The emperor, who was afraid that by remaining at Ratisbon he might render it impossible for the pope's forces to join him, having boldly advanced to Landshut on the Iser, the confederates lost some days in deliberating whether it was proper to follow him into the territories of the duke of Bavaria, a neutral prince. When at last they surmounted that scruple, and began to move towards his camp, they suddenly abandoned the design, and hastened to attack Ratisbon, in which town Charles could leave only a small garrison. By this time the papal troops, amounting fully to that number which Paul had stipulated to furnish, had reached Landshut, and were soon followed by six thousand Spaniards of the veteran bands stationed in Naples. The confederates, after Schertel's spirited but fruitless expedition, seem to have permitted these forces to advance unmolested to the place of rendezvous, without any attempt to attack either them or the emperor separately, or to prevent their junction.[b] The imperial army amounted now to thirty-six thousand men, and was still more formidable by the discipline and valour of the troops than by their number. Avila, commendador of Alcantara, who had been present in all the wars carried on by Charles, and had served in the armies which gained the memorable victory at Pavia, which conquered Tunis and invaded France, gives this the preference to any military force he had ever seen assembled.[c] Octavio Farnese, the pope's grandson, assisted by the ablest officers formed in the long wars between Charles and Francis, commanded the Italian auxiliaries. His brother, the cardinal Farnese, accompanied him as papal legate; and in order to give the war the appearance of a religious enterprise, he proposed to march at the head of the army with a cross carried before him, and to publish indulgences wherever he came to all who should give them any assistance, as had anciently been the practice in the Crusades against the infidels. But this the emperor strictly prohibited, as inconsistent with all the declarations which he had made to the Germans of his own party; and the legate perceiving, to his astonishment, that the exercise of the protestant religion, the extirpation of which he considered as the sole object of the war, was publicly permitted in the imperial camp, soon returned in disgust to Italy.[d]

The arrival of these troops enabled the emperor to send such a reinforcement to the garrison at Ratisbon, that the confederates, relinquishing all hopes of reducing that town, marched towards Ingoldstadt on the Danube, near to which Charles was now encamped. They exclaimed loudly against the emperor's notorious violation of the laws and constitution of the empire, in having called in foreigners to lay waste Germany and to oppress its liberties. As in that age the dominion of the Roman see was so odious to the protestants, that the name of the pope alone was sufficient to inspire them with horror at any enterprise which he countenanced, and to raise in their minds the blackest suspicions, it came to be universally believed among them, that Paul, not satisfied with attacking them openly by force of arms, had dispersed his emissaries all over Germany, to set on fire their towns and magazines, and to poison the wells and fountains of water. Nor did this rumour, which was extravagant and frightful enough to make a deep impression on the credulity of the vulgar, spread among them only; even the leaders of the party, blinded by their prejudices, published a declaration, in which they accused the pope of having employed such antichristian and diabolical arts against them.[e] These sentiments of the confederates were confirmed, in some measure, by the behaviour of the papal troops, who thinking nothing too rigorous towards heretics anathematized by the church, were guilty of great excesses in the territories of the Lutheran states, and aggravated the calamities of war by mingling with it all the cruelty of bigoted zeal.

The confederates advance towards the imperial army.

The first operations in the field, however, did not correspond with the violence of those passions which animated individuals. The emperor had prudently taken the resolution of avoiding an action with an enemy so far superior in number,[f] especially as he foresaw that nothing could keep a body composed of so many and such dissimilar members from falling to pieces but the pressing to attack it with an inconsiderate precipitancy. The confederates, though it was no less evident that to them every moment's delay was pernicious, were still prevented by the weakness or division of their leaders from exerting that vigour with which their situation as well as the ardour of their soldiers ought to have inspired them. On their arrival at Ingoldstadt they found the emperor in a camp not remarkable for strength, and surrounded only by a slight entrenchment. Before the camp lay a plain of such extent as afforded sufficient space for drawing out their whole army, and bringing it to act at once. Every consideration should have determined them to have seized this opportunity of attacking the emperor; and their great superiority in numbers, the eagerness of their troops, together with the stability of the German infantry in pitched battles, afforded them the most probable expectation of victory. The landgrave urged this with great warmth, declaring that if the sole command were vested in him, he would terminate the war on that occasion, and decide by one general action the fate of the two parties. But the elector, reflecting on the valour and discipline of the enemy's forces, animated by the presence of the emperor and conducted by

Aug. 29.

b Adriani Istoria di suoi Tempi, lib. v. 340. c Avila, 18. d F. Paul, 191. e Sleid. 399. f Avila, 78, a.

the best officers of the age, would not venture upon an action which he thought to be so doubtful as the attacking such a body of veterans on ground which they themselves had chosen, and while covered with fortifications which, though imperfect, would afford them no small advantage in the combat. Notwithstanding his hesitation and remonstrances, it was agreed to advance towards the enemy's camp in battle-array, in order to make a trial whether by that insult, and by a furious cannonade which they began, they could draw the imperialists out of their works. But the emperor had too much sagacity to fall into this snare. He adhered to his own system with inflexible constancy; and drawing up his soldiers behind their trenches, that they might be ready to receive the confederates if they should venture upon an assault, calmly waited their approach, and carefully restrained his own men from any excursions or skirmishes which might bring on a general engagement. He rode along the lines, and addressing the troops of the different nations in their own language, encouraged them not only by his words, but by the cheerfulness of his voice and countenance; he exposed himself in places of greatest danger, and amidst the warmest fire of the enemy's artillery, the most numerous that had hitherto been brought into the field by any army. Roused by his example, not a man quitted his ranks; it was thought infamous to discover any symptom of fear when the emperor appeared so intrepid; and the meanest soldier plainly perceived that their declining the combat at present was not the effect of timidity in their general, but the result of a well-grounded caution. The confederates, after firing several hours on the imperialists, with more noise and terror than execution, seeing no prospect of alluring them to fight on equal terms, retired to their own camp. The emperor employed the night with such diligence in strengthening his works, that the confederates, returning to the cannonade next day, found that though they had now been willing to venture upon such a bold experiment, the opportunity of making an attack with advantage was lost.[g]

The emperor declines a battle.

After such a discovery of the feebleness or irresolution of their leaders, and the prudence as well as firmness of the emperor's conduct, the confederates turned their whole attention towards preventing the arrival of a powerful reinforcement of ten thousand foot and four thousand horse, which the count de Buren was bringing to the emperor from the Low Countries. But though that general had to traverse such an extent of country; though his route lay through the territories of several states warmly disposed to favour the confederates; though they were apprised of his approach, and by their superiority in numbers might easily have detached a force sufficient to overpower him, he advanced with such rapidity, and by such well-concerted movements, while they opposed him with such remissness and so little military skill, Sept. 10. that he conducted this body to the imperial camp without any loss.[h]

The Flemish troops join the emperor.

Upon the arrival of the Flemings, in whom he placed great confidence, the emperor altered in some degree his plan of operations, and began to act more upon the offensive, though he still avoided a battle with the utmost industry. He made himself master of Neuburg, Dillingen, and Donawert on the Danube; of Nordlingen, and several other towns situated on the most considerable streams which fall into that mighty river. By this he got the command of a great extent of country, though not without being obliged to engage in several sharp encounters, of which the success was various, nor without being exposed, oftener than once, to the danger of being drawn into a battle. In this manner the whole autumn was spent; neither party gained any remarkable superiority over the other, and nothing was yet done towards bringing the war to a period. The emperor had often foretold with confidence, that discord and the want of money would compel the confederates to disperse that unwieldy body, which they had neither abilities to guide nor funds to support.[i] Though he waited with impatience for the accomplishment of his prediction, there was no prospect of that event being at hand. But he himself began to suffer from the want of forage and provisions, even the catholic provinces being so much incensed at the introduction of foreigners into the empire that they furnished them with reluctance, while the camp of the confederates abounded with a profusion of all necessaries, which the zeal of their friends in the adjacent countries poured in with the utmost liberality and good-will. Great numbers of the Italians and Spaniards, unaccustomed to the climate or food of Germany, were become unfit for service through sickness.[k] Considerable arrears were now due to the troops, who had scarcely received any money from the beginning of the campaign; the emperor experiencing on this as well as on former occasions, that his jurisdiction was more extensive than his revenues, and that the former enabled him to assemble a greater number of soldiers than the latter were sufficient to support. Upon all these accounts he found it difficult to keep his army in the field; some of his ablest generals, and even the duke of Alva himself, persevering and obstinate as he usually was in the prosecution of every measure, advising him to disperse his troops into winter-quarters. But as the arguments urged against any plan which he had adopted rarely made much impression upon the emperor, he paid no regard to their opinion, and determined to continue his efforts in order to weary out the confederates; being well assured that if he could once oblige them

to separate, there was little probability of their uniting again in a body.[l] Still, however, it remained a doubtful point whether his steadiness was most likely to fail or their zeal to be exhausted. It was still uncertain which party, by first dividing its forces, would give the superiority to the other; when an unexpected event decided the contest, and occasioned a fatal reverse in the affairs of the confederates.

Schemes of Maurice of Saxony.

Maurice of Saxony, having insinuated himself into the emperor's confidence by the arts which have already been described, no sooner saw hostilities ready to break out between the confederates of Smalkalde and that monarch, than vast prospects of ambition began to open upon him. That portion of Saxony which descended to him from his ancestors was far from satisfying his aspiring mind; and he perceived with pleasure the approach of civil war, as, amidst the revolutions and convulsions occasioned by it, opportunities of acquiring additional power or dignity, which at other times are sought in vain, present themselves to an enterprising spirit. As he was thoroughly acquainted with the state of the two contending parties, and the qualities of their leaders, he did not hesitate long in determining on which side the greatest advantages were to be expected. Having revolved all these things in his own breast, and having taken his final resolution of joining the emperor, he prudently determined to declare early in his favour, that by the merit of this he might acquire a title to a proportional recompence. With this view he had repaired to Ratisbon in the month

His league with the emperor.

of May, under pretext of attending the diet; and after many conferences with Charles or his ministers, he, with the most mysterious secresy, concluded a treaty in which he engaged to concur in assisting the emperor as a faithful subject, and Charles in return stipulated to bestow on him all the spoils of the elector of Saxony, his dignities as well as territories.[m] History hardly records any treaty that can be considered as a more manifest violation of the most powerful principles which ought to influence human actions. Maurice, a professed protestant, at a time when the belief of religion as well as zeal for its interests took strong possession of every mind, binds himself to contribute his assistance towards carrying on a war which had manifestly no other object than the extirpation of the protestant doctrines: he engages to take arms against his father-in-law, and to strip his nearest relation of his honours and dominions: he joins a dubious friend against a known benefactor, to whom his obligations were both great and recent. Nor was the prince who ventured upon all this one of those audacious politicians who, provided they can accomplish their ends and secure their interest, avowedly disregard the most sacred obligations, and glory in contemning whatever is honourable or decent. Maurice's conduct, if the whole must be ascribed to policy, was more artful and masterly; he executed his plan in all its parts, and yet endeavoured to preserve, in every step which he took, the appearance of what was fair and virtuous and laudable. It is probable from his subsequent behaviour, that, with regard to the protestant religion at least, his intentions were upright; that he fondly trusted to the emperor's promises for its security; but that, according to the fate of all who refine too much in policy, and who tread in dark and crooked paths, in attempting to deceive others he himself was, in some degree, deceived.

His artifices in order to conceal his intentions

His first care, however, was to keep the engagements into which he had entered with the emperor closely concealed: and so perfect a master was he in the art of dissimulation, that the confederates, notwithstanding his declining all connexions with them, and his remarkable assiduity in paying court to the emperor, seemed to have entertained no suspicion of his designs. Even the elector of Saxony, when he marched at the beginning of the campaign to join his associates, committed his dominions to Maurice's protection, which he, with an insidious appearance of friendship, readily undertook.[n] But scarcely had the elector taken the field when Maurice began to consult privately with the king of the Romans how to invade those very territories with the defence of which he was intrusted. Soon after, the emperor sent him a copy of the imperial ban denounced against the elector and landgrave. As he was next heir to the former, and particularly interested in preventing strangers from getting his dominions into their possession, Charles required him, not only for his own sake, but upon the allegiance and duty which he owed to the head of the empire, instantly to seize and detain in his hands the forfeited estates of the elector; warning him at the same time, that if he neglected to obey these commands, he should be held as accessory to the crimes of his kinsman, and be liable to the same punishment.[o]

This artifice, which it is probable Maurice himself suggested, was employed by him in order that his conduct towards the elector might seem a matter of necessity but not of choice, an act of obedience to his superior rather than a voluntary invasion of the rights of his kinsman and ally. But in order to give some more specious appearance to this thin veil with which he endeavoured to cover his ambition, he, soon after his return from Ratisbon, had called together the states of his country, and representing to them that a civil war between the emperor and confederates of Smalkalde was now become unavoidable, desired their advice with regard to the part which he should act in that event. They having been prepared no doubt, and tutored beforehand, and being desirous of gratifying their prince, whom they esteemed as well as loved, gave such

counsel as they knew would be most agreeable, advising him to offer his mediation towards reconciling the contending parties; but if that were rejected, and he could obtain proper security for the protestant religion, they delivered it as their opinion, that in all other points he ought to yield obedience to the emperor. Upon receiving the imperial rescript, together with the ban against the elector and landgrave, Maurice summoned the states of his country a second time; he laid before them the orders which he had received, and mentioned the punishment with which he was threatened in case of disobedience; he acquainted them that the confederates had refused to admit of his mediation, and that the emperor had given him the most satisfactory declarations with regard to religion; he pointed out his own interest in securing possession of the electoral dominions, as well as the danger of allowing strangers to obtain an establishment in Saxony; and upon the whole, as the point under deliberation respected his subjects no less than himself, he desired to know their sentiments how he should steer in that difficult and arduous conjuncture. The states, no less obsequious and complaisant than formerly, professing their own reliance on the emperor's promises as a perfect security for their religion, proposed that, before he had recourse to more violent methods, they would write to the elector, exhorting him, as the best means not only of appeasing the emperor, but of preventing his dominions from being seized by foreign or hostile powers, to give his consent that Maurice should take possession of them quietly and without opposition. Maurice himself seconded their arguments in a letter to the landgrave, his father-in-law. Such an extravagant proposition was rejected with the scorn and indignation which it deserved. The landgrave, in return to Maurice, taxed him with his treachery and ingratitude towards a kinsman to whom he was so deeply indebted: he treated with contempt his affectation of executing the imperial ban, which he could not but know to be altogether void by the unconstitutional and arbitrary manner in which it had been issued; he besought him not to suffer himself to be so far blinded by ambition as to forget the obligations of honour and friendship, or to betray the protestant religion, the extirpation of which out of Germany, even by the acknowledgment of the pope himself, was the great object of the present war.[p]

He invades the territories of the elector of Saxony.

But Maurice had proceeded too far to be diverted from pursuing his plan by reproaches or arguments. Nothing now remained but to execute with vigour what he had hitherto carried on by artifice and dissimulation. Nor was his boldness in action inferior to his subtilty in contrivance. Having assembled about twelve thousand men, he suddenly invaded one part of the electoral provinces, while Ferdinand, with an army composed of Bohemians and Hungarians, overran the other. Maurice, in two sharp encounters, defeated the troops which the elector had left to guard his country; and improving these advantages to the utmost, made himself master of all the electorate except Wittemberg, Gotha, and Eisenach, which being places of considerable strength, and defended by sufficient garrisons, refused to open their gates. The news of these rapid conquests soon reached the imperial and confederate camps. In the former, satisfaction with an event which it was foreseen would be productive of the most important consequences, was expressed by every possible demonstration of joy. The latter was filled with astonishment and terror. The name of Maurice was mentioned with execration, as an apostate from religion, a betrayer of the German liberty, and a contemner of the most sacred and natural ties. Every thing that the rage or invention of the party could suggest in order to blacken and render him odious; invectives, satires, and lampoons, the furious declamations of their preachers, together with the rude wit of their authors, were all employed against him. While he, confiding in the arts which he had so long practised, as if his actions could have admitted of any serious justification, published a manifesto, containing the same frivolous reasons for his conduct which he had formerly alleged in the meeting of his states and in his letter to the landgrave.[q]

November.

The elector, upon the first intelligence of Maurice's motions, proposed to return home with his troops for the defence of Saxony. But the deputies of the league, assembled at Ulm, prevailed on him at that time to remain with the army, and to prefer the success of the common cause before the security of his own dominions. At length the sufferings and complaints of his subjects increased so much, that he discovered the utmost impatience to set out, in order to rescue them from the oppression of Maurice and from the cruelty of the Hungarians, who having been accustomed to that licentious and merciless species of war which was thought lawful against the Turks, committed, wherever they came, the wildest acts of rapine and violence. This desire of the elector was so natural and so warmly urged, that the deputies at Ulm, though fully sensible of the unhappy consequences of dividing their army, durst not refuse their consent, how unwilling soever to grant it. In this perplexity they repaired to the camp of the confederates at Giengen on the Brenz, in order to consult their constituents. Nor were they less at a loss what to determine in this pressing emergence. But after having considered seriously the open desertion of some of their allies; the scandalous lukewarmness of others, who had hitherto contributed nothing towards the war; the intolerable load which had fallen of consequence upon such members as were most zealous for the cause or most faithful to their engagements; the ill

The confederates make overtures of accommodation to the emperor.

success of all their endeavours to obtain foreign aid; the unusual length of the campaign; the rigour of the season; together with the great number of soldiers, and even officers, who had quitted the service on that account;—they concluded that nothing could save them, but either the bringing the contest to the immediate decision of a battle, by attacking the imperial army, or an accommodation of all their differences with Charles by a treaty. Such was the despondency and dejection which now oppressed the party, that of these two they chose what was most feeble and unmanly, empowering a minister of the elector of Brandenburg to propound overtures of peace in their name to the emperor.

which he rejects.

No sooner did Charles perceive this haughty confederacy, which had so lately threatened to drive him out of Germany, condescending to make the first advances towards an agreement, than concluding their spirit to be gone or their union to be broken, he immediately assumed the tone of a conqueror; and as if they had been already at his mercy, would not hear of a negociation but upon condition that the elector of Saxony should previously give up himself and his dominions absolutely to his disposal.[r] As nothing more intolerable or ignominious could have been prescribed even in the worst situation of their affairs, it is no wonder that this proposition should be rejected by a party which was rather humbled and disconcerted than subdued. But though they refused to submit tamely to the emperor's will, they wanted spirit to pursue the only plan which could have preserved their independence; and forgetting that it was the union of their troops in one body which had hitherto rendered the confederacy formidable, and had more than once obliged the imperialists to think of quitting the field, they inconsiderately abandoned this advantage, which in spite of the diversion in Saxony would still have kept the emperor in awe, and yielding to the elector's entreaties, consented to his proposal of dividing the army. Nine thousand men were left in the duchy of Wurtemburg, in order to protect that province as well as the free cities of Upper Germany; a considerable body marched with the elector towards Saxony; but the greater part returned with their respective leaders into their own countries, and were dispersed there.[s]

The troops of the confederacy separate.

Almost all the members of it submit to the emperor.

The moment that the troops separated, the confederacy ceased to be the object of terror; and the members of it, who, while they composed part of a great body, had felt but little anxiety about their own security, began to tremble when they reflected that they now stood exposed singly to the whole weight of the emperor's vengeance. Charles did not allow them leisure to recover from their consternation, or to form any new schemes of union. As soon as the confederates began to retire he put his army in motion, and though it was now the depth of winter, he resolved to keep the field, in order to make the most of that favourable juncture for which he had waited so long. Some small towns in which the protestants had left garrisons immediately opened their gates. Norlingen, Rotenberg, and Hall, imperial cities, submitted soon after. Though Charles could not prevent the elector from levying, as he retreated, large contributions upon the archbishop of Mentz, the abbot of Fulda, and other ecclesiastics,[t] this was more than balanced by the submission of Ulm, one of the chief cities of Suabia, highly distinguished by its zeal for the Smalkaldic league. As soon as an example was set of deserting the common cause, the rest of the members became instantly impatient to follow it, and seemed afraid lest others, by getting the start of them in returning to their duty, should on that account obtain more favourable terms. The elector palatine, a weak prince, who, notwithstanding his professions of neutrality, had very preposterously sent to the confederates four hundred horse, a body so inconsiderable as to be scarcely any addition to their strength, but great enough to render him guilty in the eyes of the emperor, made his acknowledgments in the most abject manner. The inhabitants of Augsburg, shaken by so many instances of apostasy, expelled the brave Schertel out of their city, and accepted such conditions as the emperor was pleased to grant them.

The duke of Wurtemburg, though among the first who had offered to submit, was obliged to sue for pardon on his knees; and even after this mortifying humiliation obtained it with difficulty.[u]

1547.

Memmingen and other free cities in the circle of Suabia being now abandoned by all their former associates, found it necessary to provide for their own safety by throwing themselves on the emperor's mercy. Strasburg and Francfort on the Maine, cities far removed from the seat of danger, discovered no greater steadiness than those which lay more exposed. Thus a confederacy, lately so powerful as to shake the imperial throne, fell to pieces and was dissolved in the space of a few weeks; hardly any member of that formidable combination now remaining in arms but the elector and landgrave, to whom the emperor, having from the beginning marked them out as victims of his vengeance, was at no pains to offer terms of reconciliation. Nor did he grant those who submitted to him a generous and unconditional pardon. Conscious of his own superiority, he treated them both with haughtiness and rigour. All the princes in person, and the cities by their deputies, were compelled to implore mercy in the humble posture of supplicants. As the emperor laboured under great difficulties from the want of money, he imposed heavy fines upon them, which he levied with most rapacious exactness. The duke of Wurtemburg paid three hundred thousand crowns; the city of Augsburg an

The rigorous conditions imposed by the emperor.

r Hortensius, ap. Scard. ii. 485. s Sleid. 411. t Thuan. 88. u Mem. de Ribier, tom. i. 589.

hundred and fifty thousand; Ulm an hundred thousand; Francfort eighty thousand; Memmingen fifty thousand; and the rest in proportion to their abilities or their different degrees of guilt. They were obliged, besides, to renounce the league of Smalkalde; to furnish assistance, if required, towards executing the imperial ban against the elector and landgrave; to give up their artillery and warlike stores to the emperor; to admit garrisons into their principal cities and places of strength; and in this disarmed and dependent situation to expect the final award which the emperor should think proper to pronounce when the war came to an issue.[x] But amidst the great variety of articles dictated by Charles on this occasion, he, in conformity to his original plan, took care that nothing relating to religion should be inserted; and to such a degree were the confederates humbled or overawed, that forgetting the zeal which had so long animated them, they were solicitous only about their own safety, without venturing to insist on a point the mention of which they saw the emperor avoiding with so much industry. The inhabitants of Memmingen alone made some feeble efforts to procure a promise of protection in the exercise of their religion, but were checked so severely by the imperial ministers, that they instantly fell from their demand.

The elector of Cologne, whom, notwithstanding the sentence of excommunication issued against him by the pope, Charles had hitherto allowed to remain in possession of the archiepiscopal see, being now required by the emperor to submit to the censures of the church, this virtuous and disinterested prelate, unwilling to expose his subjects to the miseries of war on his own account, voluntarily resigned that high dignity. With a moderation becoming his age and character, he chose to enjoy truth, together with the exercise of his religion, in the retirement of a private life, rather than to disturb society by engaging in a doubtful and violent struggle in order to retain his office.[y]

Jan. 25.

The elector returns to Saxony and recovers possession of it.

During these transactions the elector of Saxony reached the frontiers of his country unmolested. As Maurice could assemble no force equal to the army which accompanied him, he in a short time not only recovered possession of his own territories, but overran Misnia, and stripped his rival of all that belonged to him except Dresden and Leipsic, which being towns of some strength, could not be suddenly reduced. Maurice, obliged to quit the field and to shut himself up in his capital, despatched courier after courier to the emperor, representing his dangerous situation, and soliciting him with the most earnest importunity to march immediately to his relief. But Charles, busy at that time in prescribing terms to such members of the league as were daily returning to their allegiance, thought it sufficient to detach Albert, marquis of Brandenburg-Anspach, with three thousand men, to his assistance. Albert, though an enterprising and active officer, was unexpectedly surprised by the elector, who killed many of his troops, dispersed the remainder, and took him prisoner.[z] Maurice continued as much exposed as formerly; and if his enemy had known how to improve the opportunity which presented itself, his ruin must have been immediate and unavoidable. But the elector, no less slow and dilatory when invested with the sole command than he had been formerly when joined in authority with a partner, never gave any proof of military activity but in this enterprise against Albert. Instead of marching directly towards Maurice, whom the defeat of his ally had greatly alarmed, he inconsiderately listened to overtures of accommodation, which his artful antagonist proposed with no other intention than to amuse him and to slacken the vigour of his operations.

The emperor prevented from attacking the elector and landgrave.

Such, indeed, was the posture of the emperor's affairs, that he could not march instantly to the relief of his ally. Soon after the separation of the confederate army, he, in order to ease himself of the burden of maintaining a superfluous number of troops, had dismissed the count of Buren with his Flemings,[a] imagining that the Spaniards and Germans, together with the papal forces, would be fully sufficient to crush any degree of vigour that yet remained among the members of the league. But Paul, growing wise too late, began now to discern the imprudence of that measure from which the more sagacious Venetians had endeavoured in vain to dissuade him. The rapid progress of the imperial arms, and the ease with which they had broken a combination that appeared no less firm than powerful, opened his eyes at length, and made him not only forget all the advantages which he had expected from such a complete triumph over heresy, but placed in the strongest light his own impolitic conduct, in having contributed towards acquiring for Charles such an immense increase of power as would enable him, after oppressing the liberties of Germany, to give law with absolute authority to all the states of Italy. The moment that he perceived his error he endeavoured to correct it. Without giving the emperor any warning of his intention, he ordered Farnese, his grandson, to return to Italy with all the troops under his command, and at the same time recalled the licence which he had granted Charles, of appropriating to his own use a large share of the church lands in Spain. He was not destitute of pretences to justify this abrupt desertion of his ally. The term of six months during which the stipulations in their treaty were to continue in force was now expired; the league in opposition to which their alliance had been framed, seemed to be entirely dissipated; Charles, in all his negociations with the

princes and cities which had submitted to his will, had neither consulted the pope, nor had allotted him any part of the conquests which he had made, nor had allowed him any share in the vast contributions which he had raised. He had not even made any provision for the suppression of heresy or the re-establishment of the catholic religion, which were Paul's chief inducements to bestow the treasures of the church so liberally in carrying on the war. These colours, however specious, did not conceal from the emperor that secret jealousy which was the true motive of the pope's conduct. But as Paul's orders with regard to the march of his troops were no less peremptory than unexpected, it was impossible to prevent their retreat. Charles exclaimed loudly against his treachery, in abandoning him so unseasonably, while he was prosecuting a war undertaken in obedience to the papal injunctions, and from which, if successful, so much honour and advantage would redound to the church. To complaints he added threats and expostulations. But Paul remained inflexible; his troops continued their march towards the ecclesiastical state; and in an elaborate memorial, intended as an apology for his conduct, he discovered new and more manifest symptoms of alienation from the emperor, together with a deep-rooted dread of his power.[b] Charles, weakened by the withdrawing of so great a body from his army, which was already much diminished by the number of garrisons that he had been obliged to throw into the towns which had capitulated, found it necessary to recruit his forces by new levies, before he could venture to march in person towards Saxony.

A conspiracy to overturn the government of Genoa.

The fame and splendour of his success could not have failed of attracting such multitudes of soldiers into his service from all the extensive territories now subject to his authority, as must have soon put him in a condition of taking the field against the elector; but the sudden and violent irruption of a conspiracy at Genoa, as well as the great revolutions which that event, extremely mysterious in its first appearances, seemed to portend, obliged him to avoid entangling himself in new operations in Germany until he had fully discovered its source and tendency. The form of government which had been established in Genoa at the time when Andrew Doria restored liberty to his country, though calculated to obliterate the memory of former dissensions, and received at first with eager approbation, did not, after a trial of near twenty years, give universal satisfaction to those turbulent and factious republicans. As the entire administration of affairs was now lodged in a certain number of noble families, many envying them that pre-eminence, wished for the restitution of a popular government, to which they had been accustomed; and though all reverenced the disinterested virtue of Doria, and admired his talents, not a few were jealous of that ascendant which he had acquired in the councils of the commonwealth. His age, however, his moderation, and his love of liberty, afforded ample security to his countrymen that he would not abuse his power, nor stain the close of his days by attempting to overturn that fabric which it had been the labour and pride of his life to erect. But the authority and influence which in his hands were innocent, they easily saw would prove destructive if usurped by any citizen of greater ambition or less virtue. A citizen of this dangerous character had actually formed such pretensions, and with some prospect of success. Giannetino Doria, whom his granduncle Andrew destined to be the heir of his private fortune, aimed likewise at being his successor in power. His temper, haughty, insolent, and overbearing to such a degree as would hardly have been tolerated in one born to reign, was altogether insupportable in the citizen of a free state. The more sagacious among the Genoese already feared and hated him as the enemy of those liberties for which they were indebted to his uncle: while Andrew himself, blinded by that violent and undiscerning affection which persons in advanced age often contract for the younger members of their family, set no bounds to the indulgence with which he treated him; seeming less solicitous to secure and perpetuate the freedom of the commonwealth than to aggrandize that undeserving kinsman.

The object of the conspirators.

But whatever suspicion of Doria's designs, or whatever dissatisfaction with the system of administration in the commonwealth, these circumstances might have occasioned, they would have ended, it is probable, in nothing more than murmurings and complaints, if John Lewis Fiesco, count of Lavagna, observing this growing disgust, had not been encouraged by it to attempt one of the boldest actions recorded in history. That young nobleman, the richest and most illustrious subject in the republic, possessed in an eminent degree all the qualities which win upon the human heart, which command respect or secure attachment. He was graceful and majestic in his person; magnificent even to profusion; of a generosity that anticipated the wishes of his friends, and exceeded the expectations of strangers; of an insinuating address, gentle manners, and a flowing affability. But under the appearance of these virtues, which seemed to form him for enjoying and adorning social life, he concealed all the dispositions which mark men out for taking the lead in the most dangerous and dark conspiracies—an insatiable and restless ambition, a courage unacquainted with fear, and a mind that disdained subordination. Such a temper could ill brook that station of inferiority wherein he was placed in the republic; and as he envied the power which the elder Doria had acquired, he was filled with indignation at the thoughts of its descending, like an hereditary possession, to Giannetino. These various passions

Fiesco, count of Lavagna, the head of the conspiracy.

[b] F. Paul, 208. Pallavic. par. ii. p. 5. Thuan. 126.

preying with violence on his turbulent and aspiring mind, determined him to attempt overturning that domination to which he could not submit.

Intrigues and preparations of the conspirators.

As the most effectual method of accomplishing this, he thought at first of forming a connexion with Francis, and even proposed it to the French ambassador at Rome; and after expelling Doria, together with the imperial faction, by his assistance, he offered to put the republic once more under the protection of that monarch, hoping in return for that service to be intrusted with the principal share in the administration of government. But having communicated his scheme to a few chosen confidants, from whom he kept nothing secret, Verrina, the chief of them, a man of desperate fortune, capable alike of advising and executing the most audacious deeds, remonstrated with earnestness against the folly of exposing himself to the most imminent danger, while he allowed another to reap all the fruits of his success; and exhorted him warmly to aim himself at that pre-eminence in his country to which he was destined by his illustrious birth, was called by the voice of his fellow-citizens, and would be raised by the zeal of his friends. This discourse opened such great prospects to Fiesco, and so suitable to his genius, that, abandoning his own plan, he eagerly adopted that of Verrina. The other persons present, though sensible of the hazardous nature of the undertaking, did not choose to condemn what their patron had so warmly approved. It was instantly resolved in this dark cabal, to assassinate the two Dorias as well as the principal persons of their party, to overturn the established system of government, and to place Fiesco on the ducal throne of Genoa. Time, however, and preparations were requisite to ripen such a design for execution; and while he was employed in carrying on these, Fiesco made it his chief care to guard against every thing that might betray his secret or create suspicion. The disguise he assumed was of all others the most impenetrable. He seemed to be abandoned entirely to pleasure and dissipation. A perpetual gaiety, diversified by the pursuit of all the amusements in which persons of his age and rank are apt to delight, engrossed in appearance the whole of his time and thoughts. But amidst this hurry of dissipation he prosecuted his plan with the most cool attention, neither retarding the design by a timid hesitation, nor precipitating the execution by an excess of impatience. He continued his correspondence with the French ambassador at Rome, though without communicating to him his real intentions, that by his means he might secure the protection of the French arms, if hereafter he should find it necessary to call them in to his aid. He entered into a close confederacy with Farnese, duke of Parma, who, being disgusted with the emperor for refusing to grant him the investiture of that duchy, was eager to promote any measure that tended to diminish his influence in Italy, or to ruin a family so implicitly devoted to him as that of Doria. Being sensible that in a maritime state the acquisition of naval power was what he ought chiefly to aim at, he purchased four galleys from the pope, who probably was not unacquainted with the design which he had formed, and did not disapprove of it. Under colour of fitting out one of these galleys to sail on a cruise against the Turks, he not only assembled a good number of his own vassals, but engaged in his service many bold adventurers whom the truce between the emperor and Solyman had deprived of their usual occupation and subsistence.

While Fiesco was taking these important steps, he preserved so admirably his usual appearance of being devoted entirely to pleasure and amusement, and paid court with such artful address to the two Dorias, as imposed not only on the generous and unsuspicious mind of Andrew, but deceived Giannetino, who, conscious of his own criminal intentions, was more apt to distrust the designs of others. So many instruments being now prepared, nothing remained but to strike the blow. Various consultations were held by Fiesco with his confidants, in order to settle the manner of doing it with the greatest certainty and effect. At first they proposed to murder the Dorias and their chief adherents during the celebration of high mass in the principal church; but as Andrew was often absent from religious solemnities on account of his great age, that design was laid aside. It was then concerted that Fiesco should invite the uncle and nephew, with all their friends whom he had marked out as victims, to his house, where it would be easy to cut them off at once without danger or resistance; but as Giannetino was obliged to leave the town on the day which they had chosen, it became necessary likewise to alter this plan. They at last determined to attempt by open force what they found difficult to effect by stratagem, and fixed on the night between the second and third of January for the execution of their enterprise. The time was chosen with great propriety; for as the doge of the former year was to quit his office, according to custom, on the first of the month, and his successor could not be elected sooner than the fourth, the republic remained during that interval in a sort of anarchy, and Fiesco might with less violence take possession of the vacant dignity.

The conspirators assemble to execute their plan.

The morning of that day Fiesco employed in visiting his friends, passing some hours among them with a spirit as gay and unembarrassed as at other times. Towards evening he paid court to the Dorias with his usual marks of respect, and surveying their countenance and behaviour with the attention natural in his situation, was happy to observe the perfect security in which they remained, without the least foresight or dread of that storm which had been so long a-gathering, and was now ready to burst over their heads. From their palace he hastened to his own, which stood by itself in the middle of a large

court, surrounded by a high wall. The gates had been set open in the morning, and all persons without distinction were allowed to enter; but strong guards posted within the court suffered no one to return. Verrina, meanwhile, and a few persons trusted with the secret of the conspiracy, after conducting Fiesco's vassals, as well as the crews of his galleys, into the palace in small bodies, with as little noise as possible dispersed themselves through the city, and in the name of their patron invited to an entertainment the principal citizens whom they knew to be disgusted with the administration of the Dorias, and to have inclination as well as courage to attempt a change in the government. Of the vast number of persons who now filled the palace, a few only knew for what purpose they were assembled; the rest, astonished at finding, instead of the preparations for a feast, a court crowded with armed men and apartments filled with the instruments of war, gazed on each other with a mixture of curiosity, impatience, and terror.

Fiesco's exhortations to them.

While their minds were in this state of suspense and agitation, Fiesco appeared. With a look full of alacrity and confidence he addressed himself to the persons of chief distinction, telling them that they were not now called to partake of the pleasure of an entertainment, but to join in a deed of valour which would lead them to liberty and immortal renown. He set before their eyes the exorbitant as well as intolerable authority of the elder Doria, which the ambition of Giannetino, and the partiality of the emperor to a family more devoted to him than to their country, was about to enlarge and to render perpetual. "This unrighteous dominion," continued he, "you have it now in your power to subvert, and to establish the freedom of your country on a firm basis. The tyrants must be cut off. I have taken the most effectual measures for this purpose. My associates are numerous. I can depend on allies and protectors, if necessary. Happily the tyrants are as secure as I have been provident. Their insolent contempt of their countrymen has banished the suspicion and timidity which usually render the guilty quick-sighted to discern, as well as sagacious to guard against, the vengeance which they deserve. They will now feel the blow before they suspect any hostile hand to be nigh. Let us then sally forth, that we may deliver our country by one generous effort, almost unaccompanied with danger, and certain of success." These words, uttered with that irresistible fervour which animates the mind when roused by great objects, made the desired impression on the audience. Fiesco's vassals, ready to execute whatever their master should command, received his discourse with a murmur of applause. To many whose fortunes were desperate, the licence and confusion of an insurrection afforded an agreeable prospect. Those of higher rank and more virtuous sentiments durst not discover the surprise or horror with which they were struck at the proposal of an enterprise no less unexpected than atrocious; as each of them imagined the other to be in the secret of the conspiracy, and saw himself surrounded by persons who waited only a signal from their leader to perpetrate the greatest crime. With one voice, then, all applauded, or feigned to applaud, the undertaking.

His interview with his wife.

Fiesco having thus fixed and encouraged his associates, before he gave them his last orders he hastened for a moment to the apartment of his wife, a lady of the noble house of Cibo, whom he loved with tender affection, and whose beauty and virtue rendered her worthy of his love. The noise of the armed men who crowded the court and palace having long before this reached her ears, she concluded some hazardous enterprise to be in hand, and she trembled for her husband. He found her in all the anguish of uncertainty and fear; and as it was now impossible to keep his design concealed, he informed her of what he had undertaken. The prospect of a scene so full of horror as well as danger completed her agony; and foreboding immediately in her mind the fatal issue of it, she endeavoured by her tears, her entreaties, and her despair, to divert him from his purpose. Fiesco, after trying in vain to soothe and to inspire her with hope, broke from a situation into which an excess of tenderness had unwarily seduced him, though it could not shake his resolution. "Farewell!" he cried as he quitted the apartment; "you shall either never see me more, or you shall behold, tomorrow, every thing in Genoa subject to your power."

They attack the city.

As soon as he rejoined his companions, he allotted each his proper station; some were appointed to assault and seize the different gates of the city; some to make themselves masters of the principal streets or places of strength: Fiesco reserved for himself the attack of the harbour, where Doria's galleys were laid up, as the post of chief importance and of greatest danger. It was now midnight, and the citizens slept in the security of peace, when this band of conspirators, numerous, desperate, and well armed, rushed out to execute their plan. They surprised some of the gates without meeting with any resistance. They got possession of others after a sharp conflict with the soldiers on guard. Verrina, with the galley which had been fitted out against the Turks, blocked up the mouth of the Darsena or little harbour, where Doria's fleet lay. All possibility of escape being cut off by this precaution, when Fiesco attempted to enter the galleys from the shore, to which they were made fast, they were in no condition to make resistance, as they were not only unrigged and disarmed, but had no crew on board except the slaves chained to the oar. Every quarter of the city was now filled with noise and tumult, all the streets resounding with the cry of *Fiesco and Liberty!* At that name so popular and beloved, many of the lower rank took arms and joined the conspirators. The nobles and partisans of the aristocracy, aston-

ished or affrighted, shut the gates of their houses, and thought of nothing but of securing them from pillage. At last the noise excited by this scene of violence and confusion reached the palace of Doria: Giannetino started immediately from his bed, and imagining that it was occasioned by some mutiny among the sailors, rushed out with a few attendants, and hurried towards the harbour. The gate of St. Thomas, through which he had to pass, was already in possession of the conspirators, who, the moment he appeared, fell upon him with the utmost fury, and murdered him on the spot. The same must have been the fate of the elder Doria, if Jerome de Fiesco had executed his brother's plan, and had proceeded immediately to attack him in his palace; but he, from the sordid consideration of preventing its being plundered amidst the confusion, having forbid his followers to advance, Andrew got intelligence of his nephew's death as well as of his own danger, and mounting on horseback saved himself by flight. Amidst this general consternation a few senators had the courage to assemble in the palace of the republic.[c] At first some of the most daring among them attempted to rally the scattered soldiers and to attack a body of the conspirators; but being repulsed with loss, all agreed that nothing now remained but to treat with the party which seemed to be irresistible. Deputies were accordingly sent to learn of Fiesco what were the concessions with which he would be satisfied, or rather to submit to whatever terms he should please to prescribe.

Cause of their miscarriage.

But by this time Fiesco, with whom they were empowered to negociate, was no more. Just as he was about to leave the harbour, where every thing succeeded to his wish, that he might join his victorious companions, he heard some extraordinary uproar on board the admiral's galley. Alarmed at the noise, and fearing that the slaves might break their chains and overpower his associates, he ran thither; but the plank which reached from the shore to the vessel happening to overturn, he fell into the sea, whilst he hurried forward too precipitately. Being loaded with heavy armour, he sunk to the bottom, and perished in the very moment when he must have taken full possession of every thing that his ambitious heart could desire. Verrina was the first who discovered this fatal accident, and foreseeing at once all its consequences, concealed it with the utmost industry from every one but a few leaders of the conspiracy. Nor was it difficult, amidst the darkness and confusion of the night, to have kept it secret until a treaty with the senators should have put the city in the power of the conspirators. All their hopes of this were disconcerted by the imprudence of Jerome Fiesco, who, when the deputies of the senate inquired for his brother the count of Lavagna, that they might make their proposal to him, replied with a childish vanity, "I am now the only person to whom that title belongs, and with me you must treat." These words discovered as well to his friends as to his enemies what had happened, and made the impression which might have been expected upon both. The deputies, encouraged by this event, the only one which could occasion such a sudden revolution as might turn to their advantage, assumed instantly, with admirable presence of mind, a new tone, suitable to the change in their circumstances, and made high demands. While they endeavoured to gain time by protracting the negociation, the rest of the senators were busy in assembling their partisans, and in forming a body capable of defending the palace of the republic. On the other hand, the conspirators, astonished at the death of a man whom they adored and trusted, and placing no confidence in Jerome, a giddy youth, felt their courage die away and their arms fall from their hands. That profound and amazing secrecy with which the conspiracy had been concerted, and which had contributed hitherto so much to its success, proved now the chief cause of its miscarriage. The leader was gone; the greater part of those who acted under him knew not his confidants, and were strangers to the object at which he aimed. There was no person among them whose authority or abilities entitled him to assume Fiesco's place or to finish his plan; after having lost the spirit which animated it, life and activity deserted the whole body. Many of the conspirators withdrew to their houses, hoping that amidst the darkness of the night they had passed unobserved and might remain unknown. Others sought for safety by a timely retreat; and before break of day, most of them fled with precipitation from a city, which, but a few hours before, was ready to acknowledge them as masters.

Tranquillity re-established in Genoa.

Next morning every thing was quiet in Genoa; not an enemy was to be seen, few marks of the violence of the former night appeared, the conspirators having conducted their enterprise with more noise than bloodshed, and gained all their advantages by surprise rather than by force of arms. Towards evening Andrew Doria returned to the city, being met by all the inhabitants, who received him with acclamations of joy. Though the disgrace as well as danger of the preceding night were fresh in his mind, and the mangled body of his kinsmen still before his eyes, such was his moderation as well as magnanimity, that the decree issued by the senate against the conspirators did not exceed that just measure of severity which was requisite for the support of government, and was dictated neither by the violence of resentment nor the rancour of revenge.[d] [e]

The emperor alarmed at this conspiracy;

After taking the necessary precautions for preventing the flame which was now so happily extinguished

d Thuan. 93. Sigonii Vita Andreæ Doriæ, 1196. La Conjuration du Comte de Fiesque, par Cardin. de Retz. Adriani Istoria, lib. vi. 369. Folietæ Conjuratio Jo. Lud. Fiesci. ap. Græv. Thes. Ital. i. 883.

e It is remarkable that cardinal de Retz, at the age of eighteen, composed a history of this conspiracy, containing such a discovery of his admiration of Fiesco and his enterprise, as renders it not surprising that a minister so jealous and discerning as Richelieu should be led by the perusal of it to predict the turbulent and dangerous spirit of that young ecclesiastic. Mem. de Retz, tom. i. p. 13.

from breaking out anew, the first care of the senate was to send an ambassador to the emperor, to give him a particular detail of what had happened, and to beg his assistance towards the reduction of Montobbio, a strong fort on the hereditary estate of the Fiesci, in which Jerome had shut himself up. Charles was no less alarmed than astonished at an event so strange and unexpected. He could not believe that Fiesco, how bold or adventurous soever, durst have attempted such an enterprise but on foreign suggestion and from the hope of foreign aid. Being informed that the duke of Parma was well acquainted with the plan of the conspirators, he immediately supposed that the pope could not be ignorant of a measure which his son had countenanced. Proceeding from this to a further conjecture, which Paul's cautious maxims of policy in other instances rendered extremely probable, he concluded that the French king must have known and approved of the design; and he began to apprehend that this spark might again kindle the flame of war which had raged so long in Italy. As he had drained his Italian territories of troops on account of the German war, he was altogether unprovided for resisting any hostile attack in that country; and on the first appearance of danger, he must have detached thither the greatest part of his forces for its defence. In this situation of affairs it would have been altogether imprudent in the emperor to have advanced in person against the elector, until he should learn with some degree of certainty whether such a scene were not about to open in Italy as might put it out of his power to keep the field with an army sufficient to oppose him.

suspends his operations in Germany.

BOOK IX.

Francis jealous of the emperor's power and success;

THE emperor's dread of the hostile intentions of the pope and French king did not proceed from any imaginary or ill-grounded suspicion. Paul had already given the strongest proofs both of his jealousy and enmity. Charles could not hope that Francis, after a rivalship of so long continuance, would behold the great advantages which he had gained over the confederate protestants without feeling his ancient emulation revive. He was not deceived in this conjecture. Francis had observed the rapid progress of his arms with deep concern, and though hitherto prevented, by circumstances which have been mentioned, from interposing in order to check them, he was now convinced that if he did not make some extraordinary and timely effort, Charles must acquire such a degree of power as would enable him to give law to the rest of Europe. This apprehension, which did not take its rise from the jealousy of rivalship alone, but was entertained by the wisest politicians of the age, suggested various expedients which might serve to retard the course of the emperor's victories, and to form by degrees such a combination against him as might put a stop to his dangerous career.

negociates with the protestants.

With this view Francis instructed his emissaries in Germany to employ all their address in order to revive the courage of the confederates, and to prevent them from submitting to the emperor. He made liberal offers of his assistance to the elector and landgrave, whom he knew to be the most zealous as well as the most powerful of the whole body; he used every argument and proposed every advantage which could either confirm their dread of the emperor's designs, or determine them not to imitate the inconsiderate credulity of their associates, in giving up their religion and liberties to his disposal. While he took this step towards continuing the civil war which raged in Germany, he endeavoured likewise to stir up foreign enemies against the emperor. He solicited Solyman to seize this favourable opportunity of invading Hungary, which had been drained of all the troops necessary for its defence, in order to form the army against the confederates of Smalkalde. He exhorted the pope to repair, by a vigorous and seasonable effort, the error of which he had been guilty, in contributing to raise the emperor to such a formidable height of power. Finding Paul, both from the consciousness of his own mistake and his dread of its consequences, abundantly disposed to listen to what he suggested, he availed himself of this favourable disposition which the pontiff began to discover, as an argument to gain the Venetians. He endeavoured to convince them that nothing could save Italy, and even Europe, from oppression and servitude, but their joining with the pope and him in giving the first beginning to a general confederacy in order to humble that ambitious potentate, whom they had all equal reason to dread.

with Solyman;

with the pope and Venetians;

Having set on foot these negociations in the southern courts, he turned his attention next towards those in the north of Europe. As the king of Denmark had particular reasons to be offended with the emperor, Francis imagined that the object of the league which he had projected would be highly acceptable to him; and lest considerations of caution or prudence should restrain him from joining in it, he attempted to overcome these by offering him the young queen of Scots in marriage to his son.[a] As the ministers who governed England in the name of Edward VI. had openly declared themselves converts to the opinions of the reformers, as soon as it became safe upon Henry's death to lay aside that disguise which his intolerant bigotry had forced them to assume, Francis flattered himself that their

with the kings of Denmark and England.

a Mem. de Ribier, i. 600, 606.

zeal would not allow them to remain inactive spectators of the overthrow and destruction of those who professed the same faith with themselves. He hoped that, notwithstanding the struggles of faction incident to a minority, and the prospect of an approaching rupture with the Scots, he might prevail on them likewise to take part in the common cause.[b]

While Francis employed such a variety of expedients, and exerted himself with such extraordinary activity, to rouse the different states of Europe against his rival, he did not neglect what depended on himself alone. He levied troops in all parts of his dominions; he collected military stores; he contracted with the Swiss cantons for a considerable body of men; he put his finances in admirable order; he remitted considerable sums to the elector and landgrave; and took all the other steps necessary towards commencing hostilities on the shortest warning and with the greatest vigour.[c]

The emperor greatly alarmed.

Operations so complicated, and which required the putting so many instruments in motion, did not escape the emperor's observation. He was early informed of Francis's intrigues in the several courts of Europe, as well as of his domestic preparations; and sensible how fatal an interruption a foreign war would prove to his designs in Germany, he trembled at the prospect of that event. The danger, however, appeared to him as unavoidable as it was great. He knew the insatiable and well-directed ambition of Solyman, and that he always chose the season for beginning his military enterprises with prudence equal to the valour with which he conducted them. The pope, as he had good reason to believe, wanted not pretexts to justify a rupture, nor inclination to begin hostilities. He had already made some discovery of his sentiments, by expressing a joy altogether unbecoming the head of the church, upon receiving an account of the advantage which the elector of Saxony had gained over Albert of Brandenburg; and as he was now secure of finding in the French king an ally of sufficient power to support him, he was at no pains to conceal the violence and extent of his enmity.[d] The Venetians, Charles was well assured, had long observed the growth of his power with jealousy, which, added to the solicitations and promises of France, might at last quicken their slow councils and overcome their natural caution. The Danes and English, it was evident, had both peculiar reason to be disgusted, as well as strong motives to act against him. But above all, he dreaded the active emulation of Francis himself, whom he considered as the soul and mover of any confederacy that could be formed against him; and as that monarch had afforded protection to Verrina, who sailed directly to Marscilles upon the miscarriage of Fiesco's conspiracy, Charles expected every moment to see the commencement of those hostile operations in Italy of which he conceived the insurrection in Genoa to have been only the prelude.

Entertains hope from the declining state of Francis's health.

But while he remained in this state of suspense and solicitude, there was one circumstance which afforded him some prospect of escaping the danger. The French king's health began to decline. A disease which was the effect of his inconsiderate pursuit of pleasure preyed gradually on his constitution. The preparations for war, as well as the negociations in the different courts, began to languish together with the monarch who gave spirit to both.

March.

The Genoese, during that interval, reduced Montobbio, took Jerome Fiesco prisoner, and putting him to death, together with his chief adherents, extinguished all remains of the conspiracy. Several of the imperial cities in Germany, despairing of timely assistance from France, submitted to the emperor. Even the landgrave seemed disposed to abandon the elector, and to bring matters to a speedy accommodation on such terms as he could obtain. In the mean time, Charles waited with impatience the issue of a distemper which was to decide whether he must relinquish all other schemes in order to prepare for resisting a combination of the greater part of Europe against him, or whether he might proceed to invade Saxony without interruption or fear of danger.

The good fortune so remarkably propitious to his family, that some historians have called it the *Star of the House of Austria*, did not desert him on this occasion. Francis died at Rambouillet on the last day of March, in the fifty-third year of his age and the thirty-third of his reign. During twenty-eight years of that time an avowed rivalship subsisted between him and the emperor, which involved not only their own dominions but the greater part of Europe in wars, which were prosecuted with more violent animosity, and drawn out to a greater length, than had been known in any former period. Many circumstances contributed to this. Their animosity was founded in opposition of interest, heightened by personal emulation, and exasperated not only by mutual injuries but by reciprocal insults. At the same time, whatever advantage one seemed to possess towards gaining the ascendant was wonderfully balanced by some favourable circumstance peculiar to the other. The emperor's dominions were of greater extent, the French king's lay more compact; Francis governed his kingdom with absolute power, that of Charles was limited, but he supplied the want of authority by address; the troops of the former were more impetuous and enterprising, those of the latter better disciplined and more patient of fatigue. The talents and abilities of the two monarchs were as different as the advantages which they possessed, and contributed no less to prolong the contest between them. Francis took his resolutions suddenly, prosecuted them at first with warmth, and pushed them into execution with a most adventurous courage; but being destitute of

Death of Francis; and reflections on his character and rivalship with Charles.

b Mem. de Ribier, 635. c Ibid. 595. d Mem. de Ribier, tom. i. 637.

the perseverance necessary to surmount difficulties, he often abandoned his designs, or relaxed the vigour of pursuit, from impatience, and sometimes from levity. Charles deliberated long and determined with coolness; but having once fixed his plan, he adhered to it with inflexible obstinacy, and neither danger nor discouragement could turn him aside from the execution of it. The success of their enterprises was suitable to the diversity of their characters, and was uniformly influenced by it. Francis, by his impetuous activity, often disconcerted the emperor's best-laid schemes; Charles, by a more calm but steady prosecution of his designs, checked the rapidity of his rival's career, and baffled or repulsed his most vigorous efforts. The former, at the opening of a war or of a campaign, broke in upon his enemy with the violence of a torrent, and carried all before him; the latter, waiting until he saw the force of his rival begin to abate, recovered in the end not only all that he had lost, but made new acquisitions. Few of the French monarch's attempts towards conquest, whatever promising aspect they might wear at first, were conducted to a happy issue; many of the emperor's enterprises, even after they appeared desperate and impracticable, terminated in the most prosperous manner. Francis was dazzled with the splendour of an undertaking; Charles was allured by the prospect of its turning to his advantage.

The degree, however, of their comparative merit and reputation has not been fixed either by a strict scrutiny into their abilities for government or by an impartial consideration of the greatness and success of their undertakings; and Francis is one of those monarchs who occupies a higher rank in the temple of Fame than either his talents or performances entitle him to hold. This pre-eminence he owed to many different circumstances. The superiority which Charles acquired by the victory of Pavia, and which from that period he preserved through the remainder of his reign, was so manifest, that Francis's struggle against his exorbitant and growing dominion was viewed by most of the other powers not only with the partiality which naturally arises for those who gallantly maintain an unequal contest, but with the favour due to one who was resisting a common enemy, and endeavouring to set bounds to a monarch equally formidable to them all. The characters of princes, too, especially among their contemporaries, depend not only upon their talents for government but upon their qualities as men. Francis, notwithstanding the many errors conspicuous in his foreign policy and domestic administration, was nevertheless humane, beneficent, generous. He possessed dignity without pride; affability free from meanness; and courtesy exempt from deceit. All who had access to him, and no man of merit was ever denied that privilege, respected and loved him. Captivated with his personal qualities, his subjects forgot his defects as a monarch; and admiring him as the most accomplished and amiable gentleman in his dominions, they hardly murmured at acts of mal-administration which in a prince of less engaging dispositions would have been deemed unpardonable. This admiration, however, must have been temporary only, and would have died away with the courtiers who bestowed it; the illusion arising from his private virtues must have ceased, and posterity would have judged of his public conduct with its usual impartiality; but another circumstance prevented this, and his name hath been transmitted to posterity with increasing reputation. Science and the arts had at that time made little progress in France. They were just beginning to advance beyond the limits of Italy, where they had revived, and which had hitherto been their only seat. Francis took them immediately under his protection, and vied with Leo himself in the zeal and munificence with which he encouraged them. He invited learned men to his court, he conversed with them familiarly, he employed them in business, he raised them to offices of dignity, and honoured them with his confidence. That order of men, not more prone to complain when denied the respect to which they conceive themselves entitled, than apt to be pleased when treated with the distinction which they consider as their due, thought they could not exceed in gratitude to such a benefactor, and strained their invention and employed all their ingenuity in panegyric. Succeeding authors, warmed with their descriptions of Francis's bounty, adopted their encomiums, and even added to them. The appellation of *Father of Letters* bestowed upon Francis, hath rendered his memory sacred among historians, and they seem to have regarded it as a sort of impiety to uncover his infirmities or to point out his defects. Thus Francis, notwithstanding his inferior abilities and want of success, hath more than equalled the fame of Charles. The good qualities which he possessed as a man have entitled him to greater admiration and praise than have been bestowed upon the extensive genius and fortunate arts of a more capable but less amiable rival.

Effects of Francis's death.

By his death a considerable change was made in the state of Europe. Charles, grown old in the arts of government and command, had now to contend only with younger monarchs, who could not be regarded as worthy to enter the lists with him, who had stood so many encounters with Henry VIII. and Francis I. and come off with honour in all those different struggles. By this event he was eased of all disquietude, and was happy to find that he might begin with safety those operations against the elector of Saxony which he had hitherto been obliged to suspend. He knew the abilities of Henry II., who had just mounted the throne of France, to be greatly inferior to those of his father, and foresaw that he would be so much occupied for some time in displacing the late king's ministers, whom he hated, and in gratifying the ambitious demands of his own favourites,

that he had nothing to dread either from his personal efforts or from any confederacy which this inexperienced prince could form.

Charles marches against the elector of Saxony. April 13.

But as it was uncertain how long such an interval of security might continue, Charles determined instantly to improve it; and as soon as he heard of Francis's demise, he began his march from Egra on the borders of Bohemia. But the departure of the papal troops, together with the retreat of the Flemings, had so much diminished his army, that sixteen thousand men were all he could assemble. With this inconsiderable body he set out on an expedition the event of which was to decide what degree of authority he should possess from that period in Germany: but as this little army consisted chiefly of the veteran Spanish and Italian bands, he did not, in trusting to them, commit much to the decision of chance; and even with so small a force he had reason to entertain the most sanguine hopes of success. The elector had levied an army greatly superior in number; but neither the experience and discipline of his troops, nor the abilities of his officers, were to be compared with those of the emperor. The elector, besides, had already been guilty of an error which deprived him of all the advantage which he might have derived from his superiority in number, and was alone sufficient to have occasioned his ruin. Instead of keeping his forces united, he detached one great body towards the frontiers of Bohemia, in order to facilitate his junction with the malcontents of that kingdom, and cantoned a considerable part of what remained in different places of Saxony, where he expected the emperor would make the first impression, vainly imagining that open towns with small garrisons might be rendered tenable against an enemy.

Progress of his arms.

The emperor entered the southern frontier of Saxony, and attacked Altorf upon the Elster. The impropriety of the measure which the elector had taken was immediately seen, the troops posted in that town surrendering without resistance; and those in all the other places between that and the Elbe either imitated their example or fled as the imperialists approached. Charles, that they might not recover from the panic with which they seemed to be struck, advanced without losing a moment. The elector, who had fixed his headquarters at Meissen, continued in his wonted state of fluctuation and uncertainty. He even became more undetermined in proportion as the danger drew near and called for prompt and decisive resolutions. Sometimes he acted as if he had resolved to defend the banks of the Elbe, and to hazard a battle with the enemy as soon as the detachments which he had called in were able to join him. At other times he abandoned this as rash and perilous, seeming to adopt the more prudent counsels of those who advised him to endeavour at protracting the war, and for that end to retire under the fortifications of Wittemberg, where the imperialists could not attack him without manifest disadvantage, and where he might wait in safety for the succours which he expected from Mecklenburg, Pomerania, and the protestant cities on the Baltic. Without fixing upon either of these plans, he broke down the bridge at Meissen, and marched along the east bank of the Elbe to Muhlberg. There he deliberated anew; and after much hesitation, adopted one of those middle schemes which are always acceptable to feeble minds incapable of deciding. He left a detachment at Muhlberg to oppose the imperialists if they should attempt to pass at that place; and advancing a few miles with his main body, encamped there in expectation of the event, according to which he proposed to regulate his subsequent motions.

Passes the Elbe.

Charles, meanwhile, pushing forward incessantly, arrived the evening of the twenty-third of April on the banks of the Elbe, opposite to Muhlberg. The river, at that place, was three hundred paces in breadth, above four feet in depth, its current rapid, and the bank possessed by the Saxons was higher than that which he occupied. Undismayed, however, by all these obstacles, he called together his general officers, and, without asking their opinions, communicated to them his intention of attempting next morning to force his passage over the river, and to attack the enemy wherever he could come up with them. They all expressed their astonishment at such a bold resolution; and even the duke of Alva, though naturally daring and impetuous, and Maurice of Saxony, notwithstanding his impatience to crush his rival the elector, remonstrated earnestly against it. But the emperor, confiding in his own judgment or good fortune, paid no regard to their arguments, and gave the orders necessary for executing his design.

Early in the morning a body of Spanish and Italian foot marched towards the river, and began an incessant fire upon the enemy. The long heavy muskets used in that age did execution on the opposite bank, and many of the soldiers, hurried on by a martial ardour, in order to get nearer the enemy, rushed into the stream, and advancing breast-high, fired with a more certain arm and with greater effect. Under cover of their fire a bridge of boats was begun to be laid for the infantry; and a peasant having undertaken to conduct the cavalry through the river by a ford with which he was well acquainted, they also were put in motion. The Saxons posted in Muhlberg endeavoured to obstruct these operations by a brisk fire from a battery which they had erected; but as a thick fog covered all the low grounds upon the river, they could not take aim with any certainty, and the imperialists suffered very little; at the same time the Saxons being much galled by the Spaniards and Italians, they set on fire some boats which had been collected near the village, and prepared to retire. The imperialists perceiving this, ten Spanish

soldiers instantly stripped themselves, and holding their swords with their teeth, swam across the river, put to flight such of the Saxons as ventured to oppose them, saved from the flames as many boats as were sufficient to complete their own bridge, and by this spirited and successful action, encouraged their companions no less than they intimidated the enemy.

By this time the cavalry, each trooper having a foot-soldier behind him, began to enter the river, the light horse marching in the front, followed by the men at arms, whom the emperor led in person, mounted on a Spanish horse, dressed in a sumptuous habit, and carrying a javelin in his hand. Such a numerous body struggling through a great river, in which, according to the directions of their guide, they were obliged to make several turns, sometimes treading on a firm bottom, sometimes swimming, presented to their companions, whom they left behind, a spectacle equally magnificent and interesting.[e] Their courage at last surmounted every obstacle, no man betraying any symptom of fear when the emperor shared in the danger no less than the meanest soldier. The moment that they reached the opposite side, Charles, without waiting the arrival of the rest of the infantry, advanced towards the Saxons with the troops which had passed along with him, who, flushed with their good fortune, and despising an enemy who had neglected to oppose them when it might have been done with such advantage, made no account of their superior numbers, and marched on as to a certain victory.

Ill conduct of the elector.

During all these operations, which necessarily consumed much time, the elector remained inactive in his camp; and from an infatuation which appears to be so amazing that the best informed historians impute it to the treacherous arts of his generals, who deceived him by false intelligence, he would not believe that the emperor had passed the river or could be so near at hand.[f] Being convinced at last of his fatal mistake by the concurring testimony of eye-witnesses, he gave orders for retreating towards Wittemberg. But a German army, encumbered, as usual, with baggage and artillery, could not be put suddenly in motion. They had just begun to march when the light troops of the enemy came in view, and the elector saw an engagement to be unavoidable. As he was no less bold in action than irresolute in council, he made the disposition for battle with the greatest presence of mind, and in the most proper manner: taking advantage of a great forest to cover his wings, so as to prevent his being surrounded by the enemy's cavalry, which were far more numerous than his own. The emperor likewise ranged his men in order as they came up, and riding along the ranks, exhorted them with few but efficacious words to do their duty. It was with a very different spirit that the two armies advanced to the charge. As the day, which had hitherto been dark and cloudy, happened to clear up at that moment, this accidental circumstance made an impression on the different parties corresponding to the tone of their minds; the Saxons, surprised and disheartened, felt pain at being exposed fully to the view of the enemy; the imperialists, being now secure that the protestant forces could not escape from them, rejoiced at the return of sunshine as a certain presage of victory. The shock of battle would not have been long doubtful, if the personal courage which the elector displayed, together with the activity which he exerted from the moment that the approach of the enemy rendered an engagement certain, and cut off all possibility of hesitation, had not revived in some degree the spirit of his troops. They repulsed the Hungarian light-horse who began the attack, and received with firmness the men at arms who next advanced to the charge; but as these were the flower of the imperial army, were commanded by experienced officers, and fought under the emperor's eye, the Saxons soon began to give way; and the light troops rallying at the same time and falling on their flanks, the flight became general. A small body of chosen soldiers, among whom the elector had fought in person, still continued to defend themselves, and endeavoured to save their master by retiring into the forest; but being surrounded on every side, the elector wounded in the face, exhausted with fatigue, and perceiving all resistance to be vain, surrendered himself a prisoner. He was conducted immediately towards the emperor, whom he found just returned from the pursuit, standing on the field of battle in the full exultation of success, and receiving the congratulations of his officers upon this complete victory obtained by his valour and conduct. Even in such an unfortunate and humbling situation the elector's behaviour was equally magnanimous and decent. Sensible of his condition, he approached his conqueror without any of the sullenness or pride which would have been improper in a captive; and conscious of his own dignity, he descended to no mean submission unbecoming the high station which he held among the German princes. "The fortune of war," said he, "has made me your prisoner, most gracious emperor, and I hope to be treated———" Here Charles harshly interrupted him: "And am I then at last acknowledged to be emperor? Charles of Ghent was the only title you lately allowed me. You shall be treated as you deserve." At these words he turned from him abruptly with a haughty air. To this cruel repulse the king of the Romans added reproaches in his own name, using expressions still more ungenerous and insulting. The elector made no reply; but with an unaltered countenance, which discovered neither astonishment nor dejection, accompanied the Spanish soldiers appointed to guard him.[g]

Battle of Mulhausen.

The elector defeated and taken prisoner.

His harsh reception by the emperor.

Charles's progress after this victory.

This decisive victory cost the imperialists only fifty men. Twelve hundred of the Saxons were killed, chiefly in the pursuit, and a greater number taken prisoners. About four hundred kept in a body and escaped to Wittemberg, together with the electoral prince, who had likewise been wounded in the action. After resting two days in the field of battle, partly to refresh his army and partly to receive the deputies of the adjacent towns, which were impatient to secure his protection by submitting to his will, the emperor began to move towards Wittemberg, that he might terminate the war at once by the reduction of that city. The unfortunate elector was carried along in a sort of triumph, and exposed everywhere, as a captive, to his own subjects; a spectacle extremely afflicting to them, who both honoured and loved him; though the insult was so far from subduing his firm spirit that it did not even ruffle the wonted tranquillity and composure of his mind.

Invests Wittemberg.

As Wittemberg, the residence, in that age, of the electoral branch of the Saxon family, was one of the strongest cities in Germany, and could not be taken, if properly defended, without great difficulty, the emperor marched thither with the utmost despatch, hoping that while the consternation occasioned by his victory was still recent, the inhabitants might imitate the example of their countrymen, and submit to his power as soon as he appeared before their walls. But Sybilla of Cleves, the elector's wife, a woman no less distinguished by her abilities than her virtue, instead of abandoning herself to tears and lamentations upon her husband's misfortune, endeavoured, by her example as well as exhortations, to animate the citizens. She inspired them with such resolution, that when summoned to surrender, they returned a vigorous answer, warning the emperor to behave towards their sovereign with the respect due to his rank, as they were determined to treat Albert of Brandenburg, who was still a prisoner, precisely in the same manner that he treated the elector. The spirit of the inhabitants, no less than the strength of the city, seemed now to render a siege in form necessary. After such a signal victory it would have been disgraceful not to have undertaken it, though at the same time the emperor was destitute of every thing requisite for carrying it on. But Maurice removed all difficulties by engaging to furnish provisions, artillery, ammunition, pioneers, and whatever else should be needed. Trusting to this, Charles gave orders to open the trenches before the town. It quickly appeared that Maurice's eagerness to reduce the capital of those dominions which he expected as his reward for taking arms against his kinsman and deserting the protestant cause, had led him to promise what exceeded his power to perform. A battering-train was, indeed, carried safely down the Elbe from Dresden to Wittemberg; but as Maurice had not sufficient force to preserve a secure communication between his own territories and the camp of the besiegers, count Mansfeldt, who commanded a body of electoral troops, intercepted and destroyed a convoy of provisions and military stores, and dispersed a band of pioneers destined for the service of the imperialists. This put a stop to the progress of the siege, and convinced the emperor, that as he could not rely on Maurice's promises, recourse ought to be had to some more expeditious as well as more certain method of getting possession of the town.

The emperor's ungenerous treatment of the elector.

The unfortunate elector was in his hands, and Charles was ungenerous and hard-hearted enough to take advantage of this, in order to make an experiment whether he might not bring about his design by working upon the tenderness of a wife for her husband, or upon the piety of children towards their parent. With this view he summoned Sybilla a second time to open the gates, letting her know that if she again refused to comply, the elector should answer with his head for her obstinacy. To convince her that this was not an empty threat, he brought his prisoner to an immediate trial. The proceedings against him were as irregular as the stratagem was barbarous. Instead of consulting the states of the empire, or remitting the cause to any court which, according to the German constitution, might have legally taken cognizance of the elector's crime, he subjected the greatest prince in the empire to the jurisdiction of a court-martial composed of Spanish and Italian officers, and in which the unrelenting duke of Alva, a fit instrument for any act of violence, presided. This strange tribunal founded its charge upon the ban of the empire, which had been issued against the prisoner by the sole authority of the emperor, and was destitute of every legal formality which could render it valid. But the court-martial, presuming the elector to be thereby manifestly convicted of treason and rebellion, condemned him to suffer death by being beheaded. This decree was intimated to the elector while he was amusing himself in playing at chess with Ernest of Brunswick, his fellow-prisoner. He paused for a moment, though without discovering any symptom either of surprise or terror; and after taking notice of the irregularity, as well as injustice, of the emperor's proceedings—"It is easy," continued he, "to comprehend his scheme. I must die because Wittemberg will not surrender; and I shall lay down my life with pleasure, if, by that sacrifice, I can preserve the dignity of my house, and transmit to my posterity the inheritance which belongs to them. Would to God that this sentence may not affect my wife and children more than it intimidates me; and that they, for the sake of adding a few days to a life already too long, may not renounce honours and territories which they were born to possess!"[h] He then turned to his

h Thuan. i. 142.

antagonist, whom he challenged to continue the game. He played with his usual attention and ingenuity, and having beat Ernest, expressed all the satisfaction which is commonly felt on gaining such victories. After this he withdrew to his own apartment, that he might employ the rest of his time in such religious exercises as were proper in his situation.[i]

The distress of his family.

It was not with the same indifference or composure that the account of the elector's danger was received in Wittemberg. Sybilla, who had supported with such undaunted fortitude her husband's misfortunes while she imagined that they could reach no further than to diminish his power or territories, felt all her resolution fail as soon as his life was threatened. Solicitous to save that, she despised every other consideration, and was willing to make any sacrifice in order to appease an incensed conqueror. At the same time the duke of Cleves, the elector of Brandenburg, and Maurice, to none of whom Charles had communicated the true motives of his violent proceedings against the elector, interceded warmly with him to spare his life. The first was prompted to do so merely by compassion for his sister and regard for his brother-in-law. The two others dreaded the universal reproach that they would incur, if, after having boasted so often of the ample security which the emperor had promised them with respect to their religion, the first effect of their union with him should be the public execution of a prince who was justly held in reverence as the most zealous protector of the protestant cause. Maurice, in particular, foresaw that he must become the object of detestation to the Saxons, and could never hope to govern them with tranquillity, if he were considered by them as accessory to the death of his nearest kinsman in order that he might obtain possession of his dominions.

His treaty with Charles, by which he surrenders the electorate;

While they, from such various motives, solicited Charles with the most earnest importunity not to execute the sentence, Sybilla and his children conjured the elector, by letters as well as messengers, to scruple at no concession that would extricate him out of the present danger, and deliver them from their fears and anguish on his account. The emperor, perceiving that the expedient which he had tried began to produce the effect that he intended, fell by degrees from his former rigour, and allowed himself to soften into promises of clemency and forgiveness, if the elector would show himself worthy of his favour by submitting to reasonable terms. The elector, on whom the consideration of what he might suffer himself had made no impression, was melted by the tears of a wife whom he loved, and could not resist the entreaties of his family. In compliance with their repeated solicitations, he agreed to articles of accommodation which he would otherwise have rejected with disdain. The chief of them were, that he should resign the electoral dignity, as well for himself as for his posterity, into the emperor's hands, to be disposed of entirely at his pleasure; that he should instantly put the imperial troops in possession of the cities of Wittemberg and Gotha; that he should set Albert of Brandenburg at liberty without ransom; that he should submit to the decrees of the imperial chamber, and acquiesce in whatever reformation the emperor should make in the constitution of that court; that he should renounce all league against the emperor or king of the Romans, and enter into no alliance for the future in which they were not comprehended. In return for these important concessions, the emperor not only promised to spare his life, but to settle on him and his posterity the city of Gotha and its territories, together with an annual pension of fifty thousand florins, payable out of the revenues of the electorate, and likewise to grant him a sum in ready money to be applied towards the discharge of his debts. Even these articles of grace were clogged with the mortifying condition of his remaining the emperor's prisoner during the rest of his life.[k] To the whole Charles had subjoined, that he should submit to the decrees of the pope and council with regard to the controverted points in religion; but the elector, though he had been persuaded to sacrifice all the objects which men commonly hold to be the dearest and most valuable, was inflexible with regard to this point; and neither threats nor entreaties could prevail to make him renounce what he deemed to be truth, or persuade him to act in opposition to the dictates of his conscience.

May 19.

and remains a prisoner.

As soon as the Saxon garrison marched out of Wittemberg, the emperor fulfilled his engagements to Maurice; and in reward for his merit in having deserted the protestant cause, and having contributed with such success towards the dissolution of the Smalkaldic league, he gave him possession of that city, together with all the other towns in the electorate. It was not without reluctance, however, that he made such a sacrifice; the extraordinary success of his arms had begun to operate in its usual manner upon his ambitious mind, suggesting new and vast projects for the aggrandisement of his family, towards the accomplishment of which the retaining of Saxony would have been of the utmost consequence. But as this scheme was not then ripe for execution, he durst not yet venture to disclose it; nor would it have been either safe or prudent to offend Maurice at that juncture by such a manifest violation of all the promises which had seduced him to abandon his natural allies.

Maurice put in possession of the electoral dominions.

The landgrave, Maurice's father-in-law, was still in arms; and though now left alone to maintain the protestant cause, was neither a feeble nor contemptible enemy. His dominions were of considerable extent; his subjects animated with zeal for the Refor-

Negociations with the landgrave.

[i] Struvii Corpus, 1050.

[k] Sleid. 427. Thuan. i. 142. Du Mont. Corps. Diplom. iv. p. 11, 332.

mation; and if he could have held the imperialists at bay for a short time, he had much to hope from a party whose strength was still unbroken, whose union as well as vigour might return, and which had reason to depend with certainty on being effectually supported by the king of France. The landgrave thought not of any thing so bold or adventurous; but being seized with the same consternation which had taken possession of his associates, he was intent only on the means of procuring favourable terms from the emperor, whom he viewed as a conqueror to whose will there was a necessity of submitting. Maurice encouraged this tame and pacific spirit by magnifying, on the one hand, the emperor's power; by boasting, on the other, of his own interest with his victorious ally; and by representing the advantageous conditions which he could not fail of obtaining by his intercession for a friend whom he was so solicitous to save. Sometimes the landgrave was induced to place such unbounded confidence in his promises, that he was impatient to bring matters to a final accommodation. On other occasions, the emperor's exorbitant ambition, restrained neither by the scruples of decency nor the maxims of justice, together with the recent and shocking proof which he had given of this in his treatment of the elector of Saxony, came so full into his thoughts, and made such a lively impression on them, that he broke off abruptly the negociations which he had begun, seeming to be convinced that it was more prudent to depend for safety on his own arms than to confide in Charles's generosity. But this bold resolution, which despair had suggested to an impatient spirit fretted by disappointments, was not of long continuance. Upon a more deliberate survey of the enemy's power as well as his own weakness, his doubts and fears returned upon him, and together with them the spirit of negociating and the desire of accommodation.

The conditions prescribed by the emperor;

Maurice and the elector of Brandenburg acted as mediators between him and the emperor; and after all that the former had vaunted of his influence, the conditions prescribed to the landgrave were extremely rigorous. The articles with regard to his renouncing the league of Smalkalde, acknowledging the emperor's authority, and submitting to the decrees of the imperial chamber, were the same which had been imposed on the elector of Saxony. Besides these, he was required to surrender his person and territories to the emperor; to implore for pardon on his knees; to pay an hundred and fifty thousand crowns towards defraying the expenses of the war; to demolish the fortifications of all the towns in his dominions except one; to oblige the garrison which he placed in it to take an oath of fidelity to the emperor; to allow a free passage through his territories to the imperial troops as often as it shall be demanded; to deliver up all his artillery and ammunition to the emperor; to set at liberty, without ransom, Henry of Brunswick, together with the other prisoners whom he had taken during the war; and neither to take arms himself nor to permit any of his subjects to serve against the emperor or his allies for the future.[l]

to which he submits.

The landgrave ratified these articles, though with the utmost reluctance, as they contained no stipulation with regard to the manner in which he was to be treated, and left him entirely at the emperor's mercy. Necessity, however, compelled him to give his assent to them. Charles, who had assumed the haughty and imperious tone of a conqueror ever since the reduction of Saxony, insisted on unconditional submission, and would permit nothing to be added to the terms which he had prescribed that could in any degree limit the fulness of his power, or restrain him from behaving as he saw meet towards a prince whom he regarded as absolutely at his disposal. But though he would not vouchsafe to negociate with the landgrave on such a footing of equality, as to suffer any article to be inserted among those which he had dictated to him, that could be considered as a formal stipulation for the security and freedom of his person, he, or his ministers in his name, gave the elector of Brandenburg and Maurice such full satisfaction with regard to this point, that they assured the landgrave that Charles would behave to him in the same way as he had done to the duke of Wurtemburg, and would allow him, whenever he had made his submission, to return to his own territories. Upon finding the landgrave to be still possessed with his former suspicions of the emperor's intentions, and unwilling to trust verbal or ambiguous declarations in a matter of such essential concern as his own liberty, they sent him a bond signed by them both, containing the most solemn obligations, that if any violence whatsoever was offered to his person during his interview with the emperor, they would instantly surrender themselves to his sons, and remain in their hands to be treated by them in the same manner as the emperor should treat him.[m]

He repairs to the imperial court.

This, together with the indispensable obligation of performing what was contained in the articles of which he had accepted, removed his doubts and scruples, or made it necessary to get over them. He repaired for that purpose to the imperial camp at Halle in Saxony, where a circumstance occurred which revived his suspicions and increased his fears. Just as he was about to enter the chamber of presence in order to make his public submission to the emperor, a copy of the articles which he had approved of was put into his hands, in order that he might ratify them anew. Upon perusing them he perceived that the imperial ministers had added two new articles; one importing, that if any dispute should arise concerning the meaning of the former conditions, the emperor should have the right of putting what interpretation upon them he thought most reasonable; the other,

l Sleid. 430. Thuan. l. iv. 146.

m Du Mont Corps Diplom. iv. p. 11, 336.

that the landgrave was bound to submit implicitly to the decisions of the council of Trent. This unworthy artifice, calculated to surprise him into an approbation of articles to which he had not the most distant idea of assenting, by proposing them to him at a time when his mind was engrossed and disquieted with the thoughts of that humiliating ceremony which he had to perform, filled the landgrave with indignation, and made him break out into all those violent expressions of rage to which his temper was prone. With some difficulty the elector of Brandenburg and Maurice prevailed at length on the emperor's ministers to drop the former article as unjust, and to explain the latter in such a manner that he could agree to it without openly renouncing the protestant religion.

The manner in which the emperor received him.

This obstacle being surmounted, the landgrave was impatient to finish a ceremony which, how mortifying soever, had been declared necessary towards his obtaining pardon. The emperor was seated on a magnificent throne, with all the ensigns of his dignity, surrounded by a numerous train of the princes of the empire, among whom was Henry of Brunswick, lately the landgrave's prisoner, and now, by a sudden reverse of fortune, a spectator of his humiliation. The landgrave was introduced with great solemnity, and advancing towards the throne, fell upon his knees. His chancellor, who walked behind him, immediately read, by his master's command, a paper which contained an humble confession of the crime whereof he had been guilty; an acknowledgment that he had merited on that account the most severe punishment; an absolute resignation of himself and his dominions to be disposed of at the emperor's pleasure; a submissive petition for pardon, his hopes of which were founded entirely on the emperor's clemency; and it concluded with promises of behaving for the future like a subject whose principles of loyalty and obedience would be confirmed and would even derive new force from the sentiments of gratitude which must hereafter fill and animate his heart. While the chancellor was reading this abject declaration, the eyes of all the spectators were fixed on the unfortunate landgrave; few could behold a prince so powerful as well as high-spirited suing for mercy in the posture of a supplicant, without being touched with commiseration, and perceiving serious reflections arise in their minds upon the instability and emptiness of human grandeur. The emperor viewed the whole transaction with a haughty unfeeling composure; and preserving a profound silence himself, made a sign to one of his secretaries to read his answer; the tenor of which was, That though he might have justly inflicted on him the grievous punishment which his crimes deserved, yet, prompted by his own generosity, moved by the solicitations of several princes in behalf of the landgrave, and influenced by his penitential acknowledgments, he would not deal with him according to the rigour of justice, and would subject him to no penalty that was not specified in the articles which he had already subscribed. The moment the secretary had finished, Charles turned away abruptly, without deigning to give the unhappy suppliant any sign of compassion or reconcilement. He did not even desire him to rise from his knees; which the landgrave having ventured to do unbidden, advanced towards the emperor with an intention to kiss his hand, flattering himself that his guilt being now fully expiated, he might presume to take that liberty. But the elector of Brandenburg, perceiving that this familiarity would be offensive to the emperor, interposed, and desired the landgrave to go along with him and Maurice to the duke of Alva's apartments in the castle.

He is detained a prisoner.

He was received and entertained by that nobleman with the respect and courtesy due to such a guest. But after supper, while he was engaged in play, the duke took the elector and Maurice aside, and communicated to them the emperor's orders, that the landgrave must remain a prisoner in that place under the custody of a Spanish guard. As they had not hitherto entertained the most distant suspicion of the emperor's sincerity or rectitude of intention, their surprise was excessive, and their indignation not inferior to it, on discovering how greatly they had been deceived themselves, and how infamously abused, in having been made the instruments of deceiving and ruining their friend. They had recourse to complaints, to arguments, and to entreaties, in order to save themselves from that disgrace, and to extricate him out of the wretched situation into which he had been betrayed by too great confidence in them. But the duke of Alva remained inflexible, and pleaded the necessity of executing the emperor's commands. By this time it grew late; and the landgrave, who knew nothing of what had passed, nor dreaded the snare in which he was entangled, prepared for departing, when the fatal orders were intimated to him. He was struck dumb at first with astonishment; but after being silent a few moments, he broke out into all the violent expressions which horror at injustice accompanied with fraud naturally suggests. He complained, he expostulated, he exclaimed; sometimes inveighing against the emperor's artifices as unworthy of a great and generous prince; sometimes censuring the credulity of his friends in trusting to Charles's insidious promises; sometimes charging them with meanness in stooping to lend their assistance towards the execution of such a perfidious and dishonourable scheme; and in the end he required them to remember their engagements to his children, and instantly to fulfil them. They, after giving way for a little to the torrent of his passion, solemnly asserted their own innocence and upright intention in the whole transaction, and encouraged him to hope that, as soon as they saw the emperor, they would obtain redress of an injury which affected their own honour no less

than it did his liberty. At the same time, in order to soothe his rage and impatience, Maurice remained with him during the night, in the apartment where he was confined.[n]

The elector of Brandenburg and Maurice solicit in vain for his liberty.

Next morning the elector and Maurice applied jointly to the emperor, representing the infamy to which they would be exposed throughout Germany if the landgrave were detained in custody; that they would not have advised nor would he himself have consented to an interview, if they had suspected that the loss of his liberty was to be the consequence of his submission; that they were bound to procure his release, having plighted their faith to that effect, and engaged their own persons as sureties for his. Charles listened to their earnest remonstrances with the utmost coolness. As he now stood no longer in need of their services, they had the mortification to find that their former obsequiousness was forgotten, and little regard paid to their intercession. He was ignorant, he told them, of their particular or private transactions with the landgrave, nor was his conduct to be regulated by any engagements into which they had thought fit to enter; though he knew well what he himself had promised, which was not that the landgrave should be exempt from all restraint, but that he should not be kept a prisoner during life.[o] Having said this with a peremptory and decisive tone, he put an end to the conference; and they seeing no probability, at that time, of making any impression upon the emperor, who seemed to have taken this resolution deliberately, and to be obstinately bent on adhering to it, were obliged to acquaint the unfortunate prisoner with the ill success of their endeavours in his behalf. The disappointment threw him into a new and more violent transport of rage; so that, to prevent his proceeding to some desperate extremity, the elector and Maurice promised that they would not quit the emperor until, by the frequency and fervour of their intercessions, they had extorted his consent to set him free. They accordingly renewed their solicitations a few days afterwards, but found Charles more haughty and intractable than before, and were warned that if they touched again upon a subject so disagreeable, and with regard to which he had determined to hear nothing further, he would instantly give orders to convey the prisoner into Spain. Afraid of hurting the landgrave by an officious or ill-timed zeal to serve him, they not only desisted but left the court; and as they did not choose to meet the first sallies of the landgrave's rage upon his learning the cause of their departure, they informed him of it by a letter, wherein they exhorted him to fulfil all that he had promised to the emperor as the most certain means of procuring a speedy release.

His impatience under restraint.

Whatever violent emotions their abandoning his cause in this manner occasioned, the landgrave's impatience to recover liberty made him follow their advice. He paid the sum which had been imposed on him, ordered his fortresses to be razed, and renounced all alliances which could give offence. This prompt compliance with the will of the conqueror produced no effect. He was still guarded with the same vigilant severity; and being carried about, together with the degraded elector of Saxony, wherever the emperor went, their disgrace and his triumph were each day renewed. The fortitude as well as equanimity with which the elector bore these repeated insults were not more remarkable than the landgrave's fretfulness and impatience. His active impetuous mind could ill brook restraint; and reflection upon the shameful artifices by which he had been decoyed into that situation, as well as indignation at the injustice with which he was still detained in it, drove him often to the wildest excesses of passion.

The rigour of the emperor's exactions in Germany.

The people of the different cities to whom Charles thus wantonly exposed those illustrious prisoners as a public spectacle, were sensibly touched with such an insult offered to the Germanic body, and murmured loudly at this indecent treatment of two of its greatest princes. They had soon other causes of complaint, and such as affected them more nearly. Charles proceeded to add oppression to insult, and arrogating to himself all the rights of a conqueror, exercised them with the utmost rigour. He ordered his troops to seize the artillery and military stores belonging to such as had been members of the Smalkaldic league; and having collected upwards of five hundred pieces of cannon, a great number in that age, he sent part of them into the Low Countries, part into Italy, and part into Spain, in order to spread by this means the fame of his success, and that they might serve as monuments of his having subdued a nation hitherto deemed invincible. He then levied by his sole authority large sums of money, as well upon those who had served him with fidelity during the war as upon such as had been in arms against him; upon the former as their contingent towards a war which, having been undertaken, as he pretended, for the common benefit, ought to be carried on at the common charge; upon the latter as a fine by way of punishment for their rebellion. By these exactions he amassed above one million six hundred thousand crowns, a sum which appeared prodigious in the sixteenth century. But so general was the consternation which had

n Sleid. 433. Thuan. l. iv. 147. Struv. Corp. Hist. Germ. ii. 1052.

o According to several historians of great name, the emperor, in his treaty with the landgrave, stipulated that he would not detain him in any prison. But in executing the deed, which was written in the German tongue, the imperial ministers fraudulently substituted the word *ewiger* instead of *einiger*, and thus the treaty, in place of a promise that he should not be detained in any prison, contained only an engagement that he should not be detained in *perpetual* imprisonment. But authors eminent for historical knowledge and critical accuracy have called in question the truth of this common story. The silence of Sleidan with regard to it, as well as its not being mentioned in the various memorials which he has published concerning the landgrave's imprisonment, greatly favour this opinion. But as several books which contain the information necessary towards discussing this point with accuracy are written in the German language, which I do not understand, I cannot pretend to inquire into this matter with the same precision wherewith I have endeavoured to settle some other controverted facts which have occurred in the course of this history. See Struv. Corp. 1052. Mosheim's Eccles. Hist. vol. ii. p. 161, 162. Eng. edition.

seized the Germans upon his rapid success, and such their dread of his victorious troops, that all implicitly obeyed his commands; though, at the same time, these extraordinary stretches of power greatly alarmed a people jealous of their privileges, and habituated during several ages to consider the imperial authority as neither extensive nor formidable. This discontent and resentment, how industriously soever they concealed them, became universal; and the more these passions were restrained and kept down for the present, the more likely were they to burst out soon with additional violence.

Ferdinand's encroachments on the liberties of his Bohemian subjects.

While Charles gave law to the Germans like a conquered people, Ferdinand treated his subjects in Bohemia with still greater rigour. That kingdom possessed privileges and immunities as extensive as those of any nation in which the feudal institutions were established. The prerogative of their kings was extremely limited, and the crown itself elective. Ferdinand, when raised to the throne, had confirmed their liberties with every solemnity prescribed by their excessive solicitude for the security of a constitution of government to which they were extremely attached. He soon began, however, to be weary of a jurisdiction so much circumscribed, and to despise a sceptre which he could not transmit to his posterity; and notwithstanding all his former engagements, he attempted to overturn the constitution from its foundations, that, instead of an elective kingdom, he might render it hereditary. But the Bohemians were too high-spirited tamely to relinquish privileges which they had long enjoyed. At the same time, many of them having embraced the doctrines of the reformers, the seeds of which John Huss and Jerome of Prague had planted in their country about the beginning of the preceding century, the desire of acquiring religious liberty mingled itself with their zeal for their civil rights; and these two kindred passions heightening, as usual, each other's force, precipitated them immediately into violent measures. They had not only refused to serve their sovereign against the confederates at Smalkalde, but having entered into a close alliance with the elector of Saxony, they had bound themselves by a solemn association to defend their ancient constitution, and to persist until they should obtain such additional privileges as they thought necessary towards perfecting the present model of their government or rendering it more permanent. They chose Caspar Phlug, a nobleman of distinction, to be their general, and raised an army of thirty thousand men to enforce their petitions. But either from the weakness of their leader, or from the dissensions in a great unwieldy body, which having united hastily was not thoroughly compacted, or from some other unknown cause, the subsequent operations of the Bohemians bore no proportion to the zeal and ardour with which they took their first resolutions. They suffered themselves to be amused so long with negociations and overtures of different kinds, that before they could enter Saxony, the battle of Muhlberg was fought, the elector deprived of his dignity and territories, the landgrave confined to close custody, and the league of Smalkalde entirely dissipated. The same dread of the emperor's power which had seized the rest of the Germans reached them. As soon as their sovereign approached with a body of imperial troops, they instantly dispersed, thinking of nothing but how to atone for their past guilt, and to acquire some hope of forgiveness by a prompt submission. But Ferdinand, who entered his dominions full of that implacable resentment which inflames monarchs whose authority has been despised, was not to be mollified by the late repentance and involuntary return of rebellious subjects to their duty. He even heard unmoved the entreaties and tears of the citizens of Prague, who appeared before him in the posture of suppliants, and implored for mercy. The sentence which he pronounced against them was rigorous to extremity; he abolished many of their privileges, he abridged others, and new-modelled the constitution according to his pleasure. He condemned to death many of those who had been most active in forming the late association against him, and punished a still greater number with confiscation of their goods or perpetual banishment. He obliged all his subjects of every condition to give up their arms, to be deposited in forts where he planted garrisons; and after disarming his people, he loaded them with new and exorbitant taxes. Thus by an ill-conducted and unsuccessful effort to extend their privileges, the Bohemians not only enlarged the sphere of the royal prerogative when they intended to have circumscribed it, but they almost annihilated those liberties which they aimed at establishing on a broader and more secure foundation.[p]

Diet held at Augsburg.

The emperor having now humbled, and, as he imagined, subdued, the independent and stubborn spirit of the Germans by the terror of arms and the rigour of punishment, held a diet at Augsburg, in order to compose finally the controversies with regard to religion, which had so long disturbed the empire. He durst not, however, trust the determination of a matter so interesting to the free suffrage of the Germans, broken as their minds now were to subjection. He entered the city at the head of his Spanish troops, and assigned them quarters there. The rest of his soldiers he cantoned in the adjacent villages; so that the members of the diet, while they carried on their deliberations, were surrounded by the same army which had overcome their countrymen. Immediately after his public entry, Charles gave a proof of the violence with which he intended to proceed. He took possession by force of the cathedral, together with one of the principal churches; and his priests having

p Sleid. 408, 419, 434. Thuan. l. iv. 129, 150. Struv. Corp. ii.

by various ceremonies purified them from the pollution with which they supposed the unhallowed ministrations of the protestants to have defiled them, they re-established with great pomp the rites of the Romish worship.[q]

The emperor exhorts them to submit to the general council.

The concourse of members to this diet was extraordinary; the importance of the affairs concerning which it was to deliberate, added to the fear of giving offence to the emperor by an absence which lay open to misconstruction, brought together almost all the princes, nobles, and representatives of cities who had a right to sit in that assembly. The emperor, in the speech with which he opened the meeting, called their attention immediately to that point which seemed chiefly to merit it. Having mentioned the fatal effects of the religious dissensions which had arisen in Germany, and taken notice of his own unwearied endeavours to procure a general council, which alone could provide a remedy adequate to those evils, he exhorted them to recognise its authority, and to acquiesce in the decisions of an assembly to which they had originally appealed as having the sole right of judgment in the case.

Various revolutions in the council.

But the council to which Charles wished them to refer all their controversies had by this time undergone a violent change. The fear and jealousy with which the emperor's first successes against the confederates of Smalkalde had inspired the pope continued to increase. Not satisfied with attempting to retard the progress of the imperial arms by the sudden recall of his troops, Paul began to consider the emperor as an enemy the weight of whose power he must soon feel, and against whom he could not be too hasty in taking precautions. He foresaw that the immediate effect of the emperor's acquiring absolute power in Germany would be to render him entirely master of all the decisions of the council, if it should continue to meet in Trent. It was dangerous to allow a monarch so ambitious to get the command of this formidable engine, which he might employ at pleasure to limit or overturn the papal authority. As the only method of preventing this, he determined to remove the council to some city more immediately under his own jurisdiction, and at a greater distance from the terror of the emperor's arms or the reach of his influence. An incident fortunately occurred which gave this measure the appearance of being necessary. One or two of the fathers of the council, together with some of their domestics, happening to die suddenly, the physicians, deceived by the symptoms, or suborned by the pope's legates, pronounced the distemper to be infectious and pestilential. Some of the prelates, struck with a panic, retired; others were impatient to be gone; and after a short consultation, the council was translated to Bologna, a city subject to the pope. All the bishops in the imperial interest warmly opposed this resolution as taken without necessity, and founded on false or frivolous pretexts. All the Spanish prelates, and most of the Neapolitan, by the emperor's express command, remained at Trent; the rest, to the number of thirty-four, accompanying the legates to Bologna. Thus a schism commenced in that very assembly which had been called to heal the divisions of Christendom; the fathers of Bologna inveighed against those who staid at Trent as contumacious and regardless of the pope's authority; while the other accused them of being so far intimidated by the fears of imaginary danger as to remove to a place where their consultations could prove of no service towards re-establishing peace and order in Germany.[r]

March 11. Translated from Trent to Bologna.

Symptoms of disgust between the pope and emperor.

The emperor, at the same time, employed all his interest to procure the return of the council to Trent. But Paul, who highly applauded his own sagacity in having taken a step which put it out of Charles's power to acquire the direction of that assembly, paid no regard to a request the object of which was so extremely obvious. The summer was consumed in fruitless negociations with respect to this point, the importunity of the one and obstinacy of the other daily increasing. At last an event happened which widened the breach irreparably, and rendered the pope utterly averse from listening to any proposal that came from the emperor. Charles, as has been already observed, had so violently exasperated Peter Lewis Farnese, the pope's son, by refusing to grant him the investiture of Parma and Placentia, that he had watched ever since that time with all the vigilance of resentment for an opportunity of revenging that injury. He had endeavoured to precipitate the pope into open hostilities against the emperor, and had earnestly solicited the king of France to invade Italy. His hatred and resentment extended to all those whom he knew that the emperor favoured; he did every ill office in his power to Gonzaga, governor of Milan, and had encouraged Fiesco in his attempt upon the life of Andrew Doria, because both Gonzaga and Doria possessed a great degree of the emperor's esteem and confidence. His malevolence and secret intrigues were not unknown to the emperor, who could not be more desirous to take vengeance on him than Gonzaga and Doria were to be employed as his instruments in inflicting it. Farnese, by the profligacy of his life, and by enormities of every kind equal to those committed by the worst tyrants who have disgraced human nature, had rendered himself so odious, that it was thought any violence whatever might be lawfully attempted against him. Gonzaga and Doria soon found among his own subjects persons who were eager, and even deemed it meritorious, to lend their hands in such a service. As Farnese, animated with the jealousy which usually possesses petty sovereigns, had employed all the cruelty and fraud whereby they endeavour to supply their defect

q Sleid. 435, 437.

r F. Paul, 248, &c.

of power, in order to humble and extirpate the nobility subject to his government, five noblemen of the greatest distinction in Placentia combined to avenge the injuries which they themselves had suffered, as well as those which he had offered to their order. They formed their plan in conjunction with Gonzaga; but it remains uncertain whether he originally suggested the scheme to them, or only approved of what they proposed, and co-operated in carrying it on. They concerted all the previous steps with such foresight, conducted their intrigues with such secrecy, and displayed such courage in the execution of their design, that it may be ranked among the most audacious deeds of that nature mentioned in history. One body of the conspirators surprised, at mid-day, the gates of the citadel of Placentia, where Farnese resided, overpowered his guards, and murdered him. Another party of them made themselves masters of the town, and called upon their fellow-citizens to take arms in order to recover their liberty. The multitude ran towards the citadel, from which three great guns, a signal concerted with Gonzaga, had been fired; and before they could guess the cause or the authors of the tumult, they saw the lifeless body of the tyrant hanging by the heels from one of the windows of the citadel. But so universally detestable had he become, that not one expressed any sentiment of concern at such a sad reverse of fortune, or discovered the least indignation at this ignominious treatment of a sovereign prince. The exultation at the success of the conspiracy was general, and all applauded the actors in it as the deliverers of their country. The body was tumbled into the ditch that surrounded the citadel, and exposed to the insults of the rabble; the rest of the citizens returned to their usual occupations, as if nothing extraordinary had happened.

Sep. 10. The assassination of the pope's son.

Before next morning a body of troops arriving from the frontiers of the Milanese, where they had been posted in expectation of the event, took possession of the city in the emperor's name, and reinstated the inhabitants in the possession of their ancient privileges. Parma, which the imperialists attempted likewise to surprise, was saved by the vigilance and fidelity of the officers whom Farnese had intrusted with the command of the garrison. The death of a son whom, notwithstanding his infamous vices, Paul loved with an excess of parental tenderness, overwhelmed him with the deepest affliction, and the loss of a city of such consequence as Placentia greatly imbittered his sorrow. He accused Gonzaga, in open consistory, of having committed a cruel murder in order to prepare the way for an unjust usurpation, and immediately demanded of the emperor satisfaction for both; for the former by the punishment of Gonzaga; for the latter by the restitution of Placentia to his grandson Octavia, its rightful owner. But Charles, who, rather than quit a prize of such value, was willing not only to expose himself to the imputation of being accessory to the crime which had given an opportunity of seizing it, but to bear the infamy of defrauding his own son-in-law of the inheritance which belonged to him, eluded all his solicitations, and determined to keep possession of the city, together with its territories.

The imperial troops take possession of Placentia.

This resolution, flowing from an ambition so rapacious as to be restrained by no consideration either of decency or justice, transported the pope so far beyond his usual moderation and prudence, that he was eager to take arms against the emperor, in order to be avenged on the murderers of his son, and to recover the inheritance wrested from his family. Conscious, however, of his own inability to contend with such an enemy, he warmly solicited the French king and the republic of Venice to join in an offensive league against Charles. But Henry was intent at that time on other objects. His ancient allies the Scots, having been defeated by the English in one of the greatest battles ever fought between these two rival nations, he was about to send a numerous body of veteran troops into that country, as well to preserve it from being conquered as to gain the acquisition of a new kingdom to the French monarchy by marrying his son the dauphin to the young queen of Scotland. An undertaking accompanied with such manifest advantages, the success of which appeared to be so certain, was not to be relinquished for the remote prospect of benefit from an alliance depending upon the precarious life of a pope of fourscore, who had nothing at heart but the gratification of his own private resentment. Instead, therefore, of rushing headlong into the alliance proposed, Henry amused the pope with such general professions and promises as might keep him from any thoughts of endeavouring to accommodate his differences with the emperor, but at the same time he avoided any such engagement as might occasion an immediate rupture with Charles, or precipitate him into a war for which he was not prepared. The Venetians, though much alarmed at seeing Placentia in the hands of the imperialists, imitated the wary conduct of the French king, as it nearly resembled the spirit which usually regulated their own conduct.[t]

The pope courts the alliance of the French king and the Venetians.

But though the pope found that it was not in his power to kindle immediately the flames of war, he did not forget the injuries which he was obliged for the present to endure; resentment settled deeper in his mind, and became more rancorous in proportion as he felt the difficulty of gratifying it. It was while these sentiments of enmity were in full force, and the desire of vengeance at its height, that the diet of Augsburg, by the emperor's command,

The diet of Augsburg petitions for the return of the council to Trent.

s F. Paul, 257. Pallavic. 41, 42. Thuan. iv. 156. Mem. de Ribier, 59, 67. Natalis Comitis Histor. lib. iii. p. 64.

t Mem. de Ribier, ii. 63, 71, 78, 85, 95. Paruta Istor. di Venez. 199, 203. Thuan. iv. 160.

petitioned the pope, in the name of the whole Germanic body, to enjoin the prelates who had retired to Bologna to return again to Trent, and to renew their deliberations in that place. Charles had been at great pains in bringing the members to join in this request. Having observed a considerable variety of sentiments among the protestants with respect to the submission which he had required to the decrees of the council, some of them being altogether intractable, while others were ready to acknowledge its right of jurisdiction upon certain conditions, he employed all his address in order to gain or to divide them. He threatened and overawed the elector palatine, a weak prince, and afraid that the emperor might inflict on him the punishment to which he had made himself liable by the assistance that he had given to the confederates of Smalkalde. The hope of procuring liberty for the landgrave, together with the formal confirmation of his own electoral dignity, overcame Maurice's scruples, or prevented him from opposing what he knew would be agreeable to the emperor. The elector of Brandenburg, less influenced by religious zeal than any prince of that age, was easily induced to imitate their example, in assenting to all that the emperor required. The deputies of the cities remained still to be brought over. They were more tenacious of their principles; and though every thing that could operate either on their hopes or fears was tried, the utmost that they would promise was to acknowledge the jurisdiction of the council, if effectual provision were made for securing to the divines of all parties free access to that assembly, with entire liberty of debate; and if all points in controversy were decided according to Scripture and the usage of the primitive church. But when the memorial containing this declaration was presented to the emperor, he ventured to put in practice a very extraordinary artifice. Without reading the paper, or taking any notice of the conditions on which they had insisted, he seemed to take it for granted that they had complied with his demand, and gave thanks to the deputies for their full and unreserved submission to the decrees of the council. The deputies, though astonished at what they had heard, did not attempt to set him right, both parties being better pleased that the matter should remain under this state of ambiguity than to push for an explanation, which must have occasioned a dispute, and would have led, perhaps, to a rupture.[u]

Oct. 9.

Having obtained this seeming submission from the members of the diet to the authority of the council, Charles employed that as an argument to enforce their petition for its return to Trent. But the pope, from the satisfaction which he felt in mortifying the emperor, as well as from his own aversion to what was demanded, resolved without hesitation that his petition should not be granted, though, in order to avoid the imputation of being influenced wholly by resentment, he had the address to throw it upon the fathers at Bologna to put a direct negative upon the request. With this view he referred to their consideration the petition of the diet, and they, ready to confirm by their assent whatever the legates were pleased to dictate, declared that the council could not consistently with its dignity return to Trent, unless the prelates who, by remaining there, had discovered a schismatic spirit, would first repair to Bologna and join their brethren; and that, even after their junction, the council could not renew its consultations with any prospect of benefit to the church, if the Germans did not prove their intention of obeying its future decrees to be sincere, by yielding immediate obedience to those which it had already passed.[x]

Dec. 20.

The pope eludes the demand.

This answer was communicated to the emperor by the pope, who at the same time exhorted him to comply with demands which appeared to be so reasonable. But Charles was better acquainted with the duplicity of the pope's character than to be deceived by such a gross artifice; he knew that the prelates of Bologna durst utter no sentiment but what Paul inspired; and therefore, overlooking them as mere tools in the hands of another, he considered their reply as a full discovery of the pope's intentions. As he could no longer hope to acquire such an ascendant in the council as to render it subservient to his own plan, he saw it to be necessary that Paul should not have it in his power to turn against him the authority of so venerable an assembly. In order to prevent this, he sent two Spanish lawyers to Bologna, who, in the presence of the legate, protested, That the translation of the council to that place had been unnecessary, and founded on false or frivolous pretexts; that while it continued to meet there, it ought to be deemed an unlawful and schismatical conventicle; that all its decisions ought of course to be held as null and invalid; and that since the pope, together with the corrupt ecclesiastics who depended on him, had abandoned the care of the church, the emperor, as its protector, would employ all the power which God had committed to him in order to preserve it from those calamities with which it was threatened. A few days after, the imperial ambassador at Rome demanded an audience of the pope, and, in presence of all the cardinals as well as foreign ministers, protested against the proceedings of the prelates at Bologna in terms equally harsh and disrespectful.[y]

The emperor protests against the council of Bologna.

1548. Jan. 16.

Jan. 23.

The emperor prepares a system, to serve as a rule of faith in Germany.

It was not long before Charles proceeded to carry these threats, which greatly alarmed both the pope and council of Bologna, into execution. He let the diet know the ill success of his endeavours to pro-

u F. Paul, 259. Sleid. 440. Thuan. tom. i. 155.
x F. Paul, 260. Pallav. ii. 49.

y F. Paul, 264. Pallav. 51. Sleid. 446. Goldasti Constit. Imperial. i. 561.

cure a favourable answer to their petition; and that the pope, equally regardless of their entreaties and of his services to the church, had refused to gratify them by allowing the council to meet again at Trent; that though all hope of holding this assembly in a place where they might look for freedom of debate and judgment was not to be given up, the prospect of it was at present distant and uncertain; that, in the mean time, Germany was torn in pieces by religious dissensions, the purity of the faith corrupted, and the minds of the people disquieted with a multiplicity of new opinions and controversies formerly unknown among christians; that, moved by the duty which he owed to them as their sovereign, and to the church as its protector, he had employed some divines of known abilities and learning to prepare a system of doctrine, to which all should conform, until a council such as they wished for could be convocated. This system was compiled by Pflug, Helding, and Agricola, of whom the two former were dignitaries in the Romish church, but remarkable for their pacific and healing spirit; the last was a protestant divine, suspected, not without reason, of having been gained by bribes and promises to betray or mislead his party on this occasion. The articles presented to the diet of Ratisbon in the year one thousand five hundred and forty-one, in order to reconcile the contending parties, served as a model for the present work. But as the emperor's situation was much changed since that time, and he found it no longer necessary to manage the protestants with the same delicacy as at that juncture, the concessions in their favour were not now so numerous, nor did they extend to points of so much consequence. The treatise contained a complete system of theology, conformable in almost every article to the tenets of the Romish church, though expressed, for the most part, in the softest words, or in Scriptural phrases, or in terms of studied ambiguity. Every doctrine, however, peculiar to popery was retained, and the observation of all the rites which the protestants condemned as inventions of men introduced into the worship of God was enjoined. With regard to two points only, some relaxation in the rigour of opinion as well as some latitude in practice was admitted. Such ecclesiastics as had married and would not put away their wives, were allowed, nevertheless, to perform all the functions of their sacred office; and those provinces which had been accustomed to partake of the cup as well as of the bread in the sacrament of the Lord's supper, were still indulged in the privilege of receiving both. Even these were declared to be concessions for the sake of peace, and granted only for a season, in compliance with the weakness or prejudices of their countrymen.[z]

This, which was called the Interim, he lays before the diet. May 15.

This system of doctrine, known afterwards by the name of the *Interim*, because it contained temporary regulations, which were to continue no longer in force than until a free general council could be held, the emperor presented to the diet, with a pompous declaration of his sincere intention to re-establish tranquillity and order in the church, as well as of his hopes that their adopting these regulations would contribute greatly to bring about that desirable event. It was read in presence of the diet, according to form. As soon as it was finished, the archbishop of Mentz, president of the electoral college, rose up hastily, and having thanked the emperor for his unwearied and pious endeavours in order to restore peace to the church, he, in the name of the diet, signified their approbation of the system of doctrine which had been read, together with their resolution of conforming to it in every particular. The whole assembly was amazed at a declaration so unprecedented and unconstitutional, as well as at the elector's presumption in pretending to deliver the sense of the diet upon a point which had not hitherto been the subject of consultation or debate. But not one member had the courage to contradict what the elector had said; some being overawed by fear, others remaining silent through complaisance. The emperor held the archbishop's declaration to be a full constitutional ratification of the Interim, and prepared to enforce the observance of it as a decree of the empire.[a]

and exhorts their approbation of it.

During this diet the wife and children of the landgrave, warmly seconded by Maurice of Saxony, endeavoured to interest the members in behalf of that unhappy prince, who still languished in confinement. But Charles, who did not choose to be brought under the necessity of rejecting any request that came from such a respectable body, in order to prevent their representations, laid before the diet an account of his transactions with the landgrave, together with the motives which had at first induced him to detain that prince in custody, and which rendered it prudent, as he alleged, to keep him still under restraint. It was no easy matter to give any good reason for an action incapable of being justified. But he thought the most frivolous pretexts might be produced in an assembly the members of which were willing to be deceived, and afraid of nothing so much as of discovering that they saw his conduct in its true colours. His account of his own conduct was accordingly admitted to be fully satisfactory, and after some feeble entreaties that he would extend his clemency to his unfortunate prisoner, the landgrave's concerns were no more mentioned.[b]

New and fruitless solicitations for the landgrave's liberty.

In order to counterbalance the unfavourable impression which this inflexible rigour might make, Charles, as a proof that his gratitude was no less permanent and unchangeable than his resentment, invested Maurice in the electoral dignity, with all the legal formalities. The ceremony was performed with extraordinary pomp in an open court, so near

z F. Paul, 270. Pallav. ii. 60. Sleid. 453, 457. Struv. Corp. 1054. Goldast. Constit. Imper. i. 518.

b Sleid. 441.

the apartment in which the degraded elector was kept a prisoner, that he could view it from his windows. Even this insult did not ruffle his usual tranquillity; and turning his eyes that way, he beheld a prosperous rival receiving those ensigns of dignity of which he had been stripped, without uttering one sentiment unbecoming the fortitude that he had preserved amidst all his calamities.[c]

The Interim equally disapproved of by protestants and papists.

Immediately after the dissolution of the diet the emperor ordered the Interim to be published in the German as well as Latin language. It met with the usual reception of conciliating schemes when proposed to men heated with disputation; both parties declaimed against it with equal violence. The protestants condemned it as a system containing the grossest errors of popery, disguised with so little art that it could impose only on the most ignorant, or on those who, by wilfully shutting their eyes, favoured the deception. The papists inveighed against it as a work in which some doctrines of the church were impiously given up, others meanly concealed, and all of them delivered in terms calculated rather to deceive the unwary than to instruct the ignorant, or to reclaim such as were enemies to the truth. While the Lutheran divines fiercely attacked it on one hand, the general of the Dominicans with no less vehemence impugned it on the other. But at Rome, as soon as the contents of the Interim came to be known, the indignation of the courtiers and ecclesiastics rose to the greatest height. They exclaimed against the emperor's profane encroachment on the sacerdotal function, in presuming, with the concurrence of an assembly of laymen, to define articles of faith and to regulate modes of worship. They compared this rash deed to that of Uzzah, who, with an unhallowed hand, had touched the ark of God; or to the bold attempts of those emperors who had rendered their memory detestable by endeavouring to model the christian church according to their pleasure. They even affected to find out a resemblance between the emperor's conduct and that of Henry VIII., and expressed their fear of his imitating the example of that apostate, by usurping the title as well as jurisdiction belonging to the head of the church. All therefore contended with one voice, that as the foundations of ecclesiastical authority were now shaken, and the whole fabric ready to be overturned by a new enemy, some powerful method of defence must be provided, and a vigorous resistance must be made, in the beginning, before he grew too formidable to be opposed.

The sentiments of the pope with regard to it.

The pope, whose judgment was improved by longer experience in great transactions, as well as by a more extensive observation of human affairs, viewed the matter with more acute discernment, and derived comfort from the very circumstance which filled them with apprehension. He was astonished that a prince of such superior sagacity as the emperor should be so intoxicated with a single victory as to imagine that he might give law to mankind, and decide even in those matters with regard to which they are most impatient of dominion. He saw that by joining any one of the contending parties in Germany, Charles might have had it in his power to have oppressed the other, but that the presumption of success had now inspired him with the vain thought of his being able to domineer over both. He foretold that a system which all attacked and none defended, could not be of long duration; and that, for this reason, there was no need of his interposing in order to hasten its fall; for as soon as the powerful hand which now upheld it was withdrawn, it would sink of its own accord, and be forgotten for ever.[d]

The emperor enforces compliance with the Interim.

The emperor, fond of his own plan, adhered to his resolution of carrying it into full execution. But though the elector Palatine, the elector of Brandenburg, and Maurice, influenced by the same considerations as formerly, seemed ready to yield implicit obedience to whatever he should enjoin, he met not every where with a like obsequious submission. John, marquis of Brandenburg-Anspach, although he had taken part with great zeal in the war against the confederates of Smalkalde, refused to renounce doctrines which he held to be sacred; and reminding the emperor of the repeated promises which he had given his protestant allies of allowing them the free exercise of their religion, he claimed, in consequence of these, to be exempted from receiving the Interim. Some other princes also ventured to mention the same scruples and to plead the same indulgence. But on this as on other trying occasions the firmness of the elector of Saxony was most distinguished, and merited the highest praise. Charles, well knowing the authority of his example with all the protestant party, laboured with the utmost earnestness to gain his approbation of the Interim, and by employing sometimes promises of setting him at liberty, sometimes threats of treating him with greater harshness, attempted alternately to work upon his hopes and his fears. But he was alike regardless of both. After having declared his fixed belief in the doctrines of the Reformation, "I cannot now," said he, "in my old age abandon the principles for which I early contended; nor, in order to procure freedom during a few declining years, will I betray that good cause on account of which I have suffered so much, and am still willing to suffer. Better for me to enjoy in this solitude the esteem of virtuous men, together with the approbation of my own conscience, than to return into the world with the imputation and guilt of apostasy to disgrace and imbitter the remainder of my days." By this magnanimous resolution he set

c Thuan. Hist. lib. v. 176. Struv. Corp. 1054. Investitura Mauritii, a Mammerano Lucembergo descripta, ap. Scardium, ii. 508.

d Sleid 468. F. Paul, 271, 277. Pallav. ii. 64.

his countrymen a pattern of conduct so very different from that which the emperor wished him to have exhibited to them, that it drew upon him fresh marks of displeasure. The rigour of his confinement was increased; the number of his servants abridged; the Lutheran clergymen who had hitherto been permitted to attend him were dismissed; and even the books of devotion which had been his chief consolation during a tedious imprisonment were taken from him.[e] The landgrave of Hesse, his companion in misfortune, did not maintain the same constancy. His patience and fortitude were both so much exhausted by the length of his confinement, that, willing to purchase freedom at any price, he wrote to the emperor offering not only to approve of the Interim, but to yield an unreserved submission to his will in every other particular. But Charles, who knew that whatever course the landgrave might hold, neither his example nor authority would prevail on his children or subjects to receive the Interim, paid no regard to his offers. He was kept confined as strictly as ever; and while he suffered the cruel mortification of having his conduct set in contrast to that of the elector, he derived not the smallest benefit from the mean step which exposed him to much deserved censure.[f]

The free cities struggle against receiving the Interim.

But it was in the imperial cities that Charles met with the most violent opposition to the Interim. These small commonwealths, the citizens of which were accustomed to liberty and independence, had embraced the doctrines of the Reformation, when they were first published, with remarkable eagerness; the bold spirit of innovation being peculiarly suited to the genius of free government. Among them the protestant teachers had made the greatest number of proselytes. The most eminent divines of the party were settled in them as pastors. By having the direction of the schools and other seminaries of learning, they had trained up disciples who were as well instructed in the articles of their faith as they were zealous to defend them. Such persons were not to be guided by example or swayed by authority; but having been taught to employ their own understanding in examining and deciding with respect to the points in controversy, they thought that they were both qualified and entitled to judge for themselves. As soon as the contents of the Interim were known, they, with one voice, joined in refusing to admit it. Augsburg, Ulm, Strasburg, Constance, Bremen, Magdeburg, together with many other towns of less note, presented remonstrances to the emperor, setting forth the irregular and unconstitutional manner in which the Interim had been enacted, and beseeching him not to offer such violence to their consciences as to require their assent to a form of doctrine and worship which appeared to them repugnant to the express precepts of the divine law. But Charles, having prevailed on so many princes of the empire to approve of his new model, was not much moved by the representations of those cities, which, how formidable soever they might have proved if they could have been formed into one body, lay so remote from each other, that it was easy to oppress them separately before it was possible for them to unite.

Compelled by violence to submit.

In order to accomplish this, the emperor saw it to be requisite that his measures should be vigorous, and executed with such rapidity as to allow no time for concerting any common plan of opposition. Having laid down this maxim as the rule of his proceedings, his first attempt was upon the city of Augsburg, which, though overawed with the presence of the Spanish troops, he knew to be as much dissatisfied with the Interim as any in the empire. He ordered one body of these troops to seize the gates; he posted the rest in different quarters of the city; and assembling all the burgesses in the town-hall, he, by his sole absolute authority, published a decree abolishing their present form of government, dissolving all their corporations and fraternities, and nominating a small number of persons in whom he vested for the future all the powers of government. Each of the persons thus chosen took an oath to observe the Interim. An act of power so unprecedented as well as arbitrary, which excluded the body of the inhabitants from any share in the government of their own community, and subjected them to men who had no other merit than their servile devotion to the emperor's will, gave general disgust; but as they durst not venture upon resistance, they were obliged to submit in silence. From Augsburg, in which he left a garrison, he proceeded to Ulm, and new-modelling its government with the same violent hand, he seized such of their pastors as refused to subscribe the Interim, committed them to prison, and at his departure carried them along with him in chains.[h] By this severity he not only secured the reception of the Interim in two of the most powerful cities, but gave warning to the rest what such as continued refractory had to expect. The effect of the example was as great as he could have wished; and many towns, in order to save themselves from the like treatment, found it necessary to comply with what he enjoined. This obedience, extorted by the rigour of authority, produced no change in the sentiments of the Germans, and extended no further than to make them conform so far to what he required as was barely sufficient to screen them from punishment. The protestant preachers accompanied those religious rites the observation of which the Interim prescribed, with such an explication of their tendency as served rather to confirm than to remove the scruples of their hearers with regard to them. The people, many of whom had grown up to mature years since the establishment of the reformed religion, and had never known any other form of public worship,

beheld the pompous pageantry of the popish service with contempt or horror; and in most places the Romish ecclesiastics who returned to take possession of their churches could hardly be protected from insult or their ministrations from interruption. Thus, notwithstanding the apparent compliance of so many cities, the inhabitants, being accustomed to freedom, submitted with reluctance to the power which now oppressed them. Their understanding as well as inclination revolted against the doctrines and ceremonies imposed on them; and though for the present they concealed their disgust and resentment, it was evident that these passions could not always be kept under restraint, but would break out at last in effects proportional to their violence.[i]

The pope dismisses the council assembled at Bologna.

Charles, however, highly pleased with having bent the stubborn spirit of the Germans to such general submission, departed for the Low Countries, fully determined to compel the cities which still stood out to receive the Interim. He carried his two prisoners, the elector of Saxony and the landgrave of Hesse, along with him, either because he durst not leave them behind him in Germany, or because he wished to give his countrymen the Flemings this illustrious proof of the success of his arms and the extent of his power. Before Charles arrived at Brussels he was informed that the pope's legates at Bologna had dismissed the council by an indefinite prorogation, and that the prelates assembled there had returned to their respective countries. Necessity had driven the pope into this measure. By the secession of those who had voted against the translation, together with the departure of others who grew weary of continuing in a place where they were not suffered to proceed to business, so few and such inconsiderable members remained, that the pompous appellation of a general council could not with decency be bestowed any longer upon them. Paul had no choice but to dissolve an assembly which was become the object of contempt, and exhibited to all Christendom a most glaring proof of the impotence of the Romish see. But unavoidable as the measure was, it lay open to be unfavourably interpreted, and had the appearance of withdrawing the remedy at the very time when those for whose recovery it was provided were prevailed on to acknowledge its virtue and to make trial of its efficacy. Charles did not fail to put this construction on the conduct of the pope; and by an artful comparison of his own efforts to suppress heresy with Paul's scandalous inattention to a point so essential, he endeavoured to render the pontiff odious to all zealous catholics. At the same time he commanded the prelates of his faction to remain at Trent, that the council might still appear to have a being, and might be ready, whenever it was thought expedient, to resume its deliberations for the good of the church.[k]

The motive of Charles's journey to the Low Countries, beside gratifying his favourite passion of travelling from one part of his dominions to another, was to receive Philip his only son, who was now in the twenty-first year of his age, and whom he had called thither, not only that he might be recognised by the states of the Netherlands as heir-apparent, but in order to facilitate the execution of a vast scheme, the object of which, and the reception it met with, shall be hereafter explained. Philip having left the government of Spain to Maximilian, Ferdinand's eldest son, to whom the emperor had given the princess Mary his daughter in marriage, embarked for Italy, attended by a numerous retinue of Spanish nobles.[l] The squadron which escorted him was commanded by Andrew Doria, who, notwithstanding his advanced age, insisted on the honour of performing in person the same duty to the son which he had often discharged towards the father. He landed safely at Genoa; from thence he went to Milan, and proceeding through Germany, arrived at the imperial court in Brussels. The states of Brabant in the first place, and those of the other provinces in their order, acknowledged his right of succession in common form, and he took the customary oath to preserve all the privileges inviolate.[m] In all the towns of the Low Countries through which Philip passed, he was received with extraordinary pomp. Nothing that could either express the respect of the people or contribute to his amusement was neglected; pageants, tournaments, and public spectacles of every kind, were exhibited with that expensive magnificence which commercial nations are fond of displaying when on any occasion they depart from their usual maxims of frugality. But amidst these scenes of festivity and pleasure, Philip's natural severity of temper was discernible. Youth itself could not render him agreeable, nor his being a candidate for power form him to courtesy. He maintained a haughty reserve in his behaviour, and discovered such manifest partiality towards his Spanish attendants, together with such an avowed preference to the manners of their country, as highly disgusted the Flemings, and gave rise to that antipathy which afterwards occasioned a revolution fatal to him in that part of his dominions.[n]

The emperor receives his son Philip in the Low Countries.

1549. April 1.

Charles was long detained in the Netherlands by a violent attack of the gout, which returned upon him so frequently, and with such increasing violence, that it had broken to a great degree the vigour of his constitution. He nevertheless did not slacken his endeavours to enforce the Interim. The inhabitants of Strasburg, after a long struggle, found it necessary to yield obedience; those of Constance, who had taken arms in their own defence, were compelled not only to conform to the Interim, but to renounce their privileges as a free city, to do homage

to Ferdinand as archduke of Austria, and, as his vassals, to admit an Austrian governor and garrison.[o] Magdeburg, Bremen, Hamburg, and Lubec, were the only imperial cities of note that still continued refractory.

BOOK X.

The pope's schemes against the emperor.

While Charles laboured with such unwearied industry to persuade or to force the protestants to adopt his regulations with respect to religion, the effects of his steadiness in the execution of his plan were rendered less considerable by his rupture with the pope, which daily increased. The firm resolution which the emperor seemed to have taken against restoring Placentia, together with his repeated encroachments on the ecclesiastical jurisdiction, not only by the regulations contained in the Interim, but by his attempt to reassemble the council of Trent, exasperated Paul to the utmost, who with the weakness incident to old age, grew more attached to his family and more jealous of his authority as he advanced in years. Pushed on by these passions, he made new efforts to draw the French king into an alliance against the emperor:[a] but finding that monarch, notwithstanding the hereditary enmity between him and Charles, and the jealousy with which he viewed the successful progress of the imperial arms, as unwilling as formerly to involve himself in immediate hostilities, he was obliged to contract his views, and to think of preventing future encroachments, since it was not in his power to inflict vengeance on account of those which were past. For this purpose he determined to recall his grant of Parma and Placentia, and after declaring them to be reannexed to the holy see, to indemnify his grandson Octavio by a new establishment in the ecclesiastical state. By this expedient he hoped to gain two points of no small consequence. He first of all rendered his possession of Parma more secure; as the emperor would be cautious of invading the patrimony of the church, though he might seize without scruple a town belonging to the house of Farnese. In the next place he would acquire a better chance of recovering Placentia, as his solicitations to that effect might decently be urged with greater importunity, and would infallibly be attended with greater effect, when he was considered not as pleading the cause of his own family but as an advocate for the interest of the holy see. But while Paul was priding himself on this device as a happy refinement in policy, Octavio, an ambitious and high-spirited young man, who could not bear with patience to be spoiled of one-half of his territories by the rapaciousness of his father-in-law, and to be deprived of the other by the artifices of his grandfather, took measures in order to prevent the execution of a plan fatal to his interest. He set out secretly from Rome, and having first endeavoured to surprise Parma, which attempt was frustrated by the fidelity of the governor to whom the pope had intrusted the defence of the town, he made overtures to the emperor, of renouncing all connexion with the pope, and of depending entirely on him for his future fortune. This unexpected defection of one of the pope's own family to an enemy whom he hated, irritated, almost to madness, a mind peevish with old age; and there was no degree of severity to which Paul might not have proceeded against a grandson whom he reproached as an unnatural apostate. But happily for Octavio, death prevented his carrying into execution the harsh resolutions which he had taken with respect to him, and put an end to his pontificate in the sixteenth year of his administration and the eighty-second of his age.[b]

As this event had been long expected, there was an extraordinary concourse of cardinals at Rome; and the various competitors having had time to form their parties and to concert their measures, their ambition and intrigues protracted the conclave to a great length. The imperial and French factions strove with emulation to promote one of their own number, and had by turns the prospect of success. But as Paul, during a long pontificate, had raised many to the purple, and those chiefly persons of eminent abilities as well as zealously devoted to his family, cardinal Farnese had the command of a powerful and united squadron, by whose address and firmness he exalted to the papal throne the cardinal di Monte, whom Paul had employed as his principal

a Mem. de Ribier, ii. 230.

b Among many instances of the credulity or weakness of historians in attributing the death of illustrious personages to extraordinary causes, this is one. Almost all the historians of the sixteenth century affirm that the death of Paul III. was occasioned by the violent passions which the behaviour of his grandson excited: that being informed, while he was refreshing himself in one of his gardens near Rome, of Octavio's attempt on Parma, as well as of his negociations with the emperor by means of Gonzaga, he fainted away, continued some hours in a swoon, then became feverish, and died within three days. This is the account given of it by Thuanus, lib. vi. 211. Adriani Istor. di suoi Tempi, lib. vii. 480. and by father Paul, 220. Even cardinal Pallavicini, better informed than any writer with regard to the events which happened in the papal court, and, when not warped by prejudice or system, more accurate in relating them, agrees with their narrative in its chief circumstances. Pallav. b. ii. 74. Paruta, who wrote his history by command of the senate of Venice, relates it in the same manner. Historici Venez. vol. iv. 212. But there was no occasion to search for any extraordinary cause to account for the death of an old man of eighty-two. There remains an authentic account of this event, in which we find none of those marvellous circumstances of which the historians are so fond. The cardinal of Ferrara, who was intrusted with the affairs of France at the court of Rome, and M. d'Urfé, Henry's ambassador in ordinary there, wrote an account to that monarch of the affair of Parma, and of the pope's death. By these it appears that Octavio's attempt to surprise Parma was made on the twentieth of October; that next day, in the evening, and not while he was airing himself in the gardens of Monte-Cavallo, the pope received intelligence of what he had done; that he was seized with such a transport of passion, and cried so bitterly, that his voice was heard in several apartments of the palace; that next day, however, he was so well as to give an audience to the cardinal of Ferrara, and to go through business of different kinds; that Octavio wrote a letter to the pope, not to cardinal Farnese his brother, intimating his resolution of throwing himself into the arms of the emperor; that the pope received this on the twenty-first without any new symptoms of emotion, and returned an answer to it; that on the twenty-second of October, the day on which the cardinal of Ferrara's letter is dated, the pope was in his usual state of health. Mem. de Ribier, ii. 247. By a letter of M. d'Urfé, Nov. 5, it appears that the pope was in such good health, that on the third of that month he had celebrated the anniversary of his coronation with the usual solemnities. Ibidem. 251. By another letter from the same person, we learn that on the sixth of November a catarrh or defluxion fell down on the pope's lungs, with such dangerous symptoms that his life was immediately despaired of. Ibid. 252. And by a third letter we are informed that he died November the tenth. In none of these letters is his death imputed to any extraordinary cause. It appears that more than twenty days elapsed between Octavio's attempt on Parma and the death of his grandfather, and that the disease was the natural effect of old age, not one of those occasioned by violence of passion.

legate in the council of Trent, and trusted with his most secret intentions. He assumed the name of Julius III.; and in order to express his gratitude towards his benefactor, the first act of his administration was to put Octavio Farnese in possession of Parma. When the injury which he did to the holy see, by alienating a territory of such value, was mentioned by some of the cardinals, he briskly replied, "That he would rather be a poor pope with the reputation of a gentleman, than a rich one with the infamy of having forgotten the obligations conferred upon him and the promises which he had made."[c] But all the lustre of this candour or generosity he quickly effaced by an action most shockingly indecent. According to an ancient and established practice, every pope upon his election considers it as his privilege to bestow on whom he pleases the cardinal's hat which falls to be disposed of by his being invested with the triple crown. Julius, to the astonishment of the sacred college, conferred this mark of distinction, together with ample ecclesiastical revenues, and the right of bearing his name and arms, upon one Innocent, a youth of sixteen, born of obscure parents, and known by the name of the Ape, from his having been trusted with the care of an animal of that species in the cardinal di Monte's family. Such a prostitution of the highest dignity in the church would have given offence even in those dark periods when the credulous superstition of the people imboldened ecclesiastics to venture on the most flagrant violations of decorum. But in an enlightened age, when, by the progress of knowledge and philosophy, the obligations of duty and decency were better understood, when a blind veneration for the pontifical character was every where abated, and one-half of Christendom in open rebellion against the papal see, this action was viewed with horror. Rome was immediately filled with libels and pasquinades, which imputed the pope's extravagant regard for such an unworthy object to the most criminal passions. The protestants exclaimed against the absurdity of supposing that the infallible spirit of divine truth could dwell in a breast so impure, and called more loudly than ever, and with greater appearance of justice, for the immediate and thorough reformation of a church the head of which was a disgrace to the christian name.[d] The rest of the pope's conduct was of a piece with this first specimen of his dispositions. Having now reached the summit of ecclesiastical ambition, he seemed eager to indemnify himself, by an unrestrained indulgence of his desires, for the self-denial or dissimulation which he had thought it prudent to practise while in a subordinate station. He became careless to so great a degree of all serious business, that he could seldom be brought to attend to it but in cases of extreme necessity; and giving up himself to amusements and dissipation of every kind, he imitated the luxurious elegance of Leo rather than the severe virtue of Adrian, the latter of which it was necessary to display in contending with a sect which derived great credit from the rigid and austere manners of its teachers.[e]

His charater and conduct.

The pope, however ready to fulfil his engagements to the family of Farnese, discovered no inclination to observe the oath which each cardinal had taken when he entered the conclave, that if the choice should fall on him, he would immediately call the council to reassume its deliberations. Julius knew by experience how difficult it was to confine such a body of men within the narrow limits which it was the interest of the see of Rome to prescribe, and how easily the zeal of some members, the rashness of others, or the suggestions of the princes on whom they depended, might precipitate a popular and ungovernable assembly into forbidden inquiries as well as dangerous decisions. He wished, for these reasons, to have eluded the obligation of his oath, and gave an ambiguous answer to the first proposals which were made to him by the emperor with regard to that matter. But Charles, either from his natural obstinacy in adhering to the measures which he had once adopted, or from the mere pride of accomplishing what was held to be almost impossible, persisted in his resolution of forcing the protestants to return into the bosom of the church. Having persuaded himself that the authoritative decisions of the council might be employed with efficacy in combating their prejudices, he, in consequence of that persuasion, continued to solicit earnestly that a new bull of convocation might be issued; and the pope could not with decency reject that request. When Julius found that he could not prevent the calling of a council, he endeavoured to take to himself all the merit of having procured the meeting of an assembly which was the object of such general desire and expectation. A congregation of cardinals to whom he referred the consideration of what was necessary for restoring peace to the church, recommended, by his direction, the speedy convocation of a council, as the most effectual expedient for that purpose; and as the new heresies raged with the greatest violence in Germany, they proposed Trent as the place of its meeting, that, by a near inspection of the evil, the remedy might be applied with greater discernment and certainty of success. The pope warmly approved of this advice, which he himself had dictated, and sent nuncios to the imperial and French courts, in order to make known his intentions.[f]

His views and proceedings with respect to the general council.

About this time the emperor had summoned a new diet to meet at Augsburg, in order to enforce the observation of the Interim, and to procure a more authentic act of the supreme court in the empire, acknow

A diet at Augsburg to enforce the Interim.

ledging the jurisdiction of the council, as well as an explicit promise of conforming to its decrees. He appeared there in person, together with his son the prince of Spain. Few electors were present, but all sent deputies in their name. Charles, notwithstanding the despotic authority with which he had given law in the empire during two years, knew that the spirit of independence among the Germans was not entirely subdued, and for that reason took care to overawe the diet by a considerable body of Spanish troops which escorted him thither. The first point submitted to the consideration of the diet was the necessity of holding a council. All the popish members agreed without difficulty, that the meeting of that assembly should be renewed at Trent, and promised an implicit acquiescence in its decrees. The protestants, intimidated and disunited, must have followed their example, and the resolution of the diet would have proved unanimous, if Maurice of Saxony had not begun at this time to disclose new intentions, and to act a part very different from that which he had so long assumed.

June 25.

Maurice begins to form designs against the emperor.

By an artful dissimulation of his own sentiments, by address in paying court to the emperor, and by the seeming zeal with which he forwarded all his ambitious schemes, Maurice had raised himself to the electoral dignity; and having added the dominions of the elder branch of the Saxon family to his own, he was become the most powerful prince in Germany. But his long and intimate union with the emperor had afforded him many opportunities of observing narrowly the dangerous tendency of that monarch's schemes. He saw the yoke that was preparing for his country; and from the rapid as well as formidable progress of the imperial power, was convinced that but a few steps more remained to be taken in order to render Charles as absolute a monarch in Germany as he had become in Spain. The more eminent the condition was to which he himself had been exalted, the more solicitous did Maurice naturally become to maintain all its rights and privileges, and the more did he dread the thoughts of descending from the rank of a prince almost independent to that of a vassal subject to the commands of a master. At the same time he perceived that Charles was bent on exacting a rigid conformity to the doctrines and rites of the Romish church, instead of allowing liberty of conscience, the promise of which had allured several protestant princes to assist him in the war against the confederates of Smalkalde. As he himself, notwithstanding all the compliances which he had made from motives of interest or an excess of confidence in the emperor, was sincerely attached to the Lutheran tenets, he determined not to be a tame spectator of the overthrow of a system which he believed to be founded in truth.

The political motives which influenced him.

This resolution, flowing from the love of liberty or zeal for religion, was strengthened by political and interested considerations. In that elevated station in which Maurice was now placed, new and more extensive prospects opened to his view. His rank and power entitled him to be the head of the protestants in the empire. His predecessor, the degraded elector, with inferior abilities and territories less considerable, had acquired such an ascendant over the councils of the party; and Maurice neither wanted discernment to see the advantage of this pre-eminence, nor ambition to aim at attaining it. But he found himself in a situation which rendered the attempt no less difficult than the object of it was important. On the one hand, the connexion which he had formed with the emperor was so intimate, that he could scarcely hope to take any step which tended to dissolve it, without alarming his jealousy, and drawing on himself the whole weight of that power which had crushed the greatest confederacy ever formed in Germany. On the other hand, the calamities which he had brought on the protestant party were so recent as well as great, that it seemed almost impossible to regain their confidence, or to rally and reanimate a body, after he himself had been the chief instrument in breaking its union and vigour. These considerations were sufficient to have discouraged any person of a spirit less adventurous than Maurice's. But to him the grandeur and difficulty of the enterprise were allurements; and he boldly resolved on measures the idea of which a genius of an inferior order could not have conceived, or would have trembled at the thoughts of the danger that attended the execution of them.

The passions which co-operated with these.

His passions concurred with his interest in confirming this resolution; and the resentment excited by an injury which he sensibly felt, added new force to the motives for opposing the emperor, which sound policy suggested. Maurice, by his authority, had prevailed on the landgrave of Hesse to put his person in the emperor's power, and had obtained a promise from the imperial ministers that he should not be detained a prisoner. This had been violated in the manner already related. The unhappy landgrave exclaimed as loudly against his son-in-law as against Charles. The princes of Hesse required Maurice to fulfil his engagements to their father, who had lost his liberty by trusting to him; and all Germany suspected him of having betrayed to an implacable enemy the friend whom he was most bound to protect. Roused by these solicitations or reproaches, as well as prompted by duty and affection to his father-in-law, Maurice had employed not only entreaties but remonstrances in order to procure his release. All these Charles had disregarded; and the shame of having been first deceived and then slighted by a prince whom he had served with zeal as well as success, which merited a very different return, made such a deep impression on Maurice, that he waited with impatience for an opportunity of being revenged.

The caution and address with which he carries on his schemes.

The utmost caution as well as the most delicate address were requisite in taking every step toward this end; as he had to guard, on the one hand, against giving a premature alarm to the emperor; while, on the other, something considerable and explicit was necessary to be done, in order to regain the confidence of the protestant party. Maurice had accordingly applied all his powers of art and dissimulation to attain both these points. As he knew Charles to be inflexible with regard to the submission which he required to the Interim, he did not hesitate one moment whether he should establish that form of doctrine and worship in his dominions; but being sensible how odious it was to his subjects, instead of violently imposing it on them by the mere terror of authority, as had been done in other parts of Germany, he endeavoured to render their obedience a voluntary deed of their own. For this purpose he had assembled the clergy of his country at Leipsic, and had laid the Interim before them, together with the reasons which made it necessary to conform to it. He had gained some of them by promises, others he had wrought upon by threats, and all were intimidated by the rigour with which obedience to the Interim was extorted in the neighbouring provinces. Even Melancthon, whose merit of every kind entitled him to the first place among the protestant divines, being now deprived of the manly counsels of Luther, which were wont to inspire him with fortitude, and to preserve him steady amidst the storms and dangers that threatened the church, was seduced into unwarrantable concessions by the timidity of his temper, his fond desire of peace, and his excessive complaisance towards persons of high rank. By his arguments and authority, no less than by Maurice's address, the assembly was prevailed on to declare, "that in points which were purely indifferent, obedience was due to the commands of a lawful superior." Founding upon this maxim, no less incontrovertible in theory than dangerous when carried into practice, especially in religious matters, many of the protestant ecclesiastics whom Maurice consulted proceeded to class among the number of things indifferent several doctrines which Luther had pointed out as gross and pernicious errors in the Romish creed; and placing in the same rank many of those rites which distinguished the reformed from the popish worship, they exhorted their people to comply with the emperor's injunctions concerning these particulars.[g]

He enforces the Interim in Saxony.

Makes professions of zeal for the protestant religion.

By this dexterous conduct the introduction of the Interim excited none of those violent convulsions in Saxony which it occasioned in other provinces. But though the Saxons submitted, the more zealous Lutherans exclaimed against Melancthon and his associates as false brethren, who were either so wicked as to apostatize from the truth altogether, or so crafty as to betray it by subtle distinctions, or so feeble-spirited as to give it up, from pusillanimity and criminal complaisance, to a prince capable of sacrificing to his political interest that which he himself regarded as most sacred. Maurice being conscious what a colour of probability his past conduct gave to those accusations, as well as afraid of losing entirely the confidence of the protestants, issued a declaration containing professions of his zealous attachment to the reformed religion, and of his resolution to guard against all the errors or encroachments of the papal see.[h]

At the same time courts the emperors.

Having gone so far in order to remove the fears and jealousies of the protestants, he found it necessary to efface the impression which such a declaration might make upon the emperor. For that purpose he not only renewed his professions of an inviolable adherence to his alliance with him, but as the city of Magdeburg still persisted in rejecting the Interim, he undertook to reduce it to obedience, and instantly set about levying troops to be employed in that service. This damped all the hopes which the protestants began to conceive of Maurice in consequence of his declaration, and left them more than ever at a loss to guess at his real intentions. Their former suspicion and distrust of him revived, and the divines of Magdeburg filled Germany with writings in which they represented him as the most formidable enemy of the protestant religion, who treacherously assumed an appearance of zeal for its interest that he might more effectually execute his schemes for its destruction.

Protests against the mode of proceeding in the council.

This charge, supported by the evidence of recent facts as well as by his present dubious conduct, gained such universal credit, that Maurice was obliged to take a vigorous step in his own vindication. As soon as the re-assembling of the council of Trent was proposed in the diet, his ambassadors protested that their master would not acknowledge its authority unless all the points which had been already decided there were reviewed, and considered as still undetermined; unless the protestant divines had a full hearing granted them, and were allowed a decisive voice in the council; and unless the pope renounced his pretensions to preside in the council, engaged to submit to its decrees, and to absolve the bishops from their oath of obedience, that they might deliver their sentiments with greater freedom. These demands, which were higher than any that the reformers had ventured to make, even when the zeal of their party was warmest or their affairs most prosperous, counterbalanced in some degree the impression which Maurice's preparations against Magdeburg had made upon the minds of the protestants, and kept them in suspense with regard to his designs. At the same time he had dexterity enough to re-

g Sleid. 481, 485. Jo. Laur. Moshemii Institutionem Hist. Ecclesiasticæ, lib. iv. Helmst. 1755, 4to. p. 748. Jo. And. Schmidii Historia Interimistica, p. 70, &c. Helmst. 1730.

h Sleid. 485.

present this part of his conduct in such a light to the emperor, that it gave him no offence, and occasioned no interruption of the strict confidence which subsisted between them. What the pretexts were which he employed in order to give such a bold declaration an innocent appearance, the contemporary historians have not explained; that they imposed upon Charles is certain, for he still continued not only to prosecute his plan, as well concerning the Interim as the council, with the same ardour, but to place the same confidence in Maurice with regard to the execution of both.

The diet resolve to make war on the city of Magdeburg.

The pope's resolution concerning the council not being yet known at Augsburg, the chief business of the diet was to enforce the observation of the Interim. As the senate of Magdeburg, notwithstanding various endeavours to frighten or to soothe them into compliance, not only persevered obstinately in their opposition to the Interim, but began to strengthen the fortifications of their city and to levy troops in their own defence, Charles required the diet to assist him in quelling this audacious rebellion against a decree of the empire. Had the members of the diet been left to act agreeably to their own inclination, this demand would have been rejected without hesitation. All the Germans who favoured in any degree the new opinions in religion, and many who were influenced by no other consideration than jealousy of the emperor's growing power, regarded this effort of the citizens of Magdeburg as a noble stand for the liberties of their country. Even such as had not resolution to exert the same spirit, admired the gallantry of their enterprise, and wished it success. But the presence of the Spanish troops, together with the dread of the emperor's displeasure, overawed the members of the diet to such a degree, that without venturing to utter their own sentiments, they tamely ratified, by their votes, whatever the emperor was pleased to prescribe. The rigorous decrees which Charles had issued by his own authority against the Magdeburgers were confirmed; a resolution was taken to raise troops in order to besiege the city in form; and persons were named to fix the contingent in men or money to be furnished by each state. At the same time the diet petitioned that Maurice might be intrusted with the command of that army: to which Charles gave his consent with great alacrity, and with high encomiums upon the wisdom of the choice which they had made.[i] As Maurice conducted all his schemes with profound and impenetrable secrecy, it is probable that he took no step avowedly in order to obtain this charge. The recommendation of his countrymen was either purely accidental, or flowed from the opinion generally entertained of his great abilities; and neither the diet had any foresight, nor the emperor any dread, of the consequences which followed upon this nomination. Maurice accepted without hesitation

Appoint Maurice general.

i Sleid. 503, 512.

the command to which he was recommended, instantly discerning the important advantages which he might derive from having it committed to him.

The council summoned to re-assemble at Trent. December.

Meanwhile Julius, in preparing the bull for the convocation of the council, observed all those tedious forms which the court of Rome can artfully employ to retard any disagreeable measure. At last, however, it was published, and the council was summoned to meet at Trent on the first day of the ensuing month of May. As he knew that many of the Germans rejected or disputed the authority and jurisdiction which the papal see claims with respect to general councils, he took care, in the preamble of the bull, to assert in the strongest terms his own right, not only to call and preside in that assembly, but to direct its proceedings; nor would he soften these expressions in any degree, in compliance with the repeated solicitations of the emperor, who foresaw what offence they would give, and what construction might be put on them. They were censured accordingly with great severity by several members of the diet; but whatever disgust or suspicion they excited, such complete influence over all their deliberations had the emperor acquired, that he procured a recess in which the authority of the council was recognised, and declared to be the proper remedy for the evils which at that time afflicted the church; all the princes and states of the empire, such as had made innovations in religion, as well as those who adhered to the system of their forefathers, were required to send their representatives to the council; the emperor engaged to grant a safe-conduct to such as demanded it, and to secure them an impartial hearing in the council; he promised to fix his residence in some city of the empire in the neighbourhood of Trent, that he might protect the members of the council by his presence, and take care that, by conducting their deliberations agreeably to Scripture and the doctrine of the fathers, they might bring them to a desirable issue. In this recess the observation of the Interim was more strongly enjoined than ever; and the emperor threatened all who had hitherto neglected or refused to conform to it, with the severest effects of his vengeance, if they persisted in their disobedience.[k]

1551. Feb. 13.

Another fruitless attempt to procure the landgrave liberty.

During the meeting of this diet, a new attempt was made in order to procure liberty to the landgrave. That prince, nowise reconciled to his situation by time, grew every day more impatient of restraint. Having often applied to Maurice and the elector of Brandenburg, who took every occasion of soliciting the emperor in his behalf, though without any effect, he now commanded his sons to summon them, with legal formality, to perform what was contained in the bond which they had granted him, by surrendering themselves into their hands to be treated

k Sleid. 512. Thuan. lib. vi. 233. Goldasti Constit. Imperiales, vol. ii. 340.

with the same rigour as the emperor had used him. This furnished them with a fresh pretext for renewing their application to the emperor, together with an additional argument to enforce it. Charles firmly resolved not to grant their request; though at the same time, being extremely desirous to be delivered from their incessant importunity, he endeavoured to prevail on the landgrave to give up the bond which he had received from the two electors. But that prince refusing to part with a security which he deemed essential to his safety, the emperor boldly cut the knot which he could not untie; and by a public deed annulled the bond which Maurice and the elector of Brandenburg had granted, absolving them from all their engagements to the landgrave. No pretension to a power so pernicious to society as that of abrogating at pleasure the most sacred laws of honour and most formal obligations of public faith, had hitherto been formed by any but the Roman pontiffs, who, in consequence of their claim of supreme power on earth, arrogate the right of dispensing with precepts and duties of every kind. All Germany was filled with astonishment when Charles assumed the same prerogative. The state of subjection to which the empire was reduced, appeared to be more rigorous as well as intolerable than that of the most wretched and enslaved nations, if the emperor, by an arbitrary decree, might cancel those solemn contracts which are the foundation of that mutual confidence whereby men are held together in social union. The landgrave himself now gave up all hopes of recovering his liberty by the emperor's consent, and endeavoured to procure it by his own address. But the plan which he had formed to deceive his guards being discovered, such of his attendants as he had gained to favour his escape were put to death, and he was confined in the citadel of Mechlin more closely than ever.[1]

Charles's plan of procuring the imperial crown for his son Philip.

Another transaction was carried on during this diet, with respect to an affair more nearly interesting to the emperor, and which occasioned likewise a general alarm among the princes of the empire. Charles, though formed with talents which fitted him for conceiving and conducting great designs, was not capable, as has been often observed, of bearing extraordinary success. Its operation on his mind was so violent and intoxicating, that it elevated him beyond what was moderate or attainable, and turned his whole attention to the pursuit of vast but chimerical objects. Such had been the effect of his victory over the confederates of Smalkalde. He did not long rest satisfied with the substantial and certain advantages which were the result of that event, but despising these as poor or inconsiderable fruits of such great success, he aimed at nothing less than at bringing all Germany to an uniformity in religion, and at rendering the imperial power despotic. These were objects extremely splendid indeed, and alluring to an ambitious mind; the pursuit of them, however, was attended with manifest danger, and the hope of attaining them very uncertain. But the steps which he had already taken towards them having been accompanied with such success, his imagination, warmed with contemplating this alluring object, overlooked or despised all remaining difficulties. As he conceived the execution of his plan to be certain, he began to be solicitous how he might render the possession of such an important acquisition perpetual in his family, by transmitting the German empire, together with the kingdoms of Spain and his dominions in Italy and the Low Countries, to his son. Having long revolved this flattering idea in his mind, without communicating it even to those ministers whom he most trusted, he had called Philip out of Spain, in hopes that his presence would facilitate the carrying forward the scheme.

The obstacles that stood in its way.

Great obstacles, however, and such as would have deterred any ambition less accustomed to overcome difficulties, were to be surmounted. He had, in the year one thousand five hundred and thirty, imprudently assisted in procuring his brother Ferdinand the dignity of king of the Romans; and there was no probability that this prince, who was still in the prime of life, and had a son grown up to the years of manhood, would relinquish in favour of his nephew the near prospect of the imperial throne, which Charles's infirmities and declining state of health opened to himself. This did not deter the emperor from venturing to make the proposition; and when Ferdinand, notwithstanding his profound reverence for his brother, and obsequious submission to his will in other instances, rejected it in a peremptory tone, he was not discouraged by one repulse. He renewed his applications to him by his sister, Mary, queen of Hungary, to whom Ferdinand stood indebted for the crowns both of Hungary and Bohemia, and who, by her great abilities, tempered with extreme gentleness of disposition, had acquired an extraordinary influence over both the brothers. She entered warmly into a measure which tended so manifestly to aggrandize the house of Austria; and flattering herself that she could tempt Ferdinand to renounce the reversionary possession of the imperial dignity for an immediate establishment, she assured him that the emperor, by way of compensation for his giving up his chance of succession, would instantly bestow upon him territories of very considerable value, and pointed out in particular those of the duke of Wurtemburg, which might be confiscated upon different pretexts. But neither by her address nor entreaties could she induce Ferdinand to approve of a plan which would not only have degraded him from the highest rank among the monarchs of Europe to that of a subordinate and dependent prince, but would have involved both him and his posterity in perpetual contests. He was, at the

1 Sleid. 504. Thuan. l. vi. 234, 235.

same time, more attached to his children than by a rash concession to frustrate all the high hopes in prospect of which they had been educated.

His endeavours to surmount these.

Notwithstanding the immovable firmness which Ferdinand discovered, the emperor did not abandon his scheme. He flattered himself that he might attain the object in view by another channel, and that it was not impossible to prevail on the electors to cancel their former choice of Ferdinand, or at least to elect Philip a second king of the Romans, substituting him as next in succession to his uncle. With this view he took Philip along with him to the diet, that the Germans might have an opportunity to observe and become acquainted with the prince in behalf of whom he courted their interest; and he himself employed all the arts of address or insinuation to gain the electors, and to prepare them for listening with a favourable ear to the proposal. But no sooner did he venture upon mentioning it to them, than they at once saw and trembled at the consequences with which it would be attended. They had long felt all the inconveniences of having placed at the head of the empire a prince whose power and dominions were so extensive; if they should now repeat the folly, and continue the imperial crown, like an hereditary dignity, in the same family, they foresaw that they would give the son an opportunity of carrying on that system of oppression which the father had begun, and would put it in his power to overturn whatever was yet left entire in the ancient and venerable fabric of the German constitution.

Philip's character disagreeable to the Germans.

The character of the prince in whose favour this extraordinary proposition was made, rendered it still less agreeable. Philip, though possessed with an insatiable desire of power, was a stranger to all the arts of a conciliating good-will. Haughty, reserved, and severe, he, instead of gaining new friends, disgusted the ancient and most devoted partisans of the Austrian interest. He scorned to take the trouble of acquiring the language of the country to the government of which he aspired; nor would he condescend to pay the Germans the compliment of accommodating himself, during his residence among them, to their manners and customs. He allowed the electors and most illustrious princes in Germany to remain in his presence uncovered, affecting a stately and distant demeanour, which the greatest of the German emperors, and even Charles himself, amidst the pride of power and victory, had never assumed.[l] On the other hand, Ferdinand, from the time of his arrival in Germany, had studied to render himself acceptable to the people, by a conformity to their manners which seemed to flow from choice; and his son Maximilian, who was born in Germany, possessed in an eminent degree such amiable qualities as rendered him the darling of his countrymen, and induced them to look forward to his election as a most desirable event. Their esteem and affection for him fortified the resolution which sound policy had suggested, and determined the Germans to prefer the popular virtues of Ferdinand and his son to the stubborn austerity of Philip, which interest could not soften, nor ambition teach him to disguise. All the electors, the ecclesiastical as well as secular, concurred in expressing such strong disapprobation of the measure, that Charles, notwithstanding the reluctance with which he gave up any point, was obliged to drop the scheme as impracticable. By his unseasonable perseverance in pushing it, he had not only filled the Germans with new jealousy of his ambitious designs, but laid the foundation of rivalship and discord in the Austrian family, and forced his brother Ferdinand, in self-defence, to court the electors, particularly Maurice of Saxony, and to form such connexions with them as cut off all prospect of renewing the proposal with success. Philip, soured by his disappointment, was sent back to Spain, to be called thence when any new scheme of ambition should render his presence necessary.[m]

Charles obliged to relinquish this scheme.

Having relinquished this plan of domestic ambition, which had long occupied and engrossed him, Charles imagined that he would now have leisure to turn all his attention towards his grand scheme of establishing uniformity of religion in the empire, by forcing all the contending parties to acquiesce in the decisions of the council of Trent. But such was the extent of his dominions, the variety of connexions in which this entangled him, and the multiplicity of events to which these gave rise, as seldom allowed him to apply his whole force to any one object. The machine which he had to conduct was so great and complicated, that an unforeseen irregularity or obstruction in one of the inferior wheels often disconcerted the motion of the whole, and prevented his deriving from them all the beneficial effects which he expected. Such an unlooked for occurrence happened at this juncture, and created new obstacles to the execution of his schemes with regard to religion. Julius III. though he had confirmed Octavio Farnese in the possession of the duchy of Parma during the first effusions of his joy and gratitude on his promotion to the papal throne, soon began to repent of his own generosity, and to be apprehensive of consequences which either he did not foresee or had disregarded while the sense of his obligations to the family of Farnese was recent. The emperor still retained Placentia in his hands, and had not relinquished his pretensions to Parma as a fief of the empire. Gonzaga, the governor of Milan, having, by the part which he took in the murder of the late duke Peter Ludovico, offered an insult to the family of Farnese, which he knew could never be forgiven, had for that reason

The pope and emperor form a design to recover Parma and Placentia.

l Frediman Andreæ Zulich Dissertatio politico-historica de Nævis politicis Caroli V. Lips. 1706. 4to. p. 21.

m Sleid. 505. Thuan. 180, 238. Memoir. de Ribier, ii. 219, 281, 314. Adriani Istor. lib. viii. 507, 520.

vowed its destruction, and employed all the influence which his great abilities as well as long services gave him with the emperor, in persuading him to seize Parma by force of arms. Charles, in compliance with his solicitations, and that he might gratify his own desire of annexing Parma to the Milanese, listened to the proposal; and Gonzaga, ready to take encouragement from the slightest appearance of approbation, began to assemble troops and to make other preparations for the execution of his scheme.

Octavio Farnese courts the assistance of France.

Octavio, who saw the impending danger, found it necessary for his own safety to increase the garrison of his capital, and to levy soldiers for defending the rest of the country. But as the expense of such an effort far exceeded his scanty revenues, he represented his situation to the pope, and implored that protection and assistance which was due to him as a vassal of the church. The imperial minister, however, had already preoccupied the pope's ear; and by discoursing continually concerning the danger of giving offence to the emperor, as well as the imprudence of supporting Octavio in an usurpation so detrimental to the holy see, had totally alienated him from the family of Farnese. Octavio's remonstrance and petition met, of consequence, with a cold reception; and he, despairing of any assistance from Julius, began to look round for protection from some other quarter. Henry II. of France was the only prince powerful enough to afford him this protection, and fortunately he was now in a situation which allowed him to grant it. He had brought his transactions with the two British kingdoms, which had hitherto diverted his attention from the affairs of the continent, to such an issue as he desired. This he had effected partly by the vigour of his arms, partly by his dexterity in taking advantage of the political factions which raged in both kingdoms to such a degree, as rendered the councils of the Scots violent and precipitate, and the operations of the English feeble and unsteady. He had procured from the English favourable conditions of peace for his allies the Scots; he had prevailed on the nobles of Scotland not only to affiance their young queen to his son the dauphin, but even to send her into France, that she might be educated under his eye; and had recovered Boulogne, together with its dependences, which had been conquered by Henry VIII.

His league with Henry II.;

The French king having gained points of so much consequence to his crown, and disengaged himself with such honour from the burden of supporting the Scots and maintaining a war against England, was now at full leisure to pursue the measures which his hereditary jealousy of the emperor's power naturally suggested. He listened, accordingly, to the first overtures which Octavio Farnese made him; and embracing eagerly an opportunity of recovering footing in Italy, he instantly concluded a treaty in which he bound himself to espouse his cause, and to furnish him all the assistance which he desired. This transaction could not long be kept secret from the pope, who, foreseeing the calamities which must follow if war were rekindled so near the ecclesiastical state, immediately issued monitory letters, requiring Octavio to relinquish his new alliance. Upon his refusal to comply with the requisition, he soon after pronounced his fief to be forfeited, and declared war against him as a disobedient and rebellious vassal. But as with his own forces alone he could not hope to subdue Octavio while supported by such a powerful ally as the king of France, he had recourse to the emperor, who being extremely solicitous to prevent the establishment of the French in Parma, ordered Gonzaga to second Julius with all his troops. Thus the French took the field as the allies of Octavio; the imperialists as the protectors of the holy see; and hostilities commenced between them, while Charles and Henry themselves still affected to give out that they would adhere inviolably to the peace of Crespy. The war of Parma was not distinguished by any memorable event. Many small rencounters happened with alternate success; the French ravaged part of the ecclesiastical territories; the imperialists laid waste the Parmesan; and the latter, after having begun to besiege Parma in form, were obliged to abandon the enterprise with disgrace.[n]

occasions the renewal of hostilities between Charles and Henry;

But the motions and alarm which this war or the preparations for it occasioned in Italy, prevented most of the Italian prelates from repairing to Trent on the first of May, the day appointed for re-assembling the council; and though the papal legate and nuncios resorted thither, they were obliged to adjourn the council to the first of September, hoping such a number of prelates might then assemble, that they might with decency begin their deliberations. At that time about sixty prelates, mostly from the ecclesiastical state or from Spain, together with a few Germans, convened.[o] The session was opened with the accustomed formalities, and the fathers were about to proceed to business, when the abbot of Bellozane appeared, and presenting letters of credence as ambassador from the king of France, demanded audience. Having obtained it, he protested, in Henry's name, against an assembly called at such an improper juncture, when a war wantonly kindled by the pope made it impossible for the deputies from the Gallican church to resort to Trent in safety, or to deliberate concerning articles of faith and discipline with the requisite tranquillity; he declared that his master did not acknowledge this to be a general or œcumenic council, but must consider and

retards the meeting of the council.

Henry protests against the council.

n Adriani Istor. lib. viii. 505, 514, 524. Sleid. 513. Paruta, p. 220. Lettere del Caro scritte al nome del Card. Farnese, tom. ii. p. 11, &c.

o F. Paul, 258.

would treat it as a particular and partial convention.[p] The legate affected to despise this protest; and the prelates proceeded, notwithstanding, to examine and decide the great points in controversy, concerning the sacrament of the Lord's supper, penance, and extreme unction. This measure of the French monarch, however, gave a deep wound to the credit of the council at the very commencement of its deliberations. The Germans could not pay much regard to an assembly the authority of which the second prince in Christendom had formally disclaimed, or feel any great reverence for the decisions of a few men who arrogated to themselves all the rights belonging to the representatives of the church universal, a title to which they had such poor pretensions.

Violence of the emperor's proceedings against the protestants.

The emperor, nevertheless, was straining his authority to the utmost in order to establish the reputation and jurisdiction of the council. He had prevailed on the three ecclesiastical electors, the prelates of greatest power and dignity in the church next to the pope, to repair thither in person. He had obliged several German bishops of inferior rank to go to Trent themselves, or to send their proxies. He granted an imperial safe-conduct to the ambassadors nominated by the elector of Brandenburg, the duke of Wurtemburg, and other protestants, to attend the council; and exhorted them to send their divines thither, in order to propound, explain, and defend their doctrine. At the same time his zeal anticipated the decrees of the council; and as if the opinions of the protestants had already been condemned, he took large steps towards exterminating them. With this intention he called together the ministers of Augsburg; and after interrogating them concerning several controverted points, enjoined them to teach nothing, with respect to these, contrary to the tenets of the Romish church. Upon their declining to comply with a requisition so contrary to the dictates of their consciences, he commanded them to leave the town in three days, without revealing to any person the cause of their banishment; he prohibited them to preach for the future in any province of the empire; and obliged them to take an oath that they would punctually obey these injunctions. They were not the only victims to his zeal. The protestant clergy in most of the cities in the circle of Suabia were ejected with the same violence; and in many places, such magistrates as had distinguished themselves by their attachment to the new opinions were dismissed with the most abrupt irregularity, and their offices filled, in consequence of the emperor's arbitrary appointment, with the most bigoted of their adversaries. The reformed worship was almost entirely suppressed throughout that extensive province. The ancient and fundamental privileges of the free cities were violated. The people were compelled to attend the ministration of priests whom they regarded with horror as idolaters, and to submit to the jurisdiction of magistrates whom they detested as usurpers.[q]

His endeavours to support the council.

The emperor, after this discovery, which was more explicit than any that he had hitherto made, of his intention to subvert the German constitution, as well as to extirpate the protestant religion, set out for Inspruck in the Tyrol. He fixed his residence in that city, as, by his situation in the neighbourhood of Trent and on the confines of Italy, it appeared a commodious station whence he might inspect the operations of the council and observe the progress of the war in the Parmesan, without losing sight of such occurrences as might happen in Germany.[r]

November.

The siege of Magdeburg.

During these transactions the siege of Magdeburg was carried on with various success. At the time when Charles proscribed the citizens of Magdeburg, and put them under the ban of the empire, he had exhorted and even enjoined all the neighbouring states to take arms against them as rebels and common enemies. Encouraged by his exhortations as well as promises, George of Mecklenburg, a younger brother of the reigning duke, an active and ambitious prince, collected a considerable number of those soldiers of fortune who had accompanied Henry of Brunswick in all his wild enterprises; and though a zealous Lutheran himself, invaded the territories of the Magdeburgers, hoping that by the merit of this service he might procure some part of their domains to be allotted to him as an establishment. The citizens, unaccustomed as yet to endure patiently the calamities of war, could not be restrained from sallying out in order to save their lands from being laid waste. They attacked the duke of Mecklenburg with more resolution than conduct, and were repulsed with great slaughter. But as they were animated with that unconquerable spirit which flows from zeal for religion co-operating with the love of civil liberty, far from being disheartened by their misfortune, they prepared to defend themselves with vigour. Many of the veteran soldiers who had served in the long wars between the emperor and king of France, crowding to their standards under able and experienced officers, the citizens acquired military skill by degrees, and added all the advantages of that to the efforts of undaunted courage. The duke of Mecklenburg, notwithstanding the severe blow which he had given the Magdeburgers, not daring to invest a town strongly fortified, and defended by such a garrison, continued to ravage the open country.

Maurice takes the command of the army which carried on the siege.

As the hopes of booty drew many adventurers to the camp of this young prince, Maurice of Saxony began to be jealous of the power which he possessed by being at the head of such a numerous body, and marching towards Magdeburg with his own troops, assumed the supreme command of the whole army, an honour to which his high rank and

p Sleid. 518. Thuan. 282. F. Paul, 301.

q Sleid. 516, 528. Thuan. 276.

r Sleid. 329.

great abilities, as well as the nomination of the diet, gave him an indisputable title. With this united force he invested the town, and began the siege in form; claiming great merit with the emperor on that account, as, from his zeal to execute the imperial decree, he was exposing himself once more to the censures and maledictions of the party with which he agreed in religious sentiments. But the approaches to the town went on slowly; the garrison interrupted the besiegers by frequent sallies, in one of which George of Mecklenburg was taken prisoner, levelled part of their works, and cut off the soldiers in their advanced posts. While the citizens of Magdeburg, animated by the discourses of their pastors, and the soldiers, encouraged by the example of their officers, endured all the hardships of a siege without murmuring, and defended themselves with the same ardour which they had at first discovered, —the troops of the besiegers acted with extreme remissness, repining at every thing that they suffered in a service which they disliked. They broke out more than once into open mutiny, demanding the arrears of their pay, which, as the members of the Germanic body sent in their contributions towards defraying the expenses of the war sparingly and with great reluctance, amounted to a considerable sum.[s] Maurice, too, had particular motives, though such as he durst not avow at that juncture, which induced him not to push the siege with vigour, and made him choose rather to continue at the head of an army exposed to all the imputations which his dilatory proceedings drew upon him than to precipitate a conquest that might have brought him some accession of reputation, but would have rendered it necessary to disband his forces.

The city surrenders to Maurice.

At last the inhabitants of the town beginning to suffer distress from want of provisions, and Maurice finding it impossible to protract matters any longer without filling the emperor with such suspicions as might have disconcerted all his measures, he concluded a treaty of capitulation with the city upon the following conditions:—That the Magdeburgers should humbly implore pardon of the emperor; that they should not for the future take arms or enter into any alliance against the house of Austria; that they should submit to the authority of the imperial chamber; that they should conform to the decree of the diet at Augsburg with respect to religion; that the new fortifications added to the town should be demolished; that they should pay a fine of fifty thousand crowns, deliver up twelve pieces of ordnance to the emperor, and set the duke of Mecklenburg, together with their other prisoners, at liberty without ransom. Next day their garrison marched out, and Maurice took possession of the town with great military pomp.

Nov. 3.

Maurice's views at this juncture.

Before the terms of capitulation were settled, Maurice had held many conferences with Albert, count Mansfeldt, who had the chief command in Magdeburg. He consulted likewise with count Heideck, an officer who had served with great reputation in the army of the league of Smalkalde, whom the emperor had proscribed on account of his zeal for that cause, but whom Maurice had, notwithstanding, secretly engaged in his service, and admitted into the most intimate confidence. To them he communicated a scheme which he had long revolved in his mind, for procuring liberty to his father-in-law, the landgrave, for vindicating the privileges of the Germanic body, and setting bounds to the dangerous encroachments of the imperial power. Having deliberated with them concerning the measures which might be necessary for securing the success of such an arduous enterprise, he gave Mansfeldt secret assurances that the fortifications of Magdeburg should not be destroyed, and that the inhabitants should neither be disturbed in the exercise of their religion nor be deprived of any of their ancient immunities. In order to engage Maurice more thoroughly from considerations of interest to fulfil these engagements, the senate of Magdeburg elected him their Burgrave, a dignity which had formerly belonged to the electoral house of Saxony, and which entitled him to a very ample jurisdiction not only in the city but in its dependences.[t]

The advantages he derived from his negociations with the Magdeburgers.

Thus the citizens of Magdeburg, after enduring a siege of twelve months, and struggling for their liberties, religious and civil, with an invincible fortitude worthy of the cause in which it was exerted, had at last the good fortune to conclude a treaty which left them in a better condition than the rest of their countrymen, whom their timidity or want of public spirit had betrayed into such mean submissions to the emperor. But while a great part of Germany applauded the gallant conduct of the Magdeburgers, and rejoiced in their having escaped the destruction with which they had been threatened, all admired Maurice's address in the conduct of his negociation with them, as well as the dexterity with which he converted every event to his own advantage. They saw with amazement, that after having afflicted the Magdeburgers during many months with all the calamities of war, he was at last, by their voluntary election, advanced to the station of highest authority in that city which he had so lately besieged; that after having been so long the object of their satirical invective as an apostate and an enemy to the religion which he professed, they seemed now to place unbounded confidence in his zeal and good-will.[u] At the same time the public articles in the treaty of capitulation were so perfectly conformable to those which the emperor had granted to the other protestant cities, and Maurice took such care to magnify his merit in having reduced a place which had defended itself with so

s Thuan. 277. Sleid. 514.

u Arnoldi Vita Maurit. apud Menken, ii. 1227.

much obstinacy, that Charles, far from suspecting any thing fraudulent or collusive in the terms of accommodation, ratified them without hesitation, and absolved the Magdeburgers from the sentence of ban which had been denounced against them.

His expedient for keeping an army on foot.

The only point that now remained to embarrass Maurice was how to keep together the veteran troops which had served under him, as well as those which had been employed in the defence of the town. For this, too, he found an expedient with singular art and felicity. His schemes against the emperor were not yet so fully ripened that he durst venture to disclose them, and proceed openly to carry them into execution. The winter was approaching, which made it impossible to take the field immediately. He was afraid that it would give a premature alarm to the emperor if he should retain such a considerable body in his pay until the season of action returned in the spring. As soon, then, as Magdeburg opened its gates, he sent home his Saxon subjects, whom he could command to take arms and re-assemble on the shortest warning; and at the same time paying part of the arrears due to the mercenary troops who had followed his standard, as well as to the soldiers who had served in the garrison, he absolved them from their respective oaths of fidelity, and disbanded them. But the moment he gave them their discharge, George of Mecklenburg, who was now set at liberty, offered to take them into his service, and to become surety for the payment of what was still owing to them. As such adventurers were accustomed often to change masters, they instantly accepted the offer. Thus these troops were kept united, and ready to march wherever Maurice should call them, while the emperor, deceived by this artifice, and imagining that George of Mecklenburg had hired them with an intention to assert his claim to a part of his brother's territories by force of arms, suffered this transaction to pass without observation, as if it had been a matter of no consequence.[x]

His address in concealing his intentions from the emperor.

Having ventured to take these steps, which were of so much consequence towards the execution of his schemes, Maurice, that he might divert the emperor from observing their tendency too narrowly, and prevent the suspicions which that must have excited, saw the necessity of employing some new artifice in order to engage his attention and to confirm him in his present security. As he knew that the chief object of the emperor's solicitude at this juncture, was how he might prevail with the protestant states of Germany to recognise the authority of the council of Trent, and to send thither ambassadors in their own name, as well as deputies from their respective churches, he took hold of this predominating passion in order to amuse and to deceive him. He affected a wonderful zeal to gratify Charles in what he desired with regard to this matter; he nominated ambassadors whom he empowered to attend the council; he made choice of Melancthon and some of the most eminent among his brethren to prepare a confession of faith, and to lay it before that assembly. After his example, and probably in consequence of his solicitations, the duke of Wurtemburg, the city of Strasburg, and other protestant states, appointed ambassadors and divines to attend the council. They all applied to the emperor for his safe-conduct, which they obtained in the most ample form. This was deemed sufficient for the security of the ambassadors, and they proceeded accordingly on their journey: but a separate safe-conduct from the council itself was demanded for the protestant divines. The fate of John Huss and Jerome of Prague, whom the council of Constance, in the preceding century, had condemned to the flames without regarding the imperial safe-conduct which had been granted them, rendered this precaution prudent and necessary. But as the pope was no less unwilling that the protestants should be admitted to a hearing in the council than the emperor had been eager in bringing them to demand it, the legate, by promises and threats, prevailed on the fathers of the council to decline issuing a safe-conduct in the same form with that which the council of Basil had granted to the followers of Huss. The protestants, on their part, insisted upon the council's copying the precise words of that instrument. The imperial ambassadors interposed, in order to obtain what would satisfy them. Alterations in the form of the writ were proposed; expedients were suggested; protests and counter-protests were taken: the legate, together with his associates, laboured to gain their point by artifice and chicane; the protestants adhered to theirs with firmness and obstinacy. An account of every thing that passed in Trent was transmitted to the emperor at Inspruck, who attempting, from an excess of zeal or of confidence in his own address, to reconcile the contending parties, was involved in a labyrinth of inextricable negociations. By means of this, however, Maurice gained all that he had in view; the emperor's time was wholly engrossed and his attention diverted; while he himself had leisure to mature his schemes, to carry on his intrigues, and to finish his preparations, before he threw off the mask, and struck the blow which he had so long meditated.[y]

The affairs of Hungary.

But previous to entering into any further detail concerning Maurice's operations, some account must be given of a new revolution in Hungary, which contributed not a little towards their producing such extraordinary effects. When Solyman, in the year 1541, by a stratagem which suited the base and insidious policy of a petty usurper rather than the magnanimity of a mighty conqueror, deprived the young king of Hungary of the dominions which his father had left him, he had granted that unfortunate prince the country

x Thuan. 278. Struv. Corp. Hist. Germ. 1061. Arnoldi vita Mauritii, apud Menken, ii. 1227.

y Sleid. 526, 529. F. Paul, 323, 338. Thuan. 286.

of Transylvania, a province of his paternal kingdom. The government of this, together with the care of educating the young king, for he still allowed him to retain that empty title, though he had rendered it only an empty name, he committed to the queen and Martinuzzi, bishop of Waradin, whom the late king had appointed joint guardians of his son and regents of his dominions, at a time when those offices were of greater importance. This co-ordinate jurisdiction occasioned the same dissensions in a small principality as it would have excited in a great kingdom; an ambitious young queen, possessed with a high opinion of her own capacity for governing, and a high-spirited prelate, fond of power, contending who should engross the greatest share in the administration. Each had their partisans among the nobles; but as Martinuzzi, by his great talents, began to acquire the ascendant, Isabella turned his own arts against him, and courted the protection of the Turks.

Martinuzzi favours Ferdinand's pretensions in that kingdom.

The neighbouring bashaws, jealous of the bishop's power as well as abilities, readily promised her the aid which she demanded, and would soon have obliged Martinuzzi to have given up to her the sole direction of affairs, if his ambition, fertile in expedients, had not suggested to him a new measure, and one that tended not only to preserve but to enlarge his authority. Having concluded an agreement with the queen by the mediation of some of the nobles, who were solicitous to save their country from the calamities of a civil war, he secretly despatched one of his confidants to Vienna, and entered into a negociation with Ferdinand. As it was no difficult matter to persuade Ferdinand that the same man whose enmity and intrigues had driven him out of a great part of his Hungarian dominions, might, upon a reconciliation, become equally instrumental in recovering them, he listened eagerly to the first overtures of an union with that prelate. Martinuzzi allured him by such prospects of advantage, and engaged with so much confidence that he would prevail on the most powerful of the Hungarian nobles to take arms in his favour, that Ferdinand, notwithstanding his truce with Solyman, agreed to invade Transylvania. The command of the troops destined for that service, consisting of veteran Spanish and German soldiers, was given to Castaldo, marquis de Piadena, an officer formed by the famous marquis de Pescara, whom he strongly resembled, both in his enterprising genius for civil business and in his great knowledge in the art of war. This army, more formidable by the discipline of the soldiers and the abilities of the general than by its numbers, was powerfully seconded by Martinuzzi and his faction among the Hungarians. As the Turkish bashaws, the sultan himself being at the head of his army on the frontiers of Persia, could not afford the queen such immediate or effectual assistance as the exigency of her affairs required, she quickly lost all hopes of being able to retain any longer the authority which she possessed as regent, and even began to despair of her son's safety.

The success of his measures.

Martinuzzi did not suffer this favourable opportunity of accomplishing his own designs to pass unimproved; and ventured, while she was in this state of dejection, to lay before her a proposal which at any other time she would have rejected with disdain. He represented how impossible it was for her to resist Ferdinand's victorious arms; that even if the Turks should enable her to make head against them, she would be far from changing her condition for the better, and could not consider them as deliverers, but as masters to whose commands she must submit; he conjured her, therefore, as she regarded her own dignity, the safety of her son, or the security of Christendom, rather to give up Transylvania to Ferdinand, and to make over to him her son's title to the crown of Hungary, than to allow both to be usurped by the inveterate enemy of the christian faith. At the same time he promised her, in Ferdinand's name, a compensation for herself as well as for her son, suitable to their rank, and proportional to the value of what they were to sacrifice. Isabella, deserted by some of her adherents, distrusting others, destitute of friends, and surrounded by Castaldo's and Martinuzzi's troops, subscribed these hard conditions, though with a reluctant hand. Upon this she surrendered such places of strength as were still in her possession; she gave up all the ensigns of royalty, particularly a crown of gold which, as the Hungarians believed, had descended from heaven, and conferred on him who wore it an undoubted right to the throne. As she could not bear to remain a private person in a country where she had once enjoyed sovereign power, she instantly set out with her son for Silesia, in order to take possession of the principalities of Oppelen and Ratibor, the investiture of which Ferdinand had engaged to grant her son, and likewise to bestow one of his daughters upon him in marriage.

Appointed governor of that part of Hungary which was subject to Ferdinand.

Upon the resignation of the young king, Martinuzzi, and after his example the rest of the Transylvanian grandees, swore allegiance to Ferdinand, who, in order to testify his grateful sense of the zeal as well success with which that prelate had served him, affected to distinguish him by every possible mark of favour and confidence. He appointed him governor of Transylvania with almost unlimited authority; he publicly ordered Castaldo to pay the greatest deference to his opinion and commands; he increased his revenues, which were already very great, by new appointments; he nominated him archbishop of Gran, and prevailed on the pope to raise him to the dignity of a cardinal. All this ostentation of good-will, however, was void of sincerity, and calculated to conceal sentiments the most perfectly its reverse. Ferdinand dreaded Martinuzzi's abilities; distrusted his fidelity; and foresaw that as his extensive authority enabled him

to check any attempt towards circumscribing or abolishing the extensive privileges which the Hungarian nobility possessed, he would stand forth on every occasion the guardian of the liberties of his country, rather than act the part of a viceroy devoted to the will of his sovereign.

Ferdinand begins to form designs against him.

For this reason he secretly gave it in charge to Castaldo to watch his motions, to guard against his designs, and to thwart his measures. But Martinuzzi, either because he did not perceive that Castaldo was placed as a spy on his actions, or because he despised Ferdinand's insidious arts, assumed the direction of the war against the Turks with his usual tone of authority, and conducted it with great magnanimity and no less success. He recovered some places of which the infidels had taken possession; he rendered their attempts to reduce others abortive; and established Ferdinand's authority not only in Transylvania, but in the Bannat of Temeswar and several of the countries adjacent. In carrying on these operations he often differed in sentiments from Castaldo and his officers, and treated the Turkish prisoners with a degree not only of humanity but even of generosity, which Castaldo loudly condemned. This was represented at Vienna as an artful method of courting the friendship of the infidels, that, by securing their protection, he might shake off all dependence upon the sovereign whom he now acknowledged. Though Martinuzzi, in justification of his own conduct, contended that it was impolitic by unnecessary severities to exasperate an enemy prone to revenge, Castaldo's accusations gained credit with Ferdinand, prepossessed already against Martinuzzi, and jealous of every thing that could endanger his own authority in Hungary, in proportion as he knew it to be precarious and ill-established. These suspicions Castaldo confirmed and strengthened by the intelligence which he transmitted continually to his confidants at Vienna. By misrepresenting what was innocent, and putting the worst construction on what seemed dubious in Martinuzzi's conduct; by imputing to him designs which he never formed, and charging him with actions of which he was not guilty,—he at last convinced Ferdinand, that in order to preserve his Hungarian crown, he must cut off that ambitious prelate. But Ferdinand, foreseeing that it would be dangerous to proceed in the regular course of law against a subject of such exorbitant power as might enable him to set his sovereign at defiance, determined to employ violence in order to obtain that satisfaction which the laws were too feeble to afford him.

He is assassinated by his command.

He issued his orders accordingly to Castaldo, who willingly undertook that infamous service. Having communicated the design to some Italian and Spanish officers whom he could trust, and concerted with them the plan of executing it, they entered Martinuzzi's apartment early one morning, Dec. 18. under pretence of presenting to him some despatches which were to be sent off immediately to Vienna; and while he perused a paper with attention, one of their number struck him with his poniard in the throat. The blow was not mortal. Martinuzzi started up with the intrepidity natural to him, and grappling the assassin, threw him to the ground. But the other conspirators rushing in, an old man unarmed and alone was unable long to sustain such an unequal conflict, and sunk under the wounds which he received from so many hands. The Transylvanians were restrained by dread of the foreign troops stationed in their country, from rising in arms in order to take vengeance on the murderers of a prelate who had long been the object of their love as well as veneration. They spoke of the deed, however, with horror and execration; and exclaimed against Ferdinand, whom neither gratitude for recent and important services, nor reverence for a character considered as sacred and inviolable among christians, could restrain from shedding the blood of a man whose only crime was attachment to his native country. The nobles, detesting the jealous as well as cruel policy of a court which, upon uncertain and improbable surmises, had given up a person no less conspicuous for his merit than his rank to be butchered by assassins, either retired to their own estates, or if they continued with the Austrian army, grew cold to the service. The Turks, encouraged by the death of an enemy whose abilities they knew and dreaded, prepared to renew hostilities early in the spring; and instead of the security which Ferdinand had expected from the removal of Martinuzzi, it was evident that his territories in Hungary were about to be attacked with greater vigour and defended with less zeal than ever.[z]

The effect of that violent action.

Maurice courts the protection of the French king.

By this time Maurice, having almost finished his intrigues and preparations, was on the point of declaring his intentions openly, and of taking the field against the emperors. His first care, after he came to this resolution, was to disclaim that narrow and bigoted maxim of the confederates of Smalkalde, which had led them to shun all connexion with foreigners. He had observed how fatal this had been to their cause; and instructed by their error, he was as eager to court the protection of Henry II. as they had been solicitous to prevent the interposition of Francis I. Happily for him, he found Henry in a disposition to listen to the first overture on his part, and in a situation which enabled him to bring the whole force of the French monarchy into action. Henry had long observed the progress of the emperor's arms with jealousy, and wished to distinguish himself by entering the lists against the same

z Sleid. 535. Thuan. lib. ix. 309, &c. Istuanhaffii Hist. Regn. Hungarici, lib. xvi. 189, &c. Mem. de Ribier, ii. 871. Natalis Comitis Historia, ib. iv. 84, &c.

enemy whom it had been the glory of his father's reign to oppose. He had laid hold on the first opportunity in his power of thwarting the emperor's designs, by taking the duke of Parma under his protection; and hostilities were already begun, not only in that duchy but in Piedmont. Having terminated the war with England by a peace no less advantageous to himself than honourable for his allies the Scots, the restless and enterprising courage of his nobles was impatient to display itself on some theatre of action more conspicuous than the petty operations in Parma or Piedmont afforded them.

His treaty with him.

John de Fienne, bishop of Bayonne, whom Henry had sent into Germany under pretence of hiring troops to be employed in Italy, was empowered to conclude a treaty in form with Maurice and his associates. As it would have been very indecent in a king of France to have undertaken the defence of the protestant church, the interests of religion, how much soever they might be affected by the treaty, were not once mentioned in any of the articles. Religious concerns they pretended to commit to the disposition of Divine Providence; the only motives assigned for their present confederacy against Charles were to procure the landgrave liberty, and to prevent the subversion of the ancient constitution and laws of the German empire. In order to accomplish these ends, it was agreed that all the contracting parties should at the same time declare war against the emperor; that neither peace nor truce should be made but by common consent, nor without including each of the confederates; that in order to guard against the inconveniences of anarchy or of pretensions to joint command, Maurice should be acknowledged as head of the German confederates, with absolute authority in all military affairs; that Maurice and his associates should bring into the field seven thousand horse, with a proportional number of infantry; that towards the subsistence of this army, during the first three months of the war, Henry should contribute two hundred and forty thousand crowns, and afterwards sixty thousand crowns a month, as long as they continued in arms; that Henry should attack the emperor on the side of Lorrain with a powerful army; that if it were found requisite to elect a new emperor, such a person should be nominated as shall be agreeable to the king of France.[a] This treaty was concluded on the fifth of October, some time before Magdeburg surrendered, and the preparatory negociations were conducted with such profound secrecy, that of all the princes who afterwards aceeded to it, Maurice communicated what he was carrying on to two only, John Albert, the reigning duke of Mecklenburg, and William of Hesse, the landgrave's eldest son. The league itself was no less anxiously concealed, and with such fortunate care, that no rumour concerning it reached the ears of the emperor or his ministers, nor do they seem to have conceived the most distant suspicion of such a transaction.

Solicits the aid of Edward VI. of England.

At the same time, with a solicitude which was careful to draw some accession of strength from every quarter, Maurice applied to Edward VI. of England, and requested a subsidy of four hundred thousand crowns for the support of a confederacy formed in defence of the protestant religion. But the factions which prevailed in the English court during the minority of that prince, and which deprived both the councils and arms of the nation of their wonted vigour, left the English ministers neither time nor inclination to attend to foreign affairs, and prevented Maurice's obtaining that aid which their zeal for the Reformation would have prompted them to grant him.[b]

Demands once more that the landgrave should be set at liberty.

Maurice, however, having secured the protection of such a powerful monarch as Henry II., proceeded with great confidence, but with equal caution, to execute his plan. As he judged it necessary to make one effort more in order to obtain the emperor's consent that the landgrave should be set at liberty, he sent a solemn embassy in his own name and in that of the elector of Brandenburg, to Inspruck. After resuming at great length all the facts and arguments upon which they founded their claim, and representing in the strongest terms the peculiar engagements which bound them to be so assiduous in their solicitations, they renewed the request in behalf of the unfortunate prisoner, which they had so often preferred in vain. The elector palatine, the duke of Wurtemburg, the dukes of Mecklenburg, the duke of Deuxponts, the marquis of Brandenburg-Bareith, and the marquis of Baden, by their ambassadors, concurred with them in their suit. Letters were likewise delivered to the same effect from the king of Denmark, the duke of Bavaria, and the dukes of Lunenburg. Even the king of the Romans joined in this application, being moved with compassion towards the landgrave in his wretched situation, or influenced, perhaps, by a secret jealousy of his brother's power and designs, which, since his attempt to alter the order of succession in the empire, he had come to view with other eyes than formerly, and dreaded to a great degree.

December.

But Charles, constant to his own system with regard to the landgrave, eluded a demand urged by such powerful intercessors; and having declared that he would communicate his resolution concerning the matter to Maurice as soon as he arrived at Inspruck, where he was every day expected, he did not deign to descend into any more particular explication of his intentions.[c] This application, though of no benefit to the landgrave, was of great advantage to Maurice. It served to justify his subse-

a Recueil des Traitez, tom. ii. 258. Thuan. lib. viii. 279.
b Burnet's Hist. of the Reform. vol. ii. Append. 37.
c Sleid. 531. Thuan. lib. viii. 280.

quent proeeedings, and to demonstrate the necessity of employing arms in order to extort that equitable concession which his mediation or entreaty could not obtain. It was of use, too, to confirm the emperor in his security, as both the solemnity of the application, and the solicitude with which so many princes were drawn in to enforce it, led him to conclude that they placed all their hopes of restoring the landgrave to liberty in gaining his eonsent to dismiss him.

1552. Maurice continues to amuse the emperor.

Maurice employed artifices still more refined to conceal his machinations, to amuse the emperor, and to gain time. He affected to be more solicitous than ever to find out some expedient for removing the difficulties with regard to the safe-conduct for the protestant divines appointed to attend the council, so that they might repair thither without any apprehension of danger. His ambassadors at Trent had frequent conferences concerning this matter with the imperial ambassadors in that city, and laid open their sentiments to them with the appearanee of the most unreserved confidence. He was willing, at last, to have it believed that he thought all differenees with respect to this preliminary artiele were on the point of being adjusted; and in order to give credit to this opinion, he commanded Melancthon, together with his brethren, to set out on their journey to Trent. At the same time he held a close correspondence with the imperial eourt at Inspruck, and renewed on every occasion his professions not only of fidelity but of attachment to the emperor. He talked continually of his intention of going to Inspruck in person; he gave orders to hire a house for him in that eity, and to fit it up with the greatest despateh for his reeeption.[d]

The emperor conceives some suspicion concerning his intentions.

But profoundly skilled as Maurice was in the arts of deceit, and impenetrable as he thought the veil to be under which he eoncealed his designs, there were several things in his conduet which alarmed the emperor amidst his seeurity, and tempted him frequently to suspect that he was meditating something extraordinary. As these suspicions took their rise from circumstances ineonsiderable in themselves, or of an ambiguous as well as uncertain nature, they were more than counterbalanced by Maurice's address; and the emperor would not lightly give up his confidenee in a man whom he had onee trusted and loaded with favours. One partieular alone seemed to be of such consequenee, that he thought it neeessary to demand an explanation with regard to it. The troops which George of Mecklenburg had taken into pay after the eapitulation of Magdeburg having fixed their quarters in Thuringia, lived at discretion on the lands of the rich ecclesiastics in their neighbourhood. Their licence and rapaciousness were intolerable. Sueh as felt or dreaded their exaetions complained loudly to the emperor, and represented them as a body of men kept in readiness for some desperate enterprise. But Maurice, partly by extenuating the enormities of which they had been guilty, partly by representing the impossibility of disbanding these troops, or of keeping them to regular discipline, unless the arrears still due to them by the emperor were paid, either removed the apprehensions which this had occasioned, or, as Charles was not in a condition to satisfy the demands of these soldiers, obliged him to be silent with regard to the matter.[e]

Maurice prepares for action.

The time of action was now approaching. Maurice had privately despatched Albert of Brandenburg to Paris, in order to confirm his league with Henry, and to hasten the march of the French army. He had taken measures to bring his own subjects together on the first summons; he had provided for the security of Saxony while he should be absent with the army; and he held the troops in Thuringia, on which he chiefly depended, ready to advance on a moment's warning. All these complicated operations were carried on without being discovered by the court at Inspruck, and the emperor remained there in perfeet tranquillity, busied entirely in counteraeting the intrigues of the pope's legate at Trent, and in settling the conditions on which the protestant divines should be admitted into the council, as if there had not been any transaction of greater moment in agitation.

Circumstances which contributed to deceive the emperor;

This eredulous security in a prince who, by his sagacity in observing the conduct of all around him, was commonly led to an excess of distrust, may seem unaccountable, and has been imputed to infatuation. But besides the exquisite address with which Maurice concealed his intentions, two eircumstances contributed to the delusion. The gout had returned upon Charles, soon after his arrival at Inspruck, with an increase of violence; and his constitution being broken by such frequent attacks, he was seldom able to exert his natural vigour of mind, or to consider affairs with his usual vigilance and penetration; and Granvelle, bishop of Arras, his prime minister, though one of the most subtle statesmen of that or perhaps of any age, was on this occasion the dupe of his own craft. He entertained such a high opinion of his own abilities, and held the political talents of the Germans in such contempt, that he despised all the intimations given him concerning Maurice's secret machinations or the dangerous designs which he was carrying on. When the duke of Alva, whose dark suspicious mind harboured many doubts eoneerning the elector's sineerity, proposed calling him immediately to court to answer for his conduct, Granvelle replied with great scorn, That these apprehensions were groundless, and that a drunken German head was too gross to form any scheme which he could not easily penetrate and baffle. Nor did he assume this peremptory tone

and his ministers.

d Arnoldi Vita Maurit. ap. Menken. ii. 1229.

e Sleid. 549. Thuan. 339.

merely from confidence in his own discernment; he had bribed two of Maurice's ministers, and received from them frequent and minute information concerning all their master's motions. But through this very channel, by which he expected to gain access to all Maurice's counsels, and even to his thoughts, such intelligence was conveyed to him as completed his deception. Maurice fortunately discovered the correspondence of the two traitors with Granvelle; but instead of punishing them for their crime, he dexterously availed himself of their fraud, and turned his own arts against the bishop. He affected to treat these ministers with greater confidence than ever; he admitted them to his consultations; he seemed to lay open his heart to them; and taking care all the while to let them be acquainted with nothing but what it was his interest should be known, they transmitted to Inspruck such accounts as possessed Granvelle with a firm belief of his sincerity as well as good intentions.[f] The emperor himself, in the fullness of security, was so little moved by a memorial in the name of the ecclesiastical electors, admonishing him to be on his guard against Maurice, that he made light of this intelligence; and his answer to them abounds with declarations of his entire and confident reliance on the fidelity as well as attachment of that prince.[g]

Maurice takes the field against the emperor.

At last Maurice's preparations were completed, and he had the satisfaction to find that his intrigues and designs were still unknown. But though now ready to take the field, he did not lay aside the arts which he had hitherto employed; and by one piece of craft more, he deceived his enemies a few days longer. He gave out that he was about to begin that journey to Inspruck of which he had so often talked, and he took one of the ministers whom Granvelle had bribed, to attend him thither. After travelling post a few stages, he pretended to be indisposed by the fatigue of the journey; and despatching the suspected minister to make his apology to the emperor for this delay, and to assure him that he would be at Inspruck within a few days, he mounted on horseback as soon as this spy on his actions was gone, rode full speed towards Thuringia, joined his army, which amounted to twenty thousand foot and five thousand horse, and put it immediately in motion.[h]

March 18.

Publishes a manifesto, justifying his conduct.

At the same time he published a manifesto containing his reasons for taking arms. These were three in number: That he might secure the protestant religion, which was threatened with immediate destruction; that he might maintain the constitution and laws of the empire, and save Germany from being subjected to the dominion of an absolute monarch; that he might deliver the landgrave of Hesse from the miseries of a long and unjust imprisonment. By the first he roused all the favourers of the Reformation, a party formidable by their zeal as well as numbers, and rendered desperate by oppression. By the second he interested all the friends of liberty, catholics no less than protestants, and made it their interest to unite with him in asserting the rights and privileges common to both. The third, besides the glory which he acquired by his zeal to fulfil his engagements to the unhappy prisoner, was become a cause of general concern, not only from the compassion which the landgrave's sufferings excited, but from indignation at the injustice and rigour of the emperor's proceedings against him. Together with Maurice's manifesto, another appeared in the name of Albert, marquis of Brandenburg-Culmbach, who had joined him with a body of adventurers whom he had drawn together. The same grievances which Maurice had pointed out are mentioned in it, but with an excess of virulence and animosity suitable to the character of the prince in whose name it was published.

He is powerfully supported by the French king.

The king of France added to these a manifesto in his own name; in which, after taking notice of the ancient alliance between the French and German nations, both descended from the same ancestors, and after mentioning the applications which, in consequence of this, some of the most illustrious among the German princes had made to him for his protection, he declared that he now took arms to re-establish the ancient constitution of the empire, to deliver some of its princes from captivity, and to secure the privileges and independence of all the members of the Germanic body. In this manifesto Henry assumed the extraordinary title of *Protector of the Liberties of Germany and of its captive Princes;* and there was engraved on it a cap, the ancient symbol of freedom, placed between two daggers, in order to intimate to the Germans that this blessing was to be acquired and secured by force of arms.[i]

Maurice's operations in the field.

Maurice had now to act a part entirely new, but his flexible genius was capable of accommodating itself to every situation. The moment he took arms he was as bold and enterprising in the field as he had been cautious and crafty in the cabinet. He advanced by rapid marches towards the Upper Germany. All the towns in his way opened their gates to him. He reinstated the magistrates whom the emperor had deposed, and gave possession of the churches to the protestant ministers whom he had ejected. He directed his march to Augsburg: and as the imperial garrison, which was too inconsiderable to think of defending it, retired immediately, he took possession of that great city, and made the same changes there as in the towns through which he had passed.[k]

April 1.

f Melvil's Memoirs, fol. edit. p. 12. g Sleid. 535.
h Melv. Mem. p. 13. These circumstances concerning the Saxon ministers whom Granvelle had bribed are not mentioned by the German historians; but as sir James Melvil received his information from the elector Palatine, and as they are perfectly agreeable to the rest of Maurice's conduct, they may be considered as authentic.

The emperor's astonishment and distress.

No words can express the emperor's astonishment and consternation at events so unexpected. He saw a great number of the German princes in arms against him, and the rest either ready to join them or wishing success to their enterprise. He beheld a powerful monarch united with them in close league, seconding their operations in person at the head of a formidable army, while he, through negligence and credulity, which exposed him no less to scorn than to danger, had neither made nor was in condition to make any effectual provision, either for crushing his rebellious subjects or resisting the invasion of the foreign enemy. Part of his Spanish troops had been ordered into Hungary against the Turks; the rest had marched back to Italy upon occasion of the war in the duchy of Parma. The bands of veteran Germans had been dismissed because he was not able to pay them, or had entered into Maurice's service after the siege of Magdeburg; and he remained at Inspruck with a body of soldiers hardly strong enough to guard his own person. His treasury was as much exhausted as his army was reduced. He had received no remittances for some time from the New World. He had forfeited all credit with the merchants of Genoa and Venice, who refused to lend him money, though tempted by the offer of exorbitant interest. Thus Charles, though undoubtedly the most considerable potentate in Christendom, and capable of exerting the greatest strength, (his power, notwithstanding the violent attack made upon it, being still unimpaired,) found himself in a situation which rendered him unable to make such a sudden and vigorous effort as the juncture required, and was necessary to have saved him from the present danger.

Endeavours to gain time by a negociation.

In this situation the emperor placed all his hopes on negociation, the only resource of such as are conscious of their own weakness. But thinking it inconsistent with his dignity to make the first advances to subjects who were in arms against him, he avoided that indecorum by employing the mediation of his brother Ferdinand. Maurice, confiding in his own talents to conduct any negociation in such a manner as to derive advantage from it, and hoping that, by the appearance of facility in hearkening to the first overture of accommodation, he might amuse the emperor, and tempt him to slacken the activity with which he was now preparing to defend himself, readily agreed to an interview with Ferdinand in the town of Lintz in Austria; and having left his army to proceed on its march under the command of the duke of Mecklenburg, he repaired thither.

Progress of the French army.

Meanwhile the king of France punctually fulfilled his engagements to his allies. He took the field early, with a numerous and well appointed army; and marching directly into Lorrain, Toul and Verdun opened their gates at his approach. His forces appeared next before Metz, and that city, by a fraudulent stratagem of the constable Montmorency, who having obtained permission to pass through it with a small guard, introduced as many troops as were sufficient to overpower the garrison, was likewise seized without bloodshed. Henry made his entry into all these towns with great pomp; he obliged the inhabitants to swear allegiance to him, and annexed those important conquests to the French monarchy. He left a strong garrison in Metz. From thence he advanced towards Alsace, in order to attempt new conquests, to which the success that had hitherto attended his arms invited him.[1]

The negociations between the emperor and Maurice of no effect.

The conference of Lintz did not produce any accommodation. Maurice when he consented to it seems to have had nothing in view but to amuse the emperor; for he made such demands both in behalf of his confederates and their ally the French king, as he knew would not be accepted by a prince too haughty to submit at once to conditions dictated by an enemy. But however firmly Maurice adhered during the negociation to the interests of his associates, or how steadily soever he kept in view the objects which had induced him to take arms, he often professed a strong inclination to terminate the differences with the emperor in an amicable manner. Encouraged by this appearance of a pacific disposition, Ferdinand proposed a second interview at Passau on the twenty-sixth of May, and that a truce should commence on that day, and continue to the tenth of June, in order to give them leisure for adjusting all the points in dispute.

Maurice advances towards Inspruck.

Upon this Maurice rejoined his army on the ninth of May, which had now advanced to Gundelfingen. He put his troops in motion next morning; and as sixteen days yet remained for action before the commencement of the truce, he resolved during that period to venture upon an enterprise, the success of which would be so decisive as to render the negociations at Passau extremely short, and entitle him to treat upon his own terms. He foresaw that the prospect of a cessation of arms, which was to take place so soon, together with the opinion of his earnestness to re-establish peace, with which he had artfully amused Ferdinand, could hardly fail of inspiring the emperor with such false hopes, that he would naturally become remiss, and relapse into some degree of that security which had already been so fatal to him. Relying on this conjecture, he marched directly at the head of his army towards Inspruck, and advanced with the most rapid motion that could be given to so great a body of troops. On the eighteenth he arrived at Fiessen, a post of great consequence, at the entrance into the Tyrolese. There he found a body of eight hundred men whom the emperor had assembled, strongly intrenched, in order to oppose his progress. He attacked them instantly with such violence and impetuosity that

1 Thuan. 349.

they abandoned their lines precipitately, and falling back on a second body posted near Ruten, communicated the panic terror with which they themselves had been seized to those troops; so that they likewise took to flight after a feeble resistance.

Takes the castle of Ehrenberg.

Elated with this success, which exceeded his most sanguine hopes, Maurice pressed forward to Ehrenberg, a castle situated on a high and steep precipice, which commanded the only pass through the mountains. As this fort had been surrendered to the protestants at the beginning of the Smalkaldic war, because the garrison was then too weak to defend it, the emperor, sensible of its importance, had taken care at this juncture to throw into it a body of troops sufficient to maintain it against the greatest army. But a shepherd, in pursuing a goat which had strayed from his flock, having discovered an unknown path by which it was possible to ascend to the top of the rock, came with this seasonable piece of intelligence to Maurice. A small band of chosen soldiers, under the command of George of Mecklenburg, was instantly ordered to follow this guide. They set out in the evening, and clambering up the rugged track with infinite fatigue as well as danger, they reached the summit unperceived, and at an hour which had been agreed on, when Maurice began the assault on the one side of the castle, they appeared on the other, ready to scale the walls, which were feeble in that place, because it had been hitherto deemed inaccessible. The garrison, struck with terror at the sight of an enemy on a quarter where they had thought themselves perfectly secure, immediately threw down their arms. Maurice, almost without bloodshed, and (which was of greater consequence to him) without loss of time, took possession of a place the reduction of which might have retarded him long, and have required the utmost efforts of his valour and skill.[m]

A mutiny of his troops retards his march.

Maurice was now only two days march from Inspruck, and without losing a moment he ordered his infantry to advance thither, having left his cavalry, which was unserviceable in that mountainous country, at Fiessen, to guard the mouth of the pass. He proposed to advance with such rapidity as to anticipate any accounts of the loss of Ehrenberg, and to surprise the emperor, together with his attendants, in an open town incapable of defence. But just as his troops began to move, a battalion of mercenaries mutinied, declaring that they would not stir until they had received the gratuity which, according to the custom of that age, they claimed as the recompence due to them for having taken a place by assault. It was with great difficulty as well as danger, and not without some considerable loss of time, that Maurice quieted this insurrection, and prevailed on the soldiers to follow him to a place where he promised them such rich booty as would be an ample reward for all their services.

m Arnoldi vita Maurit. 123.

The emperor flies in confusion from Inspruck.

To the delay occasioned by this unforeseen accident the emperor owed his safety. He was informed of the approaching danger late in the evening, and knowing that nothing could save him but a speedy flight, he instantly left Inspruck, without regarding the darkness of the night or the violence of the rain which happened to fall at that time; and notwithstanding the debility occasioned by the gout, which rendered him unable to bear any motion but that of a litter, he travelled by the light of torches, taking his way over the Alps, by roads almost impassable. His courtiers and attendants followed him with equal precipitation, some of them on such horses as they could hastily procure, many of them on foot, and all in the utmost confusion. In this miserable plight, very unlike the pomp with which Charles had appeared during the five preceding years as the conqueror of Germany, he arrived at length, with his dejected train, at Villach in Carinthia, and scarcely thought himself secure even in that remote inaccessible corner.

Maurice enters that town.

Maurice entered Inspruck a few hours after the emperor and his attendants had left it; and enraged that the prey should escape out of his hands when he was just ready to seize it, he pursued them some miles; but finding it impossible to overtake persons to whom their fear gave speed, he returned to the town and abandoned all the emperor's baggage, together with that of his ministers, to be plundered by the soldiers; while he preserved untouched every thing belonging to the king of the Romans, either because he had formed some friendly connexion with that prince, or because he wished to have it believed that such a connexion subsisted between them. As there now remained only three days to the commencement of the truce, (with such nicety had Maurice calculated his operations,) he set out for Passau, that he might meet Ferdinand on the day appointed.

The emperor sets the elector of Saxony at liberty.

Before Charles left Inspruck, he withdrew the guards placed on the degraded elector of Saxony, whom, during five years, he had carried about with him as a prisoner; and set him entirely at liberty, either with an intention to embarrass Maurice by letting loose a rival who might dispute his title to his dominions and dignity, or from a sense of the indecency of detaining him a prisoner while he himself ran the risk of being deprived of his own liberty. But that prince seeing no other way of escaping than that which the emperor took, and abhorring the thoughts of falling into the hands of a kinsman whom he justly considered as the author of all his misfortunes, chose rather to accompany Charles in his flight, and to expect the final decision of his fate from the treaty which was now approaching.

The council of Trent breaks up in great consternation.

These were not the only effects which Maurice's operations produced. It was no sooner known at Trent that he had

taken arms, than a general consternation seized the fathers of the council. The German prelates immediately returned home, that they might provide for the safety of their respective territories. The rest were extremely impatient to be gone; and the legate, who had hitherto disappointed all the endeavours of the imperial ambassadors to procure an audience in the council for the protestant divines, laid hold with joy on such a plausible pretext for dismissing an assembly which he had found it so difficult to govern. In a congregation held on the twenty-eighth of April, a decree was issued, proroguing the council during two years, and appointing it to meet at the expiration of that time, if peace were then re-established in Europe.[n] This prorogation, however, continued no less than ten years; and the proceedings of the council, when re-assembled in the year one thousand five hundred and sixty-two, fall not within the period prescribed to this history.

The effect of its decrees.

The convocation of this assembly had been passionately desired by all the states and princes in Christendom, who, from the wisdom as well as piety of prelates representing the whole body of the faithful, expected some charitable and efficacious endeavours towards composing the dissensions which unhappily had arisen in the church. But the several popes by whose authority it was called had other objects in view. They exerted all their power or policy to attain these; and by the abilities as well as address of their legates, by the ignorance of many of the prelates, and by the servility of the indigent Italian bishops, acquired such influence in the council, that they dictated all its decrees, and framed them, not with an intention to restore unity and concord to the church, but to establish their own dominion, or to confirm those tenets upon which they imagined that dominion to be founded. Doctrines which had hitherto been admitted upon the credit of tradition alone, and received with some latitude of interpretation, were defined with a scrupulous nicety, and confirmed by the sanction of authority. Rites which had formerly been observed only in deference to custom supposed to be ancient, were established by the decrees of the church, and declared to be essential parts of its worship. The breach, instead of being closed, was widened and made irreparable. In place of any attempt to reconcile the contending parties, a line was drawn with such studied accuracy as ascertained and marked out the distinction between them. This still serves to keep them at a distance; and, without some signal interposition of Divine Providence, must render the separation perpetual.

Character of the historians of this council.

Our knowledge of the proceedings of this assembly is derived from three different authors. Father Paul of Venice wrote his history of the council of Trent while the memory of what had passed there was recent, and some who had been members of it were still alive. He has exposed the intrigues and artifices by which it was conducted with a freedom and severity which have given a deep wound to the credit of the council. He has described its deliberations and explained its decrees with such perspicuity and depth of thought, with such various erudition and such force of reason, as have justly entitled his work to be placed among the most admired historical compositions. About half a century thereafter, the Jesuit Pallavicini published his history of the council in opposition to that of father Paul, and by employing all the force of an acute and refining genius to invalidate the credit or to confute the reasonings of his antagonist, he labours to prove, by artful apologies for the proceedings of the council, and subtle interpretations of its decrees, that it deliberated with impartiality, and decided with judgment as well as candour. Vargas, a Spanish doctor of laws, who was appointed to attend the imperial ambassadors at Trent, sent the bishop of Arras a regular account of the transactions there, explaining all the arts which the legate employed to influence or overawe the council. His letters have been published, in which he inveighs against the papal court with that asperity of censure which was natural to a man whose situation enabled him to observe its intrigues thoroughly, and who was obliged to exert all his attention and talents in order to disappoint them. But whichsoever of these authors an intelligent person takes for his guide in forming a judgment concerning the spirit of the council, he must discover so much ambition as well as artifice among some of the members, so much ignorance and corruption among others; he must observe such a large infusion of human policy and passions, mingled with such a scanty portion of that simplicity of heart, sanctity of manners, and love of truth, which alone qualify men to determine what doctrines are worthy of God and what worship is acceptable to him, that he will find it no easy matter to believe that any extraordinary influence of the Holy Ghost hovered over this assembly and dictated its decrees.

The French endeavour to surprise Strasburg;

While Maurice was employed in negociating with the king of the Romans at Lintz, or in making war on the emperor in the Tyrol, the French king had advanced into Alsace as far as Strasburg; and having demanded leave of the senate to march through the city, he hoped that by repeating the same fraud which he had practised at Metz, he might render himself master of the place, and by that means secure a passage over the Rhine into the heart of Germany. But the Strasburgers, instructed and put on their guard by the credulity and misfortune of their neighbours, shut their gates; and having assembled a garrison of five thousand soldiers, repaired their fortifications, rased the houses in their suburbs, and determined to defend themselves to the

[n] F. Paul, 353.

utmost. At the same time they sent a deputation of their most respectable citizens to the king, in order to divert him from making any hostile attempt upon them. The electors of Treves and Cologne, the duke of Cleves, and other princes in the neighbourhood, interposed in their behalf, beseeching Henry that he would not forget so soon the title which he had generously assumed, and instead of being the Deliverer of Germany, become its Oppressor. The Swiss cantons seconded them with zeal, soliciting Henry to spare a city which had long been connected with their community in friendship and alliance.

but without success.

Powerful as this united intercession was, it would not have prevailed on Henry to forego a prize of so much value, if he had been in a condition to have seized it. But in that age the method of subsisting numerous armies at a distance from the frontiers of their own country was imperfectly understood, and neither the revenues of princes nor their experience in the art of war were equal to the great and complicated efforts which such an undertaking required. The French, though not far removed from their own frontier, began already to suffer from scarcity of provisions, and had no sufficient magazines collected to support them during a siege which must necessarily have been of great length.[o] At the same time, the queen of Hungary, governess of the Low Countries, had assembled a considerable body of troops, which, under the command of Martin de Rossem, laid waste Champagne, and threatened the adjacent provinces of France. These concurring circumstances obliged the king, though with reluctance, to abandon the enterprise. But being willing to acquire some merit with his allies by this retreat which he could not avoid, he pretended to the Swiss that he had taken the resolution merely in compliance with their request;[p] and then, after giving orders that all the horses in his army should be led to drink in the Rhine, as a proof of his having pushed his conquest so far, he marched back towards Champagne.

The operations of Albert of Brandenburg.

While the French king and the main army of the confederates were thus employed, Albert of Brandenburg was intrusted with the command of a separate body of eight thousand men, consisting chiefly of mercenaries, who had resorted to his standard rather from the hope of plunder than the expectation of regular pay. That prince seeing himself at the head of such a number of desperate adventurers, ready to follow wherever he should lead them, soon began to disdain a state of subordination, and to form such extravagant schemes of aggrandizing himself as seldom occur, even to ambitious minds, unless when civil war or violent factions rouse them to bold exertions, by alluring them with immediate hopes of success. Full of these aspiring thoughts, Albert made war in a manner very different from the other confederates. He endeavoured to spread the terror of his arms by the rapidity of his motions as well as the extent and rigour of his devastations; he exacted contributions wherever he came, in order to amass such a sum of money as would put it in his power to keep his army together; he laboured to get possession of Nuremberg, Ulm, or some other of the free cities in Upper Germany, in which, as a capital, he might fix the seat of his power. But finding these cities on their guard, and in a condition to resist his attacks, he turned all his rage against the popish ecclesiastics, whose territories he plundered with such wanton and merciless barbarity as gave them a very unfavourable impression of the spirit of that reformation in religion with zeal for which he pretended to be animated. The bishops of Bamberg and Wurtzburg, by their situation, lay particularly exposed to his ravages; he obliged the former to transfer to him in property almost one half of his extensive diocese, and compelled the latter to advance a great sum of money in order to save his territories from ruin and desolation. During all those wild sallies Albert paid no regard either to Mauriee's orders, whose commands as generalissimo of the league he had engaged to obey, or to the remonstrances of the other confederates; and manifestly discovered that he attended only to his own private emolument, without any solicitude about the common cause or the general objects which had induced them to take arms.[q]

The negociations of peace at Passau.

Maurice having ordered his army to march back into Bavaria, and having published a proclamation enjoining the Lutheran clergy and instructors of youth to resume the exercise of their functions in all the cities, schools, and universities from which they had been ejected, met Ferdinand at Passau on the twenty-sixth day of May. As matters of the greatest consequence to the future peace and independence of the empire were to be settled in this congress, the eyes of all Germany were fixed upon it. Besides Ferdinand and the imperial ambassadors, the duke of Bavaria, the bishops of Saltzburg and Aichstadt, the ministers of all the electors, together with deputies from most of the considerable princes and free cities, resorted to Passau. Maurice in the name of his associates, and the king of the Romans as the emperor's representative, opened the negociation. The princes who were present, together with the deputies of such as were absent, acted as intercessors or mediators between them.

The terms which Maurice proposed.

Maurice, in a long discourse, explained the motives of his own conduct. After having enumerated all the unconstitutional and oppressive acts of the emperor's administration, he, agreeably to the manifesto which he had published when he took arms against him, limited his demands to three articles: That the landgrave of Hesse should be immediately set at liberty; that the grievances in the civil government

o Thuan. 351, 352. p Sleid. 557. Brantome, tom. vii. 39.

q Sleid. 561. Thuan. 357.

of the empire should be redressed; and that the protestants should be allowed the public exercise of their religion without molestation. Ferdinand and the imperial ambassadors discovering their unwillingness to gratify him with regard to all these points, the mediators wrote a joint letter to the emperor, beseeching him to deliver Germany from the calamities of a civil war, by giving such satisfaction to Maurice and his party as might induce them to lay down their arms; and at the same time they prevailed upon Maurice to grant a prolongation of the truce for a short time, during which they undertook to procure the emperor's final answer to his demands.

Powerfully supported by the princes of the empire.

This request was presented to the emperor in the name of all the princes of the empire, popish as well as protestant, in the name of such as had lent a helping hand to forward his ambitious schemes, as well as of those who had viewed the progress of his power with jealousy and dread. The uncommon and cordial unanimity with which they concurred at this juncture in enforcing Maurice's demands and in recommending peace, flowed from different causes. Such as were most attached to the Roman catholic church could not help observing that the protestant confederates were at the head of a numerous army, while the emperor was but just beginning to provide for his own defence. They foresaw that great efforts would be required of them, and would be necessary on their part, in order to cope with enemies who had been allowed to get the start so far, and to attain such formidable power. Experience had taught them that the fruit of all these efforts would be reaped by the emperor alone, and the more complete any victory proved which they should gain, the faster would they bind their own fetters, and render them the more intolerable. These reflections made them cautious how they contributed a second time, by their indiscreet zeal, to put the emperor in possession of power which would be fatal to the liberties of their country. Notwithstanding the intolerant spirit of bigotry in that age, they chose rather that the protestants should acquire that security for their religion which they demanded, than by assisting Charles to oppress them, to give such additional force to the imperial prerogative as would overturn the constitution of the empire. To all these considerations the dread of seeing Germany laid waste by a civil war added new force. Many states of the empire already felt the destructive rage of Albert's arms, others dreaded it, and all wished for an accommodation between the emperor and Maurice, which they hoped would save them from that cruel scourge.

The motives which influenced the emperor at this juncture.

Such were the reasons that induced so many princes, notwithstanding the variety of their political interests and the opposition in their religious sentiments, to unite in recommending to the emperor an accommodation with Maurice, not only as a salutary but as a necessary measure. The motives which prompted Charles to desire it were not fewer or of less weight. He was perfectly sensible of the superiority which the confederates had acquired through his own negligence; and he now felt the insufficiency of his own resources to oppose them. His Spanish subjects, disgusted at his long absence, and weary of endless wars which were of little benefit to their country, refused to furnish him any considerable supply either of men or money; and although by his address or importunity he might have hoped to draw from them at last more effectual aid, that, he knew, was too distant to be of any service in the present exigency of his affairs. His treasury was drained; his veteran forces were dispersed or disbanded, and he could not depend much either on the fidelity or courage of the new-levied soldiers whom he was collecting. There was no hope of repeating with success the same artifices which had weakened and ruined the Smalkaldic league. As the end at which he aimed was now known, he could no longer employ the specious pretexts which had formerly concealed his ambitious designs. Every prince in Germany was alarmed and on his guard; and it was vain to think of blinding them a second time to such a degree as to make one part of them instruments to enslave the other. The spirit of a confederacy whereof Maurice was the head, experience had taught him to be very different from that of the league of Smalkalde; and from what he had already felt, he had no reason to flatter himself that its councils would be as irresolute or its efforts as timid and feeble. If he should resolve on continuing the war, he might be assured that the most considerable states in Germany would take part in it against him; and a dubious neutrality was the utmost he could expect from the rest. While the confederates found full employment for his arms in one quarter, the king of France would seize the favourable opportunity, and push on his operations in another with almost certain success. That monarch had already made conquests in the empire, which Charles was no less eager to recover than impatient to be revenged on him for aiding his malcontent subjects. Though Henry had now retired from the banks of the Rhine, he had only varied the scene of hostilities, having invaded the Low Countries with all his forces. The Turks, roused by the solicitations of the French king, as well as stimulated by resentment against Ferdinand for having violated the truce in Hungary, had prepared a powerful fleet to ravage the coasts of Naples and Sicily, which he had left almost defenceless, by calling thence the greatest part of the regular troops to join the army which he was now assembling.

Ferdinand zealous to promote an accommodation.

Ferdinand, who went in person to Villach, in order to lay before the emperor the result of the conferences at Passau, had likewise reasons peculiar to himself for desiring an accommodation. These prompted him to second with the greatest earnestness the argu-

ments which the princes assembled there had employed in recommending it. He had observed, not without secret satisfaction, the fatal blow that had been given to the despotic power which his brother had usurped in the empire. He was extremely solicitous to prevent Charles from recovering his former superiority, as he foresaw that ambitious prince would immediately resume, with increased eagerness, and with a better chance of success, his favourite scheme of transmitting that power to his son, by excluding his brother from the right of succession to the imperial throne. On this account he was willing to contribute towards circumscribing the imperial authority, in order to render his own possession of it certain. Besides, Solyman, exasperated at the loss of Transylvania, and still more at the fraudulent arts by which it had been seized, had ordered into the field an army of an hundred thousand men, which having defeated a great body of Ferdinand's troops and taken several places of importance, threatened not only to complete the conquest of the province, but to drive them out of that part of Hungary which was still subject to his jurisdiction. He was unable to resist such a mighty enemy; the emperor, while engaged in a domestic war, could afford him no aid; and he could not even hope to draw from Germany the contingent, either of troops or money, usually furnished to repel the invasions of the infidels. Maurice having observed Ferdinand's perplexity with regard to this last point, had offered, if peace were re-established on a secure foundation, that he would march in person with his troops into Hungary against the Turks. Such was the effect of this well-timed proposal, that Ferdinand, destitute of every other prospect of relief, became the most zealous advocate whom the confederates could have employed to urge their claims, and there was hardly any thing that they could have demanded which he would not have chosen to grant, rather than have retarded a pacification to which he trusted as the only means of saving his Hungarian crown.

Circumstances which retard it.

When so many causes conspired in rendering an accommodation eligible, it might have been expected that it would have taken place immediately. But the inflexibility of the emperor's temper, together with his unwillingness at once to relinquish objects which he had long pursued with such earnestness and assiduity, counterbalanced, for some time, the force of all the motives which disposed him to peace, and not only put that event at a distance, but seemed to render it uncertain. When Maurice's demands, together with the letter of the mediators at Passau, were presented to him, he peremptorily refused to redress the grievances which were pointed out, nor would he agree to any stipulation for the immediate security of the protestant religion, but proposed referring both these to the determination of a future diet. On his part he required that instant reparation should be made to all who, during the present war, had suffered either by the licentiousness of the confederate troops or the exactions of their leaders.

Maurice's vigorous operations facilitate it.

Maurice, who was well acquainted with the emperor's arts, immediately concluded that he had nothing in view by these overtures but to amuse and deceive; and therefore, without listening to Ferdinand's entreaties, he left Passau abruptly, and joined his troops, which were encamped at Mergentheim, a city in Franconia, belonging to the knights of the Teutonic order, he put them in motion and renewed hostilities. As three thousand men in the emperor's pay had thrown themselves into Francfort on the Maine, and might from thence invest the neighbouring country of Hesse, he marched towards that city, and laid siege to it in form. The briskness of this enterprise, and the vigour with which Maurice carried on his approaches against the town, gave such an alarm to the emperor, as disposed him to lend a more favourable ear to Ferdinand's arguments in behalf of an accommodation. Firm and haughty as his nature was, he found it necessary to bend, and signified his willingness to make concessions on his part, if Maurice, in return, would abate somewhat of the rigour of his demands. Ferdinand, as soon as he perceived that his brother began to yield, did not desist from his importunities until he prevailed on him to declare what was the utmost that he would grant for the security of the confederates. Having gained this difficult point, he instantly despatched a messenger to Maurice's camp, and imparting to him the emperor's final resolution, conjured him not to frustrate his endeavours for the re-establishment of peace; or, by an unseasonable obstinacy on his side, to disappoint the wishes of all Germany for that salutary event.

July 17.

Maurice desirous of an accommodation.

Maurice, notwithstanding the prosperous situation of his affairs, was strongly inclined to listen to this advice. The emperor, though overreached and surprised, had now begun to assemble troops, and however slow his motions might be while the first effects of his consternation remained, he was sensible that Charles must at last act with vigour proportional to the extent of his power and territories, and lead into Germany an army formidable by its numbers, and still more by the terror of his name as well as the remembrance of his past victories. He could scarcely hope that a confederacy composed of so many members would continue to operate with union and perseverance sufficient to resist the consistent and well-directed efforts of an army at the absolute disposal of a leader accustomed to command and to conquer. He felt already, although he had not hitherto experienced the shock of any adverse event, that he himself was the head of a disjointed body. He saw from the example of Albert of Brandenburg how difficult it would be, with all his address and credit, to prevent any particular member from detaching himself from the whole, and how impossible to recall him to his pro-

per rank and subordination. This filled him with apprehensions for the common cause. Another consideration gave him no less disquiet with regard to his own particular interests. By setting at liberty the degraded elector, and by repealing the act by which that prince was deprived of his hereditary honours and dominions, the emperor had it in his power to wound him in the most tender part. The efforts of a prince beloved by his ancient subjects and revered by all the protestant party, in order to recover what had been unjustly taken from him, could hardly have failed of exciting commotions in Saxony, which would endanger all that he had acquired at the expense of so much dissimulation and artifice. It was no less in the emperor's power to render vain all the solicitations of the confederates in behalf of the landgrave. He had only to add one act of violence more to the injustice and rigour with which he had already treated him; and he had accordingly threatened the sons of that unfortunate prince, that if they persisted in their present enterprise, instead of seeing their father restored to liberty, they should hear of his having suffered the punishment which his rebellion had merited.[r]

The peace of religion concluded at Passau.

Having deliberated upon all these points with his associates, Maurice thought it more prudent to accept of the conditions offered, though less advantageous than those which he had proposed, than again to commit all to the doubtful issue of war.[s] He repaired forthwith to Passau, and signed the treaty of peace; of which the chief articles were,—That before the twelfth day of August, the confederates shall lay down their arms and disband their forces; that on or before that day the landgrave shall be set at liberty, and conveyed in safety to his castle of Rheinfels; that a diet shall be held within six months, in order to deliberate concerning the most proper and effectual method of preventing for the future all disputes and dissensions about religion; that in the mean time, neither the emperor nor any other prince shall, upon any pretext whatever, offer any injury or violence to such as adhered to the confession of Augsburg, but allow them to enjoy the free and undisturbed exercise of their religion; that in return the protestants shall not molest the catholics either in the exercise of their ecclesiastical jurisdiction or in performing their religious ceremonies; that the imperial chamber shall administer justice impartially to persons of both parties, and protestants be admitted indiscriminately with the catholics to sit as judges in that court; that if the next diet should not be able to terminate the disputes with regard to religion, the stipulations in the present treaty in behalf of the protestants shall continue for ever in full force and vigour; that none of the confederates shall be liable to any action on account of what had happened during the course of the war; that the consideration of those encroachments which had been made, as Maurice pretended, upon the constitution and liberties of the empire shall be remitted to the approaching diet; that Albert of Brandenburg shall be comprehended in the treaty, provided he shall accede to it, and disband his forces before the twelfth of August.[t]

Aug. 2.

Reflections upon this peace, and upon the conduct of Maurice.

Such was the memorable treaty of Passau, that overturned the vast fabric in erecting which Charles had employed so many years, and had exerted the utmost efforts of his power and policy; that annulled all his regulations with regard to religion, defeated all his hopes of rendering the imperial authority absolute and hereditary in his family, and established the protestant church, which had hitherto subsisted precariously in Germany, through connivance or by expedients, upon a firm and secure basis. Maurice reaped all the glory of having concerted and completed this unexpected revolution. It is a singular circumstance that the Reformation should be indebted for its security and full establishment in Germany to the same hand which had brought it to the brink of destruction, and that both events should have been accomplished by the same arts of dissimulation. The ends, however, which Maurice had in view at those different junctures, seem to have been more attended to than the means by which he attained them; and he was now as universally extolled for his zeal and public spirit as he had lately been condemned for his indifference and interested policy. It is no less worthy of observation, that the French king, a monarch zealous for the catholic faith, should employ his power in order to protect and maintain the Reformation in the empire, at the very time when he was persecuting his own protestant subjects with all the fierceness of bigotry; and that the league for this purpose, which proved so fatal to the Romish church, should be negociated and signed by a Roman catholic bishop. So wonderfully doth the wisdom of God superintend and regulate the caprice of human passions, and render them subservient towards the accomplishment of his own purposes.

Little attention paid to the French king in this treaty.

Little attention was paid to the interests of the French king during the negociations at Passau. Maurice and his associates having gained what they had in view, discovered no great solicitude about an ally whom, perhaps, they reckoned to be overpaid for the assistance which he had given them, by his acquisitions in Lorrain. A short clause which they procured to be inserted in the treaty, importing that the king of France might communicate to the confederates his particular pretensions or causes of hostility, which they would lay before the emperor, was the only sign that they gave of their remembering how much they had been indebted to him for their success. Henry experienced the same treatment which every prince who lends his aid to the authors of a civil

r Sleid. 571. s Ibid. Hist. 563, &c. Thuan. lib. x. 359, &c.

t Recueil des Traitez, ii. 261.

war may expect. As soon as the rage of faction began to subside, and any prospect of accommodation to open, his services were forgotten, and his associates made a merit with their sovereign of the ingratitude with which they abandoned their protector. But how much soever Henry might be enraged at the perfidy of his allies, or at the impatience with which they hastened to make their peace with the emperor at his expense, he was perfectly sensible that it was more his interest to keep well with the Germanic body than to resent the indignities offered him by any particular members of it. For that reason he dismissed the hostages which he had received from Maurice and his associates, and affected to talk in the same strain as formerly concerning his zeal for maintaining the ancient constitution and liberties of the empire.

BOOK XI.

Aug. 3. Maurice marches into Hungary against the Turks.

As soon as the treaty of Passau was signed, Maurice, in consequence of his engagements with Ferdinand, marched into Hungary at the head of twenty thousand men. But the great superiority of the Turkish armies, the frequent mutinies both of the Spanish and German soldiers, occasioned by their want of pay, together with the dissensions between Maurice and Castaldo, who was piqued at being obliged to resign the chief command to him, prevented his performing any thing in that country suitable to his former fame, or of great benefit to the king of the Romans.[a]

The landgrave of Hesse recovers his liberty.

When Maurice set out for Hungary, the prince of Hesse parted from him with the forces under his command, and marched back into his own country, that he might be ready to receive his father upon his return, and give up to him the reins of government, which he had held during his absence. But fortune was not yet weary of persecuting the landgrave. A battalion of mercenary troops which had been in the pay of Hesse, being seduced by Reifenberg their colonel, a soldier of fortune, ready to engage in any enterprise, secretly withdrew from the young prince as he was marching homewards, and joined Albert of Bradenburg, who still continued in arms against the emperor, refusing to be included in the treaty of Passau. Unhappily for the landgrave an account of this reached the Netherlands just as he was dismissed from the citadel of Mechlin where he had been confined, but before he had got beyond the frontiers of that country. The queen of Hungary, who governed there in her brother's name, incensed at such an open violation of the treaty to which he owed his liberty, issued orders to arrest him, and committed him again to the custody of the same Spanish captain who had guarded him for five years with the most severe vigilance. Philip beheld all the horrors of his imprisonment renewed; and his spirits subsiding in the same proportion as they had risen during the short interval in which he had enjoyed liberty, he sunk into despair, and believed himself to be doomed to perpetual captivity. But the matter being so explained to the emperor as fully satisfied him that the revolt of Reifenberg's mercenaries could be imputed neither to the landgrave nor to his son, he gave orders for his release, and Philip at last obtained the liberty for which he had so long languished.[b] But though he recovered his freedom and was reinstated in his dominions, his sufferings seem to have broken the vigour and to have extinguished the activity of his mind: from being the boldest as well as most enterprising prince in the empire, he became the most timid and cautious, and passed the remainder of his days in a pacific indolence.

Likewise the elector of Saxony.

The degraded elector of Saxony likewise procured his liberty in consequence of the treaty of Passau. The emperor having been obliged to relinquish all his schemes of extirpating the protestant religion, had no longer any motive for detaining him a prisoner; and being extremely solicitous, at that juncture, to recover the confidence and good-will of the Germans, whose assistance was essential to the success of the enterprise which he meditated against the king of France, he, among other expedients for that purpose, thought of releasing from imprisonment a prince whose merit entitled him no less to esteem than his sufferings rendered him the object of compassion. John Frederic took possession accordingly of that part of his territories which had been reserved for him when Maurice was invested with the electoral dignity. As in this situation he continued to display the same virtuous magnanimity for which he had been conspicuous in a more prosperous and splendid state, and which he had retained amidst all his sufferings, he maintained during the remainder of his life that high reputation to which he had so just a title.

The emperor resolves to make war upon France.

The loss of Metz, Toul, and Verdun, had made a deep impression on the emperor. Accustomed to terminate all his operations against France with advantage to himself, he thought that it nearly concerned his honour not to allow Henry the superiority in this war, or to suffer his own administration to be stained with the infamy of having permitted territories of such consequence to be dismembered from the empire. This was no less a point of interest than of honour. As the frontier of Champagne was more naked and lay more exposed than that of any province in France, Charles had frequently, during his wars with that kingdom, made inroads upon that quarter with great success and effect; but if Henry were allowed to retain his late conquests, France would gain such a formidable bar-

a Istuanhaffii Hist. Hungar. 228. Thuan. lib. x. 371.

b Sleid. 573. Belcarii Comment. 831.

rier on that side as to be altogether secure where formerly she had been weakest. On the other hand, the empire had now lost as much in point of security as France had acquired; and being stripped of the defence which those cities afforded it, lay open to be invaded on a quarter where all the towns having been hitherto considered as interior, and remote from any enemy, were but slightly fortified. These considerations determined Charles to attempt recovering the three towns of which Henry had made himself master; and the preparations which he had made against Maurice and his associates enabled him to carry his resolution into immediate execution.

His preparations for this purpose.

As soon, then, as the peace was concluded at Passau, he left his inglorious retreat at Villach, and advanced to Augsburg, at the head of a considerable body of Germans which he had levied, together with all the troops which he had drawn out of Italy and Spain. To these he added several battalions, which having been in the pay of the confederates, entered into his service when dismissed by them; and he prevailed likewise on some princes of the empire to join him with their vassals. In order to conceal the destination of this formidable army, and to guard against alarming the French king, so as to put him on preparing for the defence of his late conquests, he gave out that he was to march forthwith into Hungary, in order to second Maurice in his operations against the infidels. When he began to advance towards the Rhine, and could no longer employ that pretext, he tried a new artifice, and spread a report that he took this route in order to chastise Albert of Brandenburg, whose cruel exactions in that part of the empire called loudly for his interposition to check them.

The precautions of the French for the defence of Metz.

But the French having grown acquainted, at last, with arts by which they had been so often deceived, viewed all Charles's motions with distrust. Henry immediately discerned the true object of his vast preparations, and resolved to defend the important conquests which he had gained with vigour equal to that with which they were about to be attacked. As he foresaw that the whole weight of the war would be turned against Metz, by whose fate that of Toul and Verdun would be determined, he nominated Francis of Lorrain, duke of Guise, to take the command in that city during the siege, the issue of which would equally affect the honour and interest of his country. His choice could not have fallen upon any person more worthy of that trust. The duke of Guise possessed in a high degree all the talents of courage, sagacity, and presence of mind, which render men eminent in military command. He was largely endowed with that magnanimity of soul which delights in bold enterprises, and aspires to fame by splendid and extraordinary actions. He repaired with joy to the dangerous station assigned him, as to a theatre on which he might display his great qualities under the immediate eye of his countrymen, all ready to applaud him. The martial genius of the French nobility in that age, which considered it as the greatest reproach to remain inactive when there was any opportunity of signalizing their courage, prompted great numbers to follow a leader who was the darling as well as the pattern of every one that courted military fame. Several princes of the blood, many noblemen of the highest rank, and all the young officers who could obtain the king's permission, entered Metz as volunteers. By their presence they added spirit to the garrison, and enabled the duke of Guise to employ on every emergency persons eager to distinguish themselves and fit to conduct any service.

The duke of Guise appointed governor of the town.

Prepares for a vigorous defence.

But with whatever alacrity the duke of Guise undertook the defence of Metz, he found every thing upon his arrival there in such a situation as might have induced any person of less intrepid courage to despair of defending it with success. The city was of great extent, with large suburbs; the walls were in many places feeble and without ramparts; the ditch narrow; and the old towers, which projected instead of bastions, were at too great distance from each other to defend the space between them. For all these defects he endeavoured to provide the best remedy which the time would permit. He ordered the suburbs, without sparing the monasteries or churches, not even that of St. Arnulph, in which several kings of France had been buried, to be levelled with the ground; but in order to guard against the imputation of impiety, to which such a violation of so many sacred edifices as well as of the ashes of the dead might expose him, he executed this with much religious ceremony. Having ordered all the holy vestments and utensils, together with the bones of the kings and other persons deposited in these churches, to be removed, they were carried in solemn procession to a church within the walls, he himself walking before them bare-headed with a torch in his hand. He then pulled down such houses as stood near the walls, cleared and enlarged the ditch, repaired the ruinous fortifications, and erected new ones. As it was necessary that all these works should be finished with the utmost expedition, he laboured at them with his own hands: the officers and volunteers imitated his example, and the soldiers submitted with chcerfulness to the most severe and fatiguing service when they saw that their superiors did not decline to bear a part in it. At the same time he compelled all useless persons to leave the place; he filled the magazines with provisions and military stores; he burnt the mills and destroyed the corn and forage for several miles round the town. Such were his popular talents, as well as his arts of acquiring an ascendant over the minds of men, that the citizens seconded him with no less ardour than the soldiers; and every other passion being swallowed up in the zeal to repulse the enemy with

which he inspired them, they beheld the ruin of their estates, together with the havoc which he made among their public and private buildings, without any emotion of resentment.[c]

Charles advances towards Metz.

Meantime the emperor, having collected all his forces, continued his march towards Metz. As he passed through the cities on the Rhine, he saw the dismal effects of that licentious and wasteful war which Albert had carried on in these parts. Upon his approach, that prince, though at the head of twenty thousand men, withdrew into Lorrain, as if he had intended to join the French king, whose arms he had quartered with his own in all his standards and ensigns. Albert was not in a condition to cope with the imperial troops,[d] which amounted at least to sixty thousand men, forming one of the most numerous and best-appointed armies which had been brought into the field during that age, in any of the wars among christian princes.

Invests the town.

The chief command, under the emperor, was committed to the duke of Alva, assisted by the marquis de Marignano, together with the most experienced of the Italian and Spanish generals. As it was now towards the end of October, these intelligent officers represented the great danger of beginning at such an advanced season a siege which could not fail to prove very tedious. But Charles adhered to his own opinion with his usual obstinacy; and being confident that he had made such preparations and taken such precautions as would insure success, he ordered the city to be invested. As soon as the duke of Alva

Oct. 19.

appeared, a large body of the French sallied out and attacked his vanguard with great vigour, put it in confusion, and killed or took prisoners a considerable number of men. By this early specimen which they gave of the conduct of their officers as well as the valour of their troops, they showed the imperialists what an enemy they had to encounter, and how dear every advantage must cost them. The place, however, was completely invested, the trenches were opened, and the other works begun.

Both parties endeavour to gain Albert of Brandenburg.

The attention both of the besiegers and besieged was turned for some time towards Albert of Brandenburg, and they strove with emulation which should gain that prince, who still hovered in the neighbourhood, fluctuating in all the uncertainty of irresolution natural to a man who, being swayed by no principle, was allured different ways by contrary views of interest. The French tempted him with offers extremely beneficial; the imperialists scrupled at no promise which they thought might allure him. After much hesitation he was gained by the emperor, from whom he expected to receive advantages which were both more immediate and more permanent. As the French king, who began to suspect his intentions, had appointed a body of troops under the duke of Aumale, brother to the duke of Guise, to watch his motions, Albert fell upon them unexpectedly with such vigour, that he routed them entirely, killed many of the officers, wounded Aumale himself, and took him prisoner. Immediately after this victory he marched in

Nov. 4.

triumph to Metz, and joined his army to that of the emperor. Charles, in reward for this service, and the great accession of strength which he brought him, granted Albert a formal pardon of all past offences, and confirmed him in the possession of the territories which he had violently usurped during the war.[e]

The gallant behaviour of the duke of Guise and his garrison.

The duke of Guise, though deeply affected with his brother's misfortune, did not remit in any degree the vigour with which he defended the town. He harassed the besiegers by frequent sallies, in which his officers were so eager to distinguish themselves, that his authority being hardly sufficient to restrain the impetuosity of their courage, he was obliged at different times to shut the gates and to conceal the keys, in order to prevent the princes of the blood, and noblemen of the first rank, from exposing themselves to danger in every sally. He repaired in the night what the enemy's artillery had beat down during the day, or erected behind the ruined works new fortifications of almost equal strength. The imperialists, on their part, pushed on the attack with great spirit, and carried forward, at once, approaches against different parts of the town. But the art of attacking fortified places was not then arrived at that degree of perfection to which it was carried towards the close of the sixteenth century, during the long war in the Netherlands. The besiegers, after the unwearied labour of many weeks, found that they had made but little progress; and although their batteries had made breaches in different places, they saw, to their astonishment, works suddenly appear in demolishing which their fatigues and dangers would be renewed. The emperor, enraged at the obstinate resistance which his army met with, left Thionville where he had been confined by a violent fit of the gout, and though still so infirm that he was obliged to be carried in a litter, he repaired to the camp, that by his presence he might animate the soldiers,

Nov. 26.

and urge on the attack with greater spirit. Upon his arrival, new batteries were erected, and new efforts were made with redoubled ardour.

The distress of the imperial army.

But by this time winter had set in with great rigour; the camp was alternately deluged with rain or covered with snow; at the same time provisions were become extremely scarce, as a body of French cavalry which hovered in the neighbourhood often intercepted the convoys, or rendered their arrival difficult and uncertain. Diseases began to spread among the soldiers, especially among the Italians and Spaniards, unaccustomed to such inclement wea-

c Thuan. xi. 387.

d Natal. Comitis Hist. 127.

e Sleid. 575. Thuan. lib. xi. 389, 392.

ther; great numbers were disabled from serving, and many died. At length such breaches were made as seemed praeticable, and Charles resolved to hazard a general assault, in spite of all the remonstranees of his generals against the imprudence of attaeking a numerous garrison eonducted and animated by the most gallant of the French nobility, with an army weakened by diseases and disheartened with ill suceess. The duke of Guise suspecting the emperor's intentions from the extraordinary movements which he observed in the enemy's camp, ordered all his troops to their respeetive posts. They appeared immediately on the walls and behind the breaches, with such a determined countenance, so eager for the combat, and so well prepared to give the assailants a warm reception, that the imperialists, instead of advancing to the charge when the word of command was given, stood motionless in a timid dejected silence. The emperor pereeiving that he could not trust troops whose spirits were so mueh broken, retired abruptly to his quarters, complaining that he was now deserted by his soldiers, who deserved no longer the name of men.[f]

The emperor changes the method of attack.

Deeply as this behaviour of his troops mortified and affected Charles, he would not hear of abandoning the siege, though he saw the necessity of changing the method of attack. He suspended the fury of his batteries, and proposed to proceed by the more secure but tedious method of sapping. But as it still continued to rain or to snow almost incessantly, sueh as were employed in this service endured incredible hardships; and the duke of Guise, whose industry was not inferior to his valour, diseovering all their mines, eounter-worked them, and prevented their effect. At last Charles finding it impossible to contend any longer with the severity of the season, and with enemies whom he could neither overpower by force nor subdue by art, while at the same time a eontagious distemper raged among his troops, and eut off daily great numbers of the officers as well as soldiers, yielded to the solicitations of his generals, who eonjured him to save the remains of his army by a timely retreat: "Fortune," says he, "I now perceive, resembles other females, and ehooses to confer her favours on young men, while she turns her back on those who are advanced in years."

Dec. 26. Obliged to raise the siege.

Upon this he gave orders immediately to raise the siege, and submitted to the disgrace of abandoning the enterprise after having continued fifty-six days before the town, during which time he had lost upwards of thirty thousand men, who died of diseases or were killed by the enemy. The duke of Guise, as soon as he perceived the intention of the imperialists, sent out several bodies both of cavalry and infantry to infest their rear, to pick up stragglers, and to seize every opportunity of attacking them with advantage. Such was the confusion with whieh they made their retreat, that the French might have harassed them in the most cruel manner. But when they sallied out, a spectacle presented itself to their view which extinguished at once all hostile rage, and melted them into tenderness and compassion. The imperial eamp was filled with the sick and wounded, with the dead and the dying. In all the different roads by which the army retired, numbers were found, who having made an effort to eseape beyond their strength, were left, when they could go no further, to perish without assistance. This they received from their enemies, and were indebted to them for all the kind offices which their friends had not the power to perform. The duke of Guise immediatcly ordered proper refreshments for such as were dying of hunger; he appointed surgeons to attend the sick and wounded; he removed such as could bear it into the adjacent villages; and those who would have suffered by being carried so far, he admitted into the hospitals which he had fitted up in the city for his own soldiers. As soon as they recovered, he sent them home under an escort of soldiers, and with money to bear their charges. By these acts of humanity, whieh were uncommon in that age, when war was carried on with greater rancour and ferocity than at present, the duke of Guise completed the fame which he had acquired by his gallant and successful dcfence of Metz, and engaged those whom he had vanquished to vie with his own countrymen in extolling his name.[g]

Ruin of the imperial army, and humanity of the French.

To these calamities in Germany were added such unfortunate events in Italy as rendered this the most disastrous year in the emperor's life. During his residence at Villach, Charles had applied to Cosmo di Medici for the loan of two hundred thousand crowns. But his credit at that time was so low, that in order to obtain this inconsiderable sum, he was obliged to put him in possession of the principality of Piombino; and by giving up that, he lost the footing which he had hitherto maintained in Tuscany, and enabled Cosmo to assume, for the future, the tone and deportment of a prince altogether independent. Much about the time that his indigence constrained him to part with this valuable territory, he lost Siena, which was of still greater consequence, through the ill conduct of don Diego de Mendoza.[h]

Bad situation of the emperor's affairs in Italy.

Siena, like most of the great eities in Italy, had long enjoyed a republican government under the protection of the empire; but being torn in pieces by the dissensions between the nobility and the people which divided all the Italian commonwealths, the faetion of the people, which gained the ascendant, besought the emperor to become the guardian of the administration which they had established, and admitted into their city a small body of Spanish soldiers, whom he had sent

h Thuan. lib. xi. 376.

to countenance the execution of the laws and to preserve tranquillity among them. The command of these troops was given to Mendoza, at that time ambassador for the emperor at Rome, who persuaded the credulous multitude that it was necessary, for their security against any future attempt of the nobles, to allow him to build a citadel in Siena; and as he flattered himself that by means of this fortress he might render the emperor master of the city, he pushed on the works with all possible despatch. But he threw off the mask too soon. Before the fortifications were completed, he began to indulge his natural haughtiness and severity of temper, and to treat the citizens with great insolence. At the same time the soldiers in garrison being paid as irregularly as the emperor's troops usually were, lived almost at discretion upon the inhabitants, and were guilty of many acts of licence and oppression.

The Sienese court the assistance of France.

These injuries awakened the Sienese to a sense of their danger. As they saw the necessity of exerting themselves while the unfinished fortifications of the citadel left them any hopes of success, they applied to the French ambassador at Rome, who readily promised them his master's protection and assistance. At the same time, forgetting their domestic animosities when such a mortal blow was aimed at the liberty and existence of the republic, they sent agents to the exiled nobles, and invited them to concur with them in saving their country from the servitude with which it was threatened. As there was not a moment to lose, measures were concerted speedily but with great prudence, and were executed with equal vigour. The citizens rose suddenly in arms; the exiles flocked into the town from different parts, with all their partisans and what troops they could draw together; and several bodies of mercenaries in the pay of France appeared to support them. The Spaniards, though surprised and much inferior in number, defended themselves with great courage; but seeing no prospect of relief, and having no hopes of maintaining their station long in a half-finished fortress, they soon gave it up. The Sienese, with the utmost alacrity, levelled it with the ground, that no monument might remain of that odious structure which had been raised in order to enslave them. At the same time renouncing all connexion with the emperor, they sent ambassadors to thank the king of France as the restorer of their liberty, and to entreat that he would secure to them the perpetual enjoyment of that blessing, by continuing his protection to their republic.[i]

Descent of the Turks in the kingdom of Naples.

To these misfortunes one still more fatal had almost succeeded. The severe administration of Don Pedro de Toledo, viceroy of Naples, having filled that kingdom with murmuring and disaffection, the prince of Salerno, the head of the malcontents, had fled to the court of France, where all who bore ill-will to the emperor or his ministers were sure of finding protection and assistance. That nobleman, in the usual style of exiles, boasting much of the number and power of his partisans, and of his great influence with them, prevailed on Henry to think of invading Naples, from an expectation of being joined by all those with whom the prince of Salerno held correspondence, or who were dissatisfied with Toledo's government. But though the first hint of this enterprise was suggested by the prince of Salerno, Henry did not choose that its success should entirely depend upon his being able to fulfil the promises which he had made. He applied for aid to Solyman, whom he courted, after his father's example, as his most vigorous auxiliary against the emperor, and solicited him to second his operations by sending a powerful fleet into the Mediterranean. It was not difficult to obtain what he requested of the sultan, who at this time was highly incensed against the house of Austria on account of the proceedings in Hungary. He ordered an hundred and fifty ships to be equipped, that they might sail towards the coast of Naples at whatever time Henry should name, and might co-operate with the French troops in their attempts upon that kingdom. The command of this fleet was given to the corsair Dragut, an officer trained up under Barbarossa, and scarcely inferior to his master in courage, in talents, or in good fortune. He appeared on the coast of Calabria at the time which had been agreed on, landed at several places, plundered and burnt several villages; and at last casting anchor in the bay of Naples, filled that city with consternation. But as the French fleet, detained by some accident which the contemporary historians have not explained, did not join the Turks according to concert, they, after waiting twenty days without hearing any tidings of it, set sail for Constantinople, and thus delivered the viceroy of Naples from the terror of an invasion which he was not in a condition to have resisted.[k]

1553. The emperor sensibly affected with the state of his affairs.

As the French had never given so severe a check to the emperor in any former campaign, they expressed immoderate joy at the success of their arms. Charles himself, accustomed to a long series of prosperity, felt the calamity most sensibly, and retired from Metz into the Low Countries, much dejected with the cruel reverse of fortune, which affected him in his declining age, when the violence of the gout had increased to such a pitch as entirely broke the vigour of his constitution, and rendered him peevish, difficult of access, and often incapable of applying to business. But whenever he enjoyed any interval of ease, all his thoughts were bent on revenge; and he deliberated with the greatest solicitude concerning the most proper means of annoying France, and of effacing the stain which had obscured the re-

i Pecci Memorie de Siena, vol. iii. p. 230, 261. Thuan. 375, 377, &c. Paruta Hist. Venet. 267. Mem. de Ribier, 424, &c.

putation and glory of his arms. All the schemes concerning Germany, which had engrossed him so long, being disconcerted by the peace of Passau, the affairs of the empire became only secondary objects of attention, and enmity to France was the predominant passion which chiefly occupied his mind.

The violent proceedings of Albert of Brandenburg.

The turbulent ambition of Albert of Brandenburg excited violent commotions, which disturbed the empire during this year. That prince's troops having shared in the calamities of the siege of Metz, were greatly reduced in number. But the emperor, prompted by gratitude for his distinguished services on that occasion, or perhaps with a secret view of fomenting divisions among the princes of the empire, having paid up all the money due to him, he was enabled, with that sum, to hire so many of the soldiers dismissed from the imperial army, that he was soon at the head of a body of men as numerous as ever. The bishops of Bamberg and Wurtzburg having solicited the imperial chamber to annul, by its authority, the iniquitous conditions which Albert had compelled them to sign, that court unanimously found all their engagements with him to be void in their own nature, because they had been extorted by force; enjoined Albert to renounce all claim to the performance of them; and if he should persist in such an unjust demand, exhorted all the princes of the empire to take arms against him as a disturber of the public tranquillity. To this decision Albert opposed the confirmation of his transactions with the two prelates, which the emperor had granted him as the reward of his having joined the imperial army at Metz; and in order to intimidate his antagonists, as well as to convince them of his resolution not to relinquish his pretensions, he put his troops in motion, that he might secure the territory in question. Various endeavours were employed, and many expedients proposed, in order to prevent the kindling of a new war in Germany. But the same warmth of temper which rendered Albert turbulent and enterprising, inspiring him with the most sanguine hopes of success even in his wildest undertakings, he disdainfully rejected all reasonable overtures of accommodation.

He is condemned by the imperial chamber.

Upon this the imperial chamber issued its decree against him, and required the elector of Saxony, together with several other princes mentioned by name, to take arms in order to carry it into execution. Maurice and those associated with him were not unwilling to undertake this service. They were extremely solicitous to maintain public order by supporting the authority of the imperial chamber, and saw the necessity of giving a timely check to the usurpations of an ambitious prince, who had no principle of action but regard to his own interest, and no motive to direct him but the impulse of ungovernable passions. They had good reason to suspect that the emperor encouraged Albert in his extravagant and irregular proceedings, and secretly afforded him assistance, that, by raising him up to rival Maurice in power, he might in any future broil make use of his assistance to counterbalance and control the authority which the other had acquired in the empire.[l]

April 2. A confederacy formed against him, of which Maurice was head.

These considerations united the most powerful princes in Germany in a league against Albert, of which Maurice was declared generalissimo. This formidable confederacy, however, wrought no change in Albert's sentiments; but as he knew that he could not resist so many princes if he should allow them time to assemble their forces, he endeavoured, by his activity, to deprive them of all the advantages which they might derive from their united power and numbers; and, for that reason, marched directly against Maurice, the enemy whom he dreaded most. It was happy for the allies that the conduct of their affairs was committed to a prince of such abilities. He, by his authority and example, had inspired them with vigour; and having carried on their preparations with a degree of rapidity of which confederate bodies are seldom capable, he was in a condition to face Albert before he could make any considerable progress.

He attacks Albert,

Their armies, which were nearly equal in number, each consisting of twenty-four thousand men, met at Sieverhausen, in the duchy of Lunenburg; and the violent animosity against each other which possessed the two leaders, did not suffer them to continue long inactive. The troops, inflamed with the same hostile rage, marched fiercely to the combat; they fought with the greatest obstinacy; and as both generals were capable of availing themselves of every favourable occurrence, the battle remained long doubtful, each gaining ground upon the other alternately. At last victory declared for Maurice, who was superior in cavalry, and Albert's army fled in confusion, leaving four thousand dead on the field, and their camp, baggage, and artillery in the hands of the conquerors. The allies bought their victory dear; their best troops suffered greatly,—two sons of the duke of Brunswick, a duke of Lunenburg, and many other persons of distinction, were among the number of the slain.[m] But all these were soon forgotten; for Maurice himself, as he led up to a second charge a body of horse which had been broken, received a wound with a pistol-bullet in the belly, of which he died two days after the battle, in the thirty-second year of his age, and in the sixth after his attaining the electoral dignity.

m Historia Pugnæ infelicis inter Maurit. et Albert. Thom. Wintzero auctore apud Scard. ii. 559. Sleid. 583. Ruscelli Epistres aux Princes, 154. Arnoldi Vita Maurit. 1245.

age, when great occurrences and sudden revolutions called forth extraordinary talents to view, and afforded them full opportunity to display themselves, Maurice may justly be considered as the most remarkable. If his exorbitant ambition, his profound dissimulation, and his unwarrantable usurpation of his kinsman's honours and dominions, exclude him from being praised as a virtuous man, —his prudence in concerting his measures, his vigour in executing them, and the uniform success with which they were attended, entitle him to the appellation of a great prince. At an age when impetuosity of spirit commonly predominates over political wisdom, when the highest effort even of a genius of the first order is to fix on a bold scheme and to execute it with promptitude and courage, he formed and conducted an intricate plan of policy which deceived the most artful monarch in Europe. At the very juncture when the emperor had attained to almost unlimited despotism, Maurice, with power seemingly inadequate to such an undertaking, compelled him to relinquish all his usurpations, and established not only the religious but civil liberties of Germany on such foundations as have hitherto remained unshaken. Although, at one period of his life, his conduct excited the jealousy of the protestants, and at another drew on him the resentment of the Roman catholics, such was his masterly address, that he was the only prince of the age who in any degree possessed the confidence of both, and whom both lamented as the most able as well as faithful guardian of the constitution and laws of his country.

Albert continues the war.

The consternation which Maurice's death occasioned among his troops prevented them from making the proper improvement of the victory which they had gained. Albert, whose active courage and profuse liberality rendered him the darling of such military adventurers as were little solicitous about the justice of his cause, soon re-assembled his broken forces, and made fresh levies with such success, that he was quickly at the head of fifteen thousand men, and renewed his depredations with additional fury. But Henry of Brunswick having taken the command of the allied troops, defeated him in a second battle, scarcely less bloody than the former. Even then his courage did not sink, nor were his resources exhausted. He made several efforts, and some of them very vigorous, to retrieve his affairs: but being laid under the ban of the empire by the imperial chamber; being driven by degrees out of all his hereditary territories as well as those which he had usurped; being forsaken by many of his officers, and overpowered by the number of his enemies, he fled for refuge into France. After having been for a considerable time the terror and scourge of Germany, he lingered out some years in an indigent and dependent state of exile, the miseries of which his restless and arrogant spirit endured with the most indignant impatience. Upon his death without issue, his territories, which had been seized by the princes who took arms against him, were restored, by a decree of the empire, to his collateral heirs of the house of Brandenburg.[n]

Sept. 12.

He is driven out of Germany.

Jan. 12, 1557.

Maurice having left only one daughter, who was afterwards married to William, prince of Orange, by whom she had a son who bore his grandfather's name, and inherited the great talents for which he was conspicuous, a violent dispute arose concerning the succession to his honours and territories. John Frederic, the degraded elector, claimed the electoral dignity, and that part of his patrimonial estate of which he had been violently stripped after the Smalkaldic war. Augustus, Maurice's only brother, pleaded his right not only to the hereditary possessions of their family, but to the electoral dignity, and to the territories which Maurice had acquired. As Augustus was a prince of considerable abilities, as well as of great candour and gentleness of manners, the states of Saxony, forgetting the merits and sufferings of their former master, declared warmly in his favour. His pretensions were powerfully supported by the king of Denmark, whose daughter he had married, and zealously espoused by the king of the Romans, out of regard to Maurice's memory. The degraded elector, though secretly favoured by his ancient enemy the emperor, was at last obliged to relinquish his claim upon obtaining a small addition to the territories which had been allotted to him, together with a stipulation, securing to his family the eventual succession upon a failure of male heirs in the Albertine line. That unfortunate but magnanimous prince died next year, soon after ratifying this treaty of agreement; and the electoral dignity is still possessed by the descendants of Augustus.[o]

Maurice's brother Augustus succeeds him in the electoral dignity.

During these transactions in Germany, war was carried on in the Low Countries with considerable vigour. The emperor, impatient to efface the stain which his ignominious repulse at Metz left upon his military reputation, had an army early in the field, and laid siege to Terouane. Though the town was of such importance, that Francis used to call it one of the two pillows on which a king of France might sleep with security, the fortifications were in bad repair. Henry, trusting to what had happened at Metz, thought nothing more was necessary to render all the efforts of the enemy abortive than to reinforce the garrison with a considerable number of the young nobility. But D'Essé, a veteran officer who commanded them, being killed, and the imperialists pushing the siege with great vigour and perseverance, the place was taken by assault. That it might not fall again into the hands of the French, Charles ordered not only the

o Sleid. 587. Thuan. 409. Struv. Corp. Hist. Germ.

fortifications but the town itself to be razed, and the inhabitants to be dispersed in the adjacent cities. Elated with this success, the imperialists immediately invested Hesden, which, though defended with great bravery, was likewise taken by assault, and such of the garrison as escaped the sword were made prisoners. The emperor intrusted the conduct of this siege to Emanuel Philibert of Savoy, prince of Piedmont, who on that occasion gave the first display of those great talents for military command which soon entitled him to be ranked among the first generals of the age, and facilitated his re-establishment in his hereditary dominions, the greater part of which, having been overrun by Francis in his expeditions into Italy, were still retained by Henry.[p]

The progress of the imperialists disquiets the French king.

The loss of these towns, together with so many persons of distinction either killed or taken by the enemy, was no inconsiderable calamity to France, and Henry felt it very sensibly; but he was still more mortified at the emperor's having recovered his wonted superiority in the field so soon after the blow at Metz, which the French had represented as fatal to his power. He was ashamed, too, of his own remissness and excessive security at the opening of the campaign; and in order to repair that error, he assembled a numerous army, and led it into the Low Countries.

Roused at the approach of such a formidable enemy, Charles left Brussels, where he had been shut up so closely during seven months, that it came to be believed in many parts of Europe that he was dead; and though he was so much debilitated by the gout that he could hardly bear the motion of a litter, he hastened to join his army. The eyes of all Europe were turned with expectation towards those mighty and exasperated rivals, between whom a decisive battle was now thought unavoidable. But Charles having prudently declined to hazard a general engagement, and the violence of the autumnal rains rendering it impossible for the French to undertake any siege, they retired without having performed any thing suitable to the great preparations which they had made.[q]

The imperialists unsuccessful in Italy,

The imperial arms were not attended with the same success in Italy. The narrowness of the emperor's finances seldom allowed him to act with vigour in two different places at the same time; and having exerted himself to the utmost in order to make a great effort in the Low Countries, his operations on the other side of the Alps were proportionally feeble. The viceroy of Naples, in conjunction with Cosmo di Medici, who was greatly alarmed at the introduction of French troops into Siena, endeavoured to become master of that city. But instead of reducing the Sienese, the imperialists were obliged to retire abruptly, in order to defend their own country, upon the appearance of the Turkish fleet, which threatened the coast of Naples; and the French not only established themselves more firmly in Tuscany, but, by the assistance of the Turks, conquered a great part of the island of Corsica, subject at that time to the Genoese.[r]

and in Hungary.

The affairs of the house of Austria declined no less in Hungary during the course of this year. As the troops which Ferdinand kept in Transylvania received their pay very irregularly, they lived almost at discretion upon the inhabitants; and their insolence and rapaciousness greatly disgusted all ranks of men, and alienated them from their new sovereign, who, instead of protecting, plundered his subjects. Their indignation at this, added to their desire of revenging Martinuzzi's death, wrought so much upon a turbulent nobility impatient of injury, and upon a fierce people prone to change, that they were ripe for a revolt. At that very juncture their late queen Isabella, together with her son, appeared in Transylvania. Her ambitious mind could not bear the solitude and inactivity of a private life; and repenting quickly of the cession which she had made of the crown in the year one thousand five hundred and fifty-one, she left the place of her retreat, hoping that the dissatisfaction of the Hungarians with the Austrian government would prompt them once more to recognise her son's right to the crown. Some noblemen of great eminence declared immediately in his favour. The bashaw of Belgrade, by Solyman's order, espoused his cause, in opposition to Ferdinand; the Spanish and German soldiers, instead of advancing against the enemy, mutinied for want of pay, declaring that they would march back to Vienna; so that Castaldo, their general, was obliged to abandon Transylvania to Isabella and the Turks, and to place himself at the head of the mutineers, that by his authority he might restrain them from plundering the Austrian territories through which they passed.[s]

Ferdinand obliged to abandon Transylvania.

Solyman's domestic distresses.

Ferdinand's attention was turned so entirely towards the affairs of Germany, and his treasures so much exhausted by his late efforts in Hungary, that he made no attempt to recover this valuable province, although a favourable opportunity for that purpose presented itself, as Solyman was then engaged in a war with Persia, and involved besides in domestic calamities which engrossed and disturbed his mind. Solyman, though distinguished by many accomplishments from the other Ottoman princes, had all the passions peculiar to that violent and haughty race. He was jealous of his authority, sudden as well as furious in his anger, and susceptible of all that rage and love which reigns in the east, and often produces the wildest and most tragical effects. His favourite mistress was a Circassian slave of exquisite beauty, who bore him a son called Mustapha, whom, both on ac-

s Ibid. 430.

count of his birth-right and his merit, he destined to be the heir of his crown. Roxalana, a Russian captive, soon supplanted the Circassian, and gained the sultan's heart. Having the address to retain the conquest which she had made, she kept possession of his love without any rival for many years, during which she brought him several sons and one daughter. All the happiness, however, which she derived from the unbounded sway that she had acquired over a monarch whom one half of the world revered or dreaded, was imbittered by perpetual reflections on Mustapha's accession to the throne, and the certain death of her sons, who, she foresaw, would be immediately sacrificed, according to the barbarous jealousy of Turkish policy, to the safety of the new emperor. By dwelling continually on this melancholy idea, she came gradually to view Mustapha as the enemy of her children, and to hate him with more than a stepmother's ill-will. This prompted her to wish his destruction, in order to secure for one of her own sons the throne which was destined for him. Nor did she want either ambition to attempt such a high enterprise, or the arts requisite for carrying it into execution. Having prevailed on the sultan to give her only daughter in marriage to Rustan the grand visier, she disclosed her scheme to that crafty minister, who perceiving that it was his own interest to co-operate with her, readily promised his assistance towards aggrandizing that branch of the royal line to which he was so nearly allied.

As soon as Roxalana had concerted her measures with this able confidant, she began to affect a wonderful zeal for the Mahometan religion, to which Solyman was superstitiously attached, and proposed to found and endow a royal mosque, a work of great expense, but deemed by the Turks meritorious in the highest degree. The mufti whom she consulted approved much of her pious intention; but having been gained and instructed by Rustan, told her that she being a slave could derive no benefit herself from that holy deed, for all the merit of it would accrue to Solyman, the master whose property she was. Upon this she seemed to be overwhelmed with sorrow, and to sink into the deepest melancholy, as if she had been disgusted with life and all its enjoyments. Solyman, who was absent with the army, being informed of this dejection of mind, and of the cause from which it proceeded, discovered all the solicitude of a lover to remove it, and by a writing under his hand declared her a free woman. Roxalana having gained this point, proceeded to build the mosque, and reassumed her usual gaiety of spirit. But when Solyman, on his return to Constantinople, sent an eunuch, according to the custom of the seraglio, to bring her to partake of his bed, she, seemingly with deep regret, but in the most peremptory manner, declined to follow the eunuch, declaring that what had been an honour to her while a slave became a crime as she was now a free woman, and that she would not involve either the sultan or herself in the guilt that must be contracted by such an open violation of the law of their prophet. Solyman, whose passion this difficulty, as well as the affected delicacy which gave rise to it, heightened and inflamed, had recourse immediately to the mufti for his direction. He replied, agreeably to the Koran, that Roxalana's scruples were well founded; but added artfully, in words which Rustan had taught him to use, that it was in the sultan's power to remove these difficulties by espousing her as his lawful wife. The amorous monarch closed eagerly with the proposal, and solemnly married her according to the form of the Mahometan ritual; though by so doing he disregarded a maxim of policy which the pride of the Ottoman blood had taught all the sultans since Bajazet I. to consider as inviolable. From his time none of the Turkish monarchs had married, because when he was vanquished and taken prisoner by Tamerlane, his wife had been abused with barbarous insolence by the Tartars. That no similar calamity might again subject the Ottoman family to the same disgrace, the sultans admitted none to their beds but slaves, whose dishonour could not bring any such stain upon their house.

But the more uncommon the step was, the more it convinced Roxalana of the unbounded influence which she had acquired over the sultan's heart, and imboldened her to prosecute, with greater hopes of success, the scheme that she had formed in order to destroy Mustapha. This young prince having been intrusted by his father, according to the practice of the sultans in that age, with the government of several different provinces, was at that time invested with the administration in Diarbequir, the ancient Mesopotamia, which Solyman had wrested from the Persians and added to his empire. In all these different commands Mustapha had conducted himself with such cautious prudence as could give no offence to his father, though at the same time he governed with so much moderation as well as justice, and displayed such valour and generosity, as rendered him equally the favourite of the people and the darling of the soldiery.

There was no room to lay any folly or vice to his charge that could impair the high opinion which his father entertained of him. Roxalana's malevolence was more refined; she turned his virtues against him, and made use of these as engines for his destruction. She often mentioned in Solyman's presence the splendid qualities of his son; she celebrated his courage, his liberality, his popular arts, with malicious and exaggerated praise. As soon as she perceived that the sultan heard these encomiums, which were often repeated, with uneasiness; that suspicion of his son began to mingle itself with his former esteem; and that by degrees he came to view him with jealousy and fear,—she introduced, as by accident, some discourse concerning the rebellion of his father Selim against Bajazet

his grandfather; she took notice of the bravery of the veteran troops under Mustapha's command, and of the neighbourhood of Diarbequir to the territories of the Persian sophi, Solyman's mortal enemy. By these arts whatever remained of paternal tenderness was gradually extinguished, and such passions were kindled in the breast of the sultan as gave all Roxalana's malignant suggestions the colour not only of probability but of truth. His suspicions and fear of Mustapha settled into deep-rooted hatred. He appointed spies to observe and report all his words and actions; he watched and stood on his guard against him as his most dangerous enemy.

Having thus alienated the sultan's heart from Mustapha, Roxalana ventured upon another step. She entreated Solyman to allow her own sons the liberty of appearing at court, hoping that, by gaining access to their father, they might, by their good qualities and dutiful deportment, insinuate themselves into that place in his affections which Mustapha had formerly held; and though what she demanded was contrary to the practice of the Ottoman family in that age, the uxorious monarch granted her request. To all these female intrigues Rustan added an artifice still more subtle, which completed the sultan's delusion and heightened his jealousy and fear. He wrote to the bashaws of the provinces adjacent to Diarbequir, instructing them to send him regular intelligence of Mustapha's proceedings in his government; and to each of them he gave a private hint, flowing in appearance from his zeal for their interest, that nothing would be more acceptable to the sultan than to receive favourable accounts of a son whom he destined to sustain the glory of the Ottoman name. The bashaws, ignorant of his fraudulent intention, and eager to pay court to their sovereign at such an easy price, filled their letters with studied but fatal panegyrics of Mustapha, representing him as a prince worthy to succeed such an illustrious father, and as endowed with talents which might enable him to emulate, perhaps to equal, his fame. These letters were industriously shown to Solyman at the seasons when it was known that they would make the deepest impression. Every expression in recommendation of his son wounded him to the heart; he suspected his principal officers of being ready to favour the most desperate attempts of a prince whom they were so fond of praising; and fancying that he saw them already assaulting his throne with rebellious arms, he determined, while it was yet in his power, to anticipate the blow, and to secure his own safety by his son's death.

For this purpose, though under pretence of renewing the war against Persia, he ordered Rustan to march towards Diarbequir at the head of a numerous army, and to rid him of a son whose life he deemed inconsistent with his own safety. But that crafty minister did not choose to be loaded with the odium of having executed this cruel order. As soon as he arrived in Syria, he wrote to Solyman that the danger was so imminent as called for his immediate presence; that the camp was full of Mustapha's emissaries; that many of the soldiers were corrupted; that the affections of all leaned towards him; that he had discovered a negociation which had been carried on with the sophi of Persia in order to marry Mustapha with one of his daughters; that he already felt his own talents as well as authority to be inadequate to the exigencies of such an arduous conjuncture; that the sultan alone had sagacity to discern what resolution should be taken in those circumstances, and power to carry that resolution into execution.

This charge of courting the friendship of the sophi, Roxalana and Rustan had reserved as the last and most envenomed of all their calumnies. It operated with the violence which they expected from Solyman's inveterate abhorrence of the Persians, and threw him into the wildest transports of rage. He set out instantly for Syria, and hastened thither with all the precipitation and impatience of fear and revenge. As soon as he joined his army near Aleppo, and had concerted measures with Rustan, he sent a chiaus or messenger of the court to his son, requiring him to repair immediately to his presence. Mustapha, though no stranger to his stepmother's machinations, or to Rustan's malice, or to his father's violent temper, yet relying on his own innocence, and hoping to discredit the accusations of his enemies by the promptitude of his obedience, followed the messenger without delay to Aleppo. The moment he arrived in the camp he was introduced into the sultan's tent. As he entered it he observed nothing that could give him any alarm; no additional crowd of attendants, no body of armed guards, but the same order and silence which always reign in the sultan's apartments. In a few minutes, however, several mutes appeared, at the sight of whom Mustapha, knowing what was his doom, cried with a loud voice, "Lo, my death!" and attempted to fly. The mutes rushed forward to seize him; he resisted and struggled, demanding with the utmost earnestness to see the sultan; and despair, together with the hope of finding protection from the soldiers if he could escape out of the tent, animated him with such extraordinary strength, that for some time he baffled all the efforts of the executioners. Solyman was within hearing of his son's cries, as well as of the noise which the struggle occasioned. Impatient of this delay of his revenge, and struck with terror at the thoughts of Mustapha's escaping, he drew aside the curtain which divided the tent, and thrusting in his head, darted a fierce look towards the mutes, and, with wild and threatening gestures, seemed to condemn their sloth and timidity. At sight of his father's furious and unrelenting countenance, Mustapha's strength failed and his courage forsook him; the mutes fastened the bowstring about his neck, and in a moment put an end to his life.

The dead body was exposed before the sultan's

tent. The soldiers gathered round it, and contemplating that mournful object with astonishment, and sorrow, and indignation, were ready, if a leader had not been wanting, to have broke out into the wildest excesses of rage. After giving vent to the first expressions of their grief, they retired each man to his tent, and shutting themselves up, bewailed in secret the cruel fate of their favourite; nor was there one of them who tasted food, or even water, during the remainder of that day. Next morning the same solitude and silence reigned in the camp; and Solyman being afraid that some dreadful storm would follow this sullen calm, in order to appease the enraged soldiers, deprived Rustan of the seals, ordered him to leave the camp, and raised Achmet, a gallant officer, much beloved in the army, to the dignity of visier. This change, however, was made in concert with Rustan himself; that crafty minister suggesting it as the only expedient which could save himself or his master. But within a few months, when the resentment of the soldiers began to subside and the name of Mustapha to be forgotten, Achmet was strangled by the sultan's command, and Rustan reinstated in the office of visier. Together with his former power, he reassumed the plan for exterminating the race of Mustapha which he had concerted with Roxalana; and as they were afraid that an only son whom Mustapha had left might grow up to avenge his death, they redoubled their activity, and by employing the same arts against him which they had practised against his father, they inspired Solyman with the same fears, and prevailed on him to issue orders for putting to death that young innocent prince. These orders were executed with barbarous zeal, by a eunuch, who was despatched to Burso, the place where the prince resided; and no rival was left to dispute the Ottoman throne with the sons of Roxalana.[t]

Charles project a marriage between his son and Mary of England.

Such tragical scenes, productive of so deep distress, seldom occur but in the history of the great monarchies of the east, where the warmth of the climate seems to give every emotion of the heart its greatest force, and the absolute power of sovereigns accustoms and enables them to gratify all their passions without control. While this interesting transaction in the court of Solyman engaged his whole attention, Charles was pursuing with the utmost ardour a new scheme for aggrandizing his family. About this time Edward VI. of England, after a short reign, in which he displayed such virtues as filled his subjects with sanguine hopes of being happy under his government, and made them bear with patience all that they suffered from the weakness, the dissensions, and the ambition of the ministers who assumed the administration during his minority, was seized with a lingering distemper which threatened his life. The emperor no sooner received an account of this, than his ambition, always attentive to seize every opportunity of acquiring an increase of power or of territories to his son, suggested the thought of adding England to his other kingdoms by the marriage of Philip with the princess Mary, the heir of Edward's crown. Being apprehensive, however, that his son, who was then in Spain, might decline a match with a princess in her thirty-eighth year, and eleven years older than himself,[u] Charles determined, notwithstanding his own age and infirmities, to make offer of himself as a husband to his cousin.

To which Philip gives his consent.

But though Mary was so far advanced in years, and destitute of every charm either of person or manners that could win affection or command esteem, Philip without hesitation gave his consent to the match proposed by his father, and was willing, according to the usual maxim of princes, to sacrifice his inclination to his ambition. In order to insure the success of his scheme, the emperor, even before Edward's death, began to take such steps as might facilitate it. Upon Edward's demise, Mary mounted the throne of England; the pretensions of the lady Jane Grey proving as unfortunate as they were ill-founded.[x] Charles sent immediately a pompous embassy to London to congratulate Mary on her accession to the throne, and to propose the alliance with his son.

The sentiments of Mary and of the English with regard to it.

The queen, dazzled with the prospect of marrying the heir of the greatest monarch in Europe; fond of uniting more closely with her mother's family, to which she had been always warmly attached; and eager to secure the powerful aid which she knew would be necessary towards carrying on her favourite scheme of re-establishing the Romish religion in England, listened in the most favourable manner to the proposal. Among her subjects it met with a very different reception. Philip, it was well known, contended for all the tenets of the church of Rome with a sanguinary zeal which exceeded the measure even of Spanish bigotry: this alarmed all the numerous partisans of the Reformation. The Castilian haughtiness and reserve were far from being acceptable to the English, who having several times seen their throne occupied by persons who were born subjects, had become accustomed to an unceremonious and familiar intercourse with their sovereigns. They could not think without the utmost uneasiness of admitting a foreign prince to that influence in their councils which the husband of their queen would naturally possess. They dreaded, both from Philip's overbearing temper and from the maxims of the Spanish monarchy which he had imbibed, that he would infuse ideas into the queen's mind dangerous to the liberties of the nation, and would introduce foreign troops and money into the kingdom, to assist her in any attempt against them.

x Carte's Hist. of England, iii. 287.

The house of commons remonstrate against it.

Full of these apprehensions, the house of commons, though in that age extremely obsequious to the will of their monarchs, presented a warm address against the Spanish match; many pamphlets were published, representing the dangerous consequences of the alliance with Spain, and describing Philip's bigotry and arrogance in the most odious colours. But Mary, inflexible in all her resolutions, paid no regard to the remonstrances of her commons or to the sentiments of the people. The emperor having secured, by various arts, the ministers whom she trusted most, they approved warmly of the match, and large sums were remitted by him in order to gain the rest of the council. Cardinal Pole, whom the pope, immediately upon Mary's accession, had despatched as his legate into England, in order to reconcile his native country to the see of Rome, was detained by the emperor's command at Dillinghen in Germany, lest by his presence he should thwart Philip's pretensions, and employ his interest in favour of his kinsman Courtenay, earl of Devonshire, whom the English ardently wished their sovereign to choose for a husband.[y]

The marriage-treaty concluded.

As the negociation did not admit of delay, it was carried forward with the greatest rapidity, the emperor agreeing, without hesitation, to every article in favour of England which Mary's ministers either represented as necessary to soothe the people and reconcile them to the match, or that was suggested by their own fears and jealousy of a foreign master. The chief articles were, That Philip during his marriage with the queen, should bear the title of king of England, but the entire administration of affairs, as well as the sole disposal of all revenues, offices, and benefices, should remain with the queen; that the heirs of the marriage should, together with the crown of England, inherit the duchy of Burgundy and the Low Countries; that if prince Charles, Philip's only son by a former marriage, should die without issue, his children by the queen, whether male or female, should succeed to the crown of Spain and all the emperor's hereditary dominions; that before the consummation of the marriage, Philip should swear solemnly that he would retain no domestic who was not a subject of the queen, and would bring no foreigners into the kingdom that might give umbrage to the English; that he would make no alteration in the constitution or laws of England; that he would not carry the queen, or any of the children born of this marriage, out of the kingdom; that if the queen should die before him without issue, he would immediately leave the crown to the lawful heir, without claiming any right of administration whatever; that in consequence of this marriage, England should not be engaged in any war subsisting between France and Spain; and that the alliance between France and England should remain in full force.[z]

1554. Jan. 12.

y Carte, iii. 288.

Discontent and apprehensions of the English.

But this treaty, though both the emperor and Mary's ministers employed their utmost address in framing it so as to please the English, was far from quieting their fears and jealousies. They saw that words and promises were a feeble security against the encroachments of an ambitious prince, who, as soon as he got possession of the power and advantages which the queen's husband must necessarily enjoy, could easily evade any of the articles which either limited his authority or obstructed his schemes. They were convinced that the more favourable the conditions of the present treaty were to England, the more Philip would be tempted hereafter to violate them. They dreaded that England, like Naples, Milan, and the other countries annexed to Spain, would soon feel the dominion of that crown to be intolerably oppressive, and be constrained, as they had been, to waste its wealth and vigour in wars wherein it had no interest, and from which it could derive no advantage. These sentiments prevailed so generally, that every part of the kingdom was filled with discontent at the match, and with indignation against the advisers of it. Sir Thomas Wyat, a gentleman of some note, and of good intentions towards the public, took advantage of this, and roused the inhabitants of Kent to arms, in order to save their country from a foreign yoke. Great numbers resorted in a short time to his standard; he marched to London with such rapidity, and the queen was so utterly unprovided for defence, that the aspect of affairs was extremely threatening; and if any nobleman of distinction had joined the malcontents, or had Wyat possessed talents equal in any degree to the boldness of his enterprise, the insurrection must have proved fatal to Mary's power. But all Wyat's measures were concerted with so little prudence, and executed with such irresolution, that many of his followers forsook him; the rest were dispersed by a handful of soldiers; and he himself was taken prisoner, without having made any effort worthy of the cause that he had undertaken, or suitable to the ardour with which he engaged in it. He suffered the punishment due to his rashness and rebellion. The queen's authority was confirmed and increased by her success in defeating this inconsiderable attempt to abridge it. The lady Jane Grey, whose title the ambition of her relations had set up in opposition to that of the queen, was, notwithstanding her youth and innocence, brought to the scaffold. The lady Elizabeth, the queen's sister, was observed with the most jealous attention. The treaty of marriage was ratified by the parliament.

Wyat's insurrection.

The marriage celebrated.

Philip landed in England with a magnificent retinue, celebrated his nuptials with great solemnity; and though he could not lay aside his natural severity and pride, or assume gracious and popular manners, he endeavoured to conciliate the favour of the English nobility by

z Rymer's Fœd. vol. xv. 377, 393. Mem. de Ribier, ii. 498.

his extraordinary liberality. Lest that should fail of acquiring him such influence in the government of the kingdom as he aimed at obtaining, the emperor kept a body of twelve thousand men on the coast of Flanders, in readiness to embark for England, and to support his son in all his enterprises.

Mary's measures to overturn the protestant religion in England.

Imboldened by all these favourable circumstances, Mary pursued the scheme of extirpating the protestant religion out of her dominions with the most precipitate zeal. The laws of Edward the sixth in favour of the Reformation were repealed; the protestant clergy ejected; all the forms and rites of the popish worship were re-established; the nation was solemnly absolved from the guilt which it had contracted during the period of its apostasy, and was publicly reconciled to the church of Rome by cardinal Pole, who, immediately after the queen's marriage, was permitted to continue his journey to England, and to exercise his legantine functions with the most ample power. Not satisfied with having overturned the protestant church, and re-establishing the ancient system on its ruins, Mary insisted that all her subjects should conform to the same mode of worship which she preferred, should profess their faith in the same creed which she had approved, and abjure every practice or opinion that was deemed repugnant to either of them. Powers altogether unknown in the English constitution were vested in certain persons appointed to take cognizance of heresy, and they proceeded to exercise them with more than inquisitorial severity. The prospect of danger, however, did not intimidate the principal teachers of the protestant doctrines, who believed that they were contending for truths of the utmost consequence to the happiness of mankind. They boldly avowed their sentiments, and were condemned to that cruel death which the church of Rome reserves for its enemies. This shocking punishment was inflicted with that barbarity which the rancour of false zeal alone can inspire. The English, who are inferior in humanity to no people in Europe, and remarkable for the mildness of their public executions, beheld with astonishment and horror persons who had filled the most respectable stations in their church, and who were venerable on account of their age, their piety, and their literature, condemned to endure torments to which their laws did not subject even the most atrocious criminals.

The obstacles which she had to surmount.

This extreme rigour did not accomplish the end at which Mary aimed. The patience and fortitude with which these martyrs for the Reformation submitted to their sufferings, the heroic contempt of death expressed by persons of every rank, and age, and sex, confirmed many more in the protestant faith than the threats of their enraged persecutors could frighten into apostasy. The business of such as were intrusted with trying heretics multiplied continually, and appeared to be as endless as it was odious. The queen's ablest ministers became sensible how impolitic as well as dangerous it was to irritate the people by the frequent spectacle of public executions, which they detested as no less unjust than cruel. Even Philip was so thoroughly convinced of her having run to an excess of rigour, that on this occasion he assumed a part to which he was little accustomed, becoming an advocate for moderation and lenity.[a]

The English jealous of Philip.

But notwithstanding this attempt to ingratiate himself with the English, they discovered a constant jealousy and distrust of all his intentions; and when some members who had been gained by the court ventured to move in the house of commons that the nation ought to assist the emperor, the queen's father-in-law, in his war against France, the proposal was rejected with general dissatisfaction. A motion which was made, that the parliament should give its consent that Philip might be publicly crowned as the queen's husband, met with such a cold reception, that it was instantly withdrawn.[b]

The French king alarmed at the match between Philip and Mary.

The king of France had observed the progress of the emperor's negociation in England with much uneasiness. The great accession of territories as well as reputation which his enemy would acquire by the marriage of his son with the queen of such a powerful kingdom, was obvious and formidable. He easily foresaw that the English, notwithstanding all their fears and precautions, would be soon drawn in to take part in the quarrels on the continent, and be compelled to act in subserviency to the emperor's ambitious schemes. For this reason Henry had given it in charge to his ambassador at the court of London, to employ all his address in order to defeat or retard the treaty of marriage; and as there was not, at that time, any prince of the blood in France whom he could propose to the queen as a husband, he instructed him to co-operate with such of the English as wished their sovereign to marry one of her own subjects. But the queen's ardour and precipitation in closing with the first overtures in favour of Philip having rendered all his endeavours ineffectual, Henry was so far from thinking it prudent to give any aid to the English malcontents, though earnestly solicited by Wyat and their other leaders, who tempted him to take them under his protection by offers of great advantage to France, that he commanded his ambassador to congratulate the queen in the warmest terms upon the suppression of the insurrection.

His preparations for a vigorous campaign.

Notwithstanding these external professions, Henry dreaded so much the consequence of this alliance, which more than compensated for all the emperor had lost in Germany, that he determined to carry on his mi-

a Godwin's Annals of Q. Mary, ap. Kennet, v. ii. p. 329. Burnet's Hist. of Reform. ii. 298, 305.

b Carte's Hist. of England, iii. 314.

litary operations, both in the Low Countries and in Italy, with extraordinary vigour, in order that he might compel Charles to accept of an equitable peace before his daughter-in-law could surmount the aversion of her subjects to a war on the continent, and prevail on them to assist the emperor either with money or troops. For this purpose he exerted himself to the utmost in order to have a numerous army early assembled on the frontiers of the Netherlands, and while one part of it laid waste the open country of Artois, the main body, under the constable Montmorency, advanced towards the provinces of Liege and Hainault by the forest of Ardennes.

The progress of his arms.

The campaign was opened with the siege of Mariemburg, a town which the queen of Hungary, the governess of the Low Countries, had fortified at great expense; but being destitute of a sufficient garrison, it surrendered in six days. Henry, elated with this success, put himself at the head of his army, and investing Bouvines, took it by assault, after a short resistance. With equal facility he became master of Dinant; and then turning to the left, bent his march towards the province of Artois.

June 28.

The emperor little able to obstruct it.

The large sums which the emperor had remitted into England had so exhausted his treasury, as to render his preparations, at this juncture, slower and more dilatory than usual. He had no body of troops to make head against the French at their first entrance into his territories; and though he drew together all the forces in the country in the utmost hurry, and gave the command of them to Emanuel Philibert of Savoy, they were in no condition to face an enemy so far superior in number. The prince of Savoy, however, by his activity and good conduct, made up for his want of troops. By watching all the motions of the French at a distance, and by choosing his own posts with skill, he put it out of their power either to form any siege of consequence or to attack him. Want of subsistence soon obliged them to fall back towards their own frontiers, after having burnt all the open towns, and having plundered the country through which they marched, with a cruelty and licence more becoming a body of light troops than a royal army led by a great monarch.

The French invest Renti.

But Henry, that he might not dismiss his army without attempting some conquest adequate to the great preparations as well as sanguine hopes with which he had opened the campaign, invested Renti, a place deemed in that age of great importance, as, by its situation on the confines of Artois and the Boulonnois, it covered the former province, and protected the parties which made incursions into the latter. The town, which was strongly fortified, and provided with a numerous garrison, made a gallant defence; but being warmly pressed by a powerful army, it must soon have yielded. The emperor, who at that time enjoyed a short interval of ease from the gout, was so solicitous to save it, that although he could bear no other motion but that of a litter, he instantly put himself at the head of his army, which having received several reinforcements, was now strong enough to approach the enemy. The French were eager to decide the fate of Renti by a battle, and expected it from the emperor's arrival in his camp; but Charles avoided a general action with great industry; and as he had nothing in view but to save the town, he hoped to accomplish that without exposing himself to the consequences of such a dangerous and doubtful event.

An action between the two armies. Aug. 13.

Notwithstanding all his precautions, a dispute about a post which both armies endeavoured to seize, brought on an engagement which proved almost general. The duke of Guise, who commanded the wing of the French which stood the brunt of the combat, displayed valour and conduct worthy of the defender of Metz; the imperialists, after an obstinate struggle, were repulsed; the French remained masters of the post in dispute; and if the constable, either from his natural caution and slowness, or from unwillingness to support a rival whom he hated, had not delayed bringing up the main body to second the impression which Guise had made, the rout of the enemy must have been complete. The emperor, notwithstanding the loss which he had sustained, continued in the same camp; and the French being straitened for provisions, and finding it impossible to carry on the siege in the face of an hostile army, quitted their entrenchments. They retired openly, courting the enemy to approach rather than shunning an engagement.

But Charles having gained his end, suffered them to march off unmolested. As soon as his troops entered their own country, Henry threw garrisons into the frontier towns, and dismissed the rest of the army. This encouraged the imperialists to push forward with a considerable body of troops into Picardy, and by laying waste the country with fire and sword, they endeavoured to revenge themselves for the ravages which the French had committed in Hainault and Artois.[c] But as they were not able to reduce any place of importance, they gained nothing more than the enemy had done by this cruel and inglorious method of carrying on the war.

The imperialists invade Picardy.

Affairs of Italy.

The arms of France were still more unsuccessful in Italy. The footing which the French had acquired in Siena occasioned much uneasiness to Cosmo di Medici, the most sagacious and enterprising of all the Italian princes. He dreaded the neighbourhood of a powerful people, to whom all who favoured the ancient republican government in Florence would have recourse, as to their natural protectors, against that absolute authority which the emperor had enabled him to usurp; he knew how odious he was to the French on account of his attachment to the imperial

c Thuan. 460, &c. Haræi Ann. Brab. 674.

Cosmo di Medici's schemes with regard to Siena.

party; and he foresaw that if they were permitted to gather strength in Siena, Tuscany would soon feel the effects of their resentment. For these reasons he wished with the utmost solicitude for the expulsion of the French out of the Sienese, before they had time to establish themselves thoroughly in the country, or to receive such reinforcements from France as would render it dangerous to attack them. As this, however, was properly the emperor's business, who was called by his interest as well as honour to dislodge those formidable intruders into the heart of his dominions, Cosmo laboured to throw the whole burden of the enterprise on him; and on that account had given no assistance during the former campaign, but by advancing some small sums of money towards the payment of the imperial troops.

He negociates with the emperor.

But as the defence of the Netherlands engrossed all the emperor's attention, and his remittances into England had drained his treasury, it was obvious that his operations in Italy would be extremely feeble; and Cosmo plainly perceived that if he himself did not take part openly in the war and act with vigour, the French would scarcely meet with any annoyance. As his situation rendered this resolution necessary and unavoidable, his next care was to execute it in such a manner that he might derive from it some other advantage beside that of driving the French out of his neighbourhood. With this view he despatched an envoy to Charles, offering to declare war against France and to reduce Siena at his own charges, on condition that he should be repaid whatever he might expend in the enterprise, and be permitted to retain all his conquests until his demands were fully satisfied. Charles, to whom at this juncture the war against Siena was an intolerable burden, and who had neither expedient nor resource that could enable him to carry it on with proper vigour, closed gladly with this overture; and Cosmo, well acquainted with the low state of the imperial finances, flattered himself that the emperor, finding it impossible to reimburse him, would suffer him to keep quiet possession of whatever places he should conquer.[d]

Enters into war with France.

Full of these hopes, he made great preparations for war; and as the French king had turned the strength of his arms against the Netherlands, he did not despair of assembling such a body of men as would prove more than a sufficient match for any force which Henry could bring into the field in Italy. He endeavoured, by giving one of his daughters to the pope's nephew, to obtain assistance from the holy see, or at least to secure his remaining neutral. He attempted to detach the duke of Orsini, whose family had been long attached to the French party, from his ancient confederates, by bestowing on him another of his daughters; and what was of greater consequence than either of these, he engaged John James Medecino, marquis of Marignano, to take the command of his army.[e] This officer, from a very low condition in life, had raised himself through all the ranks of service to high command, and had displayed talents and acquired reputation in war which entitled him to be placed on a level with the greatest generals in that martial age. Having attained a station of eminence so disproportionate to his birth, he laboured with a fond solicitude to conceal his original obscurity, by giving out that he was descended of the family of Medici, to which honour the casual resemblance of his name was his only pretension. Cosmo, happy that he could gratify him at such an easy rate, flattered his vanity in this point, acknowledged him as a relation, and permitted him to assume the arms of his family. Medecino, eager to serve the head of that family of which he now considered himself as a branch, applied with wonderful zeal and assiduity to raise troops; and as, during his long service, he had acquired great credit with the leaders of those mercenary bands which formed the strength of Italian armies, he engaged the most eminent of them to follow Cosmo's standard.

Gives the command of his army to Medecino.

To oppose this able general and the formidable army which he had assembled, the king of France made choice of Peter Strozzi, a Florentine nobleman who had resided long in France as an exile, and who had risen by his merit to high reputation as well as command in the army. He was the son of Philip Strozzi, who, in the year one thousand five hundred and thirty-seven, had concurred with such ardour in the attempt to expel the family of Medici out of Florence, in order to re-establish the ancient republican form of government, and who had perished in the undertaking. The son inherited the implacable aversion to the Medici, as well as the same enthusiastic zeal for the liberty of Florence, which had animated his father, whose death he was impatient to revenge. Henry flattered himself that his army would make rapid progress under a general whose zeal to promote his interest was roused and seconded by such powerful passions; especially as he had allotted him for the scene of action his native country, in which he had many powerful partisans, ready to facilitate all his operations.

Peter Strozzi intrusted with the command of the French army in Italy.

But how specious soever the motives might appear which induced Henry to make this choice, it proved fatal to the interests of France in Italy. Cosmo, as soon as he heard that the mortal enemy of his family was appointed to take the command in Tuscany, concluded that the king of France aimed at something more than the protection of the Sienese, and saw the necessity of making extraordinary efforts, not merely to reduce Siena, but to save himself from destruction.[f] At

The imprudence of this choice.

f Pecci Memorie di Siena, vol. iv. p. 103. &c.

the same time the cardinal of Ferrara, who had the entire direction of the French affairs in Italy, considered Strozzi as a formidable rival in power, and in order to prevent his acquiring any increase of authority from success, he was extremely remiss in supplying him either with money to pay his troops or with provisions to support them. Strozzi himself, blinded by his resentment against the Medici, pushed on his operations with the impetuosity of revenge rather than with the caution and prudence becoming a great general.

The battle of Marciano;

At first, however, he attacked several towns in the territory of Florence with such vigour as obliged Medecino, in order to check his progress, to withdraw the greater part of his army from Siena, which he had invested before Strozzi's arrival in Italy. As Cosmo sustained the whole burden of military operations, the expense of which must soon have exhausted his revenues; as neither the viceroy of Naples nor governor of Milan was in condition to afford him any effectual aid; and as the troops which Medecino had left in the camp before Siena could attempt nothing against it during his absence, it was Strozzi's business to have protracted the war, and to have transferred the seat of it into the territories of Florence; but the hope of

August 3.

ruining his enemy by one decisive blow precipitated him into a general engagement not far from Marciano. The armies were nearly equal in number; but a body of Italian cavalry, in which Strozzi placed great confidence, having fled without making any resistance, either

in which the French are defeated.

through the treachery or cowardice of the officers who commanded it, his infantry remained exposed to the attacks of all Medecino's troops. Encouraged, however, by Strozzi's presence and example, who, after receiving a dangerous wound in endeavouring to rally the cavalry, placed himself at the head of the infantry, and manifested an admirable presence of mind as well as extraordinary valour, they stood their ground with great firmness, and repulsed such of the enemy as ventured to approach them. But those gallant troops being surrounded at last on every side, and torn in pieces by a battery of cannon which Medecino brought to bear upon them, the Florentine cavalry broke in on their flanks, and a general rout ensued. Strozzi, faint with the loss of blood, and deeply affected with the fatal consequences of his own rashness, found the utmost difficulty in making his escape with a handful of men.[g]

Medecino besieges Siena,

Medecino returned immediately to the siege of Siena with his victorious forces; and as Strozzi could not, after the greatest efforts of activity, collect as many men as to form the appearance of a regular army, he had leisure to carry on his approaches against the town without molestation. But the Sienese, instead of sinking into despair upon this cruel disappointment of their only hope of obtaining relief, prepared to defend themselves to the utmost extremity, with that undaunted fortitude which the love of liberty alone can inspire.

which is gallantly defended by the citizens and Monluc.

This generous resolution was warmly seconded by Monluc, who commanded the French garrison in the town. The active and enterprising courage which he had displayed on many occasions had procured him this command; and as he had ambition which aspired at the highest military dignities, without any pretensions to attain them but what he could derive from merit, he determined to distinguish his defence of Siena by extraordinary efforts of valour and perseverance. For this purpose he repaired and strengthened the fortifications with unwearied industry; he trained the citizens to the use of arms, and accustomed them to go through the fatigues and dangers of service in common with the soldiers; and as the enemy were extremely strict in guarding all the avenues to the city, he husbanded the provisions in the magazines with the most parsimonious economy, and prevailed on the soldiers as well as the citizens to restrict themselves to a very moderate daily allowance for their subsistence. Medecino, though his army was not numerous enough to storm the town by open force, ventured twice to assault it by surprise; but he was received each time with so much spirit, and repulsed with such loss, as discouraged him from repeating the attempt, and left him no hopes of reducing the town but by famine.

Medecino converts the siege into a blockade.

With this view he fortified his own camp with great care, occupied all the posts of strength round the place, and having entirely cut off the besieged from any communication with the adjacent country, he waited patiently until necessity should compel them to open their gates. But their enthusiastic zeal for liberty made the citizens despise the distresses occasioned by the scarcity of provisions, and supported them long under all the miseries of famine: Monluc, by his example and exhortations, taught his soldiers to vie with them in patience and abstinence; and it was not until they had withstood a siege of ten months, until they had eaten up all the horses, dogs, and other animals in the place, and were reduced almost to their last morsel of bread, that they proposed a capitulation.

1555.

Even then they demanded honourable terms; and as Cosmo, though no stranger to the extremity of their condition, was afraid that despair might prompt them to venture upon some wild enterprise, he immediately granted them conditions more favourable than they could have expected.

April 22. The town obliged by famine to capitulate.

The capitulation was made in the emperor's name, who engaged to take the republic of Siena under the protection of the empire; he promised to maintain the ancient liberties of the city, to allow the magistrates the full exercise of their former authority, to secure the citizens in the undisturbed possession of their

g Pecci Memoire della Siena, vol. iv. p. 157.

privileges and property; he granted an ample and unlimited pardon to all who had borne arms against him; he reserved to himself the right of placing a garrison in the town, but engaged not to rebuild the citadel without the consent of the citizens. Monluc and his French garrison were allowed to march out with all the honours of war.

Medecino observed the articles of capitulation, as far as depended on him, with great exactness. No violence or insult whatever was offered to the inhabitants, and the French garrison was treated with all the respect due to their spirit and bravery. But many of the citizens suspecting, from the extraordinary facility with which they had obtained such favourable conditions, that the emperor as well as Cosmo would take the first opportunity of violating them, and disdaining to possess a precarious liberty which depended on the will of another, abandoned the place of their nativity, and accompanied the French to Monte-Alcino, Porto Ercole, and other small towns in the territory of the republic. They established in Monte-Alcino the same model of government to which they had been accustomed at Siena, and, appointing magistrates with the same titles and jurisdiction, solaced themselves with this image of their ancient liberty.

Many of the Sienese retire to Monte-Alcino;

and establish a free government there.

The fears of the Sienese concerning the fate of their country were not imaginary, or their suspicion of the emperor and Cosmo ill-founded; for no sooner had the imperial troops taken possession of the town, than Cosmo, without regarding the articles of capitulation, not only displaced the magistrates who were in office, and nominated new ones devoted to his own interest, but commanded all the citizens to deliver up their arms to persons whom he appointed to receive them. They submitted to the former from necessity, though with all the reluctance and regret which men accustomed to liberty feel in obeying the first commands of a master. They did not yield the same tame obedience to the latter; and many persons of distinction, rather than degrade themselves from the rank of freemen to the condition of slaves by surrendering their arms, fled to their countrymen at Monte-Alcino, and chose to endure all the hardships and encounter all the dangers which they had reason to expect in that new station, where they had fixed the seat of their republic.

Hardships to which the citizens of Siena were subjected.

Cosmo not reckoning himself secure while such numbers of implacable and desperate enemies were settled in his neighbourhood, and retained any degree of power, solicited Medecino to attack them in their different places of retreat, before they had time to recruit their strength and spirits after the many calamities which they had suffered. He prevailed on him, though his army was much weakened by hard duty during the siege of Siena, to invest Porto Ercole, and the fortifications being both slight and incomplete, the besieged were soon compelled to open their gates. An unexpected order which Medecino received from the emperor, to detach the greater part of his troops into Piedmont, prevented further operations, and permitted the Sienese exiles to reside for some time undisturbed in Monte-Alcino. But their unhappy countrymen who remained at Siena were not yet at the end of their sufferings; for the emperor, instead of adhering to the articles of capitulation, granted his son Philip the investiture of that city and all its dependences; and Francis de Toledo, in the name of their new master, proceeded to settle the civil and military government, treated them like a conquered people, and subjected them to the Spanish yoke, without paying any regard whatever to their privileges or ancient form of government.[h]

Cosmo attacks those who had retired.

June 13.

The imperial army in Piedmont had been so feeble for some time, and its commander so inactive, that the emperor, in order to give vigour to his operations in that quarter, found it necessary not only to recall Medecino's troops from Tuscany while in the career of conquest, but to employ in Piedmont a general of such reputation and abilities as might counterbalance the great military talents of the mareschal Brissac, who was at the head of the French forces in that country.

Operations in Piedmont.

He pitched on the duke of Alva for that purpose; but that choice was as much the effect of a court intrigue as of his opinion with respect to the duke's merit. Alva had long made court to Philip with the utmost assiduity, and had endeavoured to work himself into his confidence by all the insinuating arts of which his haughty and inflexible nature was capable. As he nearly resembled that prince in many features of his character, he began to gain much of his good-will. Ruy Gomez de Silva, Philip's favourite, who dreaded the progress which this formidable rival made in his master's affections, had the address to prevail with the emperor to name Alva to this command. The duke, though sensible that he owed this distinction to the malicious arts of an enemy who had no other aim than to remove him at a distance from court, was of such punctilious honour that he would not decline a command that appeared dangerous and difficult, but at the same time was so haughty that he would not accept of it but on his own terms, insisting on being appointed the emperor's vicar-general in Italy, with the supreme military command in all the imperial and Spanish territories in that country. Charles granted all his demands; and he took possession of his new dignity with almost unlimited authority.

Charles appoints the duke of Alva generalissimo there.

h Sleid. 617. Thuan. lib. xv. 526, 537. Joan. Camerarii adnot. rer. præcipuarum ab anno 1550 ad 1561 ap. Freherum, vol. iii. p. 564. Pecci Memorie della Siena, iv. 64, &c.

His operations there inconsiderable.

His first operations, however, were neither proportioned to his former reputation and the extensive powers with which he was invested, not did they come up to the emperor's expectations. Brissac had under his command an army which, though inferior in number to the imperialists, was composed of chosen troops, which having grown old in service in that country, where every town was fortified and every castle capable of being defended, were perfectly acquainted with the manner of carrying on war there. By their valour and his own good conduct, Brissac not only defeated all the attempts of the imperialists, but added new conquests to the territories of which he was formerly master. Alva, after having boasted with his usual arrogance that he would drive the French out of Piedmont in a few weeks, was obliged to retire into winter-quarters, with the mortification of being unable to preserve entire that part of the country of which the emperor had hitherto kept possession.[i]

A conspiracy to betray Metz to the imperialists.

As the operations of this campaign in Piedmont were indecisive, those in the Netherlands were inconsiderable, neither the emperor nor king of France being able to bring into the field an army strong enough to undertake any enterprise of moment. But what Charles wanted in force he endeavoured to supply by a bold stratagem, the success of which would have been equal to that of the most vigorous campaign. During the siege of Metz, Leonard, father guardian of a convent of Franciscans in that city, had insinuated himself far into the esteem and favour of the duke of Guise, by his attachment to the French. Being a man of an active and intriguing spirit, he had been extremely useful both in animating the inhabitants to sustain with patience all the hardships of the siege, and in procuring intelligence of the enemy's designs and motions. The merit of those important services, together with the warm recommendations of the duke of Guise, secured him such high confidence with Vielleville, who was appointed governor of Metz when Guise left the town, that he was permitted to converse or correspond with whatever persons he thought fit, and nothing that he did created any suspicion. This monk, from the levity natural to bold and projecting adventurers; or from resentment against the French, who had not bestowed on him such rewards as he thought due to his own merit; or tempted, by the unlimited confidence which was placed in him, to imagine that he might carry on and accomplish any scheme with perfect security, formed a design of betraying Metz to the imperialists.

The plan of it.

He communicated his intentions to the queen-dowager of Hungary, who governed the Low Countries in the name of her brother. She approving, without any scruple, any act of treachery from which the emperor might derive such signal advantage, assisted the father guardian in concerting the most proper plan for insuring its success. They agreed that the father guardian should endeavour to gain his monks to concur in promoting the design; that he should introduce into the convent a certain number of chosen soldiers, disguised in the habit of friars; that when every thing was ripe for execution, the governor of Thionville should march towards Metz in the night with a considerable body of troops, and attempt to scale the ramparts; that while the garrison was employed in resisting the assailants, the monks should set fire to the town in different places; that the soldiers who lay concealed should sally out of the convent, and attack those who defended the ramparts in the rear. Amidst the universal terror and confusion which events so unexpected would occasion, it was not doubted but that the imperialists might become masters of the town. As a recompence for this service, the father guardian stipulated that he should be appointed bishop of Metz; and ample rewards were promised to such of his monks as should be most active in co-operating with him.

Its progress.

The father guardian accomplished what he had undertaken to perform with great secrecy and despatch. By his authority and arguments, as well as by the prospect of wealth and honours which he set before his monks, he prevailed on all of them to enter into the conspiracy. He introduced into the convent, without being suspected, as many soldiers as were thought sufficient. The governor of Thionville, apprised in due time of the design, had assembled a proper number of troops for executing it; and the moment approached which probably would have wrested from Henry the most important of all his conquests.

Is discovered.

But, happily for France, on the very day that was fixed for striking the blow, Vielleville, an able and vigilant officer, received information from a spy whom he entertained at Thionville, that certain Franciscan friars resorted frequently thither, and were admitted to many private conferences with the governor, who was carrying on preparations for some military enterprise with great despatch, but with a most mysterious secrecy. This was sufficient to awaken Vielleville's suspicions. Without communicating these to any person, he instantly visited the convent of Franciscans; detected the soldiers who were concealed there; and forced them to discover as much as they knew concerning the nature of the enterprise. The father guardian, who had gone to Thionville that he might put the last hand to his machinations, was seized at the gate as he returned; and he, in order to save himself from the rack, revealed all the circumstances of the conspiracy.

A body of imperialists defeated.

Vielleville, not satisfied with having seized the traitors and having frustrated their schemes, was solicitous to take advantage of the discoveries which he had made, so as to be revenged on the imperialists. For this

i Thuan. lib. xv. 529. Guichenon Hist. de Savoye, tom. i. 670.

purpose he marched out with the best troops in his garrison, and placing these in ambush near the road by which the father guardian had informed him that the governor of Thionville would approach Metz, he fell upon the imperialists with great fury, as they advanced in perfect security, without suspecting any danger to be near. Confounded at this sudden attack by an enemy whom they expected to surprise, they made little resistance; and a great part of the troops employed in this service, among whom were many persons of distinction, were killed or taken prisoners. Before next morning Vielleville returned to Metz in triumph.

The conspirators punished.

No resolution was taken for some time concerning the fate of the father guardian and his monks, the framers and conductors of this dangerous conspiracy. Regard for the honour of a body so numerous and respectable as the Franciscans, and unwillingness to afford a subject of triumph to the enemies of the Romish church by their disgrace, seem to have occasioned this delay. But at length the necessity of inflicting exemplary punishment upon them, in order to deter others from venturing to commit the same crime, became so evident, that orders were issued to proceed to their trial. The guilt was made apparent by the clearest evidence; and sentence of death was passed upon the father guardian, together with twenty monks. On the evening previous to the day fixed for their execution, the jailer took them out of the dungeons in which they had hitherto been confined separately, and shut them all up in one great room, that they might confess their sins one to another, and join together in preparing for a future state. But as soon as they were left alone, instead of employing themselves in the religious exercises suitable to their condition, they began to reproach the father guardian and four of the senior monks who had been most active in seducing them, for their inordinate ambition, which had brought such misery on them and such disgrace upon their order. From reproaches they proceeded to curses and execrations, and at last, in a phrensy of rage and despair, they fell upon them with such violence, that they murdered the father guardian on the spot, and so disabled the other four, that it became necessary to carry them next morning in a cart, together with the dead body of the father guardian, to the place of execution. Six of the youngest were pardoned, the rest suffered the punishment which their crime merited.[k]

A fruitless negociation in order to establish peace.

Though both parties, exhausted by the length of the war, carried it on in this languishing manner, neither of them showed any disposition to listen to overtures of peace. Cardinal Pole, indeed, laboured with all the zeal becoming his piety and humanity to reestablish concord among the princes of Christendom. He had not only persuaded his mistress, the queen of England, to enter warmly into his sentiments, and to offer her mediation to the contending powers, but had prevailed both on the emperor and king of France to send their plenipotentiaries to a village between Gravelines and Ardres. He himself, together with Gardiner, bishop of Winchester, repaired thither in order to preside as mediators in the conferences which were to be held for adjusting all the points in difference. But though each of the monarchs committed this negociation to some of their ministers in whom they placed the greatest confidence, it was soon evident that they came together with no sincere desire of accommodation. Each proposed articles so extravagant, that they could have no hopes of their being accepted. Pole, after exerting in vain all his zeal and address in order to persuade them to relinquish such extravagant demands, and to consent to the substitution of more equal conditions, became sensible of the folly of wasting time in attempting to re-establish concord between those whom their obstinacy rendered irreconcilable, broke off the conference, and returned to England.[l] May 21.

Affairs of Germany.

During these transactions in other parts of Europe, Germany enjoyed such profound tranquillity as afforded the diet full leisure to deliberate, and to establish proper regulations concerning a point of the greatest consequence to the internal peace of the empire. By the treaty of Passau, in one thousand five hundred and fifty-two, it had been referred to the next diet of the empire to confirm and perfect the plan of religious pacification which was there agreed upon. The terror and confusion with which the violent commotions excited by Albert of Brandenburg had filled Germany, as well as the constant attention which Ferdinand was obliged to give to the affairs of Hungary, had hitherto prevented the holding a diet, though it had been summoned, soon after the conclusion of the treaty, to meet at Augsburg.

Diet held at Augsburg, and Ferdinand's speech in it.

But as a diet was now necessary on many accounts, Ferdinand about the beginning of this year had repaired to Augsburg. Though few of the princes were present either in person or by their deputies, he opened the assembly by a speech, in which he proposed a termination of the dissensions to which the new tenets and controversies with regard to religion had given rise, not only as the first and great business of the diet, but as the point which both the emperor and he had most at heart. He represented the innumerable obstacles which the emperor had to surmount before he could procure the convocation of a general council, as well as the fatal accidents which had for some time retarded and had at last suspended the consultations of that assembly. He observed, that experience had already taught them how vain it was to expect any remedy for evils which demanded immediate redress from a general council, the assembling of which would

k Thuan. lib. xv. p. 522. Belcar. Com. Rer. Gal. 866. Memoires du Marech. Vielleville, par M. Charloix. tom. iii. p. 249, &c. p. 347. Par. 1757.

l Thuan. lib. xv. p. 523. Mem. de Ribier, tom. ii. p. 613.

either be prevented, or its deliberations be interrupted by the dissensions and hostilities of the princes of Christendom: that a national council in Germany, which, as some imagined, might be called with greater ease, and deliberate with more perfect security, was an assembly of an unprecedented nature, the jurisdiction of which was uncertain in its extent, and the form of its proceedings undefined: that in his opinion there remained but one method for composing their unhappy differences, which though it had been often tried without success, might yet prove effectual, if it were attempted with a better and more pacific spirit than had appeared on former occasions; and that was to choose a few men of learning, abilities, and moderation, who by discussing the disputed articles in an amicable conference, might explain them in such a manner as to bring the contending parties either to unite in sentiment or to differ with charity.

Suspicions and fears of the protestants.

This speech being printed in common form and dispersed over the empire, revived the fears and jealousies of the protestants: Ferdinand, they observed with much surprise, had not once mentioned in his address to the diet the treaty of Passau, the stipulations of which they considered as the great security of their religious liberty. The suspicions to which this gave rise were confirmed by the accounts which they daily received of the extreme severity with which Ferdinand treated their protestant brethren in his hereditary dominions; and as it was natural to consider his actions as the surest indication of his intentions, this diminished their confidence in those pompous professions of moderation and of zeal for the re-establishment of concord, to which his practice seemed to be so repugnant.

These increased by the arrival of a nuncio from the pope to the diet.

The arrival of the cardinal Moroné, whom the pope had appointed to attend the diet as his nuncio, completed their conviction, and left them no room to doubt that some dangerous machination was forming against the peace or safety of the protestant church. Julius, elated with the unexpected return of the English nation from apostasy, began to flatter himself that the spirit of mutiny and revolt having now spent its force, the happy period was come when the church might resume its ancient authority, and be obeyed by the people with the same tame submission as formerly. Full of these hopes, he had sent Moroné to Augsburg, with instructions to employ his eloquence to excite the Germans to imitate the laudable example of the English, and his political address in order to prevent any decree of the diet to the detriment of the catholic faith. As Moroné inherited from his father, the chancellor of Milan, uncommon talents for negociation and intrigue, he could hardly have failed of embarrassing the measures of the protestants in the diet, or of defeating whatever they aimed at obtaining in it for their further security.

The death of Julius III.

But an unforeseen event delivered them from all the danger which they had reason to apprehend from Moroné's presence. Julius, by abandoning himself to pleasures and amusements no less unbecoming his age than his character, having contracted such habits of dissipation, that any serious occupation, especially if attended with difficulty, became an intolerable burden to him, had long resisted the solicitations of his nephew to hold a consistory, because he expected there a violent opposition to his schemes in favour of that young man. But when all the pretexts which he could invent for eluding this request were exhausted, and at the same time his indolent aversion to business continued to grow upon him, he feigned indisposition rather than yield to his nephew's importunity; and that he might give the deceit a greater colour of probability, he not only confined himself to his apartment, but changed his usual diet and manner of life. By persisting too long in acting this ridiculous part, he contracted a real disease, of which he died in a few days, leaving his infamous minion the cardinal de Monte to bear his name, and to disgrace the dignity which he had conferred upon him.[m]

March 23.

The nuncio sets out for Rome.

As soon as Moroné heard of his death, he set out abruptly from Augsburg, where he had resided only a few days, that he might be present at the election of a new pontiff.

Ferdinand's reasons for wishing to satisfy the protestants.

One cause of their suspicions and fears being thus removed, the protestants soon became sensible that their conjectures concerning Ferdinand's intentions, however specious, were ill-founded, and that he had no thoughts of violating the articles favourable to them in the treaty of Passau. Charles, from the time that Maurice had defeated all his schemes in the empire, and overturned the great system of religious and civil despotism which he had almost established there, gave little attention to the internal government of Germany, and permitted his brother to pursue whatever measures he judged most salutary and expedient. Ferdinand, less ambitious and enterprising than the emperor, instead of resuming a plan which he, with power and resources so far superior, had failed of accomplishing, endeavoured to attach the princes of the empire to his family by an administration uniformly moderate and equitable. To this he gave, at present, particular attention, because his situation at this juncture rendered it necessary to court their favour and support with more than usual assiduity.

Charles had resumed his plan of altering the succession to the empire.

Charles had again resumed his favourite project of acquiring the imperial crown for his son Philip, the prosecution of which the reception it had met with when first proposed had obliged him to suspend, but had not induced him to relinquish. This led him warmly to renew his request to his brother, that he would accept of some compensation

m Onuphr. Panvinius de Vitis Pontificum, p. 320. Thuan. lib. xv. 517.

for his prior right of succession, and sacrifice that to the grandeur of the house of Austria. Ferdinand, who was as little disposed as formerly to give such an extraordinary proof of self-denial, being sensible that in order to defeat this scheme, not only the most inflexible firmness on his part, but a vigorous declaration from the princes of the empire in behalf of his title, were requisite, was willing to purchase their favour by gratifying them in every point that they deemed interesting or essential.

The Turks were ready to invade Hungary.

At the same time he stood in need of immediate and extraordinary aid from the Germanic body, as the Turks, after having wrested from him great part of his Hungarian territories, were ready to attack the provinces still subject to his authority with a formidable army, against which he could bring no equal force into the field. For this aid from Germany he could not hope, if the internal peace of the empire were not established on a foundation solid in itself, and which should appear, even to the protestants, so secure and so permanent, as might not only allow them to engage in a distant war with safety, but might encourage them to act in it with vigour.

He is alarmed at some steps taken by the protestants.

A step taken by the protestants themselves, a short time after the opening of the diet, rendered him still more cautious of giving them any new cause of offence. As soon as the publication of Ferdinand's speech awakened the fears and suspicions which have been mentioned, the electors of Saxony and Brandenburg, together with the landgrave of Hesse, met at Naumburg; and confirming the ancient treaty of confraternity which had long united their families, they added to it a new article, by which the contracting parties bound themselves to adhere to the confession of Augsburg, and to maintain the doctrine which it contained in their respective dominions.[n]

Ferdinand zealous to promote an accommodation.

Ferdinand, influenced by all these considerations, employed his utmost address in conducting the deliberations of the diet, so as not to excite the jealousy of a party on whose friendship he depended, and whose enmity, as they had not only taken the alarm, but had begun to prepare for their defence, he had so much reason to dread. The members of the diet readily agreed to Ferdinand's proposal of taking the state of religion into consideration previous to any other business. But as soon as they entered upon it, both parties discovered all the zeal and animosity which a subject so interesting naturally engenders, and which the rancour of controversy, together with the violence of civil war, had inflamed to the highest pitch.

The pretensions of the catholics and protestants.

The protestants contended, that the security which they claimed in consequence of the treaty of Passau should extend, without limitation, to all who had hitherto embraced the doctrine of Luther, or who should hereafter embrace it. The catholics having first of all asserted the pope's right as the supreme and final judge with respect to all articles of faith, declared, that though, on account of the present situation of the empire, and for the sake of peace, they were willing to confirm the toleration granted by the treaty of Passau to such as had already adopted the new opinions, they must insist that this indulgence should not be extended either to those cities which had conformed to the Interim, or to such ecclesiastics as should for the future apostatize from the church of Rome. It was no easy matter to reconcile such opposite pretensions, which were supported on each side by the most elaborate arguments and the greatest acrimony of expression that the abilities or zeal of theologians long exercised in disputation could suggest. Ferdinand, however, by his address and perseverance; by softening some things on each side; by putting a favourable meaning upon others; by representing incessantly the necessity as well as the advantages of concord; and by threatening on some occasions, when all other considerations were disregarded, to dissolve the diet, brought them at length to a conclusion in which they all agreed.

Sept. 25. The peace of religion established.

Conformably to this, a recess was framed, approved of, and published with the usual formalities. The following are the chief articles which it contained:—That such princes and cities as have declared their approbation of the confession of Augsburg, shall be permitted to profess the doctrine and exercise the worship which it authorizes, without interruption or molestation from the emperor, the king of the Romans, or any power or person whatsoever; that the protestants, on their part, shall give no disquiet to the princes and states who adhere to the tenets and rites of the church of Rome; that, for the future, no attempt shall be made towards terminating religious differences but by the gentle and pacific methods of persuasion and conference; that the popish ecclesiastics shall claim no spiritual jurisdiction in such states as receive the confession of Augsburg; that such as had seized the benefices or revenues of the church previous to the treaty of Passau, shall retain possession of them, and be liable to no persecution in the imperial chamber on that account; that the supreme civil power in every state shall have right to establish what form of doctrine and worship it shall deem proper, and if any of its subjects refuse to conform to these, shall permit them to remove with all their effects whithersoever they shall please; that if any prelate or ecclesiastic shall hereafter abandon the Romish religion, he shall instantly relinquish his diocese or benefice, and it shall be lawful for those in whom the right of nomination is vested, to proceed immediately to an election, as if the office were vacant by death or translation, and to appoint a successor of undoubted attachment to the ancient system.[o]

n Chytræi Saxonia, 480.

o Sleid. 620. F. Paul, 368. Pallav. p. 11, 161.

Reflections on the progress of the principles of toleration.

Such are the capital articles in this famous recess, which is the basis of religious peace in Germany, and the bond of union among its various states, the sentiments of which are so extremely different with respect to points the most interesting as well as important. In our age and nation, to which the idea of toleration is familiar, and its beneficial effects well known, it may seem strange that a method of terminating their dissensions so suitable to the mild and charitable spirit of the christian religion, did not sooner occur to the contending parties. But this expedient, however salutary, was so repugnant to the sentiments and practice of christians during many ages, that it did not lie obvious to discovery. Among the ancient heathens, all whose deities were local and tutelary, diversity of sentiments concerning the object or rites of religious worship seems to have been no source of animosity, because the acknowledging veneration to be due to any one god did not imply denial of the existence or the power of any other god; nor were the modes and rites of worship established in one country incompatible with those which other nations approved of and observed. Thus the errors in their system of theology were of such a nature as to be productive of concord; and notwithstanding the amazing number of their deities, as well as the infinite variety of their ceremonies, a sociable and tolerating spirit subsisted almost universally in the pagan world.

But when the christian revelation declared one Supreme Being to be the sole object of religious veneration, and prescribed the form of worship most acceptable to him, whoever admitted the truth of it held, of consequence, every other system of religion as a deviation from what was established by divine authority to be false and impious. Hence arose the zeal of the first converts to the christian faith in propagating its doctrines, and the ardour with which they laboured to overturn every other form of worship. They employed, however, for this purpose, no methods but such as suited the nature of religion. By the force of powerful arguments they convinced the understandings of men; by the charms of superior virtue they allured and captivated their hearts. At length the civil power declared in favour of christianity; and though numbers, imitating the example of their superiors, crowded into the church, many still adhered to their ancient superstitions. Enraged at their obstinacy, the ministers of religion, whose zeal was still unabated, though their sanctity and virtue were much diminished, forgot so far the nature of their own mission, and of the arguments which they ought to have employed, that they armed the imperial power against these unhappy men, and as they could not persuade, they tried to compel them to believe.

At the same time controversies concerning articles of faith multiplied, from various causes, among christians themselves, and the same unhallowed weapons which had first been used against the enemies of their religion, were turned against each other. Every zealous disputant endeavoured to interest the civil magistrate in his cause, and each in his turn employed the secular arm to crush or to exterminate his opponents. Not long after, the bishops of Rome put in their claim to infallibility in explaining articles of faith and deciding points in controversy; and bold as the pretension was, they, by their artifices and perseverance, imposed on the credulity of mankind, and brought them to recognise it. To doubt or to deny any doctrine to which these unerring instructors had given the sanction of their approbation, was held to be not only a resisting of truth, but an act of rebellion against their sacred authority: and the secular power, of which, by various arts, they had acquired the absolute direction, was instantly employed to avenge both.

Thus Europe had been accustomed, during many centuries, to see speculative opinions propagated or defended by force; the charity and mutual forbearance which christianity recommends with so much warmth were forgotten; the sacred rights of conscience and of private judgment were unheard of; and not only the idea of toleration, but even the word itself in the sense now affixed to it, was unknown. A right to extirpate error by force was universally allowed to be the prerogative of such as possessed the knowledge of truth; and as each party of christians believed that they had got possession of this invaluable attainment, they all claimed and exercised, as far as they were able, the rights which it was supposed to convey. The Roman catholics, as their system rested on the decisions of an infallible judge, never doubted that truth was on their side, and openly called on the civil power to repel the impious and heretical innovators who had risen up against it. The protestants, no less confident that their doctrine was well founded, required, with equal ardour, the princes of their party to check such as presumed to impugn it. Luther, Calvin, Cranmer, Knox, the founders of the reformed church in their respective countries, as far as they had power and opportunity, inflicted the same punishments upon such as called in question any article in their creeds which were denounced against their own disciples by the church of Rome. To their followers, and perhaps to their opponents, it would have appeared a symptom of diffidence in the goodness of their cause, or an acknowledgment that it was not well founded, if they had not employed in its defence all those means which it was supposed truth had a right to employ.

It was towards the close of the seventeenth century before toleration, under its present form, was admitted first into the republic of the United Provinces, and from thence introduced into England. Long experience of the calamities flowing from mutual persecution, the influence of free government,

the light and humanity acquired by the progress of science, together with the prudence and authority of the civil magistrate, were all requisite in order to establish a regulation so repugnant to the ideas which all the different sects had adopted, from mistaken conceptions, concerning the nature of religion and the rights of truth, or which all of them had derived from the erroneous maxims established by the church of Rome.

Advantages of the religious peace to the Lutherans;

The recess of Augsburg, it is evident, was founded on no such liberal and enlarged sentiments concerning freedom of religious inquiry, or the nature of toleration. It was nothing more than a scheme of pacification which political considerations alone had suggested to the contending parties, and regard for their mutual tranquillity and safety had rendered necessary. Of this there can be no stronger proof than an article in the recess itself, by which the benefits of the pacification are declared to extend only to the catholics on the one side, and to such as adhered to the confession of Augsburg on the other. The followers of Zuinglius and Calvin remained, in consequence of that exclusion, without any protection from the rigour of the laws denounced against heretics. Nor did they obtain any legal security until the treaty of Westphalia, near a century after this period, provided that they should be admitted to enjoy, in as ample a manner as the Lutherans, all the advantages and protection which the recess of Augsburg affords.

and to the catholics.

But if the followers of Luther were highly pleased with the security which they acquired by this recess, such as adhered to the ancient system had no less reason to be satisfied with that article in it, which preserved entire to the Roman catholic church the benefices of such ecclesiastics as should hereafter renounce its doctrines. This article, known in Germany by the name of the *Ecclesiastical Reservation*, was apparently so conformable to the idea and to the rights of an established church, and it seemed so equitable to prevent revenues which had been originally appropriated for the maintenance of persons attached to a certain system from being alienated to any other purpose, that the protestants, though they foresaw its consequences, were obliged to relinquish their opposition to it. As the Roman catholic princes of the empire have taken care to see this article exactly observed in every case where there was an opportunity of putting it in execution, it has proved the great barrier of the Romish church in Germany against the Reformation; and as, from this period, the same temptation of interest did not allure ecclesiastics to relinquish the established system, there have been few of that order who have loved truth with such disinterested and ardent affection, as for its sake to abandon the rich benefices which they had in possession.

During the sitting of the diet, Marcellus Cervino, cardinal of Santo Croce, was elected pope in room of Julius. He, in imitation of Adrian, did not change his name on being exalted to the papal chair. As he equalled that pontiff in purity of intention, while he excelled him much in the arts of government, and still more in knowledge of the state and genius of the papal court; as he had capacity to discern what reformation it needed, as well as what it could bear, such regulations were expected from his virtue and wisdom as would have removed many of its grossest and most flagrant corruptions, and have contributed towards reconciling to the church such as, from indignation at these enormities, had abandoned its communion. But this excellent pontiff was only shown to the church, and immediately snatched away. The confinement in the conclave had impaired his health, and the fatigue of tedious ceremonies upon his accession, together with too intense and anxious application of mind to the schemes of improvement which he meditated, exhausted so entirely the vigour of his feeble constitution, that he sickened on the twelfth and died on the twentieth day after his election.[p]

Marcellus II. elected pope, April 9.

His character.

His death.

All the refinements in artifice and intrigue peculiar to conclaves were displayed in that which was held for electing a successor to Marcellus; the cardinals of the imperial and French factions labouring, with equal ardour, to gain the necessary number of suffrages for one of their own party. But after a struggle of no long duration, though conducted with all the warmth and eagerness natural to men contending for so great an object, they united in choosing John Peter Caraffa, the eldest member of the sacred college, and the son of count Montorio, a nobleman of an illustrious family in the kingdom of Naples. The address and influence of cardinal Farnese, who favoured his pretensions, Caraffa's own merit, and perhaps his great age, which soothed all the disappointed candidates with the near prospect of a new vacancy, concurred in bringing about this speedy union of suffrages. In order to testify his respect for the memory of Paul III., by whom he had been created cardinal, as well as his gratitude to the family of Farnese, he assumed the name of Paul IV.

The election of Paul IV.

May 23.

The choice of a prelate of such a singular character, and who had long held a course extremely different from that which usually led to the dignity now conferred upon him, filled the Italians, who had nearest access to observe his manners and deportment, with astonishment, and kept them in suspense and solicitude with regard to his future conduct. Paul, though born in a rank of life which, without any other merit, might have secured to him the highest ecclesiastical preferments, had, from his early years, applied to study with all the assiduity of a man who had nothing

His rise and character.

[p] Thuan. 520. F. Paul, 365. Onuph. Panvin. 321, &c.

but his personal attainments to render him conspicuous. By means of this he not only acquired profound skill in scholastic theology, but added to that a considerable knowledge of the learned languages and of polite literature, the study of which had been lately revived in Italy, and was pursued at this time with great ardour. His mind, however, naturally gloomy and severe, was more formed to imbibe the sour spirit of the former than to receive any tincture of elegance or liberality of sentiment from the latter; so that he acquired rather the qualities and passions of a recluse ecclesiastic than the talents necessary for the conduct of great affairs. Accordingly, when he entered into orders, although several rich benefices were bestowed upon him, and he was early employed as a nuncio in different courts, he soon became disgusted with that course of life, and languished to be in a situation more suited to his taste and temper. With this view he resigned at once all his ecclesiastical preferments, and having instituted an order of regular priests whom he denominated Theatines, from the name of the archbishopric which he had held, he associated himself as a member of their fraternity, conformed to all the rigorous rules to which he had subjected them, and preferred the solitude of a monastic life, with the honour of being the founder of a new order, to all the great objects which the court of Rome presented to his ambition.

In this retreat he remained for many years, until Paul III., induced by the fame of his sanctity and knowledge, called him to Rome, in order to consult with him concerning the measures which might be most proper and effectual for suppressing heresy and re-establishing the ancient authority of the church. Having thus allured him from his solitude, the pope, partly by his entreaties and partly by his authority, prevailed on him to accept of a cardinal's hat, to reassume the benefices which he had resigned, and to return again into the usual path of ecclesiastical ambition, which he seemed to have relinquished. But during two successive pontificates, under the first of which the court of Rome was the most artful and interested, and under the second the most dissolute, of any in Europe, Caraffa retained his monastic austerity. He was an avowed and bitter enemy not only of all innovation in opinion, but of every irregularity in practice; he was the chief instrument in establishing the formidable and odious tribunal of the inquisition in the papal territories; he appeared a violent advocate on all occasions for the jurisdiction and discipline of the church, and a severe censurer of every measure which seemed to flow from motives of policy or interest rather than from zeal for the honour of the ecclesiastical order and the dignity of the holy see. Under a prelate of such a character, the Roman courtiers expected a severe and violent pontificate, during which the principles of sound policy would be sacrificed to the narrow prejudices of priestly zeal; while the people of Rome were apprehensive of seeing the sordid and forbidding rigour of monastic manners substituted in place of the magnificence to which they had long been accustomed in the papal court. These apprehensions Paul was extremely solicitous to remove. At his first entrance upon the administration, he laid aside that austerity which had hitherto distinguished his person and family, and when the master of his household inquired in what manner he would choose to live, he haughtily replied, "As becomes a great prince." He ordered the ceremony of his coronation to be conducted with more than usual pomp; and endeavoured to render himself popular by several acts of liberality and indulgence towards the inhabitants of Rome.[q]

The first steps of his administration.

His natural severity of temper, however, would have soon returned upon him, and would have justified the conjectures of the courtiers as well as the fears of the people, if he had not, immediately after his election, called to Rome two of his nephews, the sons of his brother the count of Montorio. The eldest he promoted to be governor of Rome. The youngest, who had hitherto served as a soldier of fortune in the armies of Spain or France, and whose disposition as well as manners were still more foreign from the clerical character than his profession, he created a cardinal, and appointed him legate of Bologna, the second office in power and dignity which a pope can bestow. These marks of favour, no less sudden than extravagant, he accompanied with the most unbounded confidence and attachment; and forgetting all his former severe maxims, he seemed to have no other object than the aggrandizing of his nephews. Their ambition, unfortunately for Paul, was too aspiring to be satisfied with any moderate acquisition. They had seen the family of Medici raised by the interest of the popes of that house to supreme power in Tuscany; Paul III. had, by his abilities and address, secured the duchies of Parma and Placentia to the family of Farnese. They aimed at some establishment for themselves, no less considerable and independent; and as they could not expect that the pope would carry his indulgence towards them so far as to secularize any part of the patrimony of the church, they had no prospect of attaining what they wished but by dismembering the imperial dominions in Italy, in hopes of seizing some portion of them. This alone they would have deemed a sufficient reason for sowing the seeds of discord between their uncle and the emperor.

The excess of his attachment to his nephews.

Their ambitious projects.

But cardinal Caraffa had, besides, private reasons which filled him with hatred and enmity to the emperor. While he served in the Spanish troops he had not received such marks of honour and distinction as he thought due to his birth and merit. Disgusted

Reasons of their disgust with the emperor.

q Platina, p. 327. Castaldo Vita di Paolo IV. Rom. 1615. p. 70.

with this ill usage, he had abruptly quitted the imperial service; and entering into that of France, he had not only met with such a reception as soothed his vanity and attached him to the French interest, but by contracting an intimate friendship with Strozzi, who commanded the French army in Tuscany, he had imbibed a mortal antipathy to the emperor, as the great enemy to the liberty and independence of the Italian states. Nor was the pope himself indisposed to receive impressions unfavourable to the emperor. The opposition given to his election by the cardinals of the imperial faction left in his mind deep resentment, which was heightened by the remembrance of ancient injuries from Charles or his ministers.

They endeavour to alienate the pope from the emperor.

Of this his nephews took advantage, and employed various devices in order to exasperate him beyond a possibility of reconciliation. They aggravated every circumstance which could be deemed any indication of the emperor's dissatisfaction with his promotion; they read to him an intercepted letter, in which Charles taxed the cardinals of his party with negligence or incapacity in not having defeated Paul's election; they pretended, at one time, to have discovered a conspiracy formed by the imperial minister and Cosmo di Medici against the pope's life; they alarmed him, at another, with accounts of a plot for assassinating themselves. By these artifices they kept his mind, which was naturally violent and become suspicious from old age, in such perpetual agitation as precipitated him into measures which otherwise he would have been the first person to condemn.[r] He seized some of the cardinals who were most attached to the emperor, and confined them in the castle of St. Angelo: he persecuted the Colonnas and other Roman barons, the ancient retainers to the imperial faction, with the utmost severity; and discovering on all occasions his distrust, fear, or hatred of the emperor, he began at last to court the friendship of the French king, and seemed willing to throw himself absolutely upon him for support and protection

Induce him to court the king of France.

This was the very point to which his nephews wished him as most favourable to their ambitious schemes; and as the accomplishment of these depended on their uncle's life, whose advanced age did not admit of losing a moment unnecessarily in negociations, instead of treating at second-hand with the French ambassador at Rome, they prevailed on the pope to despatch a person of confidence directly to the court of France, with such overtures on his part as they hoped would not be rejected. He proposed an alliance offensive and defensive between Henry and the pope; that they should attack the duchy of Tuscany and the kingdom of Naples with their united forces; and if their arms should prove successful, that the ancient republican form of government should be re-established in the former, and the investiture of the latter should be granted to one of the French king's sons, after reserving a certain territory which should be annexed to the patrimony of the church, together with an independent and princely establishment for each of the pope's nephews.

Constable Montmorency opposes the alliance with the pope.

The king, allured by these specious projects, gave a most favourable audience to the envoy. But when the matter was proposed in council, the constable Montmorency, whose natural caution and aversion to daring enterprises increased with age and experience, remonstrated with great vehemence against the alliance. He put Henry in mind how fatal to France every expedition into Italy had been during three successive reigns; and if such an enterprise had proved too great for the nation, even when its strength and finances were entire, there was no reason to hope for success, if it should be attempted now, when both were exhausted by extraordinary efforts during wars which had lasted with little interruption almost half a century. He represented the manifest imprudence of entering into engagements with a pope of fourscore, as any system which rested on no better foundation than his life must be extremely precarious, and upon the event of his death, which could not be distant, the face of things, together with the inclination of the Italian states, must instantly change, and the whole weight of the war be left upon the king alone. To these considerations he added the near prospect which they now had of a final accommodation with the emperor, who having taken the resolution of retiring from the world, wished to transmit his kingdoms in peace to his son; and he concluded with representing the absolute certainty of drawing the arms of England upon France, if it should appear that the re-establishment of tranquillity in Europe was prevented by the ambition of its monarch.

The duke of Guise favours it.

These arguments, weighty in themselves, and urged by a minister of great authority, would probably have determined the king to decline any connexion with the pope. But the duke of Guise, and his brother the cardinal of Lorrain, who delighted no less in bold and dangerous undertakings than Montmorency shunned them, declared warmly for an alliance with the pope. The cardinal expected to be intrusted with the conduct of the negociations in the court of Rome to which this alliance would give rise; the duke hoped to obtain the command of the army which would be appointed to invade Naples; and considering themselves as already in these stations, vast projects opened to their aspiring and unbounded ambition. Their credit, together with the influence of the king's mistress, the famous Diana of Poitiers, who was at that time entirely devoted to the interest of the family of Guise, more than counterbalanced all Montmorency's prudent remonstrances, and prevailed on an inconsiderate prince to listen to the overtures of the pope's envoy.

r Ripamontii Hist. Patriæ, lib. iii. 1146. ap. Græv. Thes. vol. ii. Mem. de Ribier, ii. 616. Adriani Istor. i. 906.

Cardinal of Lorrain sent to negociate with the pope.

The cardinal of Lorrain, as he had expected, was immediately sent to Rome with full powers to conclude the treaty, and to concert measures for carrying it into execution. Before he could reach that city, the pope, either from reflecting on the danger and uncertain issue of all military operations, or through the address of the imperial ambassador, who had been at great pains to soothe him, had not only begun to lose much of the ardour with which he had commenced the negociation with France, but even discovered great unwillingness to continue it. In order to rouse him from this fit of despondency, and to rekindle his former rage, his nephews had recourse to the arts which they had already practised with so much success. They alarmed him with new representations of the emperor's hostile intentions, with fresh accounts which they had received of threats uttered against him by the imperial ministers, and with new discoveries which they pretended to have made of conspiracies formed, and just ready to take effect, against his life.

Paul enraged at the proceedings of the diet of Augsburg;

But these artifices having been formerly tried would not have operated a second time with the same force, nor have made the impression which they wished, if Paul had not been excited by an offence of that kind which he was least able to bear. He received advice of the recess of the diet of Augsburg, and of the toleration which was thereby granted to the protestants; and this threw him at once into such transports of passion against the emperor and king of the Romans, as carried him headlong into all the violent measures of his nephews. Full of high ideas with respect to the papal prerogative, and animated with the fiercest zeal against heresy, he considered the liberty of deciding concerning religious matters, which had been assumed by an assembly composed chiefly of laymen, as a presumptuous and unpardonable encroachment on that jurisdiction which belonged to him alone; and regarded the indulgence which had been given to the protestants as an impious act of that power which the diet had usurped. He complained loudly of both to the imperial ambassador. He insisted that the recess of the diet should immediately be declared illegal and void. He threatened the emperor and king of the Romans, in case they should either refuse or delay to gratify him in this particular, with the severest effects of his vengeance. He talked in a tone of authority and command which might have suited a pontiff of the twelfth century, when a papal decree was sufficient to have shaken or to have overturned the throne of the greatest monarch in Europe; but which was altogether improper in that age, especially when addressed to the minister of a prince who had so often made pontiffs more formidable than Paul feel the weight of his power. The ambassador, however, heard all his extravagant propositions and menaces with much patience, and endeavoured to soothe him, by putting him in mind of the extreme distress to which the emperor had been reduced at Inspruck, of the engagements which he had come under to the protestants in order to extricate himself, of the necessity of fulfilling these, and of accommodating his conduct to the situation of his affairs. But weighty as these considerations were, they made no impression on the mind of the haughty and bigoted pontiff, who instantly replied, that he would absolve him by his apostolic authority from those impious engagements, and even command him not to perform them; that in carrying on the cause of God and of the church, no regard ought to be had to the maxims of worldly prudence and policy; and that the ill success of the emperor's schemes in Germany might justly be deemed a mark of the divine displeasure against him, on account of his having paid little attention to the former, while he regulated his conduct entirely by the latter. Having said this, he turned from the ambassador abruptly without waiting for a reply.

and exasperated by his nephews.

His nephews took care to applaud and cherish these sentiments, and easily wrought up his arrogant mind, fraught with all the monkish ideas concerning the extent of the papal supremacy, to such a pitch of resentment against the house of Austria, and to such an high opinion of his own power, that he talked continually of his being the successor of those who had deposed kings and emperors; that he was exalted as head over them all, and would trample such as opposed him under his feet. In this disposition the cardinal of Lorrain found the pope, and easily persuaded him to sign a treaty which had for its object the ruin of a prince against whom he was so highly exasperated. The stipulations in the treaty were much the same as had been proposed by the pope's envoy at Paris; and it was agreed to keep the whole transaction secret, until their united forces should be ready to take the field.[s]

Dec. 15. Concludes a treaty with France.

The emperor resolves to resign his hereditary dominions.

During the negociation of this treaty at Rome and Paris, an event happened which seemed to render the fears that had given rise to it vain, and the operations which were to follow upon it unnecessary. This was the emperor's resignation of his hereditary dominions to his son Philip, together with his resolution to withdraw entirely from any concern in business or the affairs of this world, in order that he might spend the remainder of his days in retirement and solitude. Though it requires neither deep reflection nor extraordinary discernment to discover that the state of royalty is not exempt from care and disappointment, though most of those who are exalted to a throne find solicitude, and satiety, and disgust to be their perpetual attendants in that envied pre-eminence; yet to descend voluntarily from the supreme to a subordinate station, and to relin-

s Pallav. lib. xiii. p. 163. F. Paul, 365. Thuan. lib. xv. 525. lib. xvi. 540. Mem. de Ribier, ii. 609, &c.

quish the possession of power in order to attain the enjoyment of happiness, seems to be an effort too great for the human mind. Several instances, indeed, occur in history, of monarchs who have quitted a throne, and have ended their days in retirement. But they were either weak princes, who took this resolution rashly, and repented of it as soon as it was taken; or unfortunate princes, from whose hands some stronger rival had wrested their sceptre, and compelled them to descend with reluctance into a private station. Dioclesian is perhaps the only prince capable of holding the reins of government who ever resigned them from deliberate choice, and who continued during many years to enjoy the tranquillity of retirement without fetching one penitent sigh, or casting back one look of desire towards the power or dignity which he had abandoned.

The motives of this resignation.

No wonder, then, that Charles's resignation should fill all Europe with astonishment, and give rise, both among his contemporaries and among the historians of that period, to various conjectures concerning the motives which determined a prince whose ruling passion had been uniformly the love of power, at the age of fifty-six, when objects of ambition continue to operate with full force on the mind, and are pursued with the greatest ardour, to take a resolution so singular and unexpected. But while many authors have imputed it to motives so frivolous and fantastical as can hardly be supposed to influence any reasonable mind; while others have imagined it to be the result of some profound scheme of policy,—historians more intelligent and better informed, neither ascribe it to caprice, nor search for mysterious secrets of state, where simple and obvious causes will fully account for the emperor's conduct. Charles had been attacked early in life with the gout; and notwithstanding all the precautions of the most skilful physicians, the violence of the distemper increased as he advanced in age, and the fits became every year more frequent as well as more severe. Not only was the vigour of his constitution broken, but the faculties of his mind were impaired by the excruciating torments which he endured. During the continuance of the fits, he was altogether incapable of applying to business, and even when they began to abate, as it was only at intervals that he could attend to what was serious, he gave up a great part of his time to trifling and even childish occupations, which served to relieve or to amuse his mind, enfeebled and worn out with excess of pain. Under these circumstances, the conduct of such affairs as occurred of course in governing so many kingdoms, was a burden more than sufficient; but to push forward and complete the vast schemes which the ambition of his more active years had formed, or to keep in view and carry on the same great system of policy, extending to every nation in Europe, and connected with the operations of every different court, were functions which so far exceeded his strength that they oppressed and overwhelmed his mind. As he had been long accustomed to view the business of every department, whether civil or military or ecclesiastical, with his own eyes, and to decide concerning it according to his own ideas, it gave him the utmost pain when he felt his infirmities increase so fast upon him, that he was obliged to commit the conduct of all affairs to his ministers. He imputed every misfortune which befell him, and every miscarriage that happened, even when the former was unavoidable, or the latter accidental, to his inability to take the inspection of business himself. He complained of his hard fortune in being opposed, in his declining years, to a rival who was in the full vigour of life; and that while Henry could take and execute all his resolutions in person, he should now be reduced, both in council and in action, to rely on the talents and exertions of other men. Having thus grown old before his time, he wisely judged it more decent to conceal his infirmities in some solitude, than to expose them any longer to the public eye; and prudently determined not to forfeit the fame or lose the acquisitions of his better years, by struggling with a vain obstinacy to retain the reins of government, when he was no longer able to hold them with steadiness or to guide them with address.[t]

Circumstances which had retarded it.

But though Charles had revolved this scheme in his mind for several years, and had communicated it to his sisters the dowager queens of France and Hungary, who not only approved of his intention, but offered to accompany him to whatever place of retreat he should choose, several things had hitherto prevented his carrying it into execution. He could not think of loading his son with the government of so many kingdoms, until he should attain such maturity of age and of abilities as would enable him to sustain that weighty burden. But as Philip had now reached his twenty-eighth year, and had been early accustomed to business, for which he discovered both inclination and capacity, it can hardly be imputed to the partiality of paternal affection, that his scruples with regard to this point were entirely removed, and that he thought he might place his son, without further hesitation or delay, on the throne which he himself was about to abandon.

t Don Levesque, in his Memoirs of cardinal Granvelle, gives a reason for the emperor's resignation, which, as far as I recollect, is not mentioned by any other historian. He says, that the emperor having ceded the government of the kingdom of Naples and the duchy of Milan to his son upon his marriage with the queen of England; Philip, notwithstanding the advice and entreaties of his father, removed most of the ministers and officers whom he had employed in those countries, and appointed creatures of his own to fill the places which they held. That he aspired openly, and with little delicacy, to obtain a share in the administration of affairs in the Low Countries. That he endeavoured to thwart the emperor's measures and to limit his authority, behaving towards him sometimes with inattention, and sometimes with haughtiness. That Charles, finding that he must either yield on every occasion to his son, or openly contend with him, in order to avoid either of these, which were both disagreeable and mortifying to a father, he took the resolution of resigning his crowns, and of retiring from the world, vol. i. p. 24, &c. Don Levesque derived his information concerning these curious facts, which he relates very briefly, from the original papers of cardinal Granvelle. But as that vast collection of papers, which has been preserved and arranged by M. l'Abbé Boizot of Besançon, though one of the most valuable historical monuments of the sixteenth century, and which cannot fail of throwing much light on the transactions of Charles V., is not published, I cannot determine what degree of credit should be given to this account of Charles's resignation. I have therefore taken no notice of it in relating this event.

His mother's situation had been another obstruction in his way. For although she had continued almost fifty years in confinement, and under the same disorder of mind which concern for her husband's death had brought upon her, yet the government of Spain was still vested in her jointly with the emperor; her name was inserted, together with his, in all the public instruments issued in that kingdom; and such was the fond attachment of the Spaniards to her, that they would probably have scrupled to recognise Philip as their sovereign, unless she had consented to assume him as her partner on the throne. Her utter incapacity for business rendered it impossible to obtain her consent. But her death, which happened this year, removed this difficulty; and as Charles, upon that event, became sole monarch of Spain, it left the succession open to his son. The war with France had likewise been a reason for retaining the administration of affairs in his own hand, as he was extremely solicitous to have terminated it, that he might have given up his kingdoms to his son at peace with all the world. But as Henry had discovered no disposition to close with any of his overtures, and had even rejected proposals of peace which were equal and moderate, in a tone that seemed to indicate a fixed purpose of continuing hostilities, he saw that it was vain to wait longer in expectation of an event which, however desirable, was altogether uncertain.

The formalities with which he executed it.

As this, then, appeared to be the proper juncture for executing the scheme which he had long meditated, Charles resolved to resign his kingdoms to his son, with a solemnity suitable to the importance of the transaction, and to perform this last act of sovereignty with such formal pomp as might leave a lasting impression on the minds not only of his subjects but of his successor. With this view he called Philip out of England, where the peevish temper of his queen, which increased with her despair of having issue, rendered him extremely unhappy; and the jealousy of the English left him no hopes of obtaining the direction of their affairs. Having assembled the states of the Low Countries at Brussels, on the twenty-fifth of October, Charles seated himself for the last time in the chair of state, on one side of which was placed his son, and on the other his sister the queen of Hungary, regent of the Netherlands, with a splendid retinue of the princes of the empire and grandees of Spain standing behind him. The president of the council of Flanders, by his command, explained in few words his intention in calling this extraordinary meeting of the states. He then read the instrument of resignation, by which Charles surrendered to his son Philip all his territories, jurisdiction, and authority in the Low Countries, absolving his subjects there from the oath of allegiance to him, which he required them to transfer to Philip his lawful heir, and to serve him with the same loyalty and zeal which they had manifested, during so long a course of years, in support of his government.

Charles then rose from his seat, and leaning on the shoulder of the prince of Orange, because he was unable to stand without support, he addressed himself to the audience, and from a paper which he held in his hand, in order to assist his memory, he recounted, with dignity, but without ostentation, all the great things which he had undertaken and performed since the commencement of his administration. He observed, that, from the seventeenth year of his age, he had dedicated all his thoughts and attention to public objects, reserving no portion of his time for the indulgence of his ease, and very little for the enjoyment of private pleasure; that either in a pacific or hostile manner, he had visited Germany nine times, Spain six times, France four times, Italy seven times, the Low Countries ten times, England twice, Africa as often, and had made eleven voyages by sea; that while his health permitted him to discharge his duty, and the vigour of his constitution was equal, in any degree, to the arduous office of governing such extensive dominions, he had never shunned labour, nor repined under fatigue; that now, when his health was broken, and his vigour exhausted by the rage of an incurable distemper, his growing infirmities admonished him to retire, nor was he so fond of reigning, as to retain the sceptre in an impotent hand, which was no longer able to protect his subjects, or to secure to them the happiness which he wished they should enjoy; that instead of a sovereign worn out with diseases, and scarcely half alive, he gave them one in the prime of life, accustomed already to govern, and who added to the vigour of youth all the attention and sagacity of maturer years; that if, during the course of a long administration, he had committed any material error in government, or if, under the pressure of so many and great affairs, and amidst the attention which he had been obliged to give to them, he had either neglected or injured any of his subjects, he now implored their forgiveness; that, for his part, he should ever retain a grateful sense of their fidelity and attachment, and would carry the remembrance of it along with him to the place of his retreat, as his sweetest consolation, as well as the best reward for all his services, and in his last prayers to Almighty God would pour forth his most earnest petitions for their welfare.

Then turning towards Philip, who fell on his knees and kissed his father's hand,—"If," says he, "I had left you by my death this rich inheritance, to which I have made such large additions, some regard would have been justly due to my memory on that account; but now, when I voluntarily resign to you what I might have still retained, I may well expect the warmest expression of thanks on your part. With these, however, I dispense, and shall consider your concern for the welfare of your subjects, and your love of them, as the best and most acceptable testimony of your gratitude to me. It is

in your power, by a wise and virtuous administration, to justify the extraordinary proof which I, this day, give of my paternal affection, and to demonstrate that you are worthy of the confidence which I repose in you. Preserve an inviolable regard for religion; maintain the catholic faith in its purity; let the laws of your country be sacred in your eyes; encroach not on the rights and privileges of your people; and if the time should ever come, when you shall wish to enjoy the tranquillity of private life, may you have a son endowed with such qualities, that you can resign your sceptre to him with as much satisfaction as I give up mine to you."

As soon as Charles had finished this long address to his subjects and to their new sovereign, he sunk into the chair, exhausted and ready to faint with the fatigue of such an extraordinary effort. During his discourse, the whole audience melted into tears, some from admiration of his magnanimity, others softened by the expressions of tenderness towards his son, and of love to his people; and all were affected with the deepest sorrow at losing a sovereign, who, during his administration, had distinguished the Netherlands, his native country, with particular marks of his regard and attachment.

Philip then arose from his knees, and after returning thanks to his father, with a low and submissive voice, for the royal gift which his unexampled bounty had bestowed upon him, he addressed the assembly of the states, and regretting his inability to speak the Flemish language with such facility as to express what he felt on this interesting occasion, as well as what he owed to his good subjects in the Netherlands, he begged that they would permit Granvelle, bishop of Arras, to deliver what he had given him in charge to speak in his name. Granvelle, in a long discourse, expatiated on the zeal with which Philip was animated for the good of his subjects, on his resolution to devote all his time and talents to the promoting of their happiness, and on his intention to imitate his father's example in distinguishing the Netherlands with peculiar marks of his regard. Maës, a lawyer of great eloquence, replied, in the name of the states, with large professions of their fidelity and affection to their new sovereign.

1556. January 6. Then Mary, queen dowager of Hungary, resigned the regency, with which she had been intrusted by her brother during the space of twenty-five years. Next day Philip, in presence of the states, took the usual oaths to maintain the rights and privileges of his subjects; and all the members in their own name, and in that of their own constituents, swore allegiance to him.[u]

A few weeks after this transaction, Charles, in an assembly no less splendid, and with a ceremonial equally pompous, resigned to his son the crowns of Spain, with all the territories depending on them, both in the old and in the new world. Of all these vast possessions he reserved nothing for himself but an annual pension of an hundred thousand crowns, to defray the charges of his family, and to afford him a small sum for acts of beneficence and charity.[x]

Resolves to fix his residence in Spain.

As he had fixed on a place of retreat in Spain, hoping that the dryness and the warmth of the climate in that country might mitigate the violence of his disease, which had been much increased by the moisture of the air and the rigour of the winters in the Netherlands; he was extremely impatient to embark for that kingdom, and to disengage himself entirely from business, which he found to be impossible while he remained in Brussels. But his physicians remonstrated so strongly against his venturing to sea at that cold and boisterous season of the year, that he consented, though with reluctance, to put off his voyage for some months.

Obliged to remain for some time in the Netherlands.

Promotes the negociation for peace.

By yielding to their entreaties, he had the satisfaction, before he left the Low Countries, of taking a considerable step towards a peace with France, which he ardently wished for, not only on his son's account, but that he might have the merit, when quitting the world, of re-establishing that tranquillity in Europe which he had banished out of it almost from the time that he assumed the administration of affairs. Previous to his resignation, commissioners had been appointed by him and by the French king in order to treat of an exchange of prisoners. In their conferences at the abbey of Vaucelles, near Cambray, an expedient was accidentally proposed for terminating hostilities between the contending monarchs by a long truce, during the subsistence of which, and without discussing their respective claims, each should retain what was now in his possession. Charles, sensible how much his kingdoms were exhausted by the expensive and almost continual wars in which his ambition had engaged him, and eager to gain for his son a short interval of peace, that he might estab-

u Godleveus Relatio Abdicationis Car. V. ap. Goldast. Polit. Imper. p. 377. Strada de Bello Belgico, lib. i. p. 5.

x The emperor's resignation is an event not only of such importance, but of such a nature, that the precise date of it, one would expect, should have been ascertained by historians with the greatest accuracy. There is, however, an amazing and unaccountable diversity among them with regard to this point. All agree that the deed by which Charles transferred to his son his dominions in the Netherlands, bears date at Brussels the 25th of October. Sandoval fixes on the 28th of October, as the day on which the ceremony of resignation happened, and he was present at the transaction, vol. ii. p. 592. Godleveus, who published a treatise De Abdicatione Caroli V. fixes the public ceremony, as well as the date of the instrument of resignation, on the 25th. Pere Barre, I know not on what authority, fixes it on the 24th of November, Hist. d'Alem. viii. 976. Herrera agrees with Godleveus in his account of this matter, tom. i. 155. As likewise does Pallavicini, whose authority with respect to dates, and every thing where a minute accuracy is requisite, is of great weight, Hist. lib. xvi. p. 168. Historians differ no less with regard to the day on which Charles resigned the crown of Spain to his son. According to M. de Thou, it was a month after his having resigned his dominions in the Netherlands, i. e. about the 25th of November, Thuan. lib. xvi. p. 571. According to Sandoval, it was on the 16th of January 1556, Sand. ii. 603. Antonio de Vera agrees with him, Epitome del Vida del Car. V. p. 110. According to Pallavicini, it was on the 17th, Pal. lib. xvi. p. 168. and with him Herrera agrees, Vida del D. Felipe, tom. i. p. 233. But Ferreras fixes it on the 1st day of January, Hist. Gener. tom. ix. p. 371. M. de Beaucaire supposes the resignation of the crown of Spain to have been executed a few days after the resignation of the Netherlands, Com. de Reb. Gall. p. 879. It is remarkable, that in the treaty of truce at Vaucelles, though Charles had made over all his dominions to his son some weeks previous to the conclusion of it, all the stipulations are in the emperor's name, and Philip is only styled king of England and Naples. It is certain Philip was not proclaimed king of Castile, &c. at Valladolid sooner than the 24th of March, Sandov. ii. p. 606. and, previous to that ceremony, he did not choose, it should seem, to assume the title of king of any of his Spanish kingdoms, or to perform any act of royal jurisdiction. In a deed annexed to the treaty of truce, dated April 19. he assumes the title of king of Castile, &c. in the usual style of the Spanish monarchs in that age. Corps Dipl. tom. iv. Append. p. 85.

lish himself firmly on his throne, declared warmly for closing with the overture, though manifestly dishonourable as well as disadvantageous; and such was the respect due to his wisdom and experience, that Philip, notwithstanding his unwillingness to purchase peace by such concessions, did not presume to urge his opinion in opposition to that of his father.

A truce concluded.

Henry could not have hesitated one moment about giving his consent to a truce on such conditions as would leave him in quiet possession of the greater part of the duke of Savoy's dominions, together with the important conquests which he had made on the German frontier. But it was no easy matter to reconcile such a step with the engagements which he had come under to the pope in his late treaty with him. The constable Montmorency, however, represented in such a striking light the imprudence of sacrificing the true interests of his kingdom to these rash obligations, and took such advantage of the absence of the cardinal of Lorrain, who had seduced the king into his alliance with the Caraffas, that Henry, who was naturally fluctuating and unsteady, and apt to be influenced by the advice last given him, authorized his ambassadors to sign a treaty of truce with the emperor for five years, on the terms which had been proposed. But that he might not seem to have altogether forgotten his ally the pope, who he foresaw would be highly exasperated, he, in order to soothe him, took care that he should be expressly included in the truce.[y]

5th Feb.

Ratified by both monarchs.

The count of Lalain repaired to Blois, and the admiral Coligny to Brussels; the former to be present when the king of France, and the latter when the emperor and his son, ratified the treaty and bound themselves by oath to observe it.[z]

The pope's astonishment and distress.

When an account of the conferences at Vaucelles, and of the conditions of truce which had been proposed there, was first carried to Rome, it gave the pope no manner of disquiet. He trusted so much to the honour of the French monarch, that he would not allow himself to think that Henry could forget so soon, or violate so shamefully, all the stipulations in his league with him. He had such a high opinion of the emperor's wisdom, that he made no doubt of his refusing his consent to a truce on such unequal terms; and on both these accounts he confidently pronounced that this, like many preceding negociations, would terminate in nothing. But later and more certain intelligence soon convinced him that no reasoning in political affairs is more fallacious than, because an event is improbable, to conclude that it will not happen. The sudden and unexpected conclusion of the truce filled Paul with astonishment and terror. The cardinal of Lorrain durst not encounter that storm of indignation to which he knew that he should be exposed from the haughty pontiff, who had so good reason to be incensed; but departing abruptly from Rome, he left to the cardinal Tournon the difficult task of attempting to soothe Paul and his nephews. They were fully sensible of the perilous situation in which they now stood. By their engagements with France, which were no longer secret, they had highly irritated Philip. They dreaded the violence of his implacable temper. The duke of Alva, a minister fitted, as well by his abilities as by the severity of his nature, for executing all Philip's rigorous schemes, had advanced from Milan to Naples, and began to assemble troops on the frontiers of the ecclesiastical state; while they, if deserted by France, must not only relinquish all the hopes of dominion and sovereignty to which their ambition aspired, but remain exposed to the resentment of the Spanish monarch, without one ally to protect them against an enemy with whom they were so little able to contend.

He attempts to rekindle the war.

Under these circumstances Paul had recourse to the arts of negociation and intrigue, of which the papal court knows well how to avail itself in order to ward off any calamity threatened by an enemy superior in power. He affected to approve highly of the truce as a happy expedient for putting a stop to the effusion of christian blood. He expressed his warmest wishes that it might prove the forerunner of a definitive peace. He exhorted the rival princes to embrace this favourable opportunity of setting on foot a negociation for that purpose, and offered, as their common father, to be mediator between them. Under this pretext he appointed cardinal Rebiba his nuncio to the court of Brussels, and his nephew cardinal Caraffa to that of Paris. The public instructions given to both were the same; that they should use their utmost endeavours to prevail with the two monarchs to accept of the pope's mediation, that, by means of it, peace might be re-established, and measures might be taken for assembling a general council. But under this specious appearance of zeal for attaining objects so desirable in themselves, and so becoming his sacred character to pursue, Paul concealed very different intentions. Caraffa, besides his public instructions, received a private commission to solicit the French king to renounce the treaty of truce, and to renew his engagements with the holy see; and he was empowered to spare neither entreaties, nor promises, nor bribes in order to gain that point. This both the uncle and the nephew considered as the real end of the embassy; while the other served to amuse the vulgar or to deceive the emperor and his son. The cardinal accordingly set out instantly for Paris, and travelled with the greatest expedition, while Rebiba was detained some weeks at Rome,

11th May.

y Mem. de Ribier, ii. 626. Corps Diplom. tom. iv. App. 81.

z One of admiral de Coligny's attendants, who wrote to the court of France an account of what happened while they resided at Brussels, takes notice, as an instance of Philip's unpoliteness, that he received the French ambassador in an apartment hung with tapestry, which represented the battle of Pavia, the manner in which Francis I. was taken prisoner, his voyage to Spain, with all the mortifying circumstances of his captivity and imprisonment at Madrid. Mem. de Ribier, ii. 634.

and when it became necessary for him to begin his journey, he received secret orders to protract it as much as possible, that the issue of Caraffa's negociation might be known before he should reach Brussels, and according to that, proper directions might be given to him with regard to the tone which he should assume in treating with the emperor and his son.[a]

His negociations for that purpose.

Caraffa made his entry into Paris with extraordinary pomp; and having presented a consecrated sword to Henry as the protector on whose aid the pope relied in the present exigency, he besought him not to disregard the entreaties of a parent in distress, but to employ that weapon which he gave him in his defence. This he represented not only as a duty of filial piety, but as an act of justice. As the pope, from confidence in the assistance and support which his late treaty with France entitled him to expect, had taken such steps as had irritated the king of Spain, he conjured Henry not to suffer Paul and his family to be crushed under the weight of that resentment, which they had drawn on themselves merely by their attachment to France. Together with this argument addressed to his generosity, he employed another which he hoped would work on his ambition. He affirmed that now was the time when, with the most certain prospect of success, he might attack Philip's dominions in Italy; that the flower of the veteran Spanish bands had perished in the wars of Hungary, Germany, and the Low Countries; that the emperor had left his son an exhausted treasury, and kingdoms drained of men; that he had no longer to contend with the abilities, the experience, and good fortune of Charles, but with a monarch scarcely seated on his throne, unpractised in command, odious to many of the Italian states, and dreaded by all. He promised that the pope, who had already levied soldiers, would bring a considerable army into the field, which, when joined by a sufficient number of French troops, might by one brisk and sudden effort drive the Spaniards out of Naples, and add to the crown of France a kingdom the conquest of which had been the great object of all his predecessors during half a century, and the chief motive of all their expeditions into Italy.

Their effect. July 31.

Every word Caraffa spoke made a deep impression on Henry; conscious, on the one hand, that the pope had just cause to reproach him with having violated the laws not only of generosity but of decency when he renounced his league with him, and had agreed to the truce of Vaucelles; and eager, on the other hand, not only to distinguish his reign by a conquest which three former monarchs had attempted without success, but likewise to acquire an establishment of such dignity and value for one of his sons. Reverence, however, for the oath by which he had so lately confirmed the truce of Vaucelles; the extreme old age of the pope, whose death might occasion an entire revolution in the political system of Italy; together with the representations of Montmorency, who repeated all the arguments he had used against the first league with Paul, and pointed out the great and immediate advantages which France derived from the truce, kept Henry for some time in suspense, and might possibly have outweighed all Caraffa's arguments. But the cardinal was not such a novice in the arts of intrigue and negociation as not to have expedients ready for removing or surmounting all these obstacles. To obviate the king's scruple with regard to his oath, he produced powers from the pope to absolve him from the obligation of it. By way of security against any danger which he might apprehend from the pope's death, he engaged that his uncle would make such a nomination of cardinals as should give Henry the absolute command of the next election, and enable him to place in the papal chair a person entirely devoted to his interest.

In order to counterbalance the effect of the constable's opinion and influence, he employed not only the active talents of the duke of Guise, and the eloquence of his brother the cardinal of Lorrain, but the address of the queen, aided by the more powerful arts of Diana of Poitiers, who, unfortunately for France, co-operated with Catharine in this point, though she took pleasure, on almost every other occasion, to thwart and mortify her. They, by their united solicitations, easily swayed the king, who leaned, of his own accord, to that side towards which they wished him to incline. All Montmorency's prudent remonstrances were disregarded; the nuncio absolved Henry from his oath; and he signed a new league with the pope, which rekindled the flames of war both in Italy and in the Low Countries.

July 31. The pope's violent proceedings against Philip.

As soon as Paul was informed by his nephew that there was a fair prospect of his succeeding in this negociation, he despatched a messenger after the nuncio Rebiba, with orders to return to Rome without proceeding to Brussels. As it was now no longer necessary to preserve that tone of moderation which suited the character of a mediator, and which he had affected to assume, or to put any further restraint upon his resentment against Philip, he boldly threw off the mask, and took such violent steps as rendered a rupture unavoidable. He seized and imprisoned the Spanish envoy at his court. He excommunicated the Colonnas; and having deprived Mark Antonio, the head of that family, of the dukedom of Paliano, he granted that dignity, together with the territory annexed to it, to his nephew the count of Montorio. He ordered a legal information to be presented in the consistory of cardinals against Philip, setting forth that he, notwithstanding the fidelity and allegiance due by him to the holy see, of which he held the kingdom of Naples, had not only afforded a retreat in his dominions to the Colonnas, whom the pope had

a Pallav. lib. xiii. p. 169. Burnet, Hist. of Reform. ii. App. 309.

excommunicated and declared rebels, but had furnished them with arms, and was ready, in conjunction with them, to invade the ecclesiastical state in a hostile manner; that such conduct in a vassal was to be deemed treason against his liege lord, the punishment of which was the forfeiture of his fief. Upon this, the consistorial advocate requested the pope to take cognizance of the cause, and to appoint a day for hearing of it, when he would make good every article of the charge, and expect from his justice that sentence which the heinousness of Philip's crimes merited. Paul, whose pride was highly flattered with the idea of trying and passing judgment on so great a king, assented to his request; and as if it had been no less easy to execute than to pronounce such a sentence, declared that he would consult with the cardinals concerning the formalities requisite in conducting the trial.[b]

July 27.

Philip's superstitious scruples.

But while Paul allowed his pride and resentment to drive him on with such headlong impetuosity, Philip discovered an amazing moderation on his part. He had been taught by the Spanish ecclesiastics, who had the charge of his education, a profound veneration for the holy see. This sentiment, which had been early infused, grew up with him as he advanced in years, and took full possession of his mind, which was naturally thoughtful, serious, and prone to superstition. When he foresaw a rupture with the pope approaching, he had such violent scruples with respect to the lawfulness of taking arms against the vicegerent of Christ, and the common father of all christians, that he consulted some Spanish divines upon that point. They, with the usual dexterity of casuists in accommodating their responses to the circumstances of those who apply to them for direction, assured him that, after employing prayers and remonstrances in order to bring the pope to reason, he had full right, both by the laws of nature and of christianity, not only to defend himself when attacked, but to begin hostilities, if that were judged the most proper expedient for preventing the effects of Paul's violence and injustice. Philip nevertheless continued to deliberate and delay, considering it as a most cruel misfortune, that his administration should open with an attack upon a person whose sacred function and character he so highly respected.[c]

The duke of Alva takes the field against the pope. Sept. 5.

At last the duke of Alva, who, in compliance with his master's scruples, had continued to negociate long after he should have begun to act, finding Paul inexorable, and that every overture of peace, and every appearance of hesitation on his part, increased the pontiff's natural arrogance, took the field and entered the ecclesiastical territories. His army did not exceed twelve thousand men, but it was composed of veteran soldiers, and commanded chiefly by those Roman barons whom Paul's violence had driven into exile. The valour of the troops, together with the animosity of their leaders, who fought in their own quarrel, and to recover their own estates, supplied the want of numbers. As none of the French forces were yet arrived, Alva soon became master of the Campagna Romana; some cities being surrendered through the cowardice of the garrisons, which consisted of raw soldiers, ill disciplined and worse commanded; the gates of others being opened by the inhabitants, who were eager to receive back their ancient masters. Alva, that he might not be taxed with impiety in seizing the patrimony of the church, took possession of the towns which capitulated, in the name of the college of cardinals, to which, or to the pope that should be chosen to succeed Paul, he declared that he would immediately restore them.

A truce between the pope and Philip.

The rapid progress of the Spaniards, whose light troops made excursions even to the gates of Rome, filled that city with consternation. Paul, though inflexible and undaunted himself, was obliged to give way so far to the fears and solicitations of the cardinals, as to send deputies to Alva, in order to propose a cessation of arms. The pope yielded the more readily, as he was sensible of a double advantage which might be derived from obtaining that point. It would deliver the inhabitants of Rome from their present terror, and would afford time for the arrival of the succours which he expected from France. Nor was Alva unwilling to close with the overture, both as he knew how desirous his master was to terminate a war which he had undertaken with reluctance, and as his army was so much weakened by garrisoning the great number of towns which he had reduced, that it was hardly in a condition to keep the field without fresh recruits.

Nov. 19.

A truce was accordingly concluded first for ten, and afterwards for forty days, during which, various schemes of peace were proposed, and perpetual negociations were carried on, but with no sincerity on the part of the pope. The return of his nephew the cardinal to Rome, the receipt of a considerable sum remitted by the king of France, the arrival of one body of French troops, together with the expectation of others which had begun their march, rendered him more arrogant than ever, and banished all thoughts from his mind but those of war and revenge.[d]

BOOK XII.

Charles's new attempt to alter the succession of empire.

WHILE these operations or intrigues kept the pope and Philip busy and attentive, the emperor disentangled himself finally from all the affairs of this world,

b Pallav. lib. xiii. 171.
c Ferrer. Hist. de Espagne, ix. 373. Herrera, i. 308.

d Pallav. lib. xiii. 177. Thuan. lib. xvii. 588. Mem. de. Ribier, ii. 664.

and set out for the place of his retreat. He had hitherto retained the imperial dignity, not from any unwillingness to relinquish it; for after having resigned the real and extensive authority that he enjoyed in his hereditary dominions, to part with the limited and often ideal jurisdiction which belongs to an elective crown, was no great sacrifice. His sole motive for delay was to gain a few months, for making one trial more, in order to accomplish his favourite scheme in behalf of his son. At the very time Charles seemed to be most sensible of the vanity of worldly grandeur, and when he appeared to be quitting it not only with indifferenee, but with contempt, the vast schemes of ambition which had so long oeeupied and engrossed his mind, still kept possession of it. He eould not think of leaving his son in a rank inferior to that which he himself had held among the princes of Europe. As he had, some years before, made a fruitless attempt to secure the imperial crown to Philip, that by uniting it to the kingdoms of Spain, and the dominions of the house of Burgundy, he might put it in his power to prosecute, with a better prospect of success, those great plans whieh his own infirmities had obliged him to abandon, he was still unwilling to relinquish this flattering project as ehimerical or unattainable.

Which proves unsuccessful.

Notwithstanding the repulse whieh he had formerly met with from his brother Ferdinand, he renewed his solicitations with fresh importunity; and during the summer, had tried every art, and employed every argument, which he thought could induce him to quit the imperial throne to Philip, and to accept of the investiture of some province, either in Italy or in the Low Countries, as an equivalent.[a] But Ferdinand, who was so firm and inflexible with regard to this point, that he had paid no regard to the solieitations of the emperor, even when they were enforced with all the weight of authority which aecompanies supreme power, received the overture that now came from him in the situation to which he had descended, with great indifference, and would hardly deign to listen to it. Charles, ashamed of his own credulity in having imagined that he might accomplish that now which he had attempted formerly without suecess, desisted finally from his scheme. He then resigned the government of the empire, and having transferred all his elaims of obedienee and allegiance from the Germanic body to his brother the king of the Romans, he executed a deed to that effect, with all the formalities requisite in such an important transaction. The instrument of resignation he committed to William, prince of Orange, and empowered him to lay it before the college of electors.[b]

Aug. 27.

Charles sets out for Spain.

Nothing now remained to detain Charles from that retreat for which he languished. The preparations for his voyage having been made for some time, he set out for Zuitburg in Zealand, where the fleet whieh was to convoy him had orders to assemble. In his way thither he passed through Ghent, and after stopping there a few days to indulge that tender and pleasing melancholy which arises in the mind of every man in the deeline of life on visiting the place of his nativity, and viewing the scenes and objeets familiar to him in his early youth, he pursued his journey accompanied by his son Philip, his daughter the archduchess, his sisters the dowager queens of France and Hungary, Maximilian his son-in-law, and a numerous retinue of the Flemish nobility. Before he went on board, he dismissed them with marks of his attention or regard, and taking leave of Philip with all the tenderness of a father who embraced his son for the last time, he set sail on the seventeenth of September, under the convoy of a large fleet of Spanish, Flemish, and English ships. He declined a pressing invitation from the queen of England to land in some part of her dominions, in order to refresh himself, and that she might have the comfort of seeing him once more. "It cannot, surely," said he, "be agreeable to a queen to receive a visit from a father-in-law, who is now nothing more than a private gentleman."

His arrival and reception there.

His voyage was prosperous, and he arrived at Laredo in Biscay on the eleventh day after he left Zealand. As soon as he landed he fell prostrate on the ground; and eonsidering himself now as dead to the world, he kissed the earth, and said, "Naked came I out of my mother's womb, and naked I now retúrn to thee, thou common mother of mankind." From Laredo he pursued his journey to Burgos, carried sometimes in a chair and sometimes in a horse-litter, suffering exquisite pain at every step, and advaneing with the greatest difficulty. Some of the Spanish nobility repaired to Burgos, in order to pay court to him; but they were so few in number, and their attendance was so negligent, that Charles observed it, and felt, for the first time, that he was no longer a monareh. Accustomed from his early youth to the dutiful and officious respect with which those who possess sovereign power are attended, he had received it with the eredulity common to princes, and was sensibly mortified, when he now discovered, that he had been indebted to his rank and power for much of that obsequious regard whieh he had fondly thought was paid to his personal qualities. But though he might have soon learned to view with unconcern the levity of his subjects, or to have despised their neglect, he was more deeply afflicted with the ingratitude of his son, who, forgetting already how much he owed to his father's bounty, obliged him to remain some weeks at Burgos, before he paid him the first moiety of that small pension, which was all that he had reserved of so many kingdoms. As without this sum, Charles could not dismiss his domesties with such rewards as their serviees merited, or his generosity had destined for them, he eould not help expressing both

a Ambassades des Noailles, tom. v. 356.

b Goldast. Constit. Imper. par i. 576.

surprise and dissatisfaction.[c] At last the money was paid, and Charles having dismissed a great number of his domestics, whose attendance he thought would be superfluous or cumbersome in his retirement, he proceeded to Valladolid. There he took a last and tender leave of his two sisters, whom he would not permit to accompany him to his solitude, though they requested him with tears, not only that they might have the consolation of contributing by their attendance and care to mitigate or to soothe his sufferings, but that they might reap instruction and benefit by joining with him in those pious exercises, to which he had consecrated the remainder of his days.

1557. The place of his retreat.

From Valladolid he continued his journey to Plazencia in Estremadura. He had passed through this place a great many years before, and having been struck at that time with the delightful situation of the monastery of St. Justus, belonging to the order of St. Jerome, not many miles distant from the town, he had then observed to some of his attendants, that this was a spot to which Dioclesian might have retired with pleasure. The impression had remained so strong on his mind, that he pitched upon it as the place of his own retreat. It was seated in a vale of no great extent, watered by a small brook, and surrounded by rising grounds, covered with lofty trees; from the nature of the soil, as well as the temperature of the climate, it was esteemed the most healthful and delicious situation in Spain. Some months before his resignation he had sent an architect thither, to add a new apartment to the monastery, for his accommodation; but he gave strict orders that the style of the building should be such as suited his present station, rather than his former dignity. It consisted only of six rooms, four of them in the form of friars' cells, with naked walls; the other two, each twenty feet square, were hung with brown cloth, and furnished in the most simple manner. They were all on a level with the ground; with a door on one side into a garden, of which Charles himself had given the plan, and had filled it with various plants which he intended to cultivate with his own hands. On the other side they communicated with the chapel of the monastery, in which he was to perform his devotions. Into this humble retreat, hardly sufficient for the comfortable accommodation of a private gentleman, did Charles

Feb. 21.

enter with twelve domestics only. He buried there, in solitude and silence, his grandeur, his ambition, together with all those vast projects, which, during almost half a century, had alarmed and agitated Europe, filling every kingdom in it, by turns, with the terror of his arms, and the dread of being subdued by his power.[d]

Contrast between the behaviour of Charles and the pope.

The contrast between Charles's conduct and that of the pope at this juncture, was so obvious, that it struck even the most careless observers; nor was the comparison which they made to the advantage of Paul. The former, a conqueror, born to reign, long accustomed to the splendour which accompanies supreme power, and to those busy and interesting scenes in which an active ambition had engaged him, quitted the world at a period of life not far advanced, that he might close the evening of his days in tranquillity, and secure some interval for sober thought and serious recollection. The latter, a priest, who had passed the early part of his life in the shade of the schools, and in the study of the speculative sciences, who was seemingly so detached from the world, that he had shut himself up for many years in the solitude of a cloister, and who was not raised to the papal throne until he had reached the extremity of old age, discovered at once all the impetuosity of youthful ambition, and formed extensive schemes, in order to accomplish which, he scrupled not to scatter the seeds of discord, and to kindle the flames of war, in every corner of Europe. But Paul, regardless of the opinion or censures of mankind, held on his own course with his wonted arrogance and violence. These, although they seemed already to have exceeded all bounds, rose to a still greater height, upon the arrival of the duke of Guise in Italy.

The duke of Guise leads the French army into Italy.

That which the two princes of Lorrain foresaw and desired, had happened. The duke of Guise was intrusted with the command of the army appointed to march to the pope's assistance. It consisted of twenty thousand men of the best troops in the service of France. So high was the duke's reputation, and such the general expectation of beholding some extraordinary exertion of his courage and abilities in a war into which he had precipitated his country, chiefly with the design of obtaining a field where he might display his own talents, that many of the French nobility who had no command in the troops employed, accompanied him as volunteers. This army passed the Alps in an inclement season, and advanced towards Rome without any opposition from the Spaniards, who, as they were not strong enough to act in different parts, had collected all their forces into one body on the frontiers of Naples, for the defence of that kingdom.

The pope renews hostilities against Philip.

Imboldened by the approach of the French, the pope let loose all the fury of his resentment against Philip, which notwithstanding the natural violence of his temper, prudential considerations had hitherto obliged him to keep under some restraint. He named commissioners, whom he empowered to pass judgment in the suit which the consistorial advocate had commenced against Philip, in order to prove that he had forfeited the crown of Naples, by

Feb. 12.

taking arms against the holy see, of which he was a vassal. He recalled all the nuncios resident in the courts of Charles V., of Philip, or of any of their allies. This was levelled chiefly against cardinal Pole, the pa-

April 9.

pal legate in the court of England, whose great merit, in having contributed so successfully to reconcile that kingdom to the church of Rome, together with the expectation of further services which he might perform, was not sufficient to screen him from the resentment that he had incurred by his zealous endeavours to establish peace between the house of Austria and France. He commanded an addition to be made to the anathemas annually denounced against the enemies of the church on Maundy-Thursday, whereby he inflicted the censure of excommunication on the authors of the late invasion of the ecclesiastical territories, whatever their rank or dignity might be; and, in consequence of this, the usual prayers for the emperor were omitted next day in the pope's chapel.[e]

His military preparations inadequate.

But while the pope indulged himself in those wild and childish sallies of rage, either he neglected, or found that it exceeded his power, to take such measures as would have rendered his resentment really formidable, and fatal to his enemies. For when the duke of Guise entered Rome, where he was received with a triumphal pomp, which would have been more suitable if he had been returning after having terminated the war with glory, than when he was going to begin it with a doubtful chance of success, he found none of the preparations for war in such forwardness as cardinal Caraffa had promised, or he had expected. The papal troops were far inferior in number to the quota stipulated; no magazines sufficient for their subsistence were formed; nor was money for paying them provided. The Venetians, agreeably to that cautious maxim which the misfortunes of their state had first led them to adopt, and which was now become a fundamental principle in their policy, declared their resolution to preserve an exact neutrality, without taking any part in the quarrels of princes, so far superior to themselves in power. The other Italian states were either openly united in league with Philip, or secretly wished success to his arms against a pontiff, whose inconsiderate ambition had rendered Italy once more the seat of war.

Duke of Guise's operations.

The duke of Guise perceived that the whole weight of the war would devolve on the French troops under his command; and became sensible, though too late, how imprudent it is to rely, in the execution of great enterprises, on the aid of feeble allies.

April 13.

Pushed on, however, by the pope's impatience for action, as well as by his own desire of performing some part of what he had so confidently undertaken, he marched towards Naples, and began his operations. But the success of these fell far short of his former reputation, of what the world expected, and of what he himself had promised. He opened the campaign with the siege of Civitella, a town of some importance on the Neapolitan frontier. But the obstinacy with which the Spanish governor defended it baffled all the impetuous efforts of the French valour, and obliged the duke of Guise, after a siege of three weeks, to retire from the town with disgrace. He endeavoured to wipe off that stain, by advancing boldly towards the duke of Alva's camp, and offering him battle. But that prudent commander, sensible of all the advantages of standing on the defensive before an invading enemy, declined an engagement, and kept within his intrenchment; and, adhering to his plan with the steadiness of a Castilian, eluded with great address all the Duke of Guise's stratagems to draw him into action.[f] By this time sickness began to waste the French army; violent dissensions had arisen between the duke of Guise and the commander of the pope's forces; the Spaniards renewed their incursions into the ecclesiastical state; the pope, when he found, instead of the conquests and triumphs which he had fondly expected, that he could not secure his own territories from depredation, murmured, complained, and began to talk of peace. The duke of Guise, mortified to the last degree with having acted such an inglorious part, not only solicited his court either to reinforce his army, or to recall him, but urged Paul to fulfil his engagements; and called on cardinal Caraffa, sometimes with reproaches, sometimes with threats, to make good those magnificent promises, from a rash confidence in which he had advised his master to renounce the truce of Vaucelles, and to join in league with the pope.[g]

Hostilities in the Low Countries.

But while the French affairs in Italy were in this wretched situation, an unexpected event happened in the Low Countries, which called the duke of Guise from a station wherein he could acquire no honour, to the most dignified and important charge which could be committed to a subject. As soon as the French had discovered their purpose of violating the truce of Vaucelles, not only by sending an army into Italy, but by attempting to surprise some of the frontier towns in Flanders, Philip, though willing to have avoided a rupture, determined to prosecute the war with such spirit, as should make his enemies sensible that his father had not erred, when he judged him to be so capable of government, that he had given up the reins into his hands. As he knew that Henry had been at great expense in fitting out the army under the duke of Guise, and that his treasury was hardly able to answer the exorbitant and endless demands of a distant war, he foresaw that all his operations in the Low Countries must, of consequence, prove feeble, and be considered only as secondary to those in Italy. For that reason, he prudently resolved to make his principal effort in that place where he expected the French to be weakest, and to bend his chief force against that quarter where they would feel a blow

e Pal. lib. xiii. 180. Mem. de Ribier, ii. 678.
f Herrera Vida de Felipe, 181.

g Thuan. lib. xxviii. 614. Pallav. lib. xiii. 181. Burn. ii. app. 317.

most sensibly. With this view, he assembled in the Low Countries an army of about fifty thousand men, the Flemings serving him on this occasion with that active zeal which subjects are wont to exert in obeying the first commands of a new sovereign. But Philip, cautious and provident, even at this early period of life, did not rest all his hopes of success on that formidable force alone.

Philip endeavours to engage England in the war.

He had been labouring for some time to engage the English to espouse his quarrel; and though it was manifestly the interest of that kingdom to maintain a strict neutrality, and the people themselves were sensible of the advantages which they derived from it; though he knew how odious his name was to the English, and how averse they would be to co-operate with him in any measure, he nevertheless did not despair of accomplishing his point. He relied on the affection with which the queen doated on him, which was so violent, that even his coldness and neglect had not extinguished it; he knew her implicit reverence for his opinion, and her fond desire of gratifying him in every particular. That he might work on these with greater facility and more certain success, he set out for England. The queen, who, during her husband's absence, had languished in perpetual dejection, resumed fresh spirits on his arrival; and without paying the least attention either to the interest or to the inclinations of her people, entered warmly into all his schemes. In vain did her privy council remonstrate against the imprudence as well as danger of involving the nation in an unnecessary war; in vain did they put her in mind of the solemn treaties of peace subsisting between England and France, which the conduct of that nation had afforded her no pretext to violate. Mary, soothed by Philip's caresses, or intimidated by the threats which his ascendant over her imboldened him at some times to throw out, was deaf to every thing that could be urged in opposition to his sentiments, and insisted with the greatest vehemence on an immediate declaration of war against France. The council, though all Philip's address and Mary's authority were employed to gain or overawe them, after struggling long, yielded at last, not from conviction, but merely from deference to the will of their sovereign. War was

June 20.

declared against France, the only one perhaps against that kingdom into which the English ever entered with reluctance. As Mary knew the aversion of the nation to this measure, she durst not call a parliament in order to raise money for carrying on the war. She supplied this want, however, by a stretch of royal prerogative, not unusual in that age; and levied large sums on her subjects by her own authority. This enabled her to assemble a sufficient body of troops, and to send eight thousand men under the conduct of the earl of Pembroke, to join Philip's army.[h]

Operations of Philip's army in the Low Countries.

Philip, who was not ambitious of military glory, gave the command of his army to Emanuel Philibert, duke of Savoy, and fixed his own residence at Cambray, that he might be at hand to receive the earliest intelligence of his motions, and to aid him with his counsels. The duke opened the campaign with a masterly stroke of address, which justified Philip's choice, and discovered such a superiority of genius over the French generals, as almost insured success in his subsequent operations. He appointed the general rendezvous of his troops at a place considerably distant from the country which he destined to be the scene of action; and having kept the enemy in suspense for a good time with regard to his intentions, he at last deceived them so effectually by the variety of his marches and countermarches, as led them to conclude that he meant to bend all his force against the province of Champagne, and would attempt to penetrate into the kingdom on that side. In consequence of this opinion, they drew all their strength towards that quarter, and reinforcing the garrison there, left the town on other parts of the frontier destitute of troops sufficient to defend them.

Invests St. Quintin.

The duke of Savoy, as soon as he perceived that this feint had its full effect, turned suddenly to the right, advanced by rapid marches into Picardy, and sending his cavalry, in which he was extremely strong, before him, invested St. Quintin. This was a town deemed in that age of considerable strength, and of great importance, as there were few fortified cities between it and Paris. The fortifications, however, had been much neglected; the garrison, weakened by draughts sent towards Champagne, did not amount to a fifth part of the number requisite for its defence; and the governor, though a brave officer, was neither of rank nor authority equal to the command in a place of so much consequence, besieged by such a formidable army. A few days must have put the duke of Savoy in possession of the town, if the admiral de Coligny, who thought it concerned his honour to attempt saving a place of such importance to his country, and which lay within his jurisdiction as governor of Picardy, had not taken the gallant resolution of throwing himself into it, with such a body of men as he could collect on a sudden. This resolution he executed with great intrepidity, and if the nature of the enterprise be considered, with no contemptible success; for though one half of his small body of troops was cut off, he, with the other, broke through the enemy, and entered the town. The unexpected arrival of an officer of such high rank and reputation, and who had exposed himself to such danger in order to join them, inspired the desponding garrison with courage. Every thing that the admiral's great skill and experience in the art of war could suggest, for annoying the enemy or defending the town, was attempted; and the citizens, as well as the garrison, seconding his zeal with

h Carte, iii. 337.

equal ardour, seemed to be determined that they would hold out to the last, and sacrifice themselves in order to save their country.[i]

The French endeavour to relieve the town.

The duke of Savoy, whom the English under the earl of Pembroke joined about this time, pushed on the siege with the greatest vigour. An army so numerous, and so well supplied with every thing requisite, carried on its approaches with great advantage against a garrison which was still so feeble that it durst seldom venture to disturb or retard the enemy's operations by sallies. The admiral, sensible of the approaching danger, and unable to avert it, acquainted his uncle the constable Montmorency, who had the command of the French army, with his situation, and pointed out to him a method by which he might throw relief into the town. The constable, solicitous to save a town, the loss of which would open a passage for the enemy into the heart of France; and eager to extricate his nephew out of that perilous situation, in which zeal for the public had engaged him,—resolved, though aware of the danger, to attempt what he desired. With this view, he marched from La Fere towards St. Quintin at the head of his army, which was not by one half so numerous as that of the enemy, and having given the command of a body of chosen men to Coligny's brother Dandelot, who was colonel-general of the French infantry, he ordered him to force his way into the town by that avenue which the admiral had represented as most practicable, while he himself, with the main army, would give the alarm to the enemy's camp on the opposite side, and endeavour to draw all their attention towards that quarter. Dandelot executed his orders with greater intrepidity than conduct. He rushed on with such headlong impetuosity, that, though it broke the first body of the enemy which stood in his way, it threw his own soldiers into the utmost confusion; and as they were attacked in that situation by fresh troops which closed in upon them on every side, the greater part of them were cut in pieces, Dandelot, with about five hundred of the most adventurous and most fortunate, making good his entrance into the town.

Aug. 10

The battle of St. Quintin.

Meanwhile the constable, in executing his part of the plan, advanced so near the camp of the besiegers, as rendered it impossible to retreat with safety in the face of an enemy so much superior in number. The duke of Savoy instantly perceived Montmorency's error, and prepared, with the presence of mind and abilities of a great general, to avail himself of it. He drew up his army in order of battle, with the greatest expedition; and watching the moment when the French began to file off towards La Fere, he detached all his cavalry, under the command of the count of Egmont, to fall on their rear, while he himself, at the head of his infantry, advanced to support him. The French retired at first in perfect order, and with a good countenance: but when they saw Egmont draw near with his formidable body of cavalry, the shock of which they were conscious that they could not withstand, the prospect of imminent danger, added to distrust of their general, whose imprudence every soldier now perceived, struck them with general consternation. They began insensibly to quicken their pace, and those in the rear pressed so violently on such as were before them, that in a short time their march resembled a flight rather than a retreat. Egmont, observing their confusion, charged them with the greatest fury, and in a moment all their men at arms, the pride and strength of the French troops in that age, gave way, and fled with precipitation. The infantry, however, whom the constable, by his presence and authority, kept to their colours, still continued to retreat in good order, until the enemy brought some pieces of cannon to bear upon their centre, which threw them into such confusion, that the Flemish cavalry, renewing their attack, broke in, and the rout became universal. About four thousand of the French fell in the field, and among these the duke of Enghien, a prince of the blood, together with six hundred gentlemen. The constable, as soon as he perceived the fortune of the day to be irretrievable, rushed into the thickest of the enemy, with a resolution not to survive the calamity which his ill-conduct had brought upon his country; but having received a dangerous wound, and being wasted with the loss of blood, he was surrounded by some Flemish officers, to whom he was known, who protected him from the violence of the soldiers, and obliged him to surrender. Besides the constable, the dukes of Montpensier and Longueville, the mareschal of St. André, many officers of distinction, three hundred gentlemen, and near four thousand private soldiers, were taken prisoners. All the colours belonging to the infantry, all the ammunition, and all the cannon, two pieces excepted, fell into the enemy's hands. The victorious army did not lose above fourscore men.[k]

Total defeat of the French.

The first effects of it.

This battle, no less fatal to France than the ancient victories of Crecy and Agincourt, gained by the English on the same frontier, bore a near resemblance to those disastrous events, in the suddenness of the rout; in the ill conduct of the commander-in-chief; in the number of persons of note slain or taken; and in the small loss sustained by the enemy. It filled France with equal consternation. Many inhabitants of Paris, with the same precipitancy and trepidation as if the enemy had been already at their gates, quitted the city, and retired into the interior provinces. The king, by his presence and exhortations, endeavoured to console and to animate such as remained, and applying himself with the greatest diligence to repair the ruinous fortifications of the city, prepared to defend it against the attack which he instantly expected. But happily for France, Philip's caution,

i Thuan. lib. xix. 647.

k Thuan. 650. Haræi Annal. Brabant. ii. 692. Herrera, 291.

together with the intrepid firmness of the admiral de Coligny, not only saved the capital from the danger to which it was exposed, but gained the nation a short interval, during which the people recovered from the terror and dejection occasioned by a blow no less severe than unexpected, and Henry had leisure to take measures for the public security, with the spirit which became the sovereign of a powerful and martial people.

Philip repairs to his army.

Philip, immediately after the battle, visited the camp at St. Quintin, where he was received with all the exultation of military triumph; and such were his transports of joy on account of an event which threw so much lustre on the beginning of his reign, that they softened his severe and haughty temper into an unusual flow of courtesy. When the duke of Savoy approached, and was kneeling to kiss his hands, he caught him in his arms, and embracing him with warmth, "It becomes me," says he, "rather to kiss your hands, which have gained me such a glorious and almost bloodless victory."

His deliberations concerning the prosecution of the war.

As soon as the rejoicings and congratulations on Philip's arrival were over, a council of war was held, in order to determine how they might improve their victory to the best advantage. The duke of Savoy, seconded by several of the ablest officers formed under Charles V., insisted that they should immediately relinquish the siege of St. Quintin, the reduction of which was now an object below their attention, and advance directly towards Paris; that as there were neither troops to oppose, nor any town of strength to retard their march, they might reach that capital while under the full impression of the astonishment and terror occasioned by the rout of the army, and take possession of it without resistance. But Philip, less adventurous or more prudent than his generals, preferred a moderate but certain advantage to an enterprise of greater splendour, but of more doubtful success. He represented to the council the infinite resources of a kingdom so powerful as France; the great number as well as martial spirit of its nobles; their attachment to their sovereign; the manifold advantages with which they could carry on war in their own territories; and the unavoidable destruction which must be the consequence of their penetrating too rashly into the enemy's country, before they had secured such a communication with their own as might render a retreat safe, if, upon any disastrous event, that measure should become necessary. On all these accounts, he advised the continuance of the siege; and his generals acquiesced the more readily in his opinion, as they made no doubt of being masters of the town in a few days, a loss of time of so little consequence in the execution of their plan, that they might easily repair it by their subsequent activity.[1]

The weakness of the fortifications, and the small number of the garrison, which could no longer hope either for reinforcement or relief, seemed to authorize this

St. Quintin defended by admiral Coligny;

calculation of Philip's generals. But in making it, they did not attend sufficiently to the character of admiral de Coligny, who commanded in the town. A courage undismayed, and tranquil amidst the greatest dangers, an invention fruitful in resources, a genius which roused and seemed to acquire new force upon every disaster, a talent of governing the minds of men, together with a capacity of maintaining his ascendant over them even under circumstances the most adverse and distressful, were qualities which Coligny possessed in a degree superior to any general of that age. These qualities were peculiarly adapted to the station in which he was now placed; and as he knew the infinite importance to his country of every hour which he could gain at this juncture, he exerted himself to the utmost in contriving how to protract the siege, and to detain the enemy from attempting any enterprise more dangerous to France. Such were the perseverance and skill with which he conducted the defence, and such the fortitude as well as patience with which he animated the garrison, that though the Spaniards, the Flemings, and the English, carried on the attack with all the ardour which national emulation inspires, he held out the town seventeen days. He was taken prisoner, at last, on the breach, overpowered by the superior number of the enemy.

which is taken by assault.

Aug. 27.

Henry's measures for the defence of his kingdom.

Henry availed himself, with the utmost activity, of the interval which the admiral's well-timed obstinacy had afforded him. He appointed officers to collect the scattered remains of the constable's army; he issued orders for levying soldiers in every part of the kingdom; he commanded the ban and arriere ban of the frontier provinces instantly to take the field, and to join the duke of Nevers at Laon in Picardy; he recalled the greater part of the veteran troops which served under the mareschal Brissac at Piedmont; he sent courier after courier to the duke of Guise, requiring him, together with all his army, to return instantly for the defence of their country; he despatched one envoy to the grand seignior, to solicit the assistance of his fleet, and the loan of a sum of money; he sent another into Scotland, to incite the Scots to invade the north of England, that, by drawing Mary's attention to that quarter, he might prevent her from reinforcing her troops which served under Philip. These efforts of the king were warmly seconded by the zeal of his subjects. The city of Paris granted him a free gift of three hundred thousand livres. The other great towns imitated the liberality of the capital, and contributed in proportion. Several noblemen of distinction engaged, at their own expense, to garrison and defend the towns which lay most exposed to the enemy.

1 Belcar. Commentar. de Reb. Gallic. 901.

Nor was the general concern for the public confined to corporate bodies alone, or to those in the higher sphere of life, but diffusing itself among persons of every rank, each individual seemed disposed to act with as much vigour as if the honour of the king, and the safety of the state, had depended solely on his single efforts.[m]

The victory of St. Quintin productive of few beneficial consequences.

Philip, who was no stranger either to the prudent measures taken by the French monarch for the security of his dominions, or to the spirit with which his subjects prepared to defend themselves, perceived, when it was too late, that he had lost an opportunity which could never be recalled, and that it was now vain to think of penetrating into the heart of France. He abandoned, therefore, without much reluctance, a scheme which was too bold and hazardous to be perfectly agreeable to his cautious temper; and employed his army, during the remainder of the campaign, in the sieges of Ham and Catelet. Of these he soon became master; and the reduction of two such petty towns, together with the acquisition of St. Quintin, were all the advantages which he derived from one of the most decisive victories gained in that century. Philip himself, however, continued in high exultation on account of his success; and as all his passions were tinged with superstition, he, in memory of the battle of St. Quintin, which had been fought on the day consecrated to St. Laurence, vowed to build a church, a monastery, and a palace, in honour of that saint and martyr. Before the expiration of the year, he laid the foundation of an edifice in which all these were united, at the Escurial in the neighbourhood of Madrid; and the same principle which dictated the vow directed the building. For the plan of the work was so formed as to resemble a gridiron, which, according to the legendary tale, had been the instrument of St. Laurence's martyrdom. Notwithstanding the great and expensive schemes in which his restless ambition involved him, Philip continued the building with such perseverance for twenty-two years, and reserved such large sums for this monument of his devotion and vanity, that the monarchs of Spain are indebted to him for a royal residence, which, though not the most elegant, is certainly the most sumptuous and magnificent, of any in Europe.[n]

The French army recalled out of Italy.

The first account of that fatal blow which the French had received at St. Quintin was carried to Rome by the courier whom Henry had sent to recall the duke of Guise. As Paul, even with the assistance of his French auxiliaries, had hardly been able to check the progress of the Spanish arms, he foresaw that, as soon as he was deprived of their protection, his territories must be overrun in a moment. He remonstrated, therefore, with the greatest violence against the departure of the French army, reproaching the duke of Guise for his ill conduct, which had brought him into such an unhappy situation; and complaining of the king for deserting him so ungenerously under such circumstances. The duke of Guise's orders, however, were peremptory. Paul, inflexible as he was, found it necessary to accommodate his conduct to the exigency of his affairs, and to employ the mediation of the Venetians, and of Cosmo di Medici, in order to obtain peace. Philip, who had been forced unwillingly to a rupture with the pope, and who, even while success crowned his arms, doubted so much the justice of his own cause, that he had made frequent overtures of pacification, listened eagerly to the first proposals of this nature from Paul, and discovered such moderation in his demands as could hardly have been expected from a prince elated with victory.

A treaty of peace between the pope and Philip.

The duke of Alva on the part of Philip, and the cardinal Caraffa in the name of his uncle, met at Cavi, and both being equally disposed to peace, they, after a short conference, terminated the war by a treaty on the following terms:—That Paul should renounce his league with France, and maintain for the future such a neutrality as became the common father of Christendom; that Philip should instantly restore all the towns of the ecclesiastical territory of which he had taken possession; that the claims of the Caraffas to the duchy of Paliano, and other demesnes of the Colonnas, should be referred to the decision of the republic of Venice; that the duke of Alva should repair in person to Rome, and after asking pardon of Paul in his own name, and in that of his master, for having invaded the patrimony of the church, should receive the pope's absolution from that crime. Thus Paul, through Philip's scrupulous timidity, finished an unprosperous war without any detriment to the papal see. The conqueror appeared humble, and acknowledged his error; while he who had been vanquished retained his usual haughtiness, and was treated with every mark of superiority.[o] The duke of Alva, in terms of the treaty, repaired to Rome, and, in the posture of a supplicant, kissed the feet, and implored the forgiveness, of that very person whom his arms had reduced to the last extremity. Such was the superstitious veneration of the Spaniards for the papal character, that Alva, though perhaps the proudest man of the age, and accustomed from his infancy to a familiar intercourse with princes, acknowledged that when he approached the pope, he was so much overawed, that his voice failed, and his presence of mind forsook him.[p]

Philip restores Placentia to Octavio Farnese

But though this war, which at its commencement threatened mighty revolutions, was brought to an end without occasioning any alteration in those states which were its immediate object, it had produced during its progress effects of considerable consequence in other parts of Italy. As Philip was extremely so-

m Mem. de Ribier, ii. 701, 703.

o Pallav. lib. xiii. 183. F. Paul, 380. Herrera, vol. i. 310.
p Pallav. lib. xiii. 185. Summonte Istoria di Napoli, iv. 286.

licitous to terminate his quarrel with Paul as speedily as possible, he was willing to make any sacrifice in order to gain those princes, who, by joining their troops to the papal and French army, might have prolonged the war. With this view, he entered into a negociation with Octavio Farnese, duke of Parma, and, in order to seduce him from his alliance with France, he restored to him the city of Placentia, with the territory depending on it, which Charles V. had seized in the year one thousand five hundred and forty-seven, had kept from that time in his possession, and had transmitted, together with his other dominions, to Philip.

Cosmo di Medici's measures for obtaining Siena.

This step made such a discovery of Philip's character and views to Cosmo di Medici, the most sagacious as well as provident of all the Italian princes, that he conceived hopes of accomplishing his favourite scheme of adding Siena and its territories to his dominions in Tuscany. As his success in this attempt depended entirely on the delicacy of address with which it should be conducted, he employed all the refinements of policy in the negociation which he set on foot for this purpose. He began with soliciting Philip, whose treasury he knew to be entirely drained by the expense of the war, to repay the great sums which he had advanced to the emperor during the siege of Siena. When Philip endeavoured to elude a demand which he was unable to satisfy, Cosmo affected to be extremely disquieted, and making no secret of his disgust, instructed his ambassador at Rome to open a negociation with the pope, which seemed to be the effect of it. The ambassador executed his commission with such dexterity that Paul, imagining Cosmo to be entirely alienated from the Spanish interest, proposed to him an alliance with France, which should be cemented by the marriage of his eldest son to one of Henry's daughters. Cosmo received the overture with such apparent satisfaction, and with so many professions of gratitude for the high honour of which he had the prospect, that not only the pope's ministers, but the French envoy at Rome, talked confidently, and with little reserve, of the accession of that important ally, as a matter certain and decided. The account of this was quickly carried to Philip; and Cosmo, who foresaw how much it would alarm him, had despatched his nephew Ludovico de Toledo into the Netherlands, that he might be at hand to observe and take advantage of his consternation, before the first impression which it made should in any degree abate. Cosmo was extremely fortunate in the choice of the instrument whom he employed. Toledo waited with patience, until he discovered with certainty, that Philip had received such intelligence of his uncle's negociations at Rome, as must have filled his suspicious mind with fear and jealousy; and then craving an audience, he required payment of the money which had been borrowed by the emperor, in the most earnest and peremptory terms. In urging that point, he artfully threw out several dark hints and ambiguous declarations, concerning the extremities to which Cosmo might be driven by a refusal of this just demand, as well as by other grievances of which he had good reason to complain.

Their success.

Philip, astonished at an address in such a strain, from a prince so far his inferior as the duke of Tuscany, and comparing what he now heard with the information which he had received from Italy, immediately concluded that Cosmo had ventured to assume this bold and unusual tone on the prospect of his union with France. In order to prevent the pope and Henry from acquiring an ally, who, by his abilities, as well as the situation of his dominions, would have added both reputation and strength to their confederacy, he offered to grant Cosmo the investiture of Siena, if he would consent to accept of it as an equivalent for the sums due to him, and engage to furnish a body of troops towards the defence of Philip's territories in Italy, against any power who should attack them. As soon as Cosmo had brought Philip to make this concession, which was the object of all his artifices and intrigues, he did not protract the negociation by an unnecessary delay, or any excess of refinement, but closed eagerly with the proposal; and Philip, in spite of the remonstrances of his ablest counsellors, signed a treaty with him to that effect.[q]

As no prince was ever more tenacious of his rights than Philip, or less willing to relinquish any territory which he possessed, by what tenure soever he held it, these unusual concessions to the dukes of Parma and Tuscany, by which he wantonly gave up countries, in acquiring or defending which his father had employed many years, and wasted much blood and treasure, cannot be accounted for from any motive, but his superstitious desire of extricating himself out of the war which he had been forced to wage against the pope. By these treaties, however, the balance of power among the Italian states was poised with greater equality, and rendered less variable than it had been since it received the first violent shock from the invasion of Charles VIII. of France. From this period Italy ceased to be the great theatre on which the monarchs of Spain, France, and Germany, contended for power or for fame. Their dissensions and hostilities, though as frequent and violent as ever, being excited by new objects, stained other regions of Europe with blood, and rendered them miserable, in their turn, by the devastations of war.

Sept. 29. The duke of Guise's reception in France.

The duke of Guise left Rome on the same day that his adversary the duke Alva made his humiliating submission to the pope. He was received in France as the guardian angel of the kingdom. His late ill success in Italy seemed to be forgotten, while his former services, particularly his defence of Metz, were recounted with exaggerated praise; and he

q Thuan. lib. xviii. 624. Herrera i. 263, 275. Pallav. lib. xiii. 180.

was welcomed in every city through which he passed, as the restorer of public security, who, after having set bounds by his conduct and valour to the victorious arms of Charles V., returned now, at the call of his country, to check the formidable progress of Philip's power. The reception which he met with from Henry was no less cordial and honourable. New titles were invented, and new dignities created, in order to distinguish him. He was appointed lieutenant-general-in-chief both within and without the kingdom, with a jurisdiction almost unlimited, and hardly inferior to that which was possessed by the king himself. Thus, through the singular felicity which attended the princes of Lorrain, the miscarriage of their own schemes contributed to aggrandize them. The calamities of his country, and the ill conduct of his rival the constable, exalted the duke of Guise to a height of dignity and power, which he could not have expected to attain by the most fortunate and most complete success of his own ambitious projects.

Takes the command of the army.

The duke of Guise, eager to perform something suitable to the high expectations of his countrymen, and that he might justify the extraordinary confidence which the king had reposed in him, ordered all the troops which could be got together to assemble at Compeigne. Though the winter was well advanced, and had set in with extreme severity, he placed himself at their head, and took the field. By Henry's activity and the zeal of his subjects, so many soldiers had been raised in the kingdom, and such considerable reinforcements had been drawn from Germany and Switzerland, as formed an army respectable even in the eyes of a victorious enemy. Philip, alarmed at seeing it put in motion at such an uncommon season, began to tremble for his new conquests, particularly St. Quintin, the fortifications of which were hitherto but imperfectly repaired.

He invests Calais. 1558. Jan. 1st.

But the duke of Guise meditated a more important enterprise; and after amusing the enemy with threatening successively different towns on the frontiers of Flanders, he turned suddenly to the left, and invested Calais with his whole army. Calais had been taken by the English under Edward III., and was the fruit of that monarch's glorious victory at Crecy. Being the only place that they retained of their ancient and extensive territories in France, and which opened to them, at all times, an easy and secure passage into the heart of that kingdom, their keeping possession of it soothed the pride of the one nation as much as it mortified the vanity of the other. Its situation was naturally so strong, and its fortifications deemed so impregnable, that no monarch of France, how adventurous soever, had been bold enough to attack it. Even when the domestic strength of England was broken and exhausted by the bloody wars between the houses of York and Lancaster, and its attention entirely diverted from foreign objects, Calais had remained undisturbed and unthreatened. Mary and her council, composed chiefly of ecclesiastics, unacquainted with military affairs, and whose whole attention was turned towards extirpating heresy out of the kingdom, had not only neglected to take any precautions for the safety of this important place, but seemed to think that the reputation of its strength was alone sufficient for its security. Full of this opinion, they ventured, even after the declaration of war, to continue a practice which the low state of the queen's finances had introduced in times of peace. As the country adjacent to Calais was overflowed during the winter, and the marshes around it became impassable, except by one avenue, which the forts of St. Agatha and Newnham-bridge commanded, it had been the custom of the English to dismiss the greater part of the garrison towards the end of autumn, and to replace it in the spring. In vain did lord Wentworth, the governor of Calais, remonstrate against this ill-timed parsimony, and represent the possibility of his being attacked suddenly, while he had not troops sufficient to man the works. The privy-council treated these remonstrances with scorn, as if they had flowed from the timidity or the rapaciousness of the governor; and some of them, with that confidence which is the companion of ignorance, boasted that they would defend Calais with their white rods against any enemy who should approach it during winter.[r] In vain did Philip, who had passed through Calais as he returned from England to the Netherlands, warn the queen of the danger to which it was exposed; and, acquainting her with what was necessary for its security, in vain did he offer to reinforce the garrison during winter with a detachment of his own troops. Mary's counsellors, though obsequious to her in all points wherein religion was concerned, distrusted, as much as the rest of their countrymen, every proposition that came from her husband; and suspecting this to be an artifice of Philip's, in order to gain the command of the town, they neglected his intelligence, declined his offer, and left Calais with less than a fourth part of the garrison requisite for its defence.

Its defenceless state.

His knowledge of this encouraged the duke of Guise to venture on an enterprise, that surprised his own countrymen no less than his enemies. As he knew that its success depended on conducting his operations with such rapidity as would afford the English no time for throwing relief into the town by sea, and prevent Philip from giving him any interruption by land, he pushed the attack with a degree of vigour little known in carrying on sieges during that age. He drove the English from fort St. Agatha at the first assault. He obliged them to abandon the fort of Newnham-bridge, after defending it only three days. He took the castle which commanded the harbour

Guise pushes the siege with vigour;

r Carte, iii. 345.

takes the town, by storm; and, on the eighth day after he appeared before Calais, compelled the governor to surrender; as his feeble garrison, which did not exceed five hundred men, was worn out with the fatigue of sustaining so many attacks, and defending such extensive works.

and likewise Guisnes and Hames. The duke of Guise, without allowing the English time to recover from the consternation occasioned by this blow, immediately invested Guisnes, the garrison of which, though more numerous, defended itself with less vigour, and, after standing one brisk assault, gave up the town. The castle of Hames was abandoned by the troops posted there, without waiting the approach of the enemy.

The splendour and effect of these conquests. Thus, in a few days, during the depth of winter, and at a time when the fatal battle of St. Quintin had so depressed the sanguine spirit of the French, that their utmost aim was to protect their own country, without dreaming of making conquests on the enemy, the enterprising valour of one man drove the English out of Calais, after they had held it two hundred and ten years, and deprived them of every foot of land in a kingdom where their dominions had been once very extensive. This exploit, at the same time that it gave a high idea of the power and resources of France to all Europe, set the duke of Guise, in the opinion of his countrymen, far above all the generals of the age. They celebrated his conquests with immoderate transports of joy; while the English gave vent to all the passions which animate a high-spirited people, when any great national calamity is manifestly owing to the ill conduct of their rulers. Mary and her ministers, formerly odious, were now contemptible in their eyes. All the terrors of her severe and arbitrary administration could not restrain them from uttering execrations and threats against those who, having wantonly involved the nation in a quarrel wherein it was nowise interested, had, by their negligence or incapacity, brought irreparable disgrace on their country, and lost the most valuable possession belonging to the English crown.

The king of France imitated the conduct of its former conqueror, Edward III., with regard to Calais. He commanded all the English inhabitants to quit the town; and giving their houses to his own subjects, whom he allured to settle there by granting them various immunities, he left a numerous garrison, under an experienced governor, for their defence. After this, his victorious army was conducted into quarters of refreshment, and the usual inaction of winter returned.

Feb. 24. Charles's resignation of the imperial crown. During these various operations, Ferdinand assembled the college of electors at Francfort, in order to lay before them the instrument whereby Charles V. had resigned the imperial crown, and transferred it to him. This he had hitherto delayed on account of some difficulties which had occurred, concerning the formalities requisite in supplying a vacancy occasioned by an event to which there was no parallel in the annals of the empire. These being at length adjusted, the prince of Orange executed the commission with which he had been intrusted by Charles; the electors accepted of his resignation; declared Ferdinand his lawful successor; and put him in possession of all the ensigns of the imperial dignity.

The pope refuses to acknowledge Ferdinand as emperor. But when the new emperor sent Gusman, his chancellor, to acquaint the pope with this transaction, to testify his reverence towards the holy see, and to signify that, according to form, he would soon despatch an ambassador extraordinary to treat with his holiness concerning his coronation; Paul, whom neither experience nor disappointments could teach to bring down his lofty ideas of the papal prerogative to such a moderate standard as suited the genius of the times, refused to admit the envoy into his presence, and declared all the proceedings at Francfort irregular and invalid. He contended that the pope, as the vicegerent of Christ, was intrusted with the keys both of spiritual and of civil government; that from him the imperial jurisdiction was derived; that though his predecessors had authorized the electors to choose an emperor whom the holy see confirmed, this privilege was confined to those cases when a vacancy was occasioned by death; that the instrument of Charles's resignation had been presented in an improper court, as it belonged to the pope alone to reject or to accept of it, and to nominate a person to fill the imperial throne; that, setting aside all these objections, Ferdinand's election laboured under two defects, which alone were sufficient to render it void, for the protestant electors had been admitted to vote, though, by their apostasy from the catholic faith, they had forfeited that and every other privilege of the electoral office; and Ferdinand, by ratifying the concessions of several diets in favour of heretics, had rendered himself unworthy of the imperial dignity, which was instituted for the protection, not for the destruction, of the church. But after thundering out these extravagant maxims, he added, with an appearance of condescension, that if Ferdinand would renounce all title to the imperial crown, founded on the election at Francfort, make professions of repentance for his past conduct, and supplicate him with due humility to confirm Charles's resignation, as well as his own assumption to the empire, he might expect every mark of favour from his paternal clemency and goodness. Gusman, though he had foreseen considerable difficulties in his negociation with the pope, little expected that he would have revived those antiquated and wild pretensions, which astonished him so much, that he hardly knew in what tone he ought to reply. He prudently declined entering into any controversy concerning the nature or extent of the papal jurisdiction, and confining himself to the political considerations which should determine the pope to recognise an emperor already

in possession, he endeavoured to place them in such a light as he imagined could scarcely fail to strike Paul, if he were not altogether blind to his own interest. Philip seconded Gusman's arguments with great earnestness, by an ambassador whom he sent to Rome on purpose, and besought the pope to desist from claims so unseasonable, as might not only irritate and alarm Ferdinand and the princes of the empire, but furnish the enemies of the holy see with a new reason for representing its jurisdiction as incompatible with the rights of princes, and subversive of all civil authority. But Paul, who deemed it a crime to attend to any consideration suggested by human prudence or policy, when he thought himself called upon to assert the prerogatives of the papal see, remained inflexible; and, during his pontificate, Ferdinand was not acknowledged as emperor by the court of Rome.[s]

Henry endeavours to excite the Scots against England.

While Henry was intent upon his preparations for the approaching campaign, he received accounts of the issue of his negociations in Scotland. Long experience having at last taught the Scots the imprudence of involving their country in every quarrel between France and England, neither the solicitation of the French ambassador, nor the address and authority of the queen regent, could prevail on them to take arms against a kingdom with which they were at peace. On this occasion the ardour of a martial nobility and of a turbulent people was restrained by regard for the public interest and tranquillity, which in former deliberations of this kind had been seldom attended to by a nation always prone to rush into every new war. But though the Scots adhered with steadiness to their pacific system, they were extremely ready to gratify the French king in another particular, which he had given in charge to his ambassador.

Marriage of the dauphin with the queen of Scots.

The young queen of Scots had been affianced to the dauphin in the year one thousand five hundred and forty-eight, and having been educated since that time in the court of France, she had grown up to be the most amiable and one of the most accomplished princesses of that age. Henry demanded the consent of her subjects to the celebration of the marriage; and a parliament, which was held for that purpose, appointed eight commissioners to represent the whole body of the nation at that solemnity, with power to sign such deeds as might be requisite before it was concluded. In settling the articles of the marriage, the Scots took every precaution that prudence could dictate, in order to preserve the liberty and independence of their country; while the French used every art to secure to the dauphin the conduct of affairs during the queen's life, and the succession of the crown on the event of her demise. The marriage was celebrated with pomp suitable to the dignity of

April 14.

the parties, and the magnificence of a court at that time the most splendid in Europe.[t] Thus Henry, in the course of a few months, had the glory of recovering an important possession which had anciently belonged to the crown of France, and of adding to it the acquisition of a new kingdom. By this event, too, the duke of Guise acquired new consideration and importance; the marriage of his niece to the apparent heir of the crown, raising him so far above the condition of other subjects, that the credit which he had gained by his great actions seemed thereby to be rendered no less permanent than it was extensive.

The campaign opened.

When the campaign opened, soon after the dauphin's marriage, the duke of Guise was placed at the head of the army, with the same unlimited power as formerly. Henry had received such liberal supplies from his subjects, that the troops under his command were both numerous and well-appointed; while Philip, exhausted by the extraordinary efforts of the preceding year, had been obliged to dismiss so many of his forces during the winter, that he could not bring an army into the field capable of making head against the enemy. The duke of Guise did not lose the favourable opportunity which his superiority afforded him. He invested Thionville in the duchy of Luxemburg, one of the strongest towns on the frontier of the Netherlands, and of great importance to France by its neighbourhood to Metz; and notwithstanding the obstinate valour with which it was defended, he forced it to capitulate after a siege of three weeks.[u]

June 22.

The French army defeated at Gravelines.

But the success of this enterprise, which it was expected would lead to other conquests, was more than counterbalanced by an event that happened in another part of the Low Countries. The marechal de Termes, governor of Calais, having penetrated into Flanders without opposition, invested Dunkirk with an army of fourteen thousand men, and took it by storm on the fifth day of the siege. Hence he advanced towards Nieuport, which must have soon fallen into his hands, if the approach of the count of Egmont with a superior army had not made it prudent to retreat. The French troops were so much encumbered with the booty which they had got at Dunkirk, or by ravaging the open country, that they moved slowly; and Egmont, who had left his heavy baggage and artillery behind him, marched with such rapidity, that he came up with them near Gravelines, and attacked them with the utmost impetuosity. De Termes, who had the choice of the ground, having posted his troops to advantage in the angle formed by the mouth of the river Aa and the sea, received him with great firmness. Victory remained for some time in suspense, the desperate valour of the French, who foresaw the unavoidable destruction that must follow upon

s Godleveus de Abdicat. Car. V. ap. Gold. Polit. Imper. 392. Pallav. lib. xiii. 189. Ribier, ii. 746, 759.

t Keith's History of Scotland, p. 73. Append. 13. Corps Diplom. v. 21.

u Thuan. lib. xx. 690.

a rout in an enemy's country, counterbalancing the superior number of the Flemings, when one of those accidents to which human prudence does not extend, decided the contest in favour of the latter. A squadron of English ships of war, which was cruising on the coast, being drawn by the noise of the firing towards the place of the engagement, entered the river Aa, and turned its great guns against the right wing of the French, with such effect, as immediately broke that body, and spread terror and confusion through the whole army. The Flemings, to whom assistance, so unexpected and so seasonable, gave fresh spirit, redoubled their efforts, that they might not lose the advantage which fortune had presented them, or give the enemy time to recover from their consternation, and the rout of the French soon became universal. Near two thousand were killed on the spot; a greater number fell by the hands of the peasants, who, in revenge for the cruelty with which their country had been plundered, pursued the fugitives, and massacred them without mercy; the rest were taken prisoners, together with de Termes, their general, and many officers of distinction.[x]

The duke of Guise opposed to the victorious army.

This signal victory, for which the count of Egmont was afterwards so ill requited by Philip, obliged the duke of Guise to relinquish all other schemes, and to hasten towards the frontier of Picardy, that he might oppose the progress of the enemy in that province. This disaster, however, reflected new lustre on his reputation, and once more turned the eyes of his countrymen towards him, as the only general on whose arms victory always attended, and in whose conduct as well as good fortune they could confide in every danger. Henry reinforced the duke of Guise's army with so many troops drawn from the adjacent garrisons, that it soon amounted to forty thousand men. That of the enemy, after the junction of Egmont with the duke of Savoy, was not inferior in number. They encamped at the distance of a few leagues from one another; and each monarch having joined his respective army, it was expected, after the vicissitudes of good and bad success during this and the former campaign, that a decisive battle would at last determine which of the rivals should take the ascendant for the future, and give law to Europe. But though both had it in their power, neither of them discovered any inclination to bring the determination of such an important point to depend upon the uncertain issue of a single battle. The fatal engagements at St. Quintin and Gravelines were too recent to be so soon forgotten, and the prospect of encountering the same troops, commanded by the same generals who had twice triumphed over his arms, inspired Henry with a degree of caution which was not common to him. Philip, of a genius averse to bold operations in war, naturally leaned to cautious measures, and was not disposed to hazard any thing against a general so fortunate and successful as the duke of Guise. Both monarchs, as if by agreement, stood on the defensive, and fortifying their camps carefully, avoided every skirmish or rencounter that might bring on a general engagement.

Both monarchs begin to desire peace.

While the armies continued in this inaction, peace began to be mentioned in each camp, and both Henry and Philip discovered an inclination to listen to any overture that tended to re-establish it. The kingdoms of France and Spain had been engaged during half a century in almost continual wars, carried on at a great expense, and productive of no considerable advantage to either. Exhausted by extraordinary and unceasing efforts, which far exceeded those to which the nations of Europe had been accustomed before the rivalship between Charles V. and Francis I., both nations longed so much for an interval of repose, in order to recruit their strength, that their sovereigns drew from them with difficulty the supplies necessary for carrying on hostilities. The private inclinations of both the kings concurred with those of their people. Philip was prompted to wish for peace by his fond desire of returning to Spain. Accustomed from his infancy to the climate and manners of that country, he was attached to it with such extreme predilection, that he never felt himself at ease in any other part of his dominions. But as he could not quit the Low Countries, either with decency or safety, and venture on a voyage to Spain during the continuance of war, the prospect of a pacification, which would put it in his power to execute his favourite scheme, was highly acceptable. Henry was no less desirous of being delivered from the burden and occupations of war, that he might have leisure to turn his attention, and bend the whole force of his government, towards suppressing the opinions of the reformers, which were spreading with such rapidity in Paris and other great towns of France, that they began to grow formidable to the established church.

An intrigue in the court of France facilitates it.

Besides these public and avowed considerations, arising from the state of the two hostile kingdoms, or from the wishes of their respective monarchs, there was a secret intrigue carried on in the court of France, which contributed as much as either of the other, to hasten and to facilitate the negociation of a peace. The constable Montmorency, during his captivity, beheld the rapid success and growing favour of the duke of Guise with the envy natural to a rival. Every advantage gained by the princes of Lorrain he considered as a fresh wound to his own reputation, and he knew with what malevolent address it would be improved to diminish his credit with the king, and to augment that of the duke of Guise. These arts, he was afraid, might, by degrees, work on the easy and ductile mind of Henry, so as to efface all remains of his ancient affection towards himself. But he could not discover any remedy for this, unless he were allowed to return

x Thuan. lib. xx. 694.

home, that he might try whether by his presence he could defeat the artifices of his enemies, and revive those warm and tender sentiments which had long attached Henry to him, with a confidence so entire, as resembled rather the cordiality of private friendship, than the cold and selfish connexion between a monarch and one of his courtiers. While Montmorency was forming schemes and wishes for his return to France with much anxiety of mind, but with little hope of success, an unexpected incident prepared the way for it. The cardinal of Lorrain, who had shared with his brother in the king's favour, and participated of the power which that conferred, did not bear prosperity with the same discretion as the duke of Guise. Intoxicated with their good fortune, he forgot how much they had been indebted for their present elevation to their connexions with the duchess of Valentinois, and vainly ascribed all to the extraordinary merit of their family. This led him not only to neglect his benefactress, but to thwart her schemes, and to talk with a sarcastic liberty of her character and person. That singular woman, who, if we may believe contemporary writers, retained the beauty and charms of youth at the age of threescore, and on whom it is certain that Henry still doated with all the fondness of love, felt this injury with sensibility, and set herself with eagerness to inflict the vengeance which it merited. As there was no method of supplanting the princes of Lorrain so effectually as by a coalition of interests with the constable, she proposed the marriage of her grand-daughter with one of his sons, as the bond of their future union; and Montmorency readily gave his consent to the match. Having thus cemented their alliance, the duchess employed all her influence with the king, in order to confirm his inclinations towards peace, and induce him to take the steps necessary for attaining it. She insinuated that any overture of that kind would come with great propriety from the constable, and if intrusted to the conduct of his prudence, could hardly fail of success.

Henry commits the negociation to Montmorency.

Henry, long accustomed to commit all affairs of importance to the management of the constable, and needing only this encouragement to return to his ancient habits, wrote to him immediately with his usual familiarity and affection, empowering him at the same time to take the first opportunity of sounding Philip and his ministers with regard to peace. Montmorency made his application to Philip by the most proper channel. He opened himself to the duke of Savoy, who, notwithstanding the high command to which he had been raised, and the military glory which he had acquired in the Spanish service, was weary of remaining in exile, and languished to return into his paternal dominions. As there was no prospect of his recovering possession of them by force of arms, he considered a definitive treaty of peace between France and Spain, as the only event by which he could hope to obtain restitution. Being no stranger to Philip's private wishes with regard to peace, he easily prevailed on him not only to discover a disposition on his part towards accommodation, but to permit Montmorency to return on his parole to France, that he might confirm his own sovereign in his pacific sentiments. Henry received the constable with the most flattering marks of regard; absence, instead of having abated or extinguished the monarch's friendship, seemed to have given it new ardour. Montmorency, from the moment of his appearance in court, assumed, if possible, a higher place than ever in his affection, and a more perfect ascendant over his mind. The cardinal of Lorrain and duke of Guise prudently gave way to a tide of favour too strong for them to oppose, and confining themselves to their proper departments, permitted, without any struggle, the constable and duchess of Valentinois to direct public affairs at their pleasure. They soon prevailed on the king to nominate plenipotentiaries to treat of peace. Philip did the same. The abbey of Cercamp was fixed on as the place of congress; and all military operations were immediately terminated by a suspension of arms.

Death of Charles V.

While these preliminary steps were taking towards a treaty which restored tranquillity to Europe, Charles V., whose ambition had so long disturbed it, ended his days in the monastery of St. Justus. When Charles entered this retreat, he formed such a plan of life for himself, as would have suited the condition of a private gentlemen of a moderate fortune. His table was neat, but plain; his domestics few; his intercourse with them familiar; all the cumbersome and ceremonious forms of attendance on his person were entirely abolished, as destructive of that social ease and tranquillity which he courted, in order to soothe the remainder of his days. As the mildness of the climate, together with his deliverance from the burdens and cares of government, procured him, at first, a considerable remission from the acute pains with which he had been long tormented, he enjoyed, perhaps, more complete satisfaction in this humble solitude, than all his grandeur had ever yielded him. The ambitious thoughts and projects which had so long engrossed and disquieted him, were quite effaced from his mind: far from taking any part in the political transactions of the princes of Europe, he restrained his curiosity even from any inquiry concerning them; and he seemed to view the busy scene which he had abandoned with all the contempt and indifference arising from his thorough experience of its vanity, as well as from the pleasing reflection of having disentangled himself from its cares.

His amusements in his retreat.

Other amusements and other objects now occupied him. Sometimes he cultivated the plants in his garden with his own hands; sometimes he rode out to the neighbouring wood on a little horse, the only one that he kept, attended by a single servant on foot. When his infirmities confined him to his apartment, which

often happened, and deprived him of these more active recreations, he either admitted a few gentlemen who resided near the monastery to visit him, and entertained them familiarly at his table; or he employed himself in studying mechanical principles, and in forming curious works of mechanism, of which he had always been remarkably fond, and to which his genius was peculiarly turned. With this view he had engaged Turriano, one of the most ingenious artists of that age, to accompany him in his retreat. He laboured together with him in framing models of the most useful machines, as well as in making experiments with regard to their respective powers, and it was not seldom that the ideas of the monarch assisted or perfected the inventions of the artist. He relieved his mind, at intervals, with slighter and more fantastic works of mechanism, in fashioning puppets, which, by the structure of internal springs, mimicked the gestures and actions of men, to the astonishment of the ignorant monks, who, beholding movements which they could not comprehend, sometimes distrusted their own senses, and sometimes suspected Charles and Turriano of being in compact with invisible powers. He was particularly curious with regard to the construction of clocks and watches; and having found, after repeated trials, that he could not bring any two of them to go exactly alike, he reflected, it is said, with a mixture of surprise as well as regret, on his own folly, in having bestowed so much time and labour on the more vain attempt of bringing mankind to a precise uniformity of sentiment concerning the profound and mysterious doctrines of religion.

His more serious occupations.

But in what manner soever Charles disposed of the rest of his time, he constantly reserved a considerable portion of it for religious exercises. He regularly attended divine service in the chapel of the monastery, every morning and evening; he took great pleasure in reading books of devotion, particularly the works of St. Augustine and St. Bernard; and conversed much with his confessor, and the prior of the monastery, on pious subjects. Thus did Charles pass the first year of his retreat, in a manner not unbecoming a man perfectly disengaged from the affairs of the present life, and standing on the confines of a future world; either in innocent amusements, which soothed his pains, and relieved a mind worn out with excessive application to business; or in devout occupations, which he deemed necessary in preparing for another state.

The causes of his death.

But about six months before his death, the gout, after a longer intermission than usual, returned with a proportional increase of violence. His shattered constitution had not vigour enough remaining to withstand such a shock. It enfeebled his mind as much as his body, and from this period we hardly discern any traces of that sound and masculine understanding, which distinguished Charles among his contemporaries. An illiberal and timid superstition depressed his spirit. He had no relish for amusements of any kind. He endeavoured to conform, in his manner of living, to all the rigour of monastic austerity. He desired no other society than that of monks, and was almost continually employed with them in chanting the hymns of the Missal. As an expiation for his sins, he gave himself the discipline in secret with such severity, that the whip of cords which he employed as the instrument of his punishment, was found after his disease tinged with his blood. Nor was he satisfied with these acts of mortification, which, however severe, were not unexampled. The timorous and distrustful solicitude which always accompanies superstition, still continued to disquiet him, and, depreciating all the devout exercises in which he had hitherto been engaged, prompted him to aim at something extraordinary, at some new and singular act of piety that would display his zeal, and merit the favour of Heaven. The act on which he fixed was as wild and uncommon as any that superstition ever suggested to a weak and disordered fancy. He resolved to celebrate his own obsequies before his death. He ordered his tomb to be erected in the chapel of the monastery. His domestics marched thither in funeral procession, with black tapers in their hands. He himself followed in his shroud. He was laid in his coffin, with much solemnity. The service for the dead was chanted, and Charles joined in the prayers which were offered up for the rest of his soul, mingling his tears with those which his attendants shed, as if they had been celebrating a real funeral. The ceremony closed with sprinkling holy water on the coffin in the usual form, and all the assistants retiring, the doors of the chapel were shut. Then Charles rose out of the coffin, and withdrew to his apartment, full of those awful sentiments which such a singular solemnity was calculated to inspire. But either the fatiguing length of the ceremony, or the impression which the image of death left on his mind, affected him so much, that next day he was seized with a fever. His feeble frame could not long resist its violence, and he expired on the twenty-first of September, after a life of fifty-eight years, six months, and twenty-five days.[y]

His character.

As Charles was the first prince of the age in rank and dignity, the part which he acted, whether we consider the greatness, the variety, or the success of his undertakings, was the most conspicuous. It is from an attentive observation of his conduct, not from the exaggerated praises of the Spanish historians, or the undistinguishing censure of the French, that a just idea of Charles's genius and abilities is to be collected. He possessed qualities so peculiar, that they strongly mark his character, and not only distinguish him from the princes who were his contemporaries, but account for that superiority over them which he so long maintained. In forming his schemes, he was, by nature, as well as by habit, cautious and con-

[y] Strada de Bello Belg. lib. i. p. 11. Thuan. 723. Sandov. ii. 609, &c. Miniana Contin. Marianæ, vol. 216. Vera y Zuniga Vida de Carlos, p. 111.

siderate. Born with talents which unfolded themselves slowly and were late in attaining maturity, he was accustomed to ponder every subject that demanded his consideration with a careful and deliberate attention. He bent the whole force of his mind towards it, and dwelling upon it with a serious application, undiverted by pleasure, and hardly relaxed by any amusement, he revolved it, in silence, in his own breast. He then communicated the matter to his ministers, and after hearing their opinions, took his resolution with a decisive firmness, which seldom follows such slow and seemingly hesitating consultations. Of consequence, Charles's measures, instead of resembling the desultory and irregular sallies of Henry VIII. or Francis I., had the appearance of a consistent system, in which all the parts were arranged, all the effects were forcseen, and even every accident was provided for. His promptitude in execution was no less remarkable than his patience in deliberation. He did not discover greater sagacity in his choice of the measures which it was proper to pursue, than fertility of genius in finding out the means for rendering his pursuit of them successful. Though he had naturally so little of the martial turn, that, during the most ardent and bustling period of life, he remained in the cabinet inactive; yet when he chose at length to appear at the head of his armies, his mind was so formed for vigorous exertions in every direction, that he acquired such knowledge in the art of war, and such talents for command, as rendered him equal in reputation and success to the most able generals of the age. But Charles possessed, in the most eminent degree, the science which is of greatest importance to a monarch, that of knowing men, and of adapting their talents to the various departments which he allotted to them. From the death of Chievres to the end of his reign, he employed no general in the field, no minister in the cabinet, no ambassador to a foreign court, no governor of a province, whose abilities were inadequate to the trust which he reposed in them. Though destitute of that bewitching affability of manners, which gained Francis the hearts of all who approached his person, he was no stranger to the virtues which secure fidelity and attachment. He placed unbounded confidence in his generals; he rewarded their services with munificence; he neither envied their fame nor discovered any jealousy of their power. Almost all the generals who conducted his armies, may be placed on a level with those illustrious personages who have attained the highest eminence of military glory; and his advantages over his rivals, are to be ascribed so manifestly to the superior abilities of the commanders whom he set in opposition to them, that this might seem to detract, in some degree, from his own merit, if the talent of discovering and steadiness in employing such instruments were not the most undoubted proofs of a capacity for government.

There were, nevertheless, defects in his political character which must considerably abate the admiration due to his extraordinary talents. Charles's ambition was insatiable; and though there seems to be no foundation for an opinion prevalent in his own age, that he had formed the chimerical project of establishing an universal monarchy in Europe, it is certain that his desire of being distinguished as a conqueror involved him in continual wars, which not only exhausted and oppressed his subjects, but left him little leisure for giving attention to the interior police and improvement of his kingdoms, the great objects of every prince who makes the happiness of his people the end of his government. Charles, at a very early period of life, having added the imperial crown to the kingdoms of Spain, and to the hereditary dominions of the houses of Austria and Burgundy, this opened to him such a vast field of enterprise, and engaged him in schemes so complicated as well as arduous, that, feeling his power to be unequal to the execution of them, he had often recourse to low artifices, unbecoming his superior talents, and sometimes ventured on such deviations from integrity, as were dishonourable in a great prince. His insidious and fraudulent policy appeared more conspicuous, and was rendered more odious, by a comparison with the open and undesigning character of his contemporaries Frances I. and Henry VIII. This difference, though occasioned chiefly by the diversity of their tempers, must be ascribed, in some degree, to such an opposition in the principles of their political conduct, as affords some excuse for this defect in Charles's behaviour, though it cannot serve as a justification of it. Francis and Henry seldom acted but from the impulse of their passions, and rushed headlong towards the object in view. Charles's measures, being the result of cool reflection, were disposed into a regular system, and carried on upon a concerted plan. Persons who act in the former manner, naturally pursue the end in view, without assuming any disguise, or displaying much address. Such as hold the latter course, are apt, in forming as well as in executing their designs, to employ such refinements as always lead to artifice in conduct, and often degenerate into deceit.

The circumstances transmitted to us with respect to Charles's private deportment and character, are fewer and less interesting than might have been expected from the great number of authors who have undertaken to write an account of his life. These are not the object of this history, which aims more at representing the great transactions of the reign of Charles V., and pointing out the manner in which they affected the political state of Europe, than at delineating his private virtues or defects.

Conference in order to peace.

The plenipotentiaries of France, Spain, and England, continued their conferences at Cercamp; and though each of them, with the usual art of negociators, made at first very high demands in the name of their respective courts, yet as they were all equally desirous of peace, they

would have consented reciprocally to such abatements and restrictions of their claims, as must have removed every obstacle to an accommodation. The death of Charles V. was a new motive with Philip to hasten the conclusion of a treaty, as it increased his impatience for returning into Spain, where there was now no person greater or more illustrious than himself. But, in spite of the concurring wishes of all the parties interested, an event happened which occasioned an unavoidable delay in their negociations. About a month after the opening of the conferences at Cercamp, Mary of England ended her short and inglorious reign, and Elizabeth, her sister, was immediately proclaimed queen with universal joy. As the powers of the English plenipotentiaries expired on the death of their mistress, they could not proceed until they received a commission and instructions from their new sovereign.

Nov. 17. Death of Mary of England.

Henry and Philip beheld Elizabeth's elevation to the throne with equal solicitude. As during Mary's jealous administration, under the most difficult circumstances, and in a situation extremely delicate, that princess had conducted herself with prudence and address far exceeding her years, they had conceived a high idea of her abilities, and already formed expectations of a reign very different from that of her sister. Equally sensible of the importance of gaining her favour, both monarchs set themselves with emulation to court it, and employed every art in order to insinuate themselves into her confidence. Each of them had something meritorious, with regard to Elizabeth, to plead in his own behalf. Henry had offered her a retreat in his dominions, if the dread of her sister's violence should force her to fly for safety out of England. Philip, by his powerful intercession, had prevented Mary from proceeding to the most fatal extremities against her sister. Each of them endeavoured now to avail himself of the circumstances in his favour. Henry wrote to Elizabeth soon after her accession, with the warmest expressions of regard and friendship. He represented the war which had unhappily been kindled between their kingdoms, not as a national quarrel, but as the effect of Mary's blind partiality to her husband, and fond compliance with all his wishes. He entreated her to disengage herself from an alliance which had proved so unfortunate to England, and to consent to a separate peace with him, without mingling her interests with those of Spain, from which they ought now to be altogether disjoined. Philip, on the other hand, unwilling to lose his connexion with England, the importance of which, during a rupture with France, he had so recently experienced, not only vied with Henry in declarations of esteem for Elizabeth, and in professions of his resolution to cultivate the strictest amity with her, but in order to confirm and perpetuate their union, he offered himself to her in marriage, and undertook to procure a dispensation from the pope for that purpose.

Henry and Philip court Elizabeth her successor.

Elizabeth weighed the proposals of the two monarchs attentively, and with that provident discernment of her true interest, which was conspicuous in all her deliberations. She gave some encouragement to Henry's overture of a separate negociation, because it opened a channel of correspondence with France, which she might find to be of great advantage, if Philip should not discover sufficient zeal and solicitude for securing to her proper terms in the joint treaty. But she ventured on this step with the most cautious reserve, that she might not alarm Philip's suspicious temper, and lose an ally in attempting to gain an enemy.[z] Henry himself, by an unpardonable act of indiscretion, prevented her from carrying her intercourse with him to such a length as might have offended or alienated Philip. At the very time when he was courting Elizabeth's friendship with the greatest assiduity, he yielded with an inconsiderate facility to the solicitations of the princes of Lorrain, and allowed his daughter-in-law, the queen of Scots, to assume the title and arms of queen of England. This ill-timed pretension, the source of many calamities to the unfortunate queen of Scots, extinguished at once all the confidence that might have grown between Henry and Elizabeth, and left in its place distrust, resentment, and antipathy. Elizabeth soon found that she must unite her interests closely with Philip's, and expect peace only from negociations carried on in conjunction with him.[a]

Elizabeth's deliberation concerning her conduct.

As she had granted a commission, immediately after her accession, to the same plenipotentiaries whom her sister had employed, she now instructed them to act in every point in concert with the plenipotentiaries of Spain, and to take no step until they had previously consulted with them.[b] But though she deemed it prudent to assume this appearance of confidence in the Spanish monarch, she knew precisely how far to carry it; and discovered no inclination to accept of that extraordinary proposal of marriage which Philip had made to her. The English had expressed so openly their detestation of her sister's choice of him, that it would have been highly imprudent to have exasperated them by renewing that odious alliance. She was too well acquainted with Philip's harsh imperious temper, to think of him for a husband. Nor could she admit a dispensation from the pope to be sufficient to authorize her marrying him, without condemning her father's divorce from Catharine of Aragon, and acknowledging of consequence that her mother's marriage was null, and her own birth illegitimate. But though she determined not to yield to Philip's addresses, the situation of her affairs rendered it dangerous to reject them; she

She empowers her ambassadors to treat of peace.

b Forbes's Full View, i. p. 37, 40.

returned her answer, therefore, in terms which were evasive, but so tempered with respect, that though they gave him no reason to be secure of success, they did not altogether extinguish his hopes.

Negociations at Chateau-Cambresis.

By this artifice, as well as by the prudence with which she concealed her sentiments and intentions concerning religion, for some time after her accession, she so far gained upon Philip, that he warmly espoused her interest in the conferences which were renewed at Cercamp, and afterwards removed to Chateau-Cambresis. A definitive treaty, which was to adjust the claims and pretensions of so many princes, required the examination of such a variety of intricate points, and led to such infinite and minute details, as drew out the negociations to a great length. But the constable Montmorency exerted himself with such indefatigable zeal and industry, repairing alternately to the courts of Paris and Brussels in order to obviate or remove every difficulty, that all points in dispute were adjusted at length in such a manner, as to give entire satisfaction in every particular to Henry and Philip; and the last hand was ready to be put to the treaty between them.

1559. Feb. 6.

Difficulties with regard to the claims of England.

The claims of England remained as the only obstacle to retard it. Elizabeth demanded the restitution of Calais in the most peremptory tone, as an essential condition of her consenting to peace. Henry refused to give up that important conquest; and both seemed to have taken their resolution with unalterable firmness. Philip warmly supported Elizabeth's pretensions to Calais, not merely from a principle of equity towards the English nation, that he might appear to have contributed to their recovering what they had lost by espousing his cause; nor solely with a view of soothing Elizabeth by this manifestation of zeal for her interest; but in order to render France less formidable, by securing to her ancient enemy this easy access into the heart of the kingdom. The earnestness, however, with which he seconded the arguments of the English plenipotentiaries, soon began to relax. During the course of the negociation, Elizabeth, who now felt herself firmly seated on her throne, began to take such open and vigorous measures, not only for overturning all that her sister had done in favour of popery, but for establishing the protestant church on a firm foundation, as convinced Philip that his hopes of an union with her had been from the beginning vain, and were now desperate. From that period his interpositions in her favour became more cold and formal, flowing merely from a regard to decorum, or from the consideration of remote political interests. Elizabeth, having reason to expect such an alteration in his conduct, quickly perceived it. But as nothing would have been of greater detriment to her people, or more inconsistent with her schemes of domestic administration, than the continuance of war, she saw the necessity of submitting to such conditions as the situation of her affairs imposed, and that she must reckon upon being deserted by an ally who was now united to her by a very feeble tie, if she did not speedily reduce her demands to what was moderate and attainable. She accordingly gave new instructions to her ambassadors; and Philip's plenipotentiaries acting as mediators between the French and them,[c] an expedient was fallen upon, which, in some degree, justified Elizabeth's departing from the rigour of her first demand with regard to Calais. All lesser articles were settled without much discussion or delay. Philip, that he might not appear to have abandoned the English, insisted that the treaty between Henry and Elizabeth should be concluded in form, before that between the French monarch and himself. The one was signed on the second day of April, the other on the day following.

Articles of peace between France and England.

The treaty of peace between France and England contained no articles of real importance, but that which respected Calais. It was stipulated, That the king of France should retain possession of that town, with all its dependencies, during eight years; that, at the expiration of that term, he should restore it to England; that, in case of non-performance, he should forfeit five hundred thousand crowns, for the payment of which sum, seven or eight wealthy merchants, who were not his subjects, should grant security; that five persons of distinction should be given as hostages until that security were provided; that although the forfeit of five hundred thousand crowns should be paid, the right of England to Calais should still remain entire, in the same manner as if the term of eight years were expired; that the king and queen of Scotland should be included in the treaty; that if they, or the French king, should violate the peace by any hostile action, Henry should be obliged instantly to restore Calais; that, on the other hand, if any breach of the treaty proceeded from Elizabeth, then Henry and the king and queen of Scots were absolved from all the engagements which they had come under by this treaty.

The views of both parties with respect to these.

Notwithstanding the studied attention with which so many precautions were taken, it is evident that Henry did not intend the restitution of Calais, nor is it probable that Elizabeth expected it. It was hardly possible that she could maintain, during the course of eight years, such perfect concord both with France and Scotland, as not to afford Henry some pretext for alleging that she had violated the treaty. But even if that term should elapse without any ground for complaint, Henry might then choose to pay the sum stipulated, and Elizabeth had no method of asserting her right but by force of arms. However, by throwing the articles in the treaty with regard to Calais into this form, Elizabeth satisfied her subjects of every denomination; she gave men

c Forbes, i. 59.

of discernment a striking proof of her address, in palliating what she could not prevent; and amused the multitude, to whom the cession of such an important article would have appeared altogether infamous, with the prospect of recovering in a short time that favourite possession.

An expedient which promotes peace between France and Spain.

The expedient which Montmorency employed, in order to facilitate the conclusion of peace between France and Spain, was the negociating two treaties of marriage, one between Elizabeth, Henry's eldest daughter, and Philip, who supplanted his son, the unfortunate Don Carlos, to whom that princess had been promised in the former conferences at Cercamp; the other between Margaret, Henry's only sister, and the duke of Savoy. For however feeble the ties of blood may often be among princes, or how little soever they may regard them when pushed on to act by motives of ambition, they assume on other occasions the appearance of being so far influenced by these domestic affections, as to employ them to justify measures and concessions which they find to be necessary, but know to be impolitic or dishonourable. Such was the use Henry made of the two marriages to which he gave his consent. Having secured an honourable establishment for his sister and his daughter, he, in consideration of these, granted terms both to Philip and the duke of Savoy, of which he would not, on any account, have ventured to approve.

The terms of pacification;

The principal articles in the treaty between France and Spain were,—That sincere and perpetual amity should be established between the two crowns and their respective allies; that the two monarchs should labour in concert to procure the convocation of a general council, in order to check the progress of heresy, and restore unity and concord to the christian church; that all conquests made by either party, on this side of the Alps, since the commencement of the war in one thousand five hundred and fifty-one, should be mutually restored; that the duchy of Savoy, the principality of Piedmont, the country of Bresse, and all the other territories formerly subject to the dukes of Savoy, should be restored to Emanuel Philibert, immediately after the celebration of his marriage with Margaret of France, the towns of Turin, Quiers, Pignerol, Chivaz, and Villanova excepted, of which Henry should keep possession until his claims to these places, in right of his grandmother, should be tried and decided in course of law; that as long as Henry retained these places in his hands, Philip should be at liberty to keep garrisons in the towns of Vercelli and Asti; that the French king should immediately evacuate all the places which he held in Tuscany and the Sienese, and renounce all future pretensions to them; that he should restore the marquisate of Montserrat to the duke of Mantua; that he should receive the Genoese into favour, and give up to them the towns which he had conquered in the island of Corsica; that none of the princes or states to whom these cessions were made, should call their subjects to account for any part of their conduct while under the dominion of their enemies, but should bury all past transactions in oblivion. The pope, the emperor, the kings of Denmark, Sweden, Poland, Portugal, the king and queen of Scots, and almost every prince and state in Christendom, were comprehended in this pacification as the allies either of Henry or Philip.[d]

which re-establishes tranquillity in Europe.

Thus, by this famous treaty, peace was re-established in Europe. All the causes of discord which had so long embroiled the powerful monarchs of France and Spain, that had transmitted hereditary quarrels and wars from Charles to Philip, and from Francis to Henry, seemed to be wholly removed or finally terminated. The French alone complained of the unequal conditions of a treaty, into which an ambitious minister, in order to recover his liberty, and an artful mistress, that she might gratify her resentment, had seduced their too easy monarch. They exclaimed loudly against the folly of giving up to the enemies of France an hundred and eighty-nine fortified places, in the Low Countries or in Italy, in return for the three insignificant towns of St. Quintin, Ham, and Catelet. They considered it as an indelible stain upon the glory of the nation, to renounce in one day territories so extensive, and so capable of being defended, that the enemy could not have hoped to wrest them out of its hands after many years of victory.

The peace between France and Spain ratified.

But Henry, without regarding the sentiments of his people, or being moved by the remonstrances of his council, ratified the treaty, and executed with great fidelity whatever he had stipulated to perform. The duke of Savoy repaired with a numerous retinue to Paris, in order to celebrate his marriage with Henry's sister. The duke of Alva was sent to the same capital, at the head of a splendid embassy, to espouse Elizabeth in the name of his master. They were received with extraordinary magnificence by the French court. Amidst the rejoicings and festivities on that occasion, Henry's days were cut short by a singular and tragical accident. His son, Francis II., a prince under age, of a weak constitution, and of a mind still more feeble, succeeded him. Soon after, Paul ended his violent and imperious pontificate, at enmity with all the world, and disgusted even with his own nephews. They, persecuted by Philip, and deserted by the succeeding pope, whom they had raised by their influence to the papal throne, were condemned to the punishment which their crimes and ambition had merited, and their death was as infamous as their lives had been criminal. Thus most of the personages, who had long sustained the principal characters on the great theatre of Europe, disap-

Death of Henry, July 10.

d Recuiel des Traités, tom. ii. 287.

peared about the same time. A more known period of history opens at this era; other actors enter upon the stage, with different views, as well as different passions; new contests arose, and new schemes of ambition occupied and disquieted mankind.

A general review of the whole period.

Upon reviewing the transactions of any active period in the history of civilized nations, the changes which are accomplished appear wonderfully disproportioned to the efforts which have been exerted. Conquests are never very extensive or rapid, but among nations whose progress in improvement is extremely unequal. When Alexander the Great, at the head of a gallant people, of simple manners, and formed to war by admirable military institutions, invaded a state sunk in luxury, and enervated by excessive refinement; when Genchizcan and Tamerlane, with their armies of hardy barbarians, poured in upon nations enfeebled by the climate in which they lived, or by the arts and commerce which they cultivated, these conquerors, like a torrent, swept every thing before them, subduing kingdoms and provinces in as short a space of time as was requisite to march through them. But when nations are in a state similar to each other, and keep equal pace in their advances towards refinement, they are not exposed to the calamity of sudden conquests. Their acquisitions of knowledge, their progress in the art of war, their political sagacity and address, are nearly equal. The fate of states in this situation depends not on a single battle. Their internal resources are many and various. Nor are they themselves alone interested in their own safety, or active in their own defence. Other states interpose, and balance any temporary advantage which either party may have acquired. After the fiercest and most lengthened contest, all the rival nations are exhausted, none are conquered. At length they find it necessary to conclude a peace, which restores to each almost the same power and the same territories of which they were formerly in possession.

The nations of Europe in a similar state during the sixteenth century.

Such was the state of Europe during the reign of Charles V. No prince was so much superior to the rest in power as to render his efforts irresistible, and his conquests easy. No nation had made progress in improvement so far beyond its neighbours as to have acquired a very manifest pre-eminence. Each state derived some advantage, or was subject to some inconvenience, from its situation or its climate; each was distinguished by something peculiar in the genius of its people, or the constitution of its government. But the advantages possessed by one state were counterbalanced by circumstances favourable to others; and this prevented any from attaining such superiority as might have been fatal to all. The nations of Europe in that age, as in the present, were like one great family: there were some features common to all, which fixed a resemblance; there were certain peculiarities conspicuous in each, which marked a distinction. But there was not among them that wide diversity of character and of genius which, in almost every period of history, hath exalted the Europeans above the inhabitants of the other quarters of the globe, and seems to have destined the one to rule and the other to obey.

A remarkable change in the state of Europe during the reign of Charles V.

But though the near resemblance and equality in improvement, among the different nations of Europe, prevented the reign of Charles V. from being distinguished by such sudden and extensive conquests as occur in some other periods of history, yet, during the course of his administration, all the considerable states in Europe suffered a remarkable change in their political situation, and felt the influence of events, which have not hitherto spent their force, but still continue to operate in a greater or in a less degree. It was during his reign, and in consequence of the perpetual efforts to which his enterprising ambition roused him, that the different kingdoms of Europe acquired internal vigour; that they discerned the resources of which they were possessed; that they came both to feel their own strength, and to know how to render it formidable to others. It was during his reign, too, that the different kingdoms of Europe, which in former times seemed frequently to act as if they had been single and disjointed, became so thoroughly acquainted, and so intimately connected with each other, as to form one great political system, in which each took a station, wherein it has remained since that time with less variation than could have been expected after the events of two active centuries.

The progress of the house of Austria;

The progress, however, and acquisitions of the house of Austria were not only greater than those of any other power, but more discernible and conspicuous. I have already enumerated the extensive territories which descended to Charles from his Austrian, Burgundian, and Spanish ancestors.[e] To these he himself added the imperial dignity; and as if all this had been too little, the bounds of the habitable globe seemed to be extended, and a new world was subjected to his command. Upon his resignation, the Burgundian provinces, and the Spanish kingdoms with their dependences, both in the Old and New Worlds, devolved to Philip. But Charles transmitted his dominions to his son in a condition very different from that in which he himself had received them. They were augmented by the accession of new provinces; they were habituated to obey an administration which was no less vigorous than steady; they were accustomed to expensive and persevering efforts, which, though necessary in the contests between civilized nations, had been little known in Europe before the sixteenth century. The provinces of Friesland, Utrecht, and Overyssel, which

e Book I. p. 430.

he acquired by purchase from their former proprietors, and the duchy of Gueldres, of which he made himself master, partly by force of arms, partly by the arts of negociation, were additions of great value to his Burgundian dominions. Ferdinand and Isabella had transmitted to him all the provinces of Spain, from the bottom of the Pyrenees to the frontiers of Portugal; but as he maintained a perpetual peace with that kingdom, amidst the various efforts of his enterprising ambition, he made no acquisition of territory in that quarter.

particularly in Spain;

Charles had gained, however, a vast accession of power in this part of his dominions. By his success in the war with the commons of Castile, he exalted the regal prerogative upon the ruins of the privileges which formerly belonged to the people. Though he allowed the name of the Cortes to remain, and the formality of holding it to be continued, he reduced its authority and jurisdiction almost to nothing, and modelled it in such a manner, that it became rather a junto of the servants of the crown, than an assembly of the representatives of the people. One member of the constitution being thus lopped off, it was impossible but that the other must feel the stroke, and suffer by it. The suppression of the popular power rendered the aristocratical less formidable. The grandees, prompted by the warlike spirit of the age, or allured by the honours which they enjoyed in a court, exhausted their fortunes in military service, or in attending on the person of their prince. They did not dread, perhaps did not observe, the dangerous progress of the royal authority, which leaving them the vain distinction of being covered in presence of their sovereign, stripped them, by degrees, of that real power which they possessed while they formed one body, and acted in concert with the people. Charles's success in abolishing the privileges of the commons, and in breaking the power of the nobles of Castile, encouraged Philip to invade the liberties of Aragon, which were still more extensive. The Castilians, accustomed to subjection themselves, assisted in imposing the yoke on their more happy and independent neighbours. The will of the sovereign became the supreme law in all the kingdoms of Spain; and princes who were not checked in forming their plans by the jealousy of the people, nor controlled in executing them by the power of the nobles, could both aim at great objects, and call forth the whole strength of the monarchy in order to attain them.

also in other parts of Europe.

As Charles, by extending the royal prerogative, rendered the monarchs of Spain masters at home, he added new dignity and power to their crown by his foreign acquisitions. He secured to Spain the quiet possession of the kingdom of Naples, which Ferdinand had usurped by fraud, and held with difficulty. He united the duchy of Milan, one of the most fertile and populous Italian provinces, to the Spanish crown; and left his successors, even without taking their other territories into the account, the most considerable princes in Italy, which had been long the theatre of contention to the great powers of Europe, and in which they had struggled with emulation to obtain the superiority. When the French, in conformity to the treaty of Chateau-Cambresis, withdrew their forces out of Italy, and finally relinquished all their schemes of conquest on that side of the Alps, the Spanish dominions then rose in importance, and enabled their kings, as long as the monarchy retained any degree of vigour, to preserve the chief sway in all the transactions of that country. But whatever accession, either of interior authority or of foreign dominion, Charles gained for the monarchs of Spain in Europe, was inconsiderable when compared with his acquisitions in the New World. He added there, not provinces, but empires to his crown. He conquered territories of such immense extent; he discovered such inexhaustible veins of wealth, and opened such boundless prospects of every kind, as must have roused his successor, and have called him forth to action, though his ambition had been much less ardent than that of Philip, and must have rendered him not only enterprising but formidable.

Progress of the German branch of the house of Austria.

While the elder branch of the Austrian family rose to such pre-eminence in Spain, the younger, of which Ferdinand was the head, grew to be considerable in Germany. The ancient hereditary dominions of the house of Austria in Germany, united to the kingdom of Hungary and Bohemia, which Ferdinand had acquired by marriage, formed a respectable power; and when the imperial dignity was added to these, Ferdinand possessed territories more extensive than had belonged to any prince, Charles V. excepted, who had been at the head of the empire during several ages. Fortunately for Europe, the disgust which Philip conceived on account of Ferdinand's refusing to relinquish the imperial crown in his favour, not only prevented for some time the separate members of the house of Austria from acting in concert, but occasioned between them a visible alienation and rivalship. By degrees, however, regard to the interest of their family extinguished this impolitical animosity. The confidence which was natural returned; the aggrandizing of the house of Austria became the common object of all their schemes; they gave and received assistance alternately towards the execution of them; and each derived consideration and importance from the other's success. A family so great and so aspiring, became the general object of jealousy and terror. All the power, as well as policy, of Europe was exerted, during a century, in order to check and humble it. Nothing can give a more striking idea of the ascendant which it had acquired, than that after its vigour was spent with extraordinary exertions of its strength, after Spain was become only the shadow of a great name, and its monarchs were sunk into debility and dotage, the house of Austria

still continued to be formidable. The nations of Europe had so often felt its superior power, and had been so constantly employed in guarding against it, that the dread of it became a kind of political habit, the influence of which remained when the causes which had formed it ceased to exist.

Acquisitions of the kings of France, during the reign of Charles V.

While the house of Austria went on with such success in enlarging its dominions, France made no considerable acquisition of new territory. All its schemes of conquest in Italy had proved abortive; it had hitherto obtained no establishment of consequence in the New World; and after the continued and vigorous efforts of four successive reigns, the confines of the kingdom were much the same as Louis XI. had left them. But though France made not such large strides towards dominion as the house of Austria, it continued to advance by steps which were more secure, because they were gradual and less observed. The conquest of Calais put it out of the power of the English to invade France but at their utmost peril, and delivered the French from the dread of their ancient enemies, who, previous to that event, could at any time penetrate into the kingdom by that avenue, and thereby retard or defeat the execution of their best-concerted enterprises against any foreign power. The important acquisition of Metz covered that part of their frontier which formerly was most feeble, and lay most exposed to insult. France, from the time of its obtaining these additional securities against external invasion, must be deemed the most powerful kingdom in Europe, and is more fortunately situated than any on the continent, either for conquest or defence. From the confines of Artois to the bottom of the Pyrenees, and from the British channel to the frontiers of Savoy and the coast of the Mediterranean, its territories lay compact and unmingled with those of any other power. Several of the considerable provinces, which had contracted a spirit of independence by their having been long subject to the great vassals of the crown, who were often at variance or at war with their master, were now accustomed to recognise and to obey one sovereign. As they became members of the same monarchy, they assumed the sentiments of that body into which they were incorporated, and co-operated with zeal towards promoting its interest and honour. The power and influence wrested from the nobles were seized by the crown. The people were not admitted to share in these spoils; they gained no new privilege; they acquired no additional weight in the legislature. It was not for the sake of the people, but in order to extend their own prerogative, that the monarchs of France had laboured to humble their great vassals. Satisfied with having brought them under entire subjection to the crown, they discovered no solicitude to free the people from their ancient dependence on the nobles of whom they held, and by whom they were often oppressed.

enable them to assume a higher station among the powers of Europe.

A monarch, at the head of a kingdom thus united at home, and secure from abroad, was entitled to form great designs, because he felt himself in a condition to execute them. The foreign wars which had continued with little interruption from the accession of Charles VIII., had not only cherished and augmented the martial genius of the nation, but, by inuring the troops, during the course of long service, to the fatigues of war, and accustoming them to obedience, had added the force of discipline to their natural ardour. A gallant and active body of nobles, who considered themselves as idle and useless, unless when they were in the field; who were hardly acquainted with any pastime or exercise but what was military; and who knew no road to power, or fame, or wealth, but war, would not have suffered their sovereign to remain long in inaction. The people, little acquainted with the arts of peace, and always ready to take arms at the command of their superiors, were accustomed, by the expense of long wars carried on in distant countries, to bear impositions, which, however inconsiderable they may seem if estimated by the exorbitant rate of modern exactions, appear immense when compared with the sums levied in France, or in any other country of Europe, previous to the reign of Louis XI. As all the members of which the state was composed were thus impatient for action, and capable of great efforts, the schemes and operations of France must have been no less formidable to Europe than those of Spain. The superior advantages of its situation, the contiguity and compactness of its territories, together with the peculiar state of its political constitution at that juncture, must have rendered its enterprises still more alarming and more decisive. The king possessed such a degree of power as gave him the entire command of his subjects; the people were strangers to those occupations and habits of life which render men averse to war, or unfit for it; and the nobles, though reduced to the subordination necessary in a regular government, still retained the high undaunted spirit which was the effect of their ancient independence. The vigour of the feudal times remained, their anarchy was at an end; and the kings of France could avail themselves of the martial ardour which that singular institution had kindled or kept alive, without being exposed to the dangers or inconveniences which are inseparable from it when in entire force.

Circumstances which prevented the immediate effects of their power.

A kingdom in such a state is, perhaps, capable of greater military efforts than at any other period in its progress. But how formidable or how fatal soever to the other nations of Europe the power of such a monarchy might have been, the civil wars which broke out in France saved them at that juncture from feeling its effects. These wars, of which religion was the pretext and ambition the cause, wherein great abilities were displayed by the

leaders of the different factions, and little conduct or firmness were manifested by the crown under a succession of weak princes, kept France occupied and embroiled for half a century. During these commotions the internal strength of the kingdom was much wasted, and such a spirit of anarchy was spread among the nobles, to whom rebellion was familiar, and the restraint of laws unknown, that a considerable interval became requisite, not only for recruiting the internal vigour of the nation, but for re-establishing the authority of the prince; so that it was long before France could turn her whole attention towards foreign transactions, or act with her proper force in foreign wars. It was long before she rose to that ascendant in Europe which she has maintained since the administration of cardinal Richlieu, and which the situation as well as extent of the kingdom, the nature of her government, together with the character of her people, entitle her to maintain.

Progress of England with respect to its interior state;

While the kingdoms on the continent grew into power and consequence, England likewise made considerable progress towards regular government and interior strength. Henry VIII., probably without intention, and certainly without any consistent plan, of which his nature was incapable, pursued the scheme of depressing the nobility, which the policy of his father Henry VII. had begun. The pride and caprice of his temper led him to employ chiefly new men in the administration of affairs, because he found them most obsequious, or least scrupulous; and he not only conferred on them such plenitude of power, but exalted them to such pre-eminence in dignity, as mortified and degraded the ancient nobility. By the alienation or sale of the church lands, which were dissipated with a profusion not inferior to the rapaciousness with which they had been seized, as well as by the privilege granted to the ancient landholders of selling their estates, or disposing of them by will, an immense property, formerly locked up, was brought into circulation. This put the spirit of industry and commerce in motion, and gave it some considerable degree of vigour. The road to power and to opulence became open to persons of every condition. A sudden and excessive flow of wealth from the West Indies proved fatal to industry in Spain; a moderate accession in England to the sum in circulation gave life to commerce, awakened the ingenuity of the nation, and excited it to useful enterprise. In France, what the nobles lost the crown gained. In England, the commons were gainers as well as the king. Power and influence accompanied of course the property which they acquired. They rose to consideration among their fellow-subjects; they began to feel their own importance; and, extending their influence in the legislative body gradually, and often when neither they themselves nor others foresaw all the effects of their claims and pretensions, they at last attained that high authority to which the British constitution is indebted for the existence, and must owe the preservation, of its liberty. At the same time that the English constitution advanced towards perfection, several circumstances brought on a change in the ancient system with respect to foreign powers, and introduced another more beneficial to the nation. As soon as Henry disclaimed the supremacy of the papal see, and broke off all connexion with the papal court, considerable sums were saved to the nation, of which it had been annually drained by remittances to Rome for dispensations and indulgences, by the expense of pilgrimages into foreign countries,[f] or by payment of annates, first-fruits, and a thousand other taxes which that artful and rapacious court levied on the credulity of mankind. The exercise of a jurisdiction different from that of the civil power, and claiming not only to be independent of it, but superior to it, a wild solecism in government, apt not only to perplex and disquiet weak minds, but tending directly to disturb society, was finally abolished. Government became more simple as well as more respectable, when no rank or character exempted any person from being amenable to the same courts as other subjects, from being tried by the same judges, and from being acquitted or condemned by the same laws.

with respect to the affairs of the continent;

By the loss of Calais the English were excluded from the continent. All schemes for invading France became, of course, as chimerical as they had formerly been pernicious. The views of the English were confined, first by necessity, and afterwards from choice, within their own island. That rage for conquest which had possessed the nation during many centuries, and wasted its strength in perpetual and fruitless wars, ceased at length. Those active spirits which had known and followed no profession but war, sought for occupation in the arts of peace, and their country was benefited as much by the one as it had suffered by the other. The nation, which had been exhausted by frequent expeditions to the continent, recruited its numbers, and acquired new strength; and when roused by any extraordinary exigency to take part in foreign operations, the vigour of its efforts was proportionably great, because they were only occasional, and of short continuance.

with respect to Scotland.

The same principle which had led England to adopt this new system with regard to the powers on the continent, occasioned a change in its plan of conduct with respect to Scotland, the only foreign state with which, on account of its situation in the same island, the English had such a close connexion as demanded their perpetual attention. Instead of prosecuting the ancient scheme of conquering that kingdom, which the nature of the country, defended by a brave and

f The loss which the nation sustained by most of these articles is obvious, and must have been great. Even that by pilgrimages was not inconsiderable. In the year 1428, licence was obtained by no fewer than 916 persons to visit the shrine of St. James of Compostello in Spain. Rymer, vol. x. p. . In 1434, the number of pilgrims to the same place was 2460. Ibid. p. . In 1445, they were 2100, vol. xi. p.

hardy people, rendered dangerous, if not impracticable; it appeared more eligible to endeavour at obtaining such influence in Scotland as might exempt England from any danger or disquiet from that quarter. The national poverty of the Scots, together with the violence and animosity of their factions, rendered the execution of this plan easy to a people far superior to them in wealth. The leading men of greatest power and popularity were gained; the ministers and favourites of the crown were corrupted; and such absolute direction of the Scottish councils was acquired, as rendered the operations of the one kingdom dependent, in a great measure, on the sovereign of the other. Such perfect external security, added to the interior advantages which England now possessed, must soon have raised it to new consideration and importance; the long reign of Elizabeth, equally conspicuous for wisdom, for steadiness, and for vigour, accelerated its progress, and carried it with greater rapidity towards that elevated station which it hath since held among the powers of Europe.

Changes in the political state of the secondary powers in Europe.

During the period in which the political state of the great kingdoms underwent such changes, revolutions of considerable importance happened in that of the secondary or inferior powers. Those in the papal court are most obvious, and of most extensive consequence.

The most considerable revolution of the sixteenth century in the court of Rome.

In the preliminary book, I have mentioned the rise of that spiritual jurisdiction, which the popes claim as vicars of Jesus Christ, and have traced the progress of that authority which they possess as temporal princes.[g] Previous to the reign of Charles V. there was nothing that tended to circumscribe or to moderate their authority, but science and philosophy, which began to revive and to be cultivated. The progress of these, however, was still inconsiderable; they always operate slowly; and it is long before their influence reaches the people, or can produce any sensible effect upon them. They may, perhaps, gradually, and in a long course of years, undermine and shake an established system of false religion, but there is no instance of their having overturned one. The battery is too feeble to demolish those fabrics which superstition raises on deep foundations, and can strengthen with the most consummate art.

The general revolt against the doctrines of the church of Rome, and the power of the popes.

Luther had attacked the papal supremacy with other weapons, and with an impetuosity more formidable. The time and manner of his attack concurred with a multitude of circumstances, which have been explained, in giving him immediate success. The charm which had bound mankind for so many ages was broken at once. The human mind, which had continued long as tame and passive, as if it had been formed to believe whatever was taught, and to bear whatever was imposed, roused of a sudden, and became inquisitive, mutinous, and disdainful of the yoke to which it had hitherto submitted. That wonderful ferment and agitation of mind, which, at this distance of time, appears unaccountable, or is condemned as extravagant, was so general, that it must have been excited by causes which were natural, and of powerful efficacy. The kingdoms of Denmark, Sweden, England, and Scotland, and almost one half of Germany, threw off their allegiance to the pope; abolished his jurisdiction within their territories; and gave the sanction of law to modes of discipline and systems of doctrine, which were not only independent of his power, but hostile to it. Nor was this spirit of innovation confined to those countries which openly revolted from the pope; it spread through all Europe, and broke out in every part of it with various degrees of violence. It penetrated early into France, and made a quick progress there. In that kingdom the number of converts to the opinions of the reformers was so great, their zeal so enterprising, and the abilities of their leaders so distinguished, that they soon ventured to contend for superiority with the established church, and were sometimes on the point of obtaining it. In all the provinces of Germany which continued to acknowledge the papal supremacy, as well as in the Low Countries, the protestant doctrines were secretly taught, and had gained so many proselytes, that they were ripe for revolt, and were restrained merely by the dread of their rulers from imitating the example of their neighbours, and asserting their independence. Even in Spain and in Italy, symptoms of the same disposition to shake off the yoke appeared. The pretensions of the pope to infallible knowledge and supreme power were treated by many persons of eminent learning and abilities with such scorn, or attacked with such vehemence, that the most vigilant attention of the civil magistrate, the highest strains of pontifical authority, and all the rigour of inquisitorial jurisdiction, were requisite to check and extinguish it.

This abridged the extent of the pope's dominions,

The defection of so many opulent and powerful kingdoms from the papal see, was a fatal blow to its grandeur and power. It abridged the dominions of the popes in extent, it diminished their revenues, and left them fewer rewards to bestow on the ecclesiastics of various denominations, attached to them by vows of obedience as well as by ties of interest, and whom they employed as instruments to establish or support their usurpations in every part of Europe. The countries, too, which now disclaimed their authority, were those which formerly had been most devoted to it. The empire of superstition differs from every other species of dominion; its power is often greatest, and most implicitly obeyed in the provinces most remote from the seat of government; while such as are situated nearer to that, are more apt to discern the artifices by which it is upheld, or the impostures on which it is founded. The personal

[g] Page 346.

frailties or vices of the popes, the errors as well as corruption of their administration, the ambition, venality, and deceit which reigned in their courts, fell immediately under the observation of the Italians, and could not fail of diminishing that respect which begets submission. But in Germany, England, and the more remote parts of Europe, these were either altogether unknown, or being only known by report, made a slighter impression. Veneration for the papal dignity increased accordingly in these countries in proportion to their distance from Rome; and that veneration, added to their gross ignorance, rendered them equally credulous and passive. In tracing the progress of the papal domination, the boldest and most successful instances of encroachment are to be found in Germany and other countries distant from Italy. In these its impositions were heaviest, and its exactions the most rapacious; so that in estimating the diminution of power which the court of Rome suffered in consequence of the Reformation, not only the number but the character of the people who revolted, not only the great extent of territory, but the extraordinary obsequiousness of the subjects which it lost, must be taken in the account.

and obliged them to change the spirit of their government.

Nor was it only by this defection of so many kingdoms and states which the Reformation occasioned, that it contributed to diminish the power of the Roman pontiffs. It obliged them to adopt a different system of conduct towards the nations which still continued to recognise their jurisdiction, and to govern them by new maxims and with a milder spirit. The Reformation taught them, by a fatal example, what they seem not before to have apprehended, that the credulity and patience of mankind might be overburthened and exhausted. They became afraid of venturing upon any such exertion of their authority as might alarm or exasperate their subjects, and excite them to a new revolt. They saw a rival church established in many countries of Europe, the members of which were on the watch to observe any errors in their administration, and eager to expose them. They were sensible that the opinions adverse to their power and usurpations, were not adopted by their enemies alone, but had spread even among the people who still adhered to them. Upon all these accounts, it was no longer possible to lead or to govern their flock in the same manner as in those dark and quiet ages, when faith was implicit, when submission was unreserved, and all tamely followed and obeyed the voice of their pastor. From the era of the Reformation, the popes have ruled rather by address and management than by authority. Though the style of their decrees be still the same, the effect of them is very different. Those bulls and interdicts which, before the Reformation, made the greatest princes tremble, have since that period been disregarded or despised by the most inconsiderable. Those bold decisions and acts of jurisdiction which, during many ages, not only passed uncensured, but were revered as the awards of a sacred tribunal, would, since Luther's appearance, be treated by one part of Europe as the effect of folly or arrogance, and be detested by the other as impious and unjust. The popes, in their administration, have been obliged not only to accommodate themselves to the notions of their adherents, but to pay some regard to the prejudices of their enemies. They seldom venture to claim new powers, or even to insist obstinately on their ancient prerogatives, lest they should irritate the former; they carefully avoid every measure that may either excite the indignation or draw on them the derision of the latter. The policy of the court of Rome has become as cautious, circumspect, and timid, as it was once adventurous and violent; and though their pretensions to infallibility, on which all their authority is founded, does not allow them to renounce any jurisdiction which they have at any time claimed or exercised, they find it expedient to suffer many of their prerogatives to lie dormant, and not to expose themselves to the risk of losing that remainder of power which they still enjoy, by ill-timed attempts towards reviving obsolete pretensions. Before the sixteenth century, the popes were the movers and directors in every considerable enterprise; they were at the head of every great alliance; and being considered as arbiters in the affairs of Christendom, the court of Rome was the centre of political negociation and intrigue. Since that time, the greatest operations in Europe have been carried on independent of them; they have sunk almost to a level with the other petty princes of Italy; they continue to claim, though they dare not exercise, the same spiritual jurisdiction, but hardly retain any shadow of the temporal power which they anciently possessed.

The Reformation contributed to improve the church both in science and morals.

But how fatal soever the Reformation may have been to the power of the popes, it has contributed to improve the church of Rome both in science and in morals. The desire of equalling the reformers in those talents which had procured them respect; the necessity of acquiring the knowledge requisite for defending their own tenets, or refuting the arguments of their opponents, together with the emulation natural between two rival churches, engaged the Roman catholic clergy to apply themselves to the study of useful science, which they cultivated with such assiduity and success, that they have gradually become as eminent in literature, as they were in some periods infamous for ignorance. The same principle occasioned a change no less considerable in the morals of the Romish clergy. Various causes which have formerly been enumerated, had concurred in introducing great irregularity, and even dissolution of manners, among the popish clergy. Luther and his adherents began their attack on the church with such vehement invectives against these, that, in order to remove the scandal, and silence their declamations,

greater decency of conduct became necessary. The reformers themselves were so eminent not only for the purity, but even austerity, of their manners, and had acquired such reputation among the people on that account, that the Roman catholic clergy must have soon lost all credit, if they had not endeavoured to conform in some measure to their standard. They knew that all their actions fell under the severe inspection of the protestants, whom enmity and emulation prompted to observe every vice or even impropriety in their conduct; to censure them without indulgence, and to expose them without mercy. This rendered them, of course, not only cautious to avoid such enormities as might give offence, but studious to acquire the virtues which might merit praise. In Spain and Portugal, where the tyrannical jurisdiction of the inquisition crushed the protestant faith as soon as it appeared, the spirit of popery continues invariable; science has made small progress, and the character of ecclesiastics has undergone little change. But in those countries where the members of the two churches have mingled freely with each other, or have carried on any considerable intercourse, either commercial or literary, an extraordinary alteration in the ideas, as well as in the morals, of the popish ecclesiastics, is manifest. In France, the manners of the dignitaries and secular clergy have become decent and exemplary in a high degree. Many of them have been distinguished for all the accomplishments and virtues which can adorn their profession; and differ greatly from their predecessors before the Reformation, both in their maxims and in their conduct.

The effects of it extend to the character of the popes themselves.

Nor has the influence of the Reformation been felt only by the inferior members of the Roman catholic church; it has extended to the see of Rome, to the sovereign pontiffs themselves. Violations of decorum, and even trespasses against morality, which passed without censure in those ages, when neither the power of the popes, nor the veneration of the people for their character, had any bounds; when there was no hostile eye to observe the errors in their conduct, and no adversaries zealous to inveigh against them; would be liable now to the severest animadversion, and excite general indignation or horror. Instead of rivalling the courts of temporal princes in gaiety, and surpassing them in licentiousness, the popes have studied to assume manners more severe and more suitable to their ecclesiastical character. The chair of St. Peter hath not been polluted during two centuries, by any pontiff that resembled Alexander VI., or several of his predecessors, who were a disgrace to religion and to human nature. Throughout this long succession of popes, a wonderful decorum of conduct, compared with that of preceding ages, is observable. Many of them, especially among the pontiffs of the present century, have been conspicuous for all the virtues becoming their high station; and by their humanity, their love of literature, and their moderation, have made some atonement to mankind for the crimes of their predecessors. Thus the beneficial influences of the Reformation have been more extensive than they appear on a superficial view; and this great division in the christian church hath contributed, in some measure, to increase purity of manners, to diffuse science, and to inspire humanity. History recites such a number of shocking events occasioned by religious dissensions, that it must afford peculiar satisfaction to trace any one salutary or beneficial effect to that source from which so many fatal calamities have flowed.

State of the republic of Venice;

The republic of Venice, which, at the beginning of the sixteenth century, had appeared so formidable, that almost all the potentates of Europe united in a confederacy for its destruction, declined gradually from its ancient power and splendour. The Venetians not only lost a great part of their territory in the war excited by the league of Cambray, but the revenues as well as vigour of the state were exhausted by their extraordinary and long-continued efforts in their own defence; and that commerce by which they had acquired their wealth and power began to decay, without any hopes of its reviving. All the fatal consequences to their republic, which the sagacity of the Venetian senate foresaw on the first discovery of a passage to the East Indies by the Cape of Good Hope, actually took place. Their endeavours to prevent the Portuguese from establishing themselves in the East Indies, not only by exciting the soldans of Egypt, and the Ottoman monarchs, to turn their arms against such dangerous intruders, but by affording secret aid to the infidels in order to insure their success,[h] proved ineffectual. The activity and valour of the Portuguese surmounted every obstacle, and obtained such a firm footing in that fertile country, as secured to them large possessions, together with an influence still more extensive. Lisbon, instead of Venice, became the staple for the precious commodities of the East. The Venetians, after having possessed for many years the monopoly of that beneficial commerce, had the mortification to be excluded from almost any share in it. The discoveries of the Spaniards in the western world proved no less fatal to inferior branches of their commerce. The original defects which were formerly pointed out in the constitution of the Venetian republic still continued, and the disadvantages with which it undertook any great enterprise, increased rather than diminished. The sources from which it derived its extraordinary riches and power being dried up, the interior vigour of the state declined, and, of course, its external operations became less formidable. Long before the middle of the sixteenth century, Venice ceased to be one of the principal powers in Europe, and dwindled into a secondary and subaltern state. But as the senate

h Freher. Script. Rer. German. vol. ii. 529.

had the address to conceal the diminution of its power under the veil of moderation and caution; as it made no rash effort that could discover its weakness; as the symptoms of political decay in states are not soon observed, and are seldom so apparent to their neighbours as to occasion any sudden alteration in their conduct towards them, Venice continued long to be considered and respected. She was treated not according to her present condition, but according to the rank which she had formerly held. Charles V., as well as the kings of France, his rivals, courted her assistance with emulation and solicitude in all their enterprises. Even down to the close of the century, Venice remained not only an object of attention, but a considerable seat of political negociation and intrigue.

of Tuscany; That authority which the first Cosmo di Medici, and Lawrence, his grandson, had acquired in the republic of Florence, by their beneficence and abilities, inspired their descendants with the ambition of usurping the sovereignty in their country, and paved their way towards it. Charles V. placed Alexander di Medici at the head of the republic, and to the natural interest and power of the family added the weight as well as credit of the imperial protection. Of these, his successor Cosmo, surnamed the Great, availed himself; and establishing his supreme authority on the ruins of the ancient republican constitution, he transmitted that, together with the title of grand duke of Tuscany, to his descendants. Their dominions were composed of the territories which had belonged to the three commonwealths of Florence, Pisa, and Siena, and formed one of the most respectable of the Italian states.

A. D. 1550.

of the dukes of Savoy; The dukes of Savoy, during the former part of the sixteenth century, possessed territories which were not considerable either for extent or value: and the French, having seized the greater part of them, obliged the reigning duke to retire for safety to the strong fortress of Nice, where he shut himself up for several years, while his son, the prince of Piedmont, endeavoured to better his fortune, by serving as an adventurer in the armies of Spain. The peace of Chateau-Cambresis restored to him his paternal dominions. As these are environed on every hand by powerful neighbours, all whose motions the dukes of Savoy must observe with the greatest attention, in order not only to guard against the danger of being surprised and overpowered, but that they may choose their side with discernment in those quarrels wherein it is impossible for them to avoid taking part, this peculiarity of their situation seems to have had no inconsiderable influence on their character. By rousing them to perpetual attention, by keeping their ingenuity always on the stretch, and engaging them in almost continual action, it hath formed a race of princes more sagacious in discovering their true interests, more decisive in their resolutions, and more dexterous in availing themselves of every occurrence which presented itself, than any perhaps that can be singled out in the history of Europe. By gradual acquisitions the dukes of Savoy have added to their territories, as well as to their own importance; and aspiring at length to regal dignity, which they obtained about half a century ago, by the title of kings of Sardinia, they hold now no inconsiderable rank among the monarchs of Europe.

of the United Provinces: The territories which form the republic of the United Netherlands, were lost, during the first part of the sixteenth century, among the numerous provinces subject to the house of Austria; and were then so inconsiderable, that hardly one opportunity of mentioning them hath occurred in all the busy period of this history. But soon after the peace of Chateau-Cambresis, the violent and bigoted maxims of Philip's government, being carried into execution with unrelenting rigour by the duke of Alva, exasperated the people of the Low Countries to such a degree, that they threw off the Spanish yoke, and asserted their ancient liberties and laws. These they defended with a persevering valour, which gave employment to the arms of Spain during half a century, exhausted the vigour, ruined the reputation of that monarchy, and at last constrained their ancient masters to recognise and to treat with them as a free and independent state. This state, founded on liberty, and reared by industry and economy, grew into great reputation, even while struggling for its existence. But when peace and security allowed it to enlarge its views, and to extend its commerce, it rose to be one of the most respectable as well as enterprising powers in Europe.

The transactions of the kingdoms in the north of Europe have been seldom attended to in the course of this history.

of Russia; Russia remained buried in that barbarism and obscurity, from which it was called about the beginning of the present century, by the creative genius of Peter the Great, who made his country known and formidable to the rest of Europe.

of Denmark and Sweden. In Denmark and Sweden, during the reign of Charles V., great revolutions happened in their constitutions, civil as well as ecclesiastical. In the former kingdom, a tyrant being degraded from the throne, and expelled the country, a new prince was called by the voice of the people to assume the reins of government. In the latter a fierce people, roused to arms by injuries and oppression, shook off the Danish yoke, and conferred the regal dignity on its deliverer Gustavus Ericson, who had all the virtues of a hero and of a patriot. Denmark, exhausted by foreign wars, or weakened by the dissensions between the king and the nobles, became incapable of such efforts as were requisite in order to recover the ascendant which it had long possessed in the north of Europe. Sweden, as

soon as it was freed from the dominion of strangers, began to recruit its strength, and acquired in a short time such internal vigour, that it became the first kingdom in the north. Early in the subsequent century, it rose to such a high rank among the powers of Europe, that it had the chief merit in forming, as well as conducting, that powerful league which protected not only the protestant religion, but the liberties of Germany, against the bigotry and ambition of the house of Austria.

HISTORY OF AMERICA.

PREFACE.

In fulfilling the engagement which I had come under to the public with respect to the History of America, it was my intention not to have published any part of the work until the whole was completed. The present state of the British colonies has induced me to alter that resolution. While they are engaged in civil war with Great Britain, inquiries and speculations concerning their ancient forms of policy and laws, which exist no longer, cannot be interesting. The attention and expectation of mankind are now turned towards their future condition. In whatever manner this unhappy contest may terminate, a new order of things must arise in North America, and its affairs will assume another aspect. I wait with the solicitude of a good citizen, until the ferment subside, and regular government be re-established, and then I shall return to this part of my work, in which I had made some progress. That, together with the history of Portuguese America, and of the settlements made by the several nations of Europe in the West India Islands, will complete my plan.

The three volumes which I now publish contain an account of the discovery of the New World, and of the progress of the Spanish arms and colonies there. This is not only the most splendid portion of the American story, but so much detached, as, by itself, to form a perfect whole, remarkable for the unity of the subject. As the principles and maxims of the Spaniards in planting colonies, which have been adopted in some measure by every nation, are unfolded in this part of my work, it will serve as a proper introduction to the history of all the European establishments in America, and convey such information concerning this important article of policy, as may be deemed no less interesting than curious.

In describing the achievements and institutions of the Spaniards in the New World, I have departed, in many instances, from the accounts of preceding historians, and have often related facts which seem to have been unknown to them. It is a duty I owe the public to mention the sources from which I have derived such intelligence as justifies me either in placing transactions in a new light, or in forming any new opinion with respect to their causes and effects. This duty I perform with greater satisfaction, as it will afford an opportunity of expressing my gratitude to those benefactors who have honoured me with their countenance and aid in my researches.

As it was from Spain that I had to expect the most important information with regard to this part of my work, I considered it as a very fortunate circumstance for me, when lord Grantham, to whom I had the honour of being personally known, and with whose liberality of sentiment and disposition to oblige I was well acquainted, was appointed ambassador to the court of Madrid. Upon applying to him, I met with such a reception as satisfied me that his endeavours would be employed in the most proper manner, in order to obtain the gratification of my wishes; and I am perfectly sensible, that what progress I have made in my inquiries among the Spaniards, ought to be ascribed chiefly to their knowing how much his lordship interested himself in my success.

But did I owe nothing more to lord Grantham, than the advantages which I have derived from his attention in engaging Mr. Waddilove, the chaplain of his embassy, to take the conduct of my literary inquiries in Spain, the obligations I lie under to him would be very great. During five years that gentleman has carried on researches for my behoof, with such activity, perseverance, and knowledge of the subject to which his attention was turned, as have filled me with no less astonishment than satisfaction. He procured for me the greater part of the Spanish books which I have consulted; and as many of them were printed early in the sixteenth century, and are become extremely rare, the collecting of these was such an occupation as alone required much time and assiduity. To his friendly attention I am indebted for copies of several valuable manuscripts, containing facts and details which I might have searched for in vain in works that have been made public. Encouraged by the inviting good-will with which Mr. Waddilove conferred his favours, I transmitted to him a set of queries, with respect both to the customs and policy of the native Americans, and the nature of several institutions in the Spanish settlements, framed in such a manner, that a Spaniard might answer them, without disclosing any thing that was improper to

be communicated to a foreigner. He translated these into Spanish, and obtained from various persons who had resided in most of the Spanish colonies, such replies as have afforded me much instruction.

Notwithstanding those peculiar advantages with which my inquiries were carried on in Spain, it is with regret I am obliged to add, that their success must be ascribed to the beneficence of individuals, not to any communication by public authority. By a singular arrangement of Philip II. the records of the Spanish monarchy are deposited in the Archivo of Simancas, near Valladolid, at the distance of a hundred and twenty miles from the seat of government, and the supreme courts of justice. The papers relative to America, and chiefly to that early period of its history towards which my attention was directed, are so numerous, that they alone, according to one account, fill the largest apartment in the Archivo; and, according to another, they compose eight hundred and seventy-three large bundles. Conscious of possessing, in some degree, the industry which belongs to an historian, the prospect of such a treasure excited my most ardent curiosity. But the prospect of it is all that I have enjoyed. Spain, with an excess of caution, has uniformly thrown a veil over her transactions in America. From strangers they are concealed with peculiar solicitude. Even to her own subjects the Archivo of Simancas is not opened without a particular order from the crown; and after obtaining that, papers cannot be copied, without paying fees of office so exorbitant, that the expense exceeds what it would be proper to bestow, when the gratification of literary curiosity is the only object. It is to be hoped, that the Spaniards will at last discover this system of concealment to be no less impolitic than illiberal. From what I have experienced in the course of my inquiries, I am satisfied, that upon a more minute scrutiny into their early operations in the New World, however reprehensible the actions of individuals may appear, the conduct of the nation will be placed in a more favourable light.

In other parts of Europe very different sentiments prevail. Having searched, without success, in Spain, for a letter of Cortes to Charles V. written soon after he landed in the Mexican empire, which has not hitherto been published, it occurred to me, that as the emperor was setting out for Germany at the time when the messengers from Cortes arrived in Europe, the letter with which they were intrusted might possibly be preserved in the imperial library of Vienna. I communicated this idea to sir Robert Murray Keith, with whom I have long had the honour to live in friendship, and I had soon the pleasure to learn, that upon his application, her imperial majesty had been graciously pleased to issue an order, that not only a copy of that letter, (if it were found,) but of any other papers in the library, which could throw light upon the History of America, should be transmitted to me. The letter from Cortes is not in the imperial library, but an authentic copy, attested by a notary, of the letter written by the magistrates of the colony planted by him at Vera Cruz, which I have mentioned, Book V. having been found, it was transcribed and sent to me. As this letter is no less curious, and as little known, as that which was the object of my inquiries, I have given some account, in its proper place, of what is most worthy of notice in it. Together with it, I received a copy of a letter from Cortes, containing a long account of his expedition to Honduras, with respect to which I did not think it necessary to enter into any particular detail; and likewise those curious Mexican paintings, which I have described, Vol. iii. p. 23.*

My inquiries at St. Petersburgh were carried on with equal facility and success. In examining into the nearest communication between our continent and that of America, it became of consequence to obtain authentic information concerning the discoveries of the Russians in their navigation from Kamschatka towards the coast of America. Accurate relations of their first voyage, in 1741, have been published by Muller and Gmelin. Several foreign authors have entertained an opinion, that the court of Russia studiously conceals the progress which has been made by more recent navigators, and suffers the public to be amused with false accounts of their route. Such conduct appeared to me unsuitable to those liberal sentiments, and that patronage of science, for which the present sovereign of Russia is eminent; nor could I discern any political reason, that might render it improper to apply for information concerning the late attempts of the Russians to open a communication between Asia and America. My ingenious countryman, Dr. Rogerson, first physician to the empress, presented my request to her imperial majesty, who not only disclaimed any idea of concealment, but instantly ordered the journal of captain Krenitzin, who conducted the only voyage of discovery made by public authority since the year 1741, to be translated, and his original chart to be copied for my use. By consulting them, I have been enabled to give a more accurate view of the progress and extent of the Russian discoveries, than has hitherto been communicated to the public.

From other quarters I have received information of great utility and importance. M. le Chevalier de Pinto, the minister from Portugal to the court of Great Britain, who commanded for several years at Matagrosso, a settlement of the Portuguese in the interior part of Brazil, where the Indians are numerous, and their original manners little altered by intercourse with Europeans, was pleased to send me very full answers to some queries concerning the character and institutions of the natives of America, which his polite reception of an application made to him in my name, encouraged me to propose.

* Of the original Edition.

These satisfied me, that he had contemplated with a discerning attention the curious objects which his situation presented to his view, and I have often followed him as one of my best instructed guides.

M. Suard, to whose elegant translation of the History of the Reign of Charles V. I owe the favourable reception of that work on the continent, procured me answers to the same queries from M. de Bougainville, who had opportunities of observing the Indians both of North and South America, and from M. Godin le Jeune, who resided fifteen years among the Indians in Quito, and twenty years in Cayenne. The latter are more valuable from having been examined by M. de la Condamine, who, a few weeks before his death, made some short additions to them, which may be considered as the last effort of that attention to science which occupied a long life.

My inquiries were not confined to one region in America. Governor Hutchinson took the trouble of recommending the consideration of my queries to Mr. Hawley and Mr. Brainerd, two protestant missionaries employed among the Indians of the Five Nations, who favoured me with answers which discover a considerable knowledge of the people whose customs they describe. From William Smith, Esq. the ingenious historian of New York, I received some useful information. When I enter upon the History of our Colonies in North America, I shall have occasion to acknowledge how much I have been indebted to many other gentlemen of that country.

From the valuable collection of voyages made by Alexander Dalrymple, Esq. with whose attention to the history of navigation and discovery the public is well acquainted, I have received some very rare books, particularly two large volumes of memorials, partly manuscript, and partly in print, which were presented to the court of Spain during the reigns of Philip III. and Philip IV. From these I have learned many curious particulars with respect to the interior state of the Spanish colonies, and the various schemes formed for their improvement. As this collection of memorials formerly belonged to the Colbert Library, I have quoted them by that title.

All those books and manuscripts I have consulted with that attention which the respect due from an author to the public required; and by minute references to them, I have endeavoured to authenticate whatever I relate. The longer I reflect on the nature of historical composition, the more I am convinced that this scrupulous accuracy is necessary. The historian who records the events of his own time, is credited in proportion to the opinion which the public entertains with respect to his means of information and his veracity. He who delineates the transactions of a remote period, has no title to claim assent, unless he produces evidence in proof of his assertions. Without this, he may write an amusing tale, but cannot be said to have composed an authentic history. In those sentiments I have been confirmed by the opinion of an author,* whom his industry, erudition, and discernment, have deservedly placed in a high rank among the most eminent historians of the age. Imboldened by a hint from him, I have published a catalogue of the Spanish books which I have consulted. This practice was frequent in the last century, and was considered as an evidence of laudable industry in an author; in the present, it may, perhaps, be deemed the effect of ostentation; but, as many of these books are unknown in Great Britain, I could not otherwise have referred to them as authorities, without encumbering the page with an insertion of their full titles. To any person who may choose to follow me in this path of inquiry, the catalogue must be very useful.

My readers will observe, that in mentioning sums of money, I have uniformly followed the Spanish method of computing by *pesos*. In America, the peso *fuerte*, or *duro*, is the only one known; and that is always meant when any sum imported from America is mentioned. The peso fuerte, as well as other coins, has varied in its numerary value; but I have been advised, without attending to such minute variations, to consider it as equal to four shillings and sixpence of our money. It is to be remembered, however, that in the sixteenth century the effective value of a peso, *i. e.* the quantity of labour which it represented, or of goods which it would purchase, was five or six times as much as at present.

* Mr. Gibbon.

POSTSCRIPT.

Since this edition was put into the press, a History of Mexico, in two volumes in quarto, translated from the Italian of the Abbé D. Francesco Saverio Clavigero, has been published. From a person who is a native of New Spain, who has resided forty years in that country, and who is acquainted with the Mexican language, it was natural to expect much new information. Upon perusing his work, however, I find that it contains hardly any addition to the ancient History of the Mexican empire, as related by Acosta and Herrera, but what is derived from the improbable narratives and fanciful conjectures of Torquemada and Boturini. Having copied their splendid descriptions of the high state of civilization in the Mexican empire, M. Clavigero, in the abundance of his zeal for the honour of his native country, charges me with having mistaken some points, and with having misrepresented others, in the history of it. When an author is conscious of having exerted industry in research, and impartiality in decision, he may, without presumption, claim what praise is due to these qualities, and he cannot be insensible to any accusation that tends to weaken the force of his claim. A feeling of this kind has induced me to examine such strictures of M. Clavigero on my History of America as merited any attention, especially as these are made by one who seemed to possess the means of obtaining accurate information; and to show that the greater part of them is destitute of any just foundation. This I have in notes upon the passages in my History which gave rise to his criticisms.

College of Edinburgh,
March 1*st*, 1788.

CONTENTS.

BOOK I.

Progress of navigation among the ancients. View of their discoveries as preparatory to those of the moderns. Imperfection of ancient navigation and geography. Doctrine of the zones. Further discoveries checked by the irruption of barbarous nations. Geographical knowledge still preserved in the East, and among the Arabians. Revival of commerce and navigation in Europe—favoured by the Croisades—extended by travellers into the East—promoted by the invention of the mariner's compass. First regular plan of discovery formed by Portugal. State of that kingdom. Schemes of prince Henry. Early attempts feeble. Progress along the western coast of Africa. Hopes of discovering a new route to the East Indies. Attempts to accomplish this. Prospects of success.

BOOK II.

Birth and education of Columbus—acquires naval skill in the service of Portugal—conceives hopes of reaching the East Indies by holding a westerly course—his system founded on the ideas of the ancients, and knowledge of their navigation—and on the discoveries of the Portuguese. His negociations with different courts. Obstacles which he had to surmount in Spain. Voyage of discovery—difficulties—success—return to Spain. Astonishment of mankind on this discovery of a New World. Papal grant of it. Second voyage. Colony settled. Further discoveries. War with the Indians. First tax imposed on them. Third voyage. He discovers the continent. State of the Spanish colony. Errors in the first system of colonizing. Voyage of the Portuguese to the East Indies by the Cape of Good Hope. Effects of this. Discoveries made by private adventurers in the New World. Name of America given to it. Machinations against Columbus—disgraced and sent in chains to Europe. Fourth voyage of Columbus. His discoveries—disasters—death.

BOOK III.

State of the colony in Hispaniola. New war with the Indians. Cruelty of the Spaniards. Fatal regulations concerning the condition of the Indians. Diminution of that people. Discoveries and settlements. First colony planted on the continent. Conquest of Cuba. Discovery of Florida—of the South Sea. Great expectations raised by this. Causes of disappointment with respect to these for some time. Controversy concerning the treatment of the Indians. Contrary decisions. Zeal of the ecclesiastics, particularly of Las Casas. Singular proceedings of Ximenes. Negroes imported into America. Las Casas's idea of a new colony—permitted to attempt it—unsuccessful. Discoveries towards the West Yucatan. Campeachy. New Spain—preparations for invading it.

BOOK IV.

View of America when first discovered, and of the manners and policy of its most uncivilized inhabitants. Vast extent of America—grandeur of the objects it presents to view—its mountains—rivers—lakes—its form favourable to commerce—temperature—predominance of cold—causes of this—uncultivated—unwholesome—its animals—soil. Inquiry how America was peopled—various theories—what appears most probable. Condition and character of the Americans. All, the Mexicans and Peruvians excepted, in the state of savages. Inquiry confined to the uncivilized tribes. Difficulty of obtaining information—various causes of this. Method observed in the inquiry. I. The bodily constitution of the Americans considered. II. The qualities of their minds. III. Their domestic state. IV. Their political state and institutions. V. Their system of war and public security. VI. The arts with which they were acquainted. VII. Their religions ideas and institutions. VIII. Such singular and detached customs as are not reducible to any of the former heads. IX. General review and estimate of their virtues and defects.

BOOK V.

History of the conquest of New Spain by Cortes.

BOOK VI.

History of the conquest of Peru by Pizarro—and of the dissensions and civil wars of the Spaniards in that country. Origin, progress, and effects of these.

BOOK VII.

View of the institutions and manners of the Mexicans and Peruvians. Civilized states in comparison of other Americans. Recent origin of the Mexicans. Facts which prove their progress in civilization. View of their policy in its various branches—of their arts. Facts which indicate a small progress in civilization. What opinion should be formed on comparing those contradictory facts. Genius of their religion. Peruvian monarchy more ancient. Its policy founded on religion. Singular effects of this. Peculiar state of property among the Peruvians. Their public works and arts—roads—bridges—buildings. Their unwarlike spirit. View of other dominions of Spain in America. Cinaloa and Sonora. California. Yucatan and Honduras. Chili. Tucuman. Kingdom of Tierra Firmé. New kingdom of Granada.

BOOK VIII.

View of the interior government, commerce, &c. of the Spanish colonies. Depopulation of America—first effect of their settlements—not the consequence of any system of policy—nor to be imputed to religion. Number of Indians still remaining. Fundamental maxims on which the Spanish system of colonization is founded. Condition of different orders of men in their colonies—Chapetones—Creoles—Negroes—Indians. Ecclesiastical state and policy. Character of secular and regular clergy. Small progress of Christianity among the natives. Mines chief object of their attention. Mode of working these—their produce. Effects of encouraging this species of industry. Other commodities of Spanish America. First effects of this new commerce with America on Spain. Why the Spanish colonies have not been as beneficial to the parent state as those of other nations. Errors in the Spanish system of regulating this commerce—confined to one port—carried on by annual fleets. Contraband trade. Decline of Spain both in population and wealth. Remedies proposed. View of the wise regulations of the Bourbon princes. A new and more liberal system introduced—beneficial effects of this—probable consequences. Trade between New Spain and the Philippines. Revenue of Spain from America—whence it arises—to what it amounts.

BOOK IX.

History of Virginia to the year 1688.

BOOK X.

History of New England to the year 1652.

THE

HISTORY OF AMERICA.

BOOK I.

The earth slowly peopled.

THE progress of men in discovering and peopling the various parts of the earth, has been extremely slow. Several ages elapsed before they removed far from those mild and fertile regions in which they were originally placed by their Creator. The occasion of their first general dispersion is known; but we are unacquainted with the course of their migrations, or the time when they took possession of the different countries which they now inhabit. Neither history nor tradition furnish such information concerning those remote events, as enables us to trace, with any certainty, the operations of the human race in the infancy of society.

First migrations by land.

We may conclude, however, that all the early migrations of mankind were made by land. The ocean, which surrounds the habitable earth, as well as the various arms of the sea which separate one region from another, though destined to facilitate the communication between distant countries, seem, at first view, to be formed to check the progress of man, and to mark the bounds of that portion of the globe to which nature had confined him. It was long, we may believe, before men attempted to pass these formidable barriers, and became so skilful and adventurous as to commit themselves to the mercy of the winds and waves, or to quit their native shores in quest of remote and unknown regions.

First attempts towards navigation.

Navigation and ship-building are arts so nice and complicated, that they require the ingenuity, as well as experience, of many successive ages to bring them to any degree of perfection. From the raft or canoe, which first served to carry a savage over the river that obstructed him in the chase, to the construction of a vessel capable of conveying a numerous crew with safety to a distant coast, the progress in improvement is immense. Many efforts would be made, many experiments would be tried, and much labour as well as invention would be employed, before men could accomplish this arduous and important undertaking. The rude and imperfect state in which navigation is still found among all nations which are not considerably civilized, corresponds with this account of its progress, and demonstrates that, in early times, the art was not so far improved as to enable men to undertake distant voyages, or to attempt remote discoveries.

Introduction of commerce.

As soon, however, as the art of navigation became known, a new species of correspondence among men took place. It is from this era that we must date the commencement of such an intercourse between nations as deserves the appellation of commerce. Men are, indeed, far advanced in improvement before commerce becomes an object of great importance to them. They must even have made some considerable progress towards civilization, before they acquire the idea of property, and ascertain it so perfectly as to be acquainted with the most simple of all contracts, that of exchanging by barter one rude commodity for another. But as soon as this important right is established, and every individual feels that he has an exclusive title to possess or to alienate whatever he has acquired by his own labour and dexterity, the wants and ingenuity of his nature suggest to him a new method of increasing his acquisitions and enjoyments, by disposing of what is superfluous in his own stores, in order to procure what is necessary or desirable in those of other men. Thus a commercial intercourse begins, and is carried on among the members of the same community. By degrees, they discover that neighbouring tribes possess what they themselves want, and enjoy comforts of which they wish to partake. In the same mode, and upon the same principles, that domestic traffic is carried on within the society, an external commerce is established with other tribes or nations. Their mutual interest and mutual wants render this intercourse desirable, and imperceptibly introduce the maxims and laws which facilitate its progress and render it secure. But no very extensive commerce can take place between contiguous provinces, whose soil and climate being nearly the same, yield similar produc-

tions. Remote countries cannot convey their commodities by land to those places where, on account of their rarity, they are desired, and become valuable. It is to navigation that men are indebted for the power of transporting the superfluous stock of one part of the earth to supply the wants of another. The luxuries and blessings of a particular climate are no longer confined to itself alone, but the enjoyment of them is communicated to the most distant regions.

In proportion as the knowledge of the advantages derived from navigation and commerce continued to spread, the intercourse among nations extended. The ambition of conquest, or the necessity of procuring new settlements, were no longer the sole motives of visiting distant lands. The desire of gain became a new incentive to activity, roused adventurers, and sent them forth upon long voyages, in search of countries, whose products or wants might increase that circulation which nourishes and gives vigour to commerce. Trade proved a great source of discovery, it opened unknown seas, it penetrated into new regions, and contributed more than any other cause to bring men acquainted with the situation, the nature, and commodities of the different parts of the globe. But even after a regular commerce was established in the world, after nations were considerably civilized, and the sciences and arts were cultivated with ardour and success, navigation continued to be so imperfect, that it can hardly be said to have advanced beyond the infancy of its improvement in the ancient world.

Imperfection of navigation among the ancients.

Among all the nations of antiquity, the structure of their vessels was extremely rude, and their method of working them very defective. They were unacquainted with several principles and operations in navigation, which are now considered as the first elements on which that science is founded. Though that property of the magnet, by which it attracts iron, was well known to the ancients, its more important and amazing virtue of pointing to the poles had entirely escaped their observation. Destitute of this faithful guide, which now conducts the pilot with so much certainty in the unbounded ocean, during the darkness of night, or when the heavens are covered with clouds, the ancients had no other method of regulating their course than by observing the sun and stars. Their navigation was of consequence uncertain and timid. They durst seldom quit sight of land, but crept along the coast, exposed to all the dangers, and retarded by all the obstructions, unavoidable in holding such an awkward course. An incredible length of time was requisite for performing voyages, which are now finished in a short space. Even in the mildest climates, and in seas the least tempestuous, it was only during the summer months that the ancients ventured out of their harbours. The remainder of the year was lost in inactivity. It would have been deemed most inconsiderate rashness to have braved the fury of the winds and waves during winter.[a]

a Vegetius de Re milit. lib. iv.

While both the science and practice of navigation continued to be so defective, it was an undertaking of no small difficulty and danger to visit any remote region of the earth. Under every disadvantage, however, the active spirit of commerce exerted itself. The Egyptians, soon after the establishment of their monarchy, are said to have opened a trade between the Arabian gulf or Red sea, and the western coast of the great Indian continent. The commodities which they imported from the East, were carried by land from the Arabian gulf to the banks of the Nile, and conveyed down that river to the Mediterranean. But if the Egyptians in early times applied themselves to commerce, their attention to it was of short duration. The fertile soil and mild climate of Egypt produced the necessaries and comforts of life with such profusion, as rendered its inhabitants so independent of other countries, that it became an established maxim among that people, whose ideas and institutions differed in almost every point from those of other nations, to renounce all intercourse with foreigners. In consequence of this, they never went out of their own country; they held all seafaring persons in detestation, as impious and profane; and fortifying their own harbours, they denied strangers admittance into them.[b] It was in the decline of their power, and when their veneration for ancient maxims had greatly abated, that they again opened their ports, and resumed any communication with foreigners.

Navigation and commerce of the Egyptians;

The character and situation of the Phenicians were as favourable to the spirit of commerce and discovery as those of the Egyptians were adverse to it. They had no distinguishing peculiarity in their manners and institutions; they were not addicted to any singular and unsocial form of superstition; they could mingle with other nations without scruple or reluctance. The territory which they possessed was neither large nor fertile. Commerce was the only source from which they could derive opulence or power. Accordingly, the trade carried on by the Phenicians of Sidon and Tyre was more extensive and enterprising than that of any state in the ancient world. The genius of the Phenicians, as well as the object of their policy and the spirit of their laws, were entirely commercial. They were a people of merchants, who aimed at the empire of the sea, and actually possessed it. Their ships not only frequented all the ports in the Mediterranean, but they were the first who ventured beyond the ancient boundaries of navigation, and, passing the Straits of Gades, visited the western coasts of Spain and Africa. In many of the places to which they resorted, they planted colonies, and communicated to

of the Phenicians;

b Diod. Sicul. lib. i. p. 78. ed. Wesselingii. Amst. 1756. Strabo, lib. xvii. p. 1142. ed. Amst. 1707.

the rude inhabitants some knowledge of their arts and improvements. While they extended their discoveries towards the north and the west, they did not neglect to penetrate into the more opulent and fertile regions of the south and east. Having rendered themselves masters of several commodious harbours towards the bottom of the Arabian gulf, they, after the example of the Egyptians, established a regular intercourse with Arabia and the continent of India on the one hand, and with the eastern coast of Africa on the other. From these countries they imported many valuable commodities unknown to the rest of the world, and, during a long period, engrossed that lucrative branch of commerce without a rival.[c]

of the Jews;

The vast wealth which the Phenicians acquired by monopolizing the trade carried on in the Red sea, incited their neighbours the Jews, under the prosperous reigns of David and Solomon, to aim at being admitted to some share of it. This they obtained, partly by their conquest of Idumea, which stretches along the Red sea, and partly by their alliance with Hiram, king of Tyre. Solomon fitted out fleets, which, under the direction of Phenician pilots, sailed from the Red sea to Tarshish and Ophir. These, it is probable, were ports in India and Africa, which their conductors were accustomed to frequent, and from them the Jewish ships returned with such valuable cargoes as suddenly diffused wealth and splendour through the kingdom of Israel.[d] But the singular institutions of the Jews, the observance of which was enjoined by their divine Legislator, with an intention of preserving them a separate people, uninfected by idolatry, formed a national character, incapable of that open and liberal intercourse with strangers which commerce requires. Accordingly, this unsocial genius of the people, together with the disasters which befell the kingdom of Israel, prevented the commercial spirit, which their monarchs laboured to introduce and to cherish, from spreading among them. The Jews cannot be numbered among the nations which contributed to improve navigation, or to extend discovery.

of the Carthaginians;

But though the instructions and example of the Phenicians were unable to mould the manners and temper of the Jews, in opposition to the tendency of their laws, they transmitted the commercial spirit with facility, and in full vigour, to their own descendants the Carthaginians. The commonwealth of Carthage applied to trade and to naval affairs, with no less ardour, ingenuity, and success, than its parent state. Carthage early rivalled and soon surpassed Tyre in opulence and power, but seems not to have aimed at obtaining any share in the commerce with India. The Phenicians had engrossed this, and had such a command of the Red sea as secured to them the exclusive possession of that lucrative branch of trade. The commercial activity of the Carthaginians was exerted in another direction. Without contending for the trade of the East with their mother-country, they extended their navigation chiefly towards the west and north. Following the course which the Phenicians had opened, they passed the Straits of Gades, and, pushing their discoveries far beyond those of the parent state, visited not only all the coasts of Spain, but those of Gaul, and penetrated at last into Britain. At the same time that they acquired knowledge of new countries in this part of the globe, they gradually carried their researches towards the south. They made considerable progress, by land, into the interior provinces of Africa, traded with some of them, and subjected others to their empire. They sailed along the western coast of that great continent, almost to the tropic of Cancer, and planted several colonies, in order to civilize the natives, and accustom them to commerce. They discovered the Fortunate Islands, now known by the name of the Canaries, the utmost boundary of ancient navigation in the western ocean.[e]

Nor was the progress of the Phenicians and Carthaginians in their knowledge of the globe owing entirely to the desire of extending their trade from one country to another. Commerce was followed by its usual effects among both these people. It awakened curiosity, enlarged the ideas and desires of men, and incited them to bold enterprises. Voyages were undertaken, the sole object of which was to discover new countries, and to explore unknown seas. Such, during the prosperous age of the Carthaginian republic, were the famous navigations of Hanno and Himlico. Both their fleets were equipped by authority of the senate, and at public expense. Hanno was directed to steer towards the south, along the coast of Africa, and he seems to have advanced much nearer the equinoctial line than any former navigator.[f] Himlico had it in charge to proceed towards the north, and to examine the western coasts of the European continent.[g] Of the same nature was the extraordinary navigation of the Phenicians round Africa. A Phenician fleet, we are told, fitted out by Necho, king of Egypt, took its departure about six hundred and four years before the christian era, from a port in the Red sea, doubled the southern promontory of Africa, and, after a voyage of three years, returned by the Straits of Gades to the mouth of the Nile.[h] Eudoxus of Cyzicus is said to have held the same course, and to have accomplished the same arduous undertaking.[i]

These voyages, if performed in the manner which I have related, may justly be reckoned the greatest effort of navigation in the ancient world; and if we attend to the imperfect state of the art at that time,

it is difficult to determine, whether we should most admire the courage and sagacity with which the design was formed, or the conduct and good fortune with which it was executed. But unfortunately all the original and authentic accounts of the Phenician and Carthaginian voyages, whether undertaken by public authority, or in prosecution of their private trade, have perished. The information which we receive concerning them from the Greek and Roman authors, is not only obscure and inaccurate, but, if we except a short narrative of Hanno's expedition, is of suspicious authority.[k] Whatever acquaintance with the remote regions of the earth the Phenicians or Carthaginians may have acquired, was concealed from the rest of mankind with a mercantile jealousy. Every thing relative to the course of their navigation was not only a mystery of trade, but a secret of state. Extraordinary facts are related concerning their solicitude to prevent other nations from penetrating into what they wished should remain undivulged.[l] Many of their discoveries seem, accordingly, to have been scarcely known beyond the precincts of their own states. The navigation round Africa, in particular, is recorded by the Greek and Roman writers, rather as a strange amusing tale, which they did not comprehend, or did not believe, than as a real transaction, which enlarged their knowledge and influenced their opinions.[m] As neither the progress of the Phenician or Carthaginian discoveries, nor the extent of their navigation, were communicated to the rest of mankind, all memorials of their extraordinary skill in naval affairs seem, in a great measure, to have perished, when the maritime power of the former was annihilated by Alexander's conquest of Tyre, and the empire of the latter was overturned by the Roman arms.

of the Greeks ; Leaving, then, the obscure and pompous accounts of the Phenician and Carthaginian voyages to the curiosity and conjectures of antiquaries, history must rest satisfied with relating the progress of navigation and discovery among the Greeks and Romans, which, though less splendid, is better ascertained. It is evident that the Phenicians, who instructed the Greeks in many other useful sciences and arts, did not communicate to them that extensive knowledge of navigation which they themselves possessed ; nor did the Romans imbibe that commercial spirit and ardour for discovery which distinguished their rivals the Carthaginians. Though Greece be almost encompassed by the sea, which formed many spacious bays and commodious harbours ; though it be surrounded by a great number of fertile islands, yet, notwithstanding such a favourable situation, which seemed to invite that ingenious people to apply themselves to navigation, it was long before this art attained any degree of perfection among them. Their early voyages, the object of which was piracy rather than commerce, were so inconsiderable, that the expedition of the Argonauts from the coast of Thessaly to the Euxine sea, appeared such an amazing effort of skill and courage, as entitled the conductors of it to be ranked among the demigods, and exalted the vessel in which they sailed to a place among the heavenly constellations. Even at a later period, when the Greeks engaged in their famous enterprise against Troy, their knowledge in naval affairs seems not to have been much improved. According to the account of Homer, the only poet to whom history ventures to appeal, and who, by his scrupulous accuracy in describing the manners and arts of early ages, merits this distinction, the science of navigation, at that time, had hardly advanced beyond its rudest state. The Greeks in the heroic age seem to have been unacquainted with the use of iron, the most serviceable of all the metals, without which no considerable progress was ever made in the mechanical arts. Their vessels were of inconsiderable burden, and mostly without decks. They had only one mast, which was erected or taken down at pleasure. They were strangers to the use of anchors. All their operations in sailing were clumsy and unskilful. They turned their observation towards stars, which were improper for regulating their course, and their mode of observing them was inaccurate and fallacious. When they had finished a voyage they drew their paltry barks ashore, as savages do their canoes, and these remained on dry land until the season of returning to sea approached. It is not then in the early or heroic ages of Greece that we can expect to observe the science of navigation, and the spirit of discovery, making any considerable progress. During that period of disorder and ignorance, a thousand causes concurred in restraining curiosity and enterprise within very narrow bounds.

But the Greeks advanced with rapidity to a state of greater civilization and refinement. Government, in its most liberal and perfect form, began to be established in their different communities ; equal laws and regular police were gradually introduced ; the sciences and arts which are useful or ornamental in life were carried to a high pitch of improvement, and several of the Grecian commonwealths applied to commerce with such ardour and success, that they were considered, in the ancient world, as maritime powers of the first rank. Even then, however, the naval victories of the Greeks must be ascribed rather to the native spirit of the people, and to that courage which the enjoyment of liberty inspires, than to any extraordinary progress in the science of navigation. In the Persian war, those exploits which the genius of the Greek historians has rendered so famous, were performed by fleets, composed chiefly of small vessels without decks ;[n] the crews of which rushed forward with impetuous valour, but little art, to board those of the enemy. In the war of Peloponnesus, their ships seem still to have been of inconsiderable burden and force.

m See Note III.

n Thucyd. lib. i. c. 14.

The extent of their trade, how highly soever it may have been estimated in ancient times, was in proportion to this low condition of their marine. The maritime states of Greece hardly carried on any commerce beyond the limits of the Mediterranean sea. Their chief intercourse was with the colonies of their countrymen, planted in the Lesser Asia, in Italy and Sicily. They sometimes visited the ports of Egypt, of the southern provinces of Gaul, and of Thrace, or, passing through the Hellespont, they traded with the countries situated around the Euxine sea. Amazing instances occur of their ignorance even of those countries which lay within the narrow precincts to which their navigation was confined. When the Greeks had assembled their combined fleet against Xerxes at Egina, they thought it unadvisable to sail to Samos, because they believed the distance between that island and Egina to be as great as the distance between Egina and the pillars of Hercules.[o] They were either utterly unacquainted with all the parts of the globe beyond the Mediterranean sea, or what knowledge they had of them was founded on conjecture, or derived from the information of a few persons, whom curiosity and the love of science had prompted to travel by land into the Upper Asia, or by sea into Egypt, the ancient seats of wisdom and arts. After all that the Greeks learned from them, they appear to have been ignorant of the most important facts, on which an accurate and scientific knowledge of the globe is founded.

The expedition of Alexander the Great into the East, considerably enlarged the sphere of navigation and of geographical knowledge among the Greeks. That extraordinary man, notwithstanding the violent passions which incited him, at some times, to the wildest actions, and the most extravagant enterprises, possessed talents which fitted him not only to conquer but to govern the world. He was capable of framing those bold and original schemes of policy, which gave a new form to human affairs. The revolution in commerce, brought about by the force of his genius, is hardly inferior to that revolution in empire, occasioned by the success of his arms. It is probable, that the opposition and efforts of the republic of Tyre, which checked him so long in the career of his victories, gave Alexander an opportunity of observing the vast resources of a maritime power, and conveyed to him some idea of the immense wealth which the Tyrians derived from their commerce, especially that with the East Indies. As soon as he had accomplished the destruction of Tyre, and reduced Egypt to subjection, he formed the plan of rendering the empire which he proposed to establish, the centre of commerce as well as the seat of dominion. With this view he founded a great city, which he honoured with his own name, near one of the mouths of the river Nile, that by the Mediterranean sea, and the neighbourhood of the Arabian gulf, it might command the trade both of the East and West.[p] This situation was chosen with such discernment, that Alexandria soon became the chief commercial city in the world. Not only during the subsistence of the Grecian empire in Egypt and in the East, but amidst all the successive revolutions in those countries from the time of the Ptolemies to the discovery of the navigation by the Cape of Good Hope, commerce, particularly that of the East Indies, continued to flow in the channel which the sagacity and foresight of Alexander had marked out for it.

His ambition was not satisfied with having opened to the Greeks a communication with India by sea; he aspired to the sovereignty of those regions which furnished the rest of mankind with so many precious commodities, and conducted his army thither by land. Enterprising, however, as he was, he may be said rather to have viewed than to have conquered that country. He did not, in his progress toward the East, advance beyond the banks of the rivers that fall into the Indus, which is now the western boundary of the vast continent of India. Amidst the wild exploits which distinguish this part of his history, he pursued measures that mark the superiority of his genius as well as the extent of his views. He had penetrated as far into India as to confirm his opinion of its commercial importance, and to perceive that immense wealth might be derived from intercourse with a country, where the arts of elegance, having been more early cultivated, were arrived at greater perfection than in any other part of the earth.[q] Full of this idea, he resolved to examine the course of navigation from the mouth of the Indus to the bottom of the Persian gulf; and, if it should be found practicable, to establish a regular communication between them. In order to effect this, he proposed to remove the cataracts, with which the jealousy of the Persians, and their aversion to correspondence with foreigners, had obstructed the entrance into the Euphrates;[r] to carry the commodities of the East up that river and the Tigris, which unites with it, into the interior parts of his Asiatic dominions; while, by the way of the Arabian gulf, and the river Nile, they might be conveyed to Alexandria, and distributed to the rest of the world. Nearchus, an officer of eminent abilities, was intrusted with the command of the fleet fitted out for this expedition. He performed this voyage, which was deemed an enterprise so arduous and important, that Alexander reckoned it one of the most extraordinary events which distinguished his reign. Inconsiderable as it may now appear, it was, at that time, an undertaking of no little merit and difficulty. In the prosecution of it, striking instances occur of the small progress which the Greeks had made in naval knowledge.[s] Having never sailed beyond the

s See Note IV.

bounds of the Mediterranean, where the ebb and flow of the sea are hardly perceptible, when they first observed this phenomenon at the mouth of the Indus, it appeared to them a prodigy, by which the gods testified the displeasure of heaven against their enterprise.[t] During their whole course, they seem never to have lost sight of land, but followed the bearings of the coast so servilely, that they could not much avail themselves of those periodical winds which facilitate navigation in the Indian ocean. Accordingly, they spent no less than ten months in performing this voyage,[u] which, from the mouth of the Indus to that of the Persian gulf, does not exceed twenty degrees. It is probable, that, amidst the violent convulsions and frequent revolutions in the East, occasioned by the contests among the successors of Alexander, the navigation to India by the course which Nearchus had opened was discontinued. The Indian trade carried on at Alexandria, not only subsisted, but was so much extended under the Grecian monarchs of Egypt, that it proved a great source of the wealth which distinguished their kingdom.

of the Romans.

The progress which the Romans made in navigation and discovery, was still more inconsiderable than that of the Greeks. The genius of the Roman people, their military education, and the spirit of their laws, concurred in estranging them from commerce and naval affairs. It was the necessity of opposing a formidable rival, not the desire of extending trade, which first prompted them to aim at maritime power. Though they soon perceived that in order to acquire the universal dominion after which they aspired, it was necessary to render themselves masters of the sea, they still considered the naval service as a subordinate station, and reserved for it such citizens as were not of a rank to be admitted into the legions.[x] In the history of the Roman republic, hardly one event occurs that marks attention to navigation any further than as it was instrumental towards conquest. When the Roman valour and discipline had subdued all the maritime states known in the ancient world; when Carthage, Greece, and Egypt, had submitted to their power, the Romans did not imbibe the commercial spirit of the conquered nations. Among that people of soldiers, to have applied to trade would have been deemed a degradation of a Roman citizen. They abandoned the mechanical arts, commerce, and navigation, to slaves, to freed-men, to provincials, and to citizens of the lowest class. Even after the subversion of liberty, when the severity and haughtiness of ancient manners began to abate, commerce did not rise into high estimation among the Romans. The trade of Greece, Egypt, and the other conquered countries, continued to be carried on in its usual channels, after they were reduced into the form of Roman provinces. As Rome was the capital of the world, and the seat of government, all the wealth and valuable productions of the provinces flowed naturally thither. The Romans, satisfied with this, seem to have suffered commerce to remain almost entirely in the hands of the natives of the respective countries. The extent, however, of the Roman power, which reached over the greatest part of the known world, the vigilant inspection of the Roman magistrates, and the spirit of the Roman government, no less intelligent than active, gave such additional security to commerce, as animated it with new vigour. The union among nations was never so entire, nor the intercourse so perfect, as within the bounds of this vast empire. Commerce, under the Roman dominion, was not obstructed by the jealousy of rival states, interrupted by frequent hostilities, or limited by partial restrictions. One superintending power moved and regulated the industry of mankind, and enjoyed the fruits of their joint efforts.

Navigation felt this influence, and improved under it. As soon as the Romans acquired a taste for the luxuries of the East, the trade with India through Egypt was pushed with new vigour, and carried on to greater extent. By frequenting the Indian continent, navigators became acquainted with the periodical course of the winds, which, in the ocean that separates Africa from India, blow with little variation during one half of the year from the east and during the other half blow with equal steadiness from the west. Encouraged by observing this, the pilots who sailed from Egypt to India abandoned their ancient slow and dangerous course along the coast, and as soon as the western monsoon set in, took their departure from Ocelis, at the mouth of the Arabian gulf, and stretched boldly across the ocean.[y] The uniform direction of the wind, supplying the place of the compass, and rendering the guidance of the stars less necessary, conducted them to the port of Musiris, on the western shore of the Indian continent. There they took on board their cargo, and returning with the eastern monsoon, finished their voyage to the Arabian gulf within the year. This part of India, now known by the name of the Malabar coast, seems to have been the utmost limit of ancient navigation in that quarter of the globe. What imperfect knowledge the ancients had of the immense countries which stretch beyond this towards the east, they received from a few adventurers, who had visited them by land. Such excursions were neither frequent nor extensive, and it is probable, that while the Roman intercourse with India subsisted, no traveller ever penetrated further than to the banks of the Ganges.[z] The fleets from Egypt which traded at Musiris were loaded, it is true, with the spices and other rich commodities of the continent and islands of the further India; but these were brought to that port, which became the staple of the commerce between the East and West, by the Indians themselves, in canoes hollowed out

of one tree.[a] The Egyptian and Roman merchants, satisfied with acquiring those commodities in this manner, did not think it necessary to explore unknown seas, and venture upon a dangerous navigation, in quest of the countries which produced them. But though the discoveries of the Romans in India were so limited, their commerce there was such as will appear considerable, even to the present age, in which the Indian trade has been extended far beyond the practice or conception of any preceding period. We are informed by one author of credit,[b] that the commerce with India drained the Roman empire every year of more than four hundred thousand pounds; and by another, that one hundred and twenty ships sailed annually from the Arabian gulf to that country.[c]

Discoveries of the ancients by land.

The discovery of this new method of sailing to India, is the most considerable improvement in navigation made during the continuance of the Roman power. But in ancient times, the knowledge of remote countries was acquired more frequently by land than by sea;[d] and the Romans, from their peculiar disinclination to naval affairs, may be said to have neglected totally the latter, though a more easy and expeditious method of discovery. The progress, however, of their victorious armies through a considerable portion of Europe, Asia, and Africa, contributed greatly to extend discovery by land, and gradually opened the navigation of new and unknown seas. Previous to the Roman conquests, the civilized nations of antiquity had little communication with those countries in Europe, which now form its most opulent and powerful kingdoms. The interior parts of Spain and Gaul were imperfectly known. Britain, separated from the rest of the world, had never been visited, except by its neighbours the Gauls, and by a few Carthaginian merchants. The name of Germany had scarcely been heard of. Into all these countries the arms of the Romans penetrated. They entirely subdued Spain and Gaul; they conquered the greatest and most fertile part of Britain; they advanced into Germany, as far as the banks of the river Elbe. In Africa, they acquired a considerable knowledge of the provinces, which stretch along the Mediterranean sea, from Egypt westward to the Straits of Gades. In Asia, they not only subjected to their power most of the provinces which composed the Persian and the Macedonian empires, but, after their victories over Mithridates and Tygranes, they seem to have made a more accurate survey of the countries contiguous to the Euxine and Caspian seas, and to have carried on a more extensive trade than that of the Greeks with the opulent and commercial nations then seated round the Euxine sea.

Imperfection of geographical knowledge among the ancients.

From this succinct survey of discovery and navigation, which I have traced from the earliest dawn of historical knowledge to the full establishment of the Roman dominion, the progress of both appears to have been wonderfully slow. It seems neither adequate to what we might have expected from the activity and enterprise of the human mind, nor to what might have been performed by the power of the great empires which successively governed the world. If we reject accounts that are fabulous and obscure; if we adhere steadily to the light and information of authentic history, without substituting in its place the conjectures of fancy, or the dreams of etymologists, we must conclude, that the knowledge which the ancients had acquired of the habitable globe was extremely confined. In Europe, the extensive provinces in the eastern part of Germany were little known to them. They were almost totally unacquainted with the vast countries which are now subject to the kings of Denmark, Sweden, Prussia, Poland, and the Russian empire. The more barren regions, that stretch within the arctic circle, were quite unexplored. In Africa, their researches did not extend far beyond the provinces which border on the Mediterranean, and those situated on the western shore of the Arabian gulf. In Asia, they were unacquainted, as I formerly observed, with all the fertile and opulent countries beyond the Ganges, which furnish the most valuable commodities that, in modern times, have been the great object of the European commerce with India; nor do they seem to have ever penetrated into those immense regions occupied by the wandering tribes, which they called by the general name of Sarmatians or Scythians, and which are now possessed by Tartars of various denominations, and by the Asiatic subjects of Russia.

A remarkable proof of this.

But there is one opinion that universally prevailed among the ancients, which conveys a more striking idea of the small progress they had made in the knowledge of the habitable globe, than can be derived from any detail of their discoveries. They supposed the earth to be divided into five regions, which they distinguished by the name of Zones. Two of these, which were nearest the poles, they termed Frigid Zones, and believed that the extreme cold which reigned perpetually there, rendered them uninhabitable. Another, seated under the line, and extending on either side towards the tropics, they called the Torrid Zone, and imagined it to be so burnt up with unremitting heat, as to be equally destitute of inhabitants. On the two other zones, which occupied the remainder of the earth, they bestowed the appellation of Temperate, and taught that these, being the only regions in which life could subsist, were allotted to man for his habitation. This wild opinion was not a conceit of the uninformed vulgar, or a fanciful fiction of the poets, but a system adopted by the most enlightened philosophers, the most accurate historians and geographers, in Greece and Rome. According to this theory, a vast portion of the habitable earth was pronounced to be unfit for sustaining the human species. Those

a Plin. Nat. Hist. lib. vi. c. 26. b Plin. Nat. Hist. lib. vi. c. 26. c Strab. Geogr. lib. ii. p. 179. d See Note VII.

fertile and populous regions within the torrid zone, which are now known not only to yield their own inhabitants the necessaries and comforts of life with most luxuriant profusion, but to communicate their superfluous stores to the rest of the world, were supposed to be the mansion of perpetual sterility and desolation. As all the parts of the globe with which the ancients were acquainted, lay within the northern temperate zone, their opinion that the other temperate zone was filled with inhabitants, was founded on reasoning and conjecture, not on discovery. They even believed, that by the intolerable heat of the torrid zone, such an insuperable barrier was placed between the two temperate regions of the earth, as would prevent for ever any intercourse between their respective inhabitants. Thus this extravagant theory not only proves that the ancients were unacquainted with the true state of the globe, but it tended to render their ignorance perpetual, by representing all attempts towards opening a communication with the remote regions of the earth as utterly impracticable.[e]

But, however imperfect or inaccurate the geographical knowledge which the Greeks and Romans had acquired may appear, in respect of the present improved state of that science, their progress in discovery will seem considerable, and the extent to which they carried navigation and commerce must be reckoned great, when compared with the ignorance of early times. As long as the Roman empire retained such vigour as to preserve its authority over the conquered nations, and to keep them united, it was an object of public policy, as well as of private curiosity, to examine and describe the countries which composed this great body. Even when the other sciences began to decline, geography, enriched with new observations, and receiving some accession from the experience of every age, and the reports of every traveller, continued to improve. It attained to the highest point of perfection and accuracy to which it ever arrived in the ancient world, by the industry and genius of Ptolemy the philosopher. He flourished in the second century of the christian era, and published a description of the terrestrial globe, more ample and exact than that of any of his predecessors.

Improvements in geography by Ptolemy.

But, soon after, violent convulsions began to shake the Roman state; the fatal ambition or caprice of Constantine, by changing the seat of government, divided and weakened its force; the barbarous nations, which Providence prepared as instruments to overturn the mighty fabric of the Roman power, began to assemble and to muster their armies on its frontier: the empire tottered to its fall. During this decline and old age of the Roman state, it was impossible that the sciences should go on improving. The efforts of genius were, at that period, as languid and feeble as those of government. From the time of Ptolemy, no considerable addition seems to have been made to geographical knowledge, nor did any important revolution happen in trade, excepting that Constantinople, by its advantageous situation, and the encouragement of the eastern emperors, became a commercial city of the first note.

The invasion of the Roman empire by barbarous nations.

At length, the clouds which had been so long gathering round the Roman empire, burst into a storm. Barbarous nations rushed in from several quarters with irresistible impetuosity, and, in the general wreck, occasioned by the inundation which overwhelmed Europe, the arts, sciences, inventions, and discoveries of the Romans, perished in a great measure, and disappeared.[f] All the various tribes, which settled in the different provinces of the Roman empire, were uncivilized, strangers to letters, destitute of arts, unacquainted with regular government, subordination, or laws. The manners and institutions of some of them were so rude, as to be hardly compatible with a state of social union. Europe, when occupied by such inhabitants, may be said to have returned to a second infancy, and had to begin anew its career in improvement, science, and civility. The first effect of the settlement of those barbarous invaders was to dissolve the union by which the Roman power had cemented mankind together. They parcelled out Europe into many small and independent states, differing from each other in language and customs. No intercourse subsisted between the members of those divided and hostile communities. Accustomed to a simple mode of life, and averse to industry, they had few wants to supply, and few superfluities to dispose of. The names of *stranger* and *enemy* became once more words of the same import. Customs every where prevailed, and even laws were established, which rendered it disagreeable and dangerous to visit any foreign country.[g] Cities, in which alone an extensive commerce can be carried on, were few, inconsiderable, and destitute of those immunities which produce security or excite enterprise. The sciences, on which geography and navigation are founded, were little cultivated. The accounts of ancient improvements and discoveries, contained in the Greek and Roman authors, were neglected or misunderstood. The knowledge of remote regions was lost; their situation, their commodities, and almost their names, were unknown.

Effects of their conquests on commercial intercourse.

One circumstance prevented commercial intercourse with distant nations from ceasing altogether. Constantinople, though often threatened by the fierce invaders who spread desolation over the rest of Europe, was so fortunate as to escape their destructive rage. In that city, the knowledge of ancient arts and discoveries was preserved; a taste for splendour and elegance subsisted; the productions and luxuries of foreign countries were in request;

Commerce still preserved in the eastern empire,

e See Note VIII.

f View of the State of Europe, sect. I.

g View of the State of Europe, sect. I

and commerce continued to flourish there when it was almost extinct in every other part of Europe. The citizens of Constantinople did not confine their trade to the islands of the Archipelago, or to the adjacent coasts of Asia; they took a wider range, and following the course which the ancients had marked out, imported the commodities of the East Indies from Alexandria. When Egypt was torn from the Roman empire by the Arabians, the industry of the Greeks discovered a new channel, by which the productions of India might be conveyed to Constantinople. They were carried up the Indus, as far as that great river is navigable; thence they were transported by land to the banks of the river Oxus, and proceeded down its stream to the Caspian sea. There they entered the Volga, and sailing up it, were carried by land to the Tanais, which conducted them into the Euxine sea, where vessels from Constantinople waited their arrival.[h] This extraordinary and tedious mode of conveyance merits attention, not only as a proof of the violent passion which the inhabitants of Constantinople had conceived for the luxuries of the East, and as a specimen of the ardour and ingenuity with which they carried on commerce; but because it demonstrates, that during the ignorance which reigned in the rest of Europe, an extensive knowledge of remote countries was still preserved in the capital of the Greek empire.

and among the Arabians.

At the same time, a gleam of light and knowledge broke in upon the East. The Arabians, having contracted some relish for the sciences of the people whose empire they had contributed to overturn, translated the books of several of the Greek philosophers into their own language. One of the first was that valuable work of Ptolemy, which I have already mentioned. The study of geography became, of consequence, an early object of attention to the Arabians. But that acute and ingenious people cultivated chiefly the speculative and scientific parts of geography. In order to ascertain the figure and dimensions of the terrestrial globe, they applied the principles of geometry, they had recourse to astronomical observations, they employed experiments and operations, which Europe, in more enlightened times, has been proud to adopt and to imitate. At that period, however, the fame of the improvements made by the Arabians did not reach Europe. The knowledge of their discoveries was reserved for ages capable of comprehending and of perfecting them.

Revival of commerce and navigation in Europe.

By degrees, the calamities and desolation brought upon the western provinces of the Roman empire by its barbarous conquerors, were forgotten, and in some measure repaired. The rude tribes which settled there acquiring insensibly some idea of regular government, and some relish for the functions and comforts of civil life, Europe began to awake from its torpid and inactive state. The first symptoms of revival were discerned in Italy. The northern tribes which took possession of this country, made progress in improvement with greater rapidity than the people settled in other parts of Europe. Various causes, which it is not the object of this work to enumerate or explain, concurred in restoring liberty and independence to the cities of Italy.[i] The acquisition of these roused industry, and gave motion and vigour to all the active powers of the human mind. Foreign commerce revived, navigation was attended to and improved. Constantinople became the chief mart to which the Italians resorted. There they not only met with a favourable reception, but obtained such mercantile privileges as enabled them to carry on trade with great advantage. They were supplied both with the precious commodities of the East, and with many curious manufactures, the product of ancient arts and ingenuity which still subsisted among the Greeks. As the labour and expense of conveying the productions of India to Constantinople by that long and indirect course which I have described, rendered them extremely rare, and of an exorbitant price, the industry of the Italians discovered other methods of procuring them in greater abundance, and at an easier rate. They sometimes purchased them in Aleppo, Tripoli, and other ports on the coast of Syria, to which they were brought by a route not unknown to the ancients. They were conveyed from India by sea, up the Persian gulf, and ascending the Euphrates and Tigris, as far as Bagdat, were carried by land across the desert of Palmyra, and from thence to the towns on the Mediterranean. But, from the length of the journey, and the dangers to which the caravans were exposed, this proved always a tedious, and often a precarious, mode of conveyance. At length the soldans of Egypt, having revived the commerce with India in its ancient channel, by the Arabian gulf, the Italian merchants, notwithstanding the violent antipathy to each other with which christians and the followers of Mahomet were then possessed, repaired to Alexandria, and enduring, from the love of gain, the insolence and exactions of the Mahometans, established a lucrative trade in that port. From that period, the commercial spirit of Italy became active and enterprising. Venice, Genoa, Pisa rose, from inconsiderable towns, to be populous and wealthy cities. Their naval power increased; their vessels frequented not only all the ports in the Mediterranean, but, venturing sometimes beyond the Straits, visited the maritime towns of Spain, France, the Low Countries, and England; and, by distributing their commodities over Europe, began to communicate to its various nations some taste for the valuable productions of the East, as well as some ideas of manufactures and arts, which were then unknown beyond the precincts of Italy.

Their progress favoured by the Crusades;

While the cities of Italy were thus advancing in their career of improvement, an event happened, the most ex-

h Ramusio, vol. i. p. 372. F.

i View of the State of Europe, sect. I.

traordinary, perhaps, in the history of mankind, which, instead of retarding the commercial progress of the Italians, rendered it more rapid. The martial spirit of the Europeans, heightened and inflamed by religious zeal, prompted them to attempt the deliverance of the Holy Land from the dominion of infidels. Vast armies, composed of all the nations in Europe, marched towards Asia, upon this wild enterprise. The Genoese, the Pisans, and Venetians, furnished the transports which carried them thither. They supplied them with provisions and military stores. Besides the immense sums which they received on this account, they obtained commercial privileges and establishments, of great consequence in the settlements which the crusaders made in Palestine, and in other provinces of Asia. From those sources, prodigious wealth flowed into the cities which I have mentioned. This was accompanied with a proportional increase of power; and, by the end of the Holy War, Venice, in particular, became a great maritime state, possessing an extensive commerce, and ample territories.[k] Italy was not the only country in which the Crusades contributed to revive and diffuse such a spirit as prepared Europe for future discoveries. By their expeditions into Asia, the other European nations became well acquainted with remote regions, which formerly they knew only by name, or by the reports of ignorant and credulous pilgrims. They had an opportunity of observing the manners, the arts, and the accommodations of people more polished than themselves. This intercourse between the East and West subsisted almost two centuries. The adventurers who returned from Asia communicated to their countrymen the ideas which they had acquired, and the habits of life they had contracted by visiting more refined nations. The Europeans began to be sensible of wants, with which they were formerly unacquainted: new desires were excited; and such a taste for the commodities and arts of other countries gradually spread among them, that they not only encouraged the resort of foreigners to their harbours, but began to perceive the advantage and necessity of applying to commerce themselves.[l]

by the discoveries of travellers by land.

This communication, which was opened between Europe and the western provinces of Asia, encouraged several persons to advance far beyond the countries in which the crusaders carried on their operations, and to travel by land into the more remote and opulent regions of the East. The wild fanaticism which seems, at that period, to have mingled in all the schemes of individuals, no less than in all the counsels of nations, first incited men to enter upon those long and dangerous peregrinations. They were afterwards undertaken from prospects of commercial advantage, or from motives of mere curiosity. Benjamin, a Jew of Tudela, in the kingdom of Navarre, possessed with a superstitious veneration for the law of Moses, and solicitous to visit his countrymen in the East, whom he hoped to find in such a state of power and opulence as might redound to the honour of his sect, set out from Spain in the year 1160, and travelling by land to Constantinople, proceeded through the countries to the north of the Euxine and Caspian seas, as far as Chinese Tartary. From thence he took his route towards the south, and after traversing various provinces of the further India, he embarked on the Indian ocean, visited several of its islands, and returned at the end of thirteen years by the way of Egypt, to Europe, with much information concerning a large district of the globe, altogether unknown at that time to the western world.[m] The zeal of the head of the christian church co-operated with the superstition of Benjamin the Jew, in discovering the interior and remote provinces of Asia.

1246. All Christendom having been alarmed with accounts of the rapid progress of the Tartar arms under Zengis Khan, Innocent IV. who entertained most exalted ideas concerning the plenitude of his own power, and the submission due to his injunctions, sent father John de Plano Carpini, at the head of a mission of Franciscan monks, and father Ascolino, at the head of another of Dominicans, to enjoin Kayuk Khan, the grandson of Zengis, who was then at the head of the Tartar empire, to embrace the christian faith, and to desist from desolating the earth by his arms. The haughty descendant of the greatest conqueror Asia had ever beheld, astonished at this strange mandate from an Italian priest, whose name and jurisdiction were alike unknown to him, received it with the contempt which it merited, though he dismissed the mendicants who delivered it with impunity. But, as they had penetrated into the country by different routes, and followed for some time the Tartar camps, which were always in motion, they had opportunity of visiting a great part of Asia. Carpini, who proceeded by the way of Poland and Russia, travelled through its northern provinces as far as the extremities of Thibet. Ascolino, who seems to have landed somewhere in Syria, advanced through its southern provinces, into the interior parts of Persia.[n]

1253. Not long after St. Louis of France contributed further towards extending the knowledge which the Europeans had begun to acquire of those distant regions. Some designing impostor, who took advantage of the slender acquaintance of Christendom with the state and character of the Asiatic nations, having informed him that a powerful khan of the Tartars had embraced the christian faith, the monarch listened to the tale with pious credulity, and instantly resolved to send ambassadors to this illustrious convert, with a view of enticing him to attack their common enemy the Saracens in one quarter, while he fell upon them in another. As monks were the only persons in

k Essai de l'Histoire du Commerce de Venise, p. 52, &c.
l View of the State of Europe, sect. i.

m Bergeron, Recueil des Voyages, &c. tom. i. p. 1.
n Hakluyt, i. 21. Bergeron, tom. i.

that age who possessed such a degree of knowledge as qualified them for a service of this kind, he employed in it father Andrew, a Jacobine, who was followed by father William de Rubruquis, a Franciscan. With respect to the progress of the former, there is no memorial extant. The journal of the latter has been published. He was admitted into the presence of Mangu, the third khan in succession from Zengis, and made a circuit through the interior parts of Asia, more extensive than that of any European who had hitherto explored them.[o]

To those travellers, whom religious zeal sent forth to visit Asia, succeeded others who ventured into remote countries, from the prospect of commercial advantage, or from motives of mere curiosity, The first and most eminent of these was Marco Polo, a Venetian of a noble family. Having engaged early in trade, according to the custom of his country, his aspiring mind wished for a sphere of activity more extensive than was afforded to it by the established traffic carried on in those ports of Europe and Asia, which the Venetians frequented. This prompted him to travel into unknown countries, in expectation of opening a commercial intercourse with them, more suited to the sanguine ideas and hopes of a young adventurer. 1265.

As his father had already carried some European commodities to the court of the Great Khan of the Tartars, and had disposed of them to advantage, he resorted thither. Under the protection of Kublay Khan, the most powerful of all the successors of Zengis, he continued his mercantile peregrinations in Asia upwards of twenty-six years; and, during that time, advanced towards the east, far beyond the utmost boundaries to which any European traveller had ever proceeded. Instead of following the course of Carpini and Rubruquis, along the vast unpeopled plains of Tartary, he passed through the chief trading cities in the more cultivated parts of Asia, and penetrated to Cambalu, or Peking, the capital of the great kingdom of Cathay, or China, subject at that time to the successors of Zengis. He made more than one voyage on the Indian ocean; he traded in many of the islands, from which Europe had long received spiceries and other commodities, which it held in high estimation, though unacquainted with the particular countries to which it was indebted for those precious productions; and he obtained information concerning several countries which he did not visit in person, particularly the island Zipangri, probably the same now known by the name of Japan.[p] On his return, he astonished his contemporaries with his descriptions of vast regions, whose names had never been heard of in Europe, and with such pompous accounts of their fertility, their populousness, their opulence, the variety of their manufactures, and the extent of their trade, as rose far above the conception of an uninformed age.

About half a century after Marco Polo, sir John Mandeville, an Englishman, encouraged by his example, visited most of the countries in the East which he had described, and like him, published an account of them.[q] The narrations of those early travellers abound with many wild incoherent tales, concerning giants, enchanters, and monsters. But they were not, from that circumstance, less acceptable to an ignorant age, which delighted in what was marvellous. The wonders which they told, mostly on hearsay, filled the multitude with admiration. The facts which they related from their own observation attracted the attention of the more discerning. The former, which may be considered as the popular traditions and fables of the countries through which they had passed, were gradually disregarded as Europe advanced in knowledge. The latter, however incredible some of them may have appeared in their own time, have been confirmed by the observations of modern travellers. By means of both, however, the curiosity of mankind was excited with respect to the remote parts of the earth; their ideas were enlarged, and they were not only insensibly disposed to attempt new discoveries, but received such information as directed to that particular course in which these were afterwards carried on. 1322.

While this spirit was gradually forming in Europe, a fortunate discovery was made, which contributed more than all the efforts and ingenuity of preceding ages, to improve and to extend navigation. That wonderful property of the magnet, by which it communicates such virtue to a needle or slender rod of iron, as to point towards the poles of the earth, was observed. The use which might be made of this in directing navigation was immediately perceived. That valuable but now familiar instrument, the *mariner's compass*, was constructed. When, by means of it, navigators found that, at all seasons, and in every place, they could discover the north and south with so much ease and accuracy, it became no longer necessary to depend merely on the light of the stars and the observation of the sea coast. They gradually abandoned their ancient timid and lingering course along the shore, ventured boldly into the ocean, and, relying on this new guide, could steer in the darkest night, and under the most cloudy sky, with a security and precision hitherto unknown. The compass may be said to have opened to man the dominion of the sea, and to have put him in full possession of the earth, by enabling him to visit every part of it. Flavio Gioia, a citizen of Amalfi, a town of considerable trade in the kingdom of Naples, was the author of this great discovery, about the year one thousand three hundred and two. It hath been often the fate of those illustrious benefactors of mankind, who have enriched science and improved the arts by their inven- and by the invention of the mariner's compass.

o Hakl. i. 71. Recueil des Voyages par Bergeron, tom. i.
p Viaggi di Marco Polo. Ramus. ii. 2. Bergeron, tom. ii.
q Voyages and Travels, by Sir John Mandeville.

tions, to derive more reputation than benefit from the happy efforts of their genius. But the lot of Gioia has been still more cruel; through the inattention or ignorance of contemporary historians, he has been defrauded even of the fame to which he had such a just title. We receive from them no information with respect to his profession, his character, the precise time when he made this important discovery, or the accidents and inquiries which led to it. The knowledge of this event, though productive of greater effects than any recorded in the annals of the human race, is transmitted to us without any of those circumstances which can gratify the curiosity that it naturally awakens.[r] But though the use of the compass might enable the Italians to perform the short voyages to which they were accustomed, with greater security and expedition, its influence was not so sudden or extensive, as immediately to render navigation adventurous, and to excite a spirit of discovery. Many causes combined in preventing this beneficial invention from producing its full effect instantaneously. Men relinquish ancient habits slowly, and with reluctance. They are averse to new experiments, and venture upon them with timidity. The commercial jealousy of the Italians, it is probable, laboured to conceal the happy discovery of their countryman from other nations. The art of steering by the compass with such skill and accuracy as to inspire a full confidence in its direction, was acquired gradually. Sailors, unaccustomed to quit sight of land, durst not launch out at once and commit themselves to unknown seas. Accordingly, near half a century elapsed from the time of Gioia's discovery, before navigators ventured into any seas which they had not been accustomed to frequent.

Some appearance of a bolder spirit in navigation.

The first appearance of a bolder spirit may be dated from the voyages of the Spaniards to the Canary or Fortunate Islands. By what accident they were led to the discovery of those small isles, which lie near five hundred miles from the Spanish coast, and above a hundred and fifty miles from the coast of Africa, contemporary writers have not explained. But, about the middle of the fourteenth century, the people of all the different kingdoms into which Spain was then divided, were accustomed to make piratical excursions thither, in order to plunder the inhabitants, or to carry them off as slaves. Clement VI. in virtue of the right claimed by the holy see, to dispose of all countries possessed by infidels, erected those isles into a kingdom, in the year one thousand three hundred and forty-four, and conferred it on Lewis de la Cerda, descended from the royal family of Castile. But that unfortunate prince, destitute of power to assert his nominal title, having never visited the Canaries, John de Bethencourt, a Norman baron, obtained a grant of them from Henry III. of Castile.[s] Bethencourt, with the valour and good fortune which distinguished the adventurers of his country, attempted and effected the conquest; and the possession of the Canaries remained for some time in his family, as a fief held of the crown of Castile. Previous to this expedition of Bethencourt, his countrymen settled in Normandy are said to have visited the coast of Africa, and to have proceeded far to the south of the Canary Islands. 1365. But their voyages thither seem not to have been undertaken in consequence of any public or regular plan for extending navigation and attempting new discoveries. They were either excursions suggested by that roving piratical spirit, which descended to the Normans from their ancestors, or the commercial enterprises of private merchants, which attracted so little notice, that hardly any memorial of them is to be found in contemporary authors. In a general survey of the progress of discovery, it is sufficient to have mentioned this event; and leaving it among those of dubious existence, or of small importance, we may conclude, that though much additional information concerning the remote regions of the East had been received by travellers who visited them by land, navigation, at the beginning of the fifteenth century, had not advanced beyond the state to which it had attained before the downfall of the Roman empire.

First regular plan of discovery, formed by the Portuguese.

At length the period arrived, when Providence decreed that men were to pass the limits within which they had been so long confined, and open to themselves a more ample field wherein to display their talents, their enterprise, and courage. The first considerable efforts towards this were not made by any of the more powerful states of Europe, or by those who had applied to navigation with the greatest assiduity and success. The glory of leading the way in this new career, was reserved for Portugal, one of the smallest and least powerful of the European kingdoms. As the attempts of the Portuguese to acquire the knowledge of those parts of the globe with which mankind were then unacquainted, not only improved and extended the art of navigation, but roused such a spirit of curiosity and enterprise, as led to the discovery of the New World, of which I propose to write the history, it is necessary to take a full view of the rise, the progress, and success of their various naval operations. It was in this school that the discoverer of America was trained; and unless we trace the steps by which his instructors and guides advanced, it will be impossible to comprehend the circumstances which suggested the idea or facilitated the execution of his great design.

Circumstances which led to this.

Various circumstances prompted the Portuguese to exert their activity in this new direction, and enabled them to accomplish undertakings apparently superior to the natural

r Collinas et Trombellus de Actis Nauticæ Inventore. Instit. Acad. Bonon. tom. ii. part iii. p. 372.

s Viera y Clavijo Notic. de la Histor. de Canaria, i. 268, &c. Glas. Hist. c. 1.

force of their monarchy. The kings of Portugal, having driven the Moors out of their dominions, had acquired power, as well as glory, by the success of their arms against the infidels. By their victories over them, they had extended the royal authority beyond the narrow limits within which it was originally circumscribed in Portugal, as well as in other feudal kingdoms. They had the command of the national force, could rouse it to act with united vigour, and, after the expulsion of the Moors, could employ it without dread of interruption from any domestic enemy. By the perpetual hostilities carried on for several centuries against the Mahometans, the martial and adventurous spirit which distinguished all the European nations during the middle ages, was improved and heightened among the Portuguese. A fierce civil war towards the close of the fourteenth century, occasioned by a disputed succession, augmented the military ardour of the nation, and formed or called forth men of such active and daring genius, as are fit for bold undertakings. The situation of the kingdom, bounded on every side by the dominions of a more powerful neighbour, did not afford free scope to the activity of the Portuguese by land, as the strength of their monarchy was no match for that of Castile. But Portugal was a maritime state, in which there were many commodious harbours; the people had begun to make some progress in the knowledge and practice of navigation; and the sea was open to them, presenting the only field of enterprise in which they could distinguish themselves.

First attempt.

Such was the state of Portugal, and such the disposition of the people, when John I., surnamed the Bastard, obtained secure possession of the crown by the peace concluded with Castile, in the year one thousand four hundred and eleven. He was a prince of great merit, who, by superior courage and abilities, had opened his way to a throne, which of right did not belong to him. He instantly perceived that it would be impossible to preserve public order, or domestic tranquillity, without finding some employment for the restless spirit of his subjects. With this view he assembled a numerous fleet at Lisbon, composed of all the ships which he could fit out in his own kingdom, and of many hired from foreigners. This great armament was destined to attack the Moors settled on the coast of Barbary. While it was equipping, a few vessels were appointed to sail along the western shore of Africa bounded by the Atlantic ocean, and to discover the unknown countries situated there. From this inconsiderable attempt, we may date the commencement of that spirit of discovery, which opened the barriers that had so long shut out mankind from the knowledge of one half of the terrestrial globe.

1412.

At the time when John sent forth these ships on this new voyage, the art of navigation was still very imperfect. Though Africa lay so near to Portugal, and the fertility of the countries already known on that continent invited men to explore it more fully, the Portuguese had never ventured to sail beyond Cape *Non*. That promontory, as its name imports, was hitherto considered as a boundary which could not be passed. But the nations of Europe had now acquired as much knowledge as imboldened them to disregard the prejudices and to correct the errors of their ancestors. The long reign of ignorance, the constant enemy of every curious inquiry, and of every new undertaking, was approaching to its period. The light of science began to dawn. The works of the ancient Greeks and Romans began to be read with admiration and profit. The sciences cultivated by the Arabians were introduced into Europe by the Moors settled in Spain and Portugal, and by the Jews, who were very numerous in both these kingdoms. Geometry, astronomy, and geography, the sciences on which the art of navigation is founded, became objects of studious attention. The memory of the discoveries made by the ancients was revived, and the progress of their navigation and commerce began to be traced. Some of the causes which have obstructed the cultivation of science in Portugal, during this century and the last, did not exist, or did not operate in the same manner, in the fifteenth century;[t] and the Portuguese, at that period, seem to have kept pace with other nations on this side of the Alps in literary pursuits.

Its success.

As the genius of the age favoured the execution of that new undertaking, to which the peculiar state of the country invited the Portuguese, it proved successful. The vessels sent on the discovery doubled that formidable Cape, which had terminated the progress of former navigators, and proceeded a hundred and sixty miles beyond it, to Cape Bojador. As its rocky cliffs, which stretched a considerable way into the Atlantic, appeared more dreadful than the promontory which they had passed, the Portuguese commanders durst not attempt to sail round it, but returned to Lisbon, more satisfied with having advanced so far, than ashamed of having ventured no further.

Prince Henry the director of the Portuguese discoveries. 1417.

Inconsiderable as this voyage was, it increased the passion for discovery, which began to arise in Portugal. The fortunate issue of the king's expedition against the Moors of Barbary, added strength to that spirit in the nation, and pushed it on to new undertakings. In order to render these successful, it was necessary that they should be conducted by a person who possessed abilities capable of discerning what was attainable, who enjoyed leisure to form a regular system for prosecuting discovery, and who was animated with ardour that would persevere in spite of obstacles and repulses. Happily for Portugal, she found all those qualities in Henry duke of Viseo, the fourth son of king John by Philippa of Lancaster, sister of Henry IV. king

t See Note IX.

of England. That prince, in his early youth, having accompanied his father in his expedition to Barbary, distinguished himself by many deeds of valour. To the martial spirit, which was the characteristic of every man of noble birth at that time, he added all the accomplishments of a more enlightened and polished age. He cultivated the arts and sciences, which were then unknown and despised by persons of his rank. He applied with peculiar fondness to the study of geography; and by the instruction of able masters, as well as by the accounts of travellers, he early acquired such knowledge of the habitable globe, as discovered the great probability of finding new and opulent countries, by sailing along the coast of Africa. Such an object was formed to awaken the enthusiasm and ardour of a youthful mind, and he espoused with the utmost zeal the patronage of a design which might prove as beneficial, as it appeared to be splendid and honourable. In order that he might pursue this great scheme without interruption, he retired from court immediately after his return from Africa, and fixed his residence at Sagres, near Cape St. Vincent, where the prospect of the Atlantic ocean invited his thoughts continually towards his favourite project, and encouraged him to execute it. In this retreat he was attended by some of the most learned men in his country, who aided him in his researches. He applied for information to the Moors of Barbary, who were accustomed to travel by land into the interior provinces of Africa, in quest of ivory, gold-dust, and other rich commodities. He consulted the Jews settled in Portugal. By promises, rewards, and marks of respect, he allured into his service several persons, foreigners as well as Portuguese, who were eminent for their skill in navigation. In taking those preparatory steps, the great abilities of the prince were seconded by his private virtues. His integrity, his affability, his respect for religion, his zeal for the honour of his country, engaged persons of all ranks to applaud his design, and to favour the execution of it. His schemes were allowed, by the greater part of his countrymen, to proceed neither from ambition nor the desire of wealth, but to flow from the warm benevolence of a heart eager to promote the happiness of mankind, and which justly entitled him to assume a motto for his device, that described the quality by which he wished to be distinguished, *the talent of doing good.*

Discovery of Porto Santo. 1418.

His first effort, as is usual at the commencement of any new undertaking, was extremely inconsiderable. He fitted out a single ship, and giving the command of it to John Gonzalez Zarco and Tristan Vaz, two gentlemen of his household, who voluntarily offered to conduct the enterprise, he instructed them to use their utmost efforts to double Cape Bojador, and thence to steer towards the south. They, according to the mode of navigation which still prevailed, held their course along the shore; and by following that direction, they must have encountered almost insuperable difficulties in attempting to pass Cape Bojador. But fortune came in aid to their want of skill, and prevented the voyage from being altogether fruitless. A sudden squall of wind arose, drove them out to sea, and when they expected every moment to perish, landed them on an unknown island, which from their happy escape they named *Porto Santo.* In the infancy of navigation, the discovery of this small island appeared a matter of such moment, that they instantly returned to Portugal with the good tidings, and were received by Henry with the applause and honour due to fortunate adventurers. This faint dawn of success filled a mind ardent in the pursuit of a favourite object with such sanguine hopes as were sufficient incitements to proceed. Next year Henry 1419.
sent out three ships under the same commanders, to whom he joined Bartholomew Perestrello, in order to take possession of the island which they had discovered. When they began to settle in Porto Santo, they observed towards the south a fixed spot in the horizon like a small black cloud. By degrees they were led to of Madeira:
conjecture that it might be land, and steering towards it, they arrived at a considerable island, uninhabited and covered with wood, which on that account they called *Madeira.*[u] As it was Henry's chief object to render his discoveries useful to his country, he immediately equipped a fleet to carry a colony of Portuguese to these 1420.
islands. By his provident care, they were furnished not only with the seeds, plants, and domestic animals common in Europe; but as he foresaw that the warmth of the climate and fertility of the soil would prove favourable to the rearing of other productions, he procured slips of the vine from the island of Cyprus, the rich wines of which were then in great request, and plants of the sugar-cane from Sicily, into which it had been lately introduced. These throve so prosperously in this new country, that the benefit of cultivating them was immediately perceived, and the sugar and wine of Madeira quickly became articles of some consequence in the commerce of Portugal.[x]

As soon as the advantages derived from this first settlement to the west of the European continent began to be felt, the spirit of discovery appeared less chimerical, and became more adventurous. By their voyages to Madeira, the Portuguese were gradually accustomed to a bolder navigation, and, instead of creeping servilely along the coast, ventured into the open sea. In consequence of taking this course, Gilianez, who commanded one of Prince Henry's ships, doubled Cape Bojador, Double Cape Bojador. 1423.
the boundary of the Portuguese navigation upwards of twenty years, and which had hitherto been deemed impassable. This

u Historical Relation of the first Discovery of Madeira, translated from the Portuguese of Fran. Alcafarana, p. 15, &c.

x Lud. Guicciardini Descritt. de Paesi Bassi, p. 180, 181.

successful voyage, which the ignorance of the age placed on a level with the most famous exploits recorded in history, opened a new sphere to navigation, as it discovered the vast continent of Africa, still washed by the Atlantic ocean, and stretching towards the south. Part of this was soon explored; the Portuguese advanced within the tropics, and in the space of a few years they discovered the river Senegal, and all the coast extending from Cape Blanco to Cape de Verd.

Advance within the tropics.

Hitherto the Portuguese had been guided in their discoveries, or encouraged to attempt them, by the light and information which they received from the works of the ancient mathematicians and geographers. But when they began to enter the torrid zone, the notion which prevailed among the ancients, that the heat, which reigned perpetually there, was so excessive as to render it uninhabitable, deterred them, for some time, from proceeding. Their own observations, when they first ventured into this unknown and formidable region, tended to confirm the opinion of antiquity concerning the violent operation of the direct rays of the sun. As far as the river Senegal, the Portuguese had found the coast of Africa inhabited by people nearly resembling the Moors of Barbary. When they advanced to the south of that river, the human form seemed to put on a new appearance. They beheld men with skins black as ebony, with short curled hair, flat noses, thick lips, and all the peculiar features which are now known to distinguish the race of negroes. This surprising alteration they naturally attributed to the influence of heat, and if they should advance nearer to the line, they began to dread that its effects would be still more violent. Those dangers were exaggerated; and many other objections against attempting further discoveries were proposed by some of the grandees, who, from ignorance, from envy, or from that cold timid prudence which rejects whatever has the air of novelty or enterprise, had hitherto condemned all prince Henry's schemes. They represented, that it was altogether chimerical to expect any advantage from countries situated in that region which the wisdom and experience of antiquity had pronounced to be unfit for the habitation of men; that their forefathers, satisfied with cultivating the territory which Providence had allotted them, did not waste the strength of the kingdom by fruitless projects, in quest of new settlements; that Portugal was already exhausted by the expense of attempts to discover lands, which either did not exist, or which nature destined to remain unknown; and was drained of men, who might have been employed in undertakings attended with more certain success, and productive of greater benefit. But neither their appeal to the authority of the ancients, nor their reasonings concerning the interests of Portugal, made any impression upon the determined philosophic mind of prince Henry. The discoveries which he had already made convinced him that the ancients had little more than a conjectural knowledge of the torrid zone. He was no less satisfied that the political arguments of his opponents, with respect to the interest of Portugal, were malevolent and ill founded. In those sentiments he was strenuously supported by his brother Pedro, who governed the kingdom as guardian of their nephew Alphonso V., who had succeeded to the throne during his minority; and, instead of slackening his efforts, Henry continued to pursue his discoveries with fresh ardour.

Astonished at what they discovered there.

1438.

But, in order to silence all the murmurs of opposition, he endeavoured to obtain the sanction of the highest authority in favour of his operations. With this view he applied to the pope, and represented, in pompous terms, the pious and unwearied zeal with which he had exerted himself during twenty years, in discovering unknown countries, the wretched inhabitants of which were utter strangers to true religion, wandering in heathen darkness, or led astray by the delusions of Mahomet. He besought the holy father, to whom, as the vicar of Christ, all the kingdoms of the earth were subject, to confer on the crown of Portugal a right to all the countries possessed by infidels, which should be discovered by the industry of its subjects, and subdued by the force of its arms. He entreated him to enjoin all christian powers, under the highest penalties, not to molest Portugal while engaged in this laudable enterprise, and to prohibit them from settling in any of the countries which the Portuguese should discover. He promised that, in all their expeditions, it should be the chief object of his countrymen to spread the knowledge of the christian religion, to establish the authority of the holy see, and to increase the flock of the universal pastor. As it was by improving with dexterity every favourable conjuncture for acquiring new powers, that the court of Rome had gradually extended its usurpations, Eugene IV. the pontiff to whom this application was made, eagerly seized the opportunity which now presented itself. He instantly perceived, that, by complying with prince Henry's request, he might exercise a prerogative no less flattering in its own nature, than likely to prove beneficial in its consequences. A bull was accordingly issued, in which, after applauding in the strongest terms the past efforts of the Portuguese, and exhorting them to proceed in that laudable career on which they had entered, he granted them an exclusive right to all the countries which they should discover, from Cape Non to the continent of India.

Papal grant to Portugal of what countries it should discover.

Extravagant as this donation, comprehending such a large portion of the habitable globe, would now appear, even in catholic countries, no person in the fifteenth century doubted that the pope, in the plenitude of his apostolic power, had a right to confer it. Prince Henry was soon sensible of the advantages which he derived from this transaction. His schemes were authorized and sanctified by the

bull approving of them. The spirit of discovery was connected with zeal for religion, which, in that age, was a principle of such activity and vigour, as to influence the conduct of nations. All christian princes were deterred from intruding into those countries which the Portuguese had discovered, or from interrupting the progress of their navigation and conquests.[y]

Fame and progress of the Portuguese discoveries.

The fame of the Portuguese voyages soon spread over Europe. Men long accustomed to circumscribe the activity and knowledge of the human mind within the limits to which they had been hitherto confined, were astonished to behold the sphere of navigation so suddenly enlarged, and a prospect opened of visiting regions of the globe, the existence of which was unknown in former times. The learned and speculative reasoned and formed theories concerning those unexpected discoveries. The vulgar inquired and wondered; while enterprising adventurers crowded from every part of Europe, soliciting prince Henry to employ them in this honourable service. Many Venetians and Genoese, in particular, who were, at that time, superior to all other nations in the science of naval affairs, entered aboard the Portuguese ships, and acquired a more perfect and extensive knowledge of their profession in that new school of navigation. In emulation of these foreigners, the Portuguese exerted their own talents. The nation seconded the designs of the prince. Private merchants formed companies, with a view to search for unknown countries. The Cape de Verd islands, which lie off the promontory of that name, were discovered, and soon after the isles called Azores. As the former of these are above three hundred miles from the African coast, and the latter nine hundred miles from any continent, it is evident, by their venturing so boldly into the open seas, that the Portuguese had, by this time, improved greatly in the art of navigation.

1446.

1449.

Death of prince Henry. 1463.

While the passion for engaging in new undertakings was thus warm and active, it received an unfortunate check by the death of prince Henry, whose superior knowledge had hitherto directed all the operations of the discoverers, and whose patronage had encouraged and protected them. But notwithstanding all the advantages which they derived from these, the Portuguese, during his life, did not advance, in their utmost progress towards the south, within five degrees of the equinoctial line; and after their continued exertions for half a century, hardly fifteen hundred miles of the coast of Africa were discovered. To an age acquainted with the efforts of navigation in its state of maturity and improvement, those essays of its early years must necessarily appear feeble and unskilful. But inconsiderable as they may be deemed, they were sufficient to turn the curiosity of the European nations into a new channel, to excite an enterprising spirit, and to point the way to future discoveries.

From 1412 to 1463.

The passion for discovery languishes for some time.

Alphonso, who possessed the throne of Portugal at the time of prince Henry's death, was so much engaged in supporting his own pretensions to the crown of Castile, or in carrying on his expeditions against the Moors in Barbary, that the force of his kingdom being exerted in other operations, he could not prosecute the discoveries in Africa with ardour. He committed the conduct of them to Fernando Gomez, a merchant in Lisbon, to whom he granted an exclusive right of commerce with all the countries of which prince Henry had taken possession. Under the restraint and oppression of a monopoly, the spirit of discovery languished. It ceased to be a national object, and became the concern of a private man, more attentive to his own gain, than to the glory of his country. Some progress, however, was made. The Portuguese ventured at length to cross the line, and, to their astonishment, found that region of the torrid zone, which was supposed to be scorched with intolerable heat, to be not only habitable, but populous and fertile.

1471.

1481. Revives with additional ardour.

John II. who succeeded his father Alphonso, possessed talents capable both of forming and executing great designs. As part of his revenues, while prince, had arisen from duties on the trade with the newly-discovered countries, this naturally turned his attention towards them, and satisfied him with respect to their utility and importance. In proportion as his knowledge of these countries extended, the possession of them appeared to be of greater consequence. While the Portuguese proceeded along the coast of Africa, from Cape Non to the river of Senegal, they found all that extensive tract to be sandy, barren, and thinly inhabited by a wretched people, professing the Mahometan religion, and subject to the vast empire of Morocco. But to the south of that river, the power and religion of the Mahometans were unknown. The country was divided into small independent principalities, the population was considerable, the soil fertile,[z] and the Portuguese soon discovered that it produced ivory, rich gums, gold, and other valuable commodities. By the acquisition of these, commerce was enlarged, and became more adventurous. Men, animated and rendered active by the certain prospect of gain, pursued discovery with greater eagerness, than when they were excited only by curiosity and hope.

Its progress.

This spirit derived no small reinforcement of vigour from the countenance of such a monarch as John. Declaring him-

y See Note X.

z Navigatio Aloysii Cadamusti apud Novum Orbem Grynæi, p. 2, 18. Navigat. all Isola di San Tome per un Pilotto Portug. Ramusio, i. 115.

self the patron of every attempt towards discovery, he promoted it with all the ardour of his grand-uncle prince Henry, and with superior power. The effects of this were immediately felt. A powerful fleet was fitted out, which, after discovering the kingdoms of Benin and Congo, advanced above fifteen hundred miles beyond the line, and the Portuguese, for the first time, beheld a new heaven, and observed the stars of another hemisphere. John was not only solicitous to discover, but attentive to secure, the possession of those countries. He built forts on the coast of Guinea; he sent out colonies to settle there; he established a commercial intercourse with the more powerful kingdoms; he endeavoured to render such as were feeble or divided, tributary to the crown of Portugal. Some of the petty princes voluntarily acknowledged themselves his vassals. Others were compelled to do so by force of arms. A regular and well-digested system was formed with respect to this new object of policy, and by firmly adhering to it, the Portuguese power and commerce in Africa were established upon a solid foundation.

1484.

Hopes of discovering a new route to the East Indies.

By their constant intercourse with the people of Africa, the Portuguese gradually acquired some knowledge of those parts of that country which they had not visited. The information which they received from the natives, added to what they had observed in their own voyages, began to open prospects more extensive, and to suggest the idea of schemes more important, than those which had hitherto allured and occupied them. They had detected the error of the ancients concerning the nature of the torrid zone. They found as they proceeded southwards, that the continent of Africa, instead of extending in breadth, according to the doctrine of Ptolemy,[a] at that time the oracle and guide of the learned in the science of geography, appeared sensibly to contract itself, and to bend toward the east. This induced them to give credit to the accounts of the ancient Phenician voyages round Africa, which had long been deemed fabulous, and led them to conceive hopes, that, by following the same route, they might arrive at the East Indies, and engross that commerce which has been the source of wealth and power to every nation possessed of it. The comprehensive genius of prince Henry, as we may conjecture from the words of the pope's bull, had early formed some idea of this navigation. But though his countrymen, at that period, were incapable of conceiving the extent of his views and schemes, all the Portuguese mathematicians and pilots now concurred in representing them as well founded and practicable. The king entered with warmth into their sentiments, and began to concert measures for this arduous and important voyage.

Before his preparations for this expedition were finished, accounts were transmitted from Africa, that various nations along the coast had mentioned a mighty kingdom situated on their continent, at a great distance towards the East, the king of which, according to their description, professed the christian religion. The Portuguese monarch immediately concluded, that this must be the emperor of Abyssinia, to whom the Europeans, seduced by a mistake of Rubruquis, Marco Polo, and other travellers to the East, absurdly gave the name of Prester or Presbyter John; and, as he hoped to receive information and assistance from a christian prince, in prosecuting a scheme that tended to propagate their common faith, he resolved to open, if possible, some intercourse with his court. With this view, he made choice of Pedro de Covillam and Alphonso de Payva, who were perfect masters of the Arabic language, and sent them into the East to search for the residence of this unknown potentate, and to make him proffers of friendship. They had in charge likewise to procure whatever intelligence the nations which they visited could supply, with respect to the trade of India, and the course of navigation to that continent.[b]

Schemes for accomplishing this.

While John made this new attempt by land, to obtain some knowledge of the country which he wished so ardently to discover, he did not neglect the prosecution of this great design by sea. The conduct of a voyage for this purpose, the most arduous and important which the Portuguese had ever projected, was committed to Bartholomew Diaz, an officer whose sagacity, experience, and fortitude rendered him equal to the undertaking. He stretched boldly towards the south, and, proceeding beyond the utmost limits to which his countrymen had hitherto advanced, discovered near a thousand miles of new country. Neither the danger to which he was exposed, by a succession of violent tempests in unknown seas, and by the frequent mutinies of his crew, nor the calamities of famine which he suffered from losing his store-ship, could deter him from prosecuting his enterprise. In recompence of his labours and perseverance, he at last descried that lofty promontory which bounds Africa to the south. But to descry it was all that he had in his power to accomplish. The violence of the winds, the shattered condition of his ships and the turbulent spirit of the sailors, compelled him to return after a voyage of sixteen months, in which he discovered a far greater extent of country than any former navigator. Diaz had called the promontory which terminated his voyage, *Cabo Tormentoso*, or the Stormy Cape; but the king, his master, as he now entertained no doubt of having found the long-desired route to India, gave it a name more inviting, and of better omen, *The Cape of Good Hope*.[c]

Voyage of Bartholomew Diaz.

1486.

Those sanguine expectations of success were con-

a Vide Nov. Orbis Tabul. Geograph. secund. Ptolemy, Amst. 1730.

c Faria y Sousa Port. Asia, vol. i. p. 26.

More certain prospects of success.

firmed by the intelligence which John received over land, in consequence of his embassy to Abyssinia. Covillam and Payva, in obedience to their master's instructions, had repaired to Grand Cairo. From that city they travelled along with a caravan of Egyptian merchants, and, embarking on the Red sea, arrived at Aden in Arabia. There they separated; Payva sailed directly towards Abyssinia; Covillam embarked for the East Indies, and, having visited Calecut, Goa, and other cities on the Malabar coast, returned to Sofala, on the east side of Africa, and thence to Grand Cairo, which Payva and he had fixed upon as their place of rendezvous. Unfortunately the former was cruelly murdered in Abyssynia, but Covillam found at Cairo two Portuguese Jews, whom John, whose provident sagacity attended to every circumstance that could facilitate the execution of his schemes, had despatched after them, in order to receive a detail of their proceedings, and to communicate to them new instructions. By one of these Jews, Covillam transmitted to Portugal a journal of his travels by sea and land, his remarks upon the trade of India, together with exact maps of the coasts on which he had touched; and from what he himself had observed, as well as from the information of skilful seamen in different countries, he concluded, that, by sailing round Africa, a passage might be found to the East Indies.[d]

Preparations for another voyage.

The happy coincidence of Covillam's opinion and report, with the discoveries which Diaz had lately made, left hardly any shadow of doubt with respect to the possibility of sailing from Europe to India. But the vast length of the voyage, and the furious storms which Diaz had encountered near the Cape of Good Hope, alarmed and intimidated the Portuguese to such a degree, although by long experience they were now become adventurous and skilful mariners, that some time was requisite to prepare their minds for this dangerous and extraordinary voyage. The courage however and authority of the monarch gradually dispelled the vain fears of his subjects, or made it necessary to conceal them. As John thought himself now upon the eve of accomplishing that great design, which had been the principal object of his reign, his earnestness in prosecuting it became so vehement, that it occupied his thoughts by day, and bereaved him of sleep through the night. While he was taking every precaution that his wisdom and experience could suggest, in order to insure the success of the expedition, which was to decide concerning the fate of his favourite project, the fame of the vast discoveries which the Portuguese had already made, the reports concerning the extraordinary intelligence which they had received from the East, and the prospect of the voyage which they now meditated, drew the attention of all the European nations,

The attention of mankind fixed upon it;

and held them in suspense and expectation. By some, the maritime skill and navigations of the Portuguese were compared with those of the Phenicians and Carthaginians, and exalted above them. Others formed conjectures concerning the revolutions which the success of the Portuguese schemes might occasion in the course of trade, and the political state of Europe. The Venetians began to be disquieted with the apprehension of losing their Indian commerce, the monopoly of which was the chief source of their power as well as opulence, and the Portuguese already enjoyed in fancy the wealth of the East. But, during this interval, which gave such scope to the various workings of curiosity, of hope, and of fear, an account was brought to Europe of an event no less extraordinary than unexpected, the discovery of a New World situated in the west; and the eyes and admiration of mankind turned immediately towards that great object.

suddenly turned to a new object.

BOOK II.

Birth and education of Columbus.

Among the foreigners whom the fame of the discoveries made by the Portuguese had allured into their service, was Christopher Colon, or Columbus, a subject of the republic of Genoa. Neither the time nor place of his birth are known with certainty;[a] but he was descended of an honourable family, though reduced to indigence by various misfortunes. His ancestors having betaken themselves for subsistence to a seafaring life, Columbus discovered in his early youth the peculiar character and talents which mark out a man for that profession. His parents, instead of thwarting this original propensity of his mind, seem to have encouraged and confirmed it, by the education which they gave him. After acquiring some knowledge of the Latin tongue, the only language in which science was taught at that time, he was instructed in geometry, cosmography, astronomy, and the art of drawing. To these he applied with such ardour and predilection, on account of their connexion with navigation, his favourite object, that he advanced with rapid proficiency in the study of them. Thus qualified, he went to sea at the age of fourteen, and began his career on that element which conducted him to so much glory. His early voyages were to those ports in the Mediterranean which his countrymen the Genoese frequented. This being a sphere too narrow for his active mind, he made an excursion to the northern seas, and visited the coasts of Iceland, to which the English and other nations had begun to resort on account of its fishery. As navigation, in every direction, was now become enterprising, he proceeded beyond that

1461.

[a] See Note XI.

island, the Thule of the ancients, and advanced several degrees within the polar circle. Having satisfied his curiosity, by a voyage which tended more to enlarge his knowledge of naval affairs than to improve his fortune, he entered into the service of a famous sea-captain, of his own name and family. This man commanded a small squadron fitted out at his own expense, and by cruising sometimes against the Mahometans, sometimes against the Venetians, the rivals of his country in trade, had acquired both wealth and reputation. With him Columbus continued for several years, no less distinguished for his courage, than for his experience as a sailor. At length, in an obstinate engagement off the coast of Portugal, with some Venetian caravals, returning richly laden from the Low Countries, the vessel on board which he served took fire, together with one of the enemy's ships, to which it was fast grappled. In this dreadful extremity his intrepidity and presence of mind did not forsake him. He threw himself into the sea, laid hold of a floating oar, and by the support of it, and his dexterity in swimming, he reached the shore, though above two leagues distant, and saved a life reserved for great undertakings.[b]

He enters into the Portuguese service.

As soon as he recovered strength for the journey, he repaired to Lisbon, where many of his countrymen were settled. They soon conceived such a favourable opinion of his merit, as well as talents, that they warmly solicited him to remain in that kingdom, where his naval skill and experience could not fail of rendering him conspicuous. To every adventurer, animated either with curiosity to visit new countries, or with ambition to distinguish himself, the Portuguese service was at that time extremely inviting. Columbus listened with a favourable ear to the advice of his friends, and having gained the esteem of a Portuguese lady, whom he married, fixed his residence in Lisbon. This alliance, instead of detaching him from a sea-faring life, contributed to enlarge the sphere of his naval knowledge, and to excite a desire of extending it still further. His wife was a daughter of Bartholomew Perestrello, one of the captains employed by prince Henry in his early navigations, and who, under his protection, had discovered and planted the islands of Porto Santo and Madeira. Columbus got possession of the journals and charts of this experienced navigator, and from them he learned the course which the Portuguese had held in making their discoveries, as well as the various circumstances which guided or encouraged them in their attempts. The study of these soothed and inflamed his favourite passion; and while he contemplated the maps, and read the descriptions of the new countries which Perestrello had seen, his impatience to visit them became irresistible. In order to indulge it, he made a voyage to Madeira, and continued during several years to trade with that island, with the Canaries, the Azores, the settlements in Guinea, and all the other places which the Portuguese had discovered on the continent of Africa.[c]

The effects of their discoveries upon him.

By the experience which Columbus acquired during such a variety of voyages, to almost every part of the globe with which, at that time, any intercourse was carried on by sea, he was now become one of the most skilful navigators in Europe. But, not satisfied with that praise, his ambition aimed at something more. The successful progress of the Portuguese navigators had awakened a spirit of curiosity and emulation, which set every man of science upon examining all the circumstances that led to the discoveries which they had made, or that afforded a prospect of succeeding in any new and bolder undertaking. The mind of Columbus, naturally inquisitive, capable of deep reflection, and turned to speculations of this kind, was so often employed in revolving the principles upon which the Portuguese had founded their schemes of discovery, and the mode in which they had carried them on, that he gradually began to form an idea of improving upon their plan, and of accomplishing discoveries which hitherto they had attempted in vain.

He forms the idea of a new course to India.

To find out a passage by sea to the East-Indies, was the great object in view at that period. From the time that the Portuguese doubled Cape de Verd, this was the point at which they aimed in all their navigations, and, in comparison with it, all their discoveries in Africa appeared inconsiderable. The fertility and riches of India had been known for many ages; its spices and other valuable commodities were in high request throughout Europe, and the vast wealth of the Venetians arising from their having engrossed this trade, had raised the envy of all nations. But how intent soever the Portuguese were upon discovering a new route to those desirable regions, they searched for it only by steering towards the south, in hopes of arriving at India, by turning to the east, after they had sailed round the further extremity of Africa. This course was still unknown, and, even if discovered, was of such immense length, that a voyage from Europe to India must have appeared, at that period, an undertaking extremely arduous, and of very uncertain issue More than half a century had been employed in advancing from Cape Non to the equator; a much longer space of time might elapse before the more extensive navigation from that to India could be accomplished. These reflections upon the uncertainty, the danger, and tediousness of the course which the Portuguese were pursuing, naturally led Columbus to consider whether a shorter and more direct passage to the East Indies might not be found out. After revolving long and seriously every circumstance suggested by his superior knowledge in the theory as well as practice of navigation; after comparing attentively the observations of modern

b Life of Columbus, c. v.

c Life of Columbus, c. iv. v.

pilots with the hints and conjectures of ancient authors, he at last concluded, that by sailing directly towards the west, across the Atlantic ocean, new countries, which probably formed a part of the great continent of India, must infallibly be discovered.

The principles on which his theory was founded.

Principles and arguments of various kinds, and derived from different sources, induced him to adopt this opinion, seemingly as chimerical as it was new and extraordinary. The spherical figure of the earth was known, and its magnitude ascertained with some degree of accuracy. From this it was evident, that the continents of Europe, Asia, and Africa, as far as they were known at that time, formed but a small portion of the terraqueous globe. It was suitable to our ideas concerning the wisdom and beneficence of the Author of Nature, to believe that the vast space still unexplored was not covered entirely by a waste unprofitable ocean, but occupied by countries fit for the habitation of man. It appeared likewise extremely probable, that the continent, on this side of the globe, was balanced by a proportional quantity of land in the other hemisphere. These conclusions concerning the existence of another continent, drawn from the figure and structure of the globe, were confirmed by the observations and conjectures of modern navigators. A Portuguese pilot, having stretched further to the west than was usual at that time, took up a piece of timber artificially carved, floating upon the sea; and as it was driven towards him by a westerly wind, he concluded that it came from some unknown land situated in that quarter. Columbus's brother-in-law had found, to the west of the Madeira Isles, a piece of timber fashioned in the same manner, and brought by the same wind; and had seen likewise canes of an enormous size floating upon the waves, which resembled those described by Ptolemy as productions peculiar to the East Indies.[d] After a course of westerly winds, trees, torn up by the roots, were often driven upon the coasts of the Azores; and at one time, the dead bodies of two men with singular features, resembling neither the inhabitants of Europe nor of Africa, were cast ashore there.

As the force of this united evidence, arising from theoretical principles and practical observations, led Columbus to expect the discovery of new countries in the western ocean, other reasons induced him to believe that these must be connected with the continent of India. Though the ancients had hardly ever penetrated into India further than the banks of the Ganges, yet some Greek authors had ventured to describe the provinces beyond that river. As men are prone, and at liberty, to magnify what is remote or unknown, they represented them as regions of an immense extent. Ctesias affirmed that India was as large as all the rest of Asia. Onesicratus, whom Pliny the naturalist follows,[e] contended that it was equal to a third part of the habitable earth. Nearchus asserted, that it would take four months to march in a straight line from one extremity of India to the other.[f] The journal of Marco Polo, who had proceeded towards the east far beyond the limits to which any European had ever advanced, seemed to confirm these exaggerated accounts of the ancients. By his magnificent descriptions of the kingdoms of *Cathay* and *Cipango*, and of many other countries, the names of which were unknown in Europe, India appeared to be a region of vast extent. From these accounts, which, however defective, were the most accurate that the people of Europe had received at that period, with respect to the remote parts of the east, Columbus drew a just conclusion. He contended, that in proportion as the continent of India stretched out towards the east, it must, in consequence of the spherical figure of the earth, approach nearer to the islands which had lately been discovered to the west of Africa; that the distance from the one to the other was probably not very considerable; and that the most direct as well as shortest course to the remote regions of the east, was to be found by sailing due west.[g] This notion concerning the vicinity of India to the western parts of our continent, was countenanced by some eminent writers among the ancients, the sanction of whose authority was necessary, in that age, to procure a favourable reception to any tenet. Aristotle thought it probable that the Columns of Hercules, or Straits of Gibraltar, were not far removed from the East Indies, and that there might be a communication by sea between them.[h] Seneca, in terms still more explicit, affirms, that, with a fair wind, one might sail from Spain to India in a few days.[i] The famous Atlantic island described by Plato, and supposed by many to be a real country, beyond which an unknown continent was situated, is represented by him as lying at no great distance from Spain. After weighing all these particulars, Columbus, in whose character the modesty and diffidence of true genius were united with the ardent enthusiasm of a projector, did not rest with such absolute assurance either upon his own arguments, or upon the authority of the ancients, as not to consult such of his contemporaries as were capable of comprehending the nature of the evidence which he produced in support of his opinion. As early as the year one thousand four hundred and seventy-four, he communicated his ideas concerning the probability of discovering new countries, by sailing westwards, to Paul, a physician of Florence, eminent for his knowledge of cosmography, and who, from the learning as well as candour which he discovers in his reply, appears to have been well entitled to the confidence which Columbus placed in him. He warmly approved of the plan, suggested several facts in confirmation of it, and encouraged Columbus to persevere in an undertaking so laud-

able, and which must redound so much to the honour of his country, and the benefit of Europe.[k]

His schemes for carrying it into execution.

To a mind less capable of forming and of executing great designs than that of Columbus, all those reasonings, and observations, and authorities, would have served only as the foundation of some plausible and fruitless theory, which might have furnished matter for ingenious discourse or fanciful conjecture. But with his sanguine and enterprising temper, speculation led directly to action. Fully satisfied himself with respect to the truth of his system, he was impatient to bring it to the test of experiment, and to set out upon a voyage of discovery. The first step towards this was to secure the patronage of some of the considerable powers in Europe, capable of undertaking such an enterprise. As long absence had not extinguished the affection which he bore to his native country, he wished that it should reap the fruits of his labours and invention. With this view,

He applies to the Genoese;

he laid his scheme before the senate of Genoa, and making his country the first tender of his service, offered to sail under the banners of the republic, in quest of the new regions which he expected to discover. But Columbus had resided for so many years in foreign parts, that his countrymen were unacquainted with his abilities and character; and though a maritime people, were so little accustomed to distant voyages, that they could form no just idea of the principles on which he founded his hopes of success. They inconsiderately rejected his proposal, as the dream of a chimerical projector, and lost for ever the opportunity of restoring their commonwealth to its ancient splendour.[l]

to the king of Portugal.

Having performed what was due to his country, Columbus was so little discouraged by the repulse which he had received, that, instead of relinquishing his undertaking, he pursued it with fresh ardour. He made his next overture to John II. king of Portugal, in whose dominions he had been long established, and whom he considered, on that account, as having the second claim to his service. Here every circumstance seemed to promise him a more favourable reception: he applied to a monarch of an enterprising genius, no incompetent judge in naval affairs, and proud of patronizing every attempt to discover new countries. His subjects were the most experienced navigators in Europe, and the least apt to be intimidated either by the novelty or boldness of any maritime expedition. In Portugal, the professional skill of Columbus, as well as his personal good qualities, were thoroughly known: and as the former rendered it probable that his scheme was not altogether visionary, the latter exempted him from the suspicion of any sinister intention in proposing it. Accordingly, the king listened to him in the most gracious manner, and referred the consideration of his plan to Diego Ortiz, bishop of Ceuta, and two Jewish physicians, eminent cosmographers, whom he was accustomed to consult in matters of this kind. As in Genoa, ignorance had opposed and disappointed Columbus; in Lisbon, he had to combat with prejudice, an enemy no less formidable. The persons, according to whose decision his scheme was to be adopted or rejected, had been the chief directors of the Portuguese navigations, and had advised to search for a passage to India, by steering a course directly opposite to that which Columbus recommended as shorter and more certain. They could not, therefore, approve of his proposal, without submitting to the double mortification of condemning their own theory, and acknowledging his superior sagacity. After teasing him with captious questions, and starting innumerable objections, with a view of betraying him into such a particular explanation of his system, as might draw from him a full discovery of its nature, they deferred passing a final judgment with respect to it. In the mean time, they conspired to rob him of the honour and advantages which he expected from the success of his scheme, advising the king to despatch a vessel secretly, in order to attempt the proposed discovery, by following exactly the course which Columbus seemed to point out. John, forgetting on this occasion the sentiments becoming a monarch, meanly adopted this perfidious counsel. But the pilot chosen to execute Columbus's plan had neither the genius nor the fortitude of its author. Contrary winds arose, no sight of approaching land appeared, his courage failed, and he returned to Lisbon, execrating the project as equally extravagant and dangerous.[m]

by whom he is deceived.

He leaves Portugal and repairs to the court of Spain.

Upon discovering this dishonourable transaction, Columbus felt the indignation natural to an ingenuous mind, and in the warmth of his resentment determined to break off all intercourse with a nation capable of such flagrant treachery. He instantly quitted the kingdom, and landed in Spain towards the close of the year one thousand four hundred and eighty-four. As he was now at liberty to court the protection of any patron, whom he could engage to approve of his plan, and to carry it into execution, he resolved to propose it in person to Ferdinand and Isabella, who at that time governed the united kingdoms of Castile and Arragon. But as he had already experienced the uncertain issue of application to kings and ministers, he took the precaution of sending into England his brother Bartholomew, to whom he had fully communicated his ideas, in order that he might negociate, at the same time, with Henry VII. who was reputed one of the most sagacious as well as opulent princes in Europe.

Sends his brother into England.

Obstacles to his success in Spain

It was not without reason that Columbus entertained doubts and fears

k Life of Columbus, c. viii.
l Herrera Hist. de las Indias Occid. dec. 1. lib. i. c. vii.

m Life of Columbus, c. xi. Herrera, dec. 1. lib. i. c. 7.

with respect to the reception of his proposals in the Spanish court. Spain was, at that juncture, engaged in a dangerous war with Granada, the last of the Moorish kingdoms in that country. The wary and suspicious temper of Ferdinand was not formed to relish bold or uncommon designs. Isabella, though more generous and enterprising, was under the influence of her husband in all her actions. The Spaniards had hitherto made no efforts to extend navigation beyond its ancient limits, and had beheld the amazing progress of discovery among their neighbours the Portuguese, without one attempt to imitate or to rival them. The war with the infidels afforded an ample field to the national activity and love of glory. Under circumstances so unfavourable, it was impossible for Columbus to make rapid progress with a nation, naturally slow and dilatory in forming all its resolutions. His character, however, was admirably adapted to that of the people whose confidence and protection he solicited. He was grave, though courteous in his deportment; circumspect in his words and actions; irreproachable in his morals; and exemplary in his attention to all the duties and functions of religion. By qualities so respectable, he not only gained many private friends, but acquired such general esteem, that, notwithstanding the plainness of his appearance, suitable to the mediocrity of his fortune, he was not considered as a mere adventurer, to whom indigence had suggested a visionary project, but was received as a person to whose propositions serious attention was due.

His scheme examined by unskilful judges;

Ferdinand and Isabella, though fully occupied by their operations against the Moors, paid so much regard to Columbus, as to remit the consideration of his plan to the queen's confessor, Ferdinand de Talavera. He consulted such of his countrymen as were supposed best qualified to decide with respect to a subject of this kind. But true science had hitherto made so little progress in Spain, that the pretended philosophers, selected to judge in a matter of such moment, did not comprehend the first principles upon which Columbus founded his conjectures and hopes. Some of them, from mistaken notions concerning the dimensions of the globe, contended that a voyage to those remote parts of the east which Columbus expected to discover, could not be performed in less than three years. Others concluded, that either he would find the ocean to be of infinite extent, according to the opinion of some ancient philosophers; or if he should persist in steering towards the west beyond a certain point, that the convex figure of the globe would prevent his return, and that he must inevitably perish, in the vain attempt to open a communication between the two opposite hemispheres, which nature had for ever disjoined. Even without deigning to enter into any particular discussion, many rejected the scheme in general, upon the credit of a maxim, under which the ignorant and unenterprising shelter themselves in every age, "That it is presumptuous in any person, to suppose that he alone possesses knowledge superior to all the rest of mankind united." They maintained, that if there were really any such countries as Columbus pretended, they could not have remained so long concealed, nor would the wisdom and sagacity of former ages have left the glory of this invention to an obscure Genoese pilot.

who made an unfavourable report concerning it.

It required all Columbus's patience and address to negociate with men capable of advancing such strange propositions. He had to contend not only with the obstinacy of ignorance, but with what is still more intractable, the pride of false knowledge. After innumerable conferences, and wasting five years in fruitless endeavours to inform and to satisfy judges so little capable of deciding with propriety, Talavera, at last, made such an unfavourable report to Ferdinand and Isabella, as induced them to acquaint Columbus, that until the war with the Moors should be brought to a period, it would be imprudent to engage in any new and extensive enterprise.

Whatever care was taken to soften the harshness of this declaration, Columbus considered it as a final rejection of his proposals. But, happily for mankind, that superiority of genius, which is capable of forming great and uncommon designs, is usually accompanied with an ardent enthusiasm, which can neither be cooled by delays, nor damped by disappointment. Columbus was of this sanguine temper. Though he felt deeply the cruel blow given to his hopes, and retired immediately from a court, where he had been amused so long with vain expectations, his confidence in the justness of his own system did not diminish, and his impatience to demonstrate the truth of it by an actual experiment, became greater than ever. Having courted the protection of sovereign states without success, he applied next to persons of inferior rank, and addressed successively the dukes of Medina Sidonia and Medina Celi, who, though subjects, were possessed of power and opulence more than equal to the enterprise which he projected. His negociations with them proved as fruitless as those in which he had been hitherto engaged; for these noblemen were either as little convinced by Columbus's arguments as their superiors, or they were afraid of alarming the jealousy and offending the pride of Ferdinand, by countenancing a scheme which he had rejected.[n]

Negociation of his brother in England.

Amid the painful sensations occasioned by such a succession of disappointments, Columbus had to sustain the additional distress of having received no accounts of his brother, whom he had sent to the court of England. In his voyage to that country, Bartholomew had been so unfortunate as to fall into the hands of pirates, who having stripped him of

n Life of Columb. c. 13. Herrera, dec. 1. lib. i. c. 7.

every thing, detained him a prisoner for several years. At length he made his escape, and arrived in London, but in such extreme indigence, that he was obliged to employ himself, during a considerable time, in drawing and selling maps, in order to pick up as much money as would purchase a decent dress, in which he might venture to appear at court. He then laid before the king the proposals with which he had been intrusted by his brother, and, notwithstanding Henry's excessive caution and parsimony, which rendered him averse to new or extensive undertakings, he received Columbus's overtures with more approbation than any monarch to whom they had hitherto been presented.

Columbus has some prospects of encouragement in Spain.

Meanwhile, Columbus being unacquainted with his brother's fate, and having now no prospect of encouragement in Spain, resolved to visit the court of England in person, in hopes of meeting with a more favourable reception there. He had already made preparations for this purpose, and taken measures for the disposal of his children during his absence, when Juan Perez, the guardian of the monastery of Rabida, near Palos, in which they had been educated, earnestly solicited him to defer his journey for a short time. Perez was a man of considerable learning, and of some credit with queen Isabella, to whom he was known personally. He was warmly attached to Columbus, with whose abilities as well as integrity he had many opportunities of being acquainted. Prompted by curiosity or by friendship, he entered upon an accurate examination of his system, in conjunction with a physician settled in the neighbourhood, who was a considerable proficient in mathematical knowledge. This investigation satisfied them so thoroughly, with respect to the solidity of the principles on which Columbus founded his opinion, and the probability of success in executing the plan which he proposed, that Perez, in order to prevent his country from being deprived of the glory and benefit which must accrue to the patrons of such a grand enterprise, ventured to write to Isabella, conjuring her to consider the matter anew with the attention which it merited.

Moved by the representations of a person whom she respected, Isabella desired Perez to repair immediately to the village of Santa Fe, in which, on account of the siege of Granada, the court resided at that time, that she might confer with him upon this important subject. The first effect of their interview was a gracious invitation of Columbus back to court, accompanied with the present of a small sum to equip him for the journey. As there was now a certain prospect that the war with the Moors would speedily be brought to a happy issue by the reduction of Granada, which would leave the nation at liberty to engage in new undertakings; this, as well as the mark of royal favour with which Columbus had been lately honoured, encouraged his friends to appear with greater confidence than formerly in support of his scheme. The chief of these, Alonso de Quintanilla, comptroller of the finances in Castile, and Luis de Santangel, receiver of the ecclesiastical revenues in Aragon, whose meritorious zeal in promoting this great design entitles their names to an honourable place in history, introduced Columbus to many persons of high rank, and interested them warmly in his behalf.

Is again disappointed.

But it was not an easy matter to inspire Ferdinand with favourable sentiments. He still regarded Columbus's project as extravagant and chimerical; and in order to render the efforts of his partisans ineffectual, he had the address to employ, in this new negociation with him, some of the persons who had formerly pronounced his scheme to be impracticable. To their astonishment, Columbus appeared before them with the same confident hopes of success as formerly, and insisted upon the same high recompence. He proposed that a small fleet should be fitted out, under his command, to attempt the discovery, and demanded to be appointed hereditary admiral and viceroy of all the seas and lands which he should discover, and to have the tenths of the profits arising from them settled irrevocably upon himself and his descendants. At the same time, he offered to advance the eighth part of the sum necessary for accomplishing his design, on condition that he should be entitled to a proportional share of benefit from the adventure. If the enterprise should totally miscarry, he made no stipulation for any reward or emolument whatever. Instead of viewing this conduct as the clearest evidence of his full persuasion with respect to the truth of his own system, or being struck with that magnanimity which, after so many delays and repulses, would stoop to nothing inferior to its original claims, the persons with whom Columbus treated began meanly to calculate the expense of the expedition, and the value of the reward which he demanded. The expense, moderate as it was, they represented to be too great for Spain in the present exhausted state of its finances. They contended that the honours and emoluments claimed by Columbus were exorbitant, even if he should perform the utmost of what he had promised; and if all his sanguine hopes should prove illusive, such vast concessions to an adventurer would be deemed not only inconsiderate, but ridiculous. In this imposing garb of caution and prudence, their opinion appeared so plausible, and was so warmly supported by Ferdinand, that Isabella declined giving any countenance to Columbus, and abruptly broke off the negociation with him which she had begun.

This was more mortifying to Columbus than all the disappointments which he had hitherto met with. The invitation to court from Isabella, like an unexpected ray of light, had opened such prospects of success as encouraged him to hope that his labours were at an end; but now darkness and uncertainty returned, and his mind, firm as it was, could hardly support the shock of such an unforeseen reverse. He withdrew in deep anguish from

court, with an intention of prosecuting his voyage to England as his last resource.

Proves at last successful. 1492. January 2.

About that time Granada surrendered, and Ferdinand and Isabella, in triumphal pomp, took possession of a city, the reduction of which extirpated a foreign power from the heart of their dominions, and rendered them masters of all the provinces, extending from the bottom of the Pyrenees to the frontiers of Portugal. As the flow of spirits which accompanies success elevates the mind, and renders it enterprising, Quintanilla and Santangel, the vigilant and discerning patrons of Columbus, took advantage of this favourable situation, in order to make one effort more in behalf of their friend. They addressed themselves to Isabella, and after expressing some surprise that she, who had always been the munificent patroness of generous undertakings, should hesitate so long to countenance the most splendid scheme that had ever been proposed to any monarch; they represented to her, that Columbus was a man of a sound understanding and virtuous character, well qualified, by his experience in navigation, as well as his knowledge of geometry, to form just ideas with respect to the structure of the globe and the situation of its various regions; that by offering to risk his own life and fortune in the execution of his scheme, he gave the most satisfying evidence both of his integrity and hope of success; that the sum requisite for equipping such an armament as he demanded was inconsiderable, and the advantages which might accrue from his undertaking were immense; that he demanded no recompence for his invention and labour, but what was to arise from the countries which he should discover; that, as it was worthy of her magnanimity to make this noble attempt to extend the sphere of human knowledge, and to open an intercourse with regions hitherto unknown, so it would afford the highest satisfaction to her piety and zeal, after re-establishing the christian faith in those provinces of Spain from which it had been long banished, to discover a new world, to which she might communicate the light and blessings of divine truth; that if now she did not decide instantly, the opportunity would be irretrievably lost; that Columbus was on his way to foreign countries, where some prince, more fortunate or adventurous, would close with his proposals, and Spain would for ever bewail that fatal timidity which had excluded her from the glory and advantages that she had once in her power to have enjoyed.

These forcible arguments, urged by persons of such authority, and at a juncture so well chosen, produced the desired effect. They dispelled all Isabella's doubts and fears; she ordered Columbus to be instantly recalled, declared her resolution of employing him on his own terms, and regretting the low estate of her finances, generously offered to pledge her own jewels, in order to raise as much money as might be needed in making preparations for the voyage. Santangel, in a transport of gratitude, kissed the queen's hand, and in order to save her from having recourse to such a mortifying expedient for procuring money, engaged to advance immediately the sum that was requisite.[o]

The conditions of his agreement with Spain.

Columbus had proceeded some leagues on his journey, when the messenger from Isabella overtook him. Upon receiving an account of the unexpected resolution in his favour, he returned directly to Santa Fe, though some remainder of diffidence still mingled itself with his joy. But the cordial reception which he met with from Isabella, together with the near prospect of setting out upon that voyage which had so long been the object of his thoughts and wishes, soon effaced the remembrance of all that he had suffered in Spain, during eight tedious years of solicitation and suspense. The negociation now went forward with facility and despatch, and a treaty or capitulation with Columbus was signed on the seventeenth of April, one thousand four hundred and ninety-two. The chief articles of it were:—1. Ferdinand and Isabella, as sovereigns of the ocean, constituted Columbus their high admiral in all the seas, islands, and continents, which should be discovered by his industry; and stipulated that he and his heirs for ever should enjoy this office, with the same powers and prerogatives which belonged to the high admiral of Castile, within the limits of his jurisdiction. 2. They appointed Columbus their viceroy in all the islands and continents which he should discover; but if, for the better administration of affairs, it should hereafter be necessary to establish a separate governor in any of those countries, they authorized Columbus to name three persons, of whom they would choose one for that office; and the dignity of viceroy, with all its immunities, was likewise to be hereditary in the family of Columbus. 3. They granted to Columbus and his heirs for ever, the tenth of the free profits accruing from the productions and commerce of the countries which he should discover. 4. They declared, that if any controversy or law-suit shall arise with respect to any mercantile transaction in the countries which should be discovered, it should be determined by the sole authority of Columbus, or of judges to be appointed by him. 5. They permitted Columbus to advance one-eighth part of what should be expended in preparing for the expedition, and in carrying on commerce with the countries which he should discover, and entitled him, in return, to an eighth part of the profit.[p]

Though the name of Ferdinand appears conjoined with that of Isabella in this transaction, his distrust of Columbus was still so violent that he refused to take any part in the enterprise as king of Aragon. As the whole expense of the expedition was to be defrayed by the crown of Castile, Isabella reserved for her subjects of that kingdom an exclusive right to all the benefits which might redound from its success.

o Herrera, dec. 1. lib. c. 8.

p Life of Columbus, c. 15. Herrera, dec. 1. lib. i. c. 9.

The preparations for his voyage.

As soon as the treaty was signed, Isabella, by her attention and activity in forwarding the preparations for the voyage, endeavoured to make some reparation to Columbus for the time which he had lost in fruitless solicitation. By the twelfth of May, all that depended upon her was adjusted; and Columbus waited on the king and queen, in order to receive their final instructions. Every thing respecting the destination and conduct of the voyage, they committed implicitly to the disposal of his prudence. But that they might avoid giving any just cause of offence to the king of Portugal, they strictly enjoined him not to approach near to the Portuguese settlements on the coast of Guinea, or in any of the other countries to which the Portuguese claimed right as the discoverers. Isabella had ordered the ships, of which Columbus was to take the command, to be fitted out in the port of Palos, a small maritime town in the province of Andalusia. As the guardian, Juan Perez, to whom Columbus had already been so much indebted, resided in the neighbourhood of this place, he, by the influence of that good ecclesiastic, as well as by his own connexion with the inhabitants, not only raised among them what he wanted of the sum that he was bound by treaty to advance, but engaged several of them to accompany him in the voyage. The chief of these associates were three brothers of the name of Pinzon, of considerable wealth, and of great experience in naval affairs, who were willing to hazard their lives and fortunes in the expedition.

But, after all the efforts of Isabella and Columbus, the armament was not suitable, either to the dignity of the nation by which it was equipped, or to the importance of the service for which it was destined. It consisted of three vessels. The largest, a ship of no considerable burthen, was commanded by Columbus, as admiral, who gave it the name of *Santa Maria*, out of respect for the blessed Virgin, whom he honoured with singular devotion. Of the second, called the *Pinta*, Martin Pinzon was captain, and his brother Francis pilot. The third, named the *Nigna*, was under the command of Vincent Yanez Pinzon. These two were light vessels, hardly superior in burthen or force to large boats. This squadron, if it merits that name, was victualled for twelve months, and had on board ninety men, mostly sailors, together with a few adventurers who followed the fortune of Columbus, and some gentlemen of Isabella's court, whom she appointed to accompany him. Though the expense of the undertaking was one of the circumstances which chiefly alarmed the court of Spain, and retarded so long the negociation with Columbus, the sum employed in fitting out this squadron did not exceed four thousand pounds.

As the art of ship-building in the fifteenth century was extremely rude, and the bulk of vessels was accommodated to the short and easy voyages along the coast which they were accustomed to perform, it is a proof of the courage as well as enterprising genius of Columbus, that he ventured, with a fleet so unfit for a distant navigation, to explore unknown seas, where he had no chart to guide him, no knowledge of the tides and currents, and no experience of the dangers to which he might be exposed. His eagerness to accomplish the great design which had so long engrossed his thoughts, made him overlook or disregard every circumstance that would have intimidated a mind less adventurous. He pushed forwards the preparations with such ardour, and was seconded so effectually by the persons to whom Isabella committed the superintendance of this business, that every thing was soon in readiness for the voyage. But as Columbus was deeply impressed with sentiments of religion, he would not set out upon an expedition so arduous, and of which one great object was to extend the knowledge of the christian faith, without imploring publicly the guidance and protection of Heaven. With this view, he, together with all the persons under his command, marched in solemn procession to the monastery of Rabida. After confessing their sins, and obtaining absolution, they received the holy sacrament from the hands of the guardian, who joined his prayers to theirs for the success of an enterprise which he had so zealously patronized.

His departure from Spain.

Next morning, being Friday the third day of August, in the year one thousand four hundred and ninety-two, Columbus set sail, a little before sun-rise, in presence of a vast crowd of spectators, who sent up their supplications to Heaven for the prosperous issue of the voyage, which they wished rather than expected. Columbus steered directly for the Canary Islands, and arrived there without any occurrence that would have deserved notice on any other occasion. But, in a voyage of such expectation and importance, every circumstance was the object of attention. The rudder of the Pinta broke loose the day after she left the harbour, and that accident alarmed the crew, no less superstitious than unskilful, as a certain omen of the unfortunate destiny of the expedition. Even in the short run to the Canaries, the ships were found to be so crazy and ill-appointed, as to be very improper for a navigation which was expected to be both long and dangerous. Columbus refitted them, however, to the best of his power, and having supplied himself with fresh provisions, he took his departure from Gomera, one of the most westerly of the Canary Islands, on the sixth day of September.

August 13.

The course which he held.

Here the voyage of discovery may properly be said to begin; for Columbus, holding his course due west, left immediately the usual track of navigation, and stretched into unfrequented and unknown seas. The first day, as it was very calm, he made but little way; but on the second, he lost sight of the Canaries; and many of the sailors, dejected already and dismayed, when they contemplated the boldness of the undertaking,

began to beat their breasts, and to shed tears, as if they were never more to behold land. Columbus comforted them with assurances of sueeess, and the prospeet of vast wealth, in those opulent regions whither he was conducting them. This early discovery of the spirit of his followers taught Columbus that he must prepare to struggle, not only with the unavoidable difficulties whieh might be expeeted from the nature of his undertaking, but with such as were likely to arise from the ignoranee and timidity of the people under his eommand; and he pereeived that the art of governing the minds of men would be no less requisite for aecomplishing the discoveries which he had in view, than naval skill and undaunted eourage. Happily for himself, and for the country by which he was employed, he joined to the ardent temper and inventive genius of a projector, virtues of another species, which are rarely united with them. He possessed a thorough knowledge of mankind, an insinuating address, a patient perseveranee in executing any plan, the perfect government of his own passions, and the talent of aequiring an ascendant over those of other men. All these qualities, which formed him for command, were aecompanied with that superior knowledge of his profession, which begets confidenee in times of diffieulty and danger. To unskilful Spanish sailors, aeeustomed only to coasting voyages in the Mediterranean, the maritime science of Columbus, the fruit of thirty years' experienee, improved by an acquaintance with all the inventions of the Portuguese, appeared immense. As soon as they put to sea, he regulated every thing by his sole authority; he superintended the execution of every order: and allowing himself only a few hours for sleep, he was at all other times upon deck. As his course lay through seas which had not formerly been visited, the sounding-line, or instruments for observation, were eontinually in his hands. After the example of the Portuguese discoverers, he attended to the motion of tides and currents, watehed the flight of birds, the appearance of fishes, of seaweeds, and of every thing that floated on the waves, and entered every oecurrence, with a minute exactness, in the journal which he kept. As the length of the voyage could not fail of alarming sailors habituated only to short exeursions, Columbus endeavoured to conceal from them the real progress which they made. With this view, though they run eighteen leagues on the seeond day after they left Gomera, he gave out that they had advanced only fifteen, and he uniformly employed the same artifice of reckoning short during the whole voyage. By the fourteenth of September, the fleet was above two hundred leagues to the west of the Canary Isles, at a greater distanee from land than any Spaniard had been before that time. There they were struck with an appearance no less astonishing than

Vigilance and attention of Columbus.

Apprehensions and alarms of the crew.

new. They observed that the magnetie needle, in their compasses, did not point exactly to the polar star, but varied towards the west; and as they proceeded, this variation inereased. This appearanee, whieh is now familiar, though it still remains one of the mysteries of nature, into the cause of whieh the sagacity of man hath not been able to penetrate, filled the companions of Columbus with terror. They were now in a boundless and unknown ocean, far from the usual course of navigation; nature itself seemed to be altered, and the only guide which they had left was about to fail them. Columbus, with no less quiekness than ingenuity, invented a reason for this appearance, whieh, though it did not satisfy himself, seemed so plausible to them, that it dispelled their fears, or silenced their murmurs.

He still continued to steer due west, nearly in the same latitude with the Canary Islands. In this course he came within the sphere of the trade wind, whieh blows invariably from east to west, between the tropies and a few degrees beyond them. He advaneed before this steady gale with such uniform rapidity, that it was seldom neeessary to shift a sail. When about four hundred leagues to the west of the Canaries, he found the sea so eovered with weeds, that it resembled a meadow of vast extent, and in some places they were so thick, as to retard the motion of the vessels. This strange appearance oecasioned new alarm and disquiet. The sailors imagined that they were now arrived at the utmost boundary of the navigable ocean; that these floating weeds would obstruct their further progress, and concealed dangerous rocks, or some large traet of land, whieh had sunk, they knew not how, in that place. Columbus endeavoured to persuade them, that what had alarmed, ought rather to have encouraged them, and was to be considered as a sign of approaching land. At the same time, a brisk gale arose, and carried them forward. Several birds were seen hovering about the ship,[q] and directed their flight towards the west. The desponding crew resumed some degree of spirit, and began to entertain fresh hopes.

Upon the first of October they were, according to the admiral's reckoning, seven hundred and seventy leagues to the west of the Canaries; but lest his men should be intimidated by the prodigious length of the navigation, he gave out that they had proceeded only five hundred and eighty-four leagues; and, fortunately for Columbus, neither his own pilot, nor those of the other ships, had skill sufficient to correct this error, and discover the deceit. They had now been above three weeks at sea; they had proceeded far beyond what former navigators had attempted or deemed possible; all their prognostics of discovery, drawn from the flight of birds and other cireumstances, had proved fallaeious; the appearanees of land, with which their own eredulity or the artifice of their eommander had from time to time flattered and amused them, had

These increase.

q See Note XIII.

been altogether illusive, and their prospect of success seemed now to be as distant as ever. These reflections occurred often to men, who had no other object or occupation than to reason and discourse concerning the intention and circumstances of their expedition. They made impression, at first, upon the ignorant and timid, and extending, by degrees, to such as were better informed or more resolute, the contagion spread at length from ship to ship. From secret whispers or murmurings, they proceeded to open cabals and public complaints. They taxed their sovereign with inconsiderate credulity, in paying such regard to the vain promises and rash conjectures of an indigent foreigner, as to hazard the lives of so many of her own subjects, in prosecuting a chimerical scheme. They affirmed that they had fully performed their duty, by venturing so far in an unknown and hopeless course, and could incur no blame for refusing to follow, any longer, a desperate adventurer to certain destruction. They contended, that it was necessary to think of returning to Spain, while their crazy vessels were still in a condition to keep the sea; but expressed their fear that the attempt would prove vain, as the wind, which had hitherto been so favourable to their course, must render it impossible to sail in the opposite direction. All agreed that Columbus should be compelled by force to adopt a measure on which their common safety depended. Some of the more audacious proposed, as the most expeditious and certain method for getting rid at once of his remonstrances, to throw him into the sea, being persuaded that, upon their return to Spain, the death of an unsuccessful projector would excite little concern, and be inquired into with no curiosity.

The address of Columbus in soothing them.

Columbus was fully sensible of his perilous situation. He had observed, with great uneasiness, the fatal operation of ignorance and of fear in producing disaffection among his crew, and saw that it was now ready to burst out into open mutiny. He retained, however, perfect presence of mind. He affected to seem ignorant of their machinations. Notwithstanding the agitation and solicitude of his own mind, he appeared with a cheerful countenance, like a man satisfied with the progress he had made, and confident of success. Sometimes he employed all the arts of insinuation, to soothe his men. Sometimes he endeavoured to work upon their ambition or avarice, by magnificent descriptions of the fame and wealth which they were about to acquire. On other occasions, he assumed a tone of authority, and threatened them with vengeance from their sovereign, if, by their dastardly behaviour, they should defeat this noble effort to promote the glory of God, and to exalt the Spanish name above that of every other nation. Even with seditious sailors, the words of a man whom they had been accustomed to reverence, were weighty and persuasive, and not only restrained them from those violent excesses which they meditated, but prevailed with them to accompany their admiral for some time longer.

As they proceeded, the indications of approaching land seemed to be more certain, and excited hope in proportion. The birds began to appear in flocks, making towards the south-west. Columbus, in imitation of the Portuguese navigators, who had been guided, in several of their discoveries, by the motion of birds, altered his course from due west towards that quarter whither they pointed their flight. But, after holding on for several days in this new direction, without any better success than formerly, having seen no object, during thirty days, but the sea and the sky, the hopes of his companions subsided faster than they had risen; their fears revived with additional force; impatience, rage, and despair, appeared in every countenance. All sense of subordination was lost: the officers, who had hitherto concurred with Columbus in opinion, and supported his authority, now took part with the private men: they assembled tumultuously on the deck, expostulated with their commander, mingled threats with their expostulations, and required him instantly to tack about and return to Europe. Columbus perceived that it would be of no avail to have recourse to any of his former arts, which having been tried so often had lost their effect; and that it was impossible to rekindle any zeal for the success of the expedition among men, in whose breasts fear had extinguished every generous sentiment. He saw that it was no less vain to think of employing either gentle or severe measures to quell a mutiny so general and so violent. It was necessary, on all these accounts, to soothe passions which he could no longer command, and to give way to a torrent too impetuous to be checked. He promised solemnly to his men that he would comply with their request, provided they would accompany him, and obey his command for three days longer, and if, during that time, land were not discovered, he would then abandon the enterprise, and direct his course towards Spain.[r]

Their fears return.

Danger of a mutiny.

Distress of Columbus.

Encouraging appearances of success.

Enraged as the sailors were, and impatient to turn their faces again towards their native country, this proposition did not appear to them unreasonable. Nor did Columbus hazard much in confining himself to a term so short. The presages of discovering land were now so numerous and promising, that he deemed them infallible. For some days the sounding-line reached the bottom, and the soil which it brought up indicated land to be at no great distance. The flocks of birds increased, and were composed not only of sea-fowl, but of such land birds as could not be supposed to fly far from the shore. The crew of the Pinta observed a cane floating, which seemed to have been newly cut, and likewise a piece of timber artificially carved. The sailors aboard the

r Oviedo, Hist. ap. Ramus. vol. iii. p. 81 E.

Nigna took up the branch of a tree with red berries, perfectly fresh. The clouds around the setting sun assumed a new appearance; the air was more mild and warm, and, during night, the wind became unequal and variable. From all these symptoms, Columbus was so confident of being near land, that on the evening of the eleventh of October, after public prayers for success, he ordered the sails to be furled, and the ships to lie to, keeping strict watch, lest they should be driven ashore in the night. During this interval of suspense and expectation, no man shut his eyes, all kept upon deck, gazing intently towards that quarter where they expected to discover the land, which had been so long the object of their wishes.

Land discovered. About two hours before midnight, Columbus standing on the forecastle, observed a light at a distance, and privately pointed it out to Pedro Guttierez, a page of the queen's wardrobe. Guttierez perceived it, and calling to Salcedo, comptroller of the fleet, all three saw it in motion, as if it were carried from place to place. A little after midnight the joyful sound of *land! land!* was heard from the Pinta, which kept always ahead of the other ships. But, having been so often deceived by fallacious appearances, every man was now become slow of belief, and waited in all the anguish of uncertainty and impatience, for the return of day. As soon as morning dawned, all doubts and fears were dispelled. From every ship an island was seen about two leagues to the north, whose flat and verdant fields, well stored with wood, and watered with many rivulets, presented the aspect of a delightful country. The crew of the Pinta instantly began the *Te Deum*, as a hymn of thanksgiving to God, and were joined by those of the other ships, with tears of joy and transports of congratulation. This office of gratitude to Heaven was followed by an act of justice to their commander. They threw themselves at the feet of Columbus, with feelings of self-condemnation mingled with reverence. They implored him to pardon their ignorance, incredulity, and insolence, which had created him so much unnecessary disquiet, and had so often obstructed the prosecution of his well-concerted plan; and passing, in the warmth of their admiration, from one extreme to another, they now pronounced the man, whom they had so lately reviled and threatened, to be a person inspired by Heaven with sagacity and fortitude more than human, in order to accomplish a design so far beyond the ideas and conception of all former ages.

Friday, Oct. 12.

First interview with the natives. As soon as the sun arose, all their boats were manned and armed. They rowed towards the island with their colours displayed, with warlike music, and other martial pomp. As they approached the coast, they saw it covered with a multitude of people, whom the novelty of the spectacle had drawn together, whose attitudes and gestures expressed wonder and astonishment at the strange objects which presented themselves to their view. Columbus was the first European who set foot in the New World which he had discovered. He landed in a rich dress, and with a naked sword in his hand. His men followed, and kneeling down, they all kissed the ground which they had so long desired to see. They next erected a crucifix, and prostrating themselves before it, returned thanks to God for conducting their voyage to such a happy issue. They then took solemn possession of the country for the crown of Castile and Leon, with all the formalities which the Portuguese were accustomed to observe in acts of this kind, in their new discoveries.[s]

Their mutual astonishment. The Spaniards, while thus employed, were surrounded by many of the natives, who gazed, in silent admiration, upon actions which they could not comprehend, and of which they did not foresee the consequences. The dress of the Spaniards, the whiteness of their skins, their beards, their arms, appeared strange and surprising. The vast machines in which they had traversed the ocean, that seemed to move upon the waters with wings, and uttered a dreadful sound resembling thunder, accompanied with lightning and smoke, struck them with such terror, that they began to respect their new guests as a superior order of beings, and concluded that they were children of the sun, who had descended to visit the earth.

The Europeans were hardly less amazed at the scene now before them. Every herb, and shrub, and tree, was different from those which flourished in Europe. The soil seemed to be rich, but bore few marks of cultivation. The climate, even to the Spaniards, felt warm, though extremely delightful. The inhabitants appeared in the simple innocence of nature, entirely naked. Their black hair, long and uncurled, floated upon their shoulders, or was bound in tresses around their heads. They had no beards, and every part of their bodies was perfectly smooth. Their complexion was of a dusky copper colour, their features singular, rather than disagreeable, their aspect gentle and timid. Though not tall, they were well shaped and active. Their faces, and several parts of their body, were fantastically painted with glaring colours. They were shy at first through fear, but soon became familiar with the Spaniards, and with transports of joy received from them hawksbells, glass beads, or other baubles, in return for which they gave such provisions as they had, and some cotton yarn, the only commodity of value that they could produce. Towards evening, Columbus returned to his ship, accompanied by many of the islanders in their boats, which they called *canoes*, and though rudely formed out of the trunk of a single tree, they rowed them with surprising dexterity. Thus, in the first interview between the inhabitants of the Old and New Worlds, every thing was conducted amicably, and to their

s Life of Columbus, c. 22, 23. Herrera, dec. 1. lib. i. c. 13.

mutual satisfaction. The former, enlightened and ambitious, formed already vast ideas with respect to the advantages which they might derive from the regions that began to open to their view. The latter, simple and undiscerning, had no foresight of the calamities and desolation which were approaching their country.

Columbus assumes the title of admiral and viceroy.

Columbus, who now assumed the title and authority of admiral and viceroy, called the island which he had discovered *San Salvador*. It is better known by the name of *Guanahani*, which the natives gave to it, and is one of that large cluster of islands called the Lucaya or Bahama isles. It is situated above three thousand miles to the west of Gomera, from which the squadron took its departure, and only four degrees to the south of it; so little had Columbus deviated from the westerly course, which he had chosen as the most proper.

Proceeds towards the south.

Columbus employed the next day in visiting the coasts of the island; and from the universal poverty of the inhabitants, he perceived that this was not the rich country for which he sought. But, conformably to his theory concerning the discovery of those regions of Asia which stretched towards the east, he concluded that San Salvador was one of the isles which geographers described as situated in the great ocean adjacent to India.[t] Having observed that most of the people whom he had seen wore small plates of gold, by way of ornament, in their nostrils, he eagerly inquired where they got that precious metal. They pointed towards the south, and made him comprehend by signs, that gold abounded in countries situated in that quarter. Thither he immediately determined to direct his course, in full confidence of finding there those opulent regions which had been the object of his voyage, and would be a recompence for all his toils and dangers. He took along with him seven of the natives of San Salvador, that, by acquiring the Spanish language, they might serve as guides and interpreters; and those innocent people considered it as a mark of distinction when they were selected to accompany him.

Discovers Cuba.

He saw several islands, and touched at three of the largest, on which he bestowed the names of St. Mary of the Conception, Fernandina, and Isabella. But, as their soil, productions, and inhabitants, nearly resembled those of San Salvador, he made no stay in any of them. He inquired every where for gold, and the signs that were uniformly made by way of answer, confirmed him in the opinion that it was brought from the south. He followed that course, and soon discovered a country which appeared very extensive, not perfectly level, like those which he had already visited, but so diversified with rising grounds, hills, rivers, woods, and plains, that he was uncertain whether it might prove an island, or part of the continent. The natives of San Salvador, whom he had on board, called it *Cuba;* Columbus gave it the name of Juana. He entered the mouth of a large river with his squadron, and all the inhabitants fled to the mountains as he approached the shore. But as he resolved to careen his ships in that place, he sent some Spaniards, together with one of the people of San Salvador, to view the interior part of the country. They, having advanced above sixty miles from the shore, reported, upon their return, that the soil was richer and more cultivated than any they had hitherto discovered; that, besides many scattered cottages, they had found one village, containing above a thousand inhabitants; that the people, though naked, seemed to be more intelligent than those of San Salvador, but had treated them with the same respectful attention, kissing their feet, and honouring them as sacred beings allied to heaven; that they had given them to eat a certain root, the taste of which resembled roasted chesnuts, and likewise a singular species of corn called *maize*, which either when roasted whole or ground into meal, was abundantly palatable; that there seemed to be no four-footed animals in the country, but a species of dogs, which could not bark, and a creature resembling a rabbit, but of a much smaller size; that they had observed some ornaments of gold among the people, but of no great value.[u]

These messengers had prevailed with some of the natives to accompany them, who informed Columbus, that the gold of which they made their ornaments was found in *Cubanacan*. By this word they meant the middle or inland part of Cuba; but Columbus, being ignorant of their language, as well as unaccustomed to their pronunciation, and his thoughts running continually upon his own theory concerning the discovery of the East Indies, he was led, by the resemblance of sound, to suppose that they spoke of the Great Khan, and imagined that the opulent kingdom of *Cathay*, described by Marco Polo, was not very remote. This induced him to employ some time in viewing the country. He visited almost every harbour, from Porto del Principe, on the north coast of Cuba, to the eastern extremity of the island; but, though delighted with the beauty of the scenes which every where presented themselves, and amazed at the luxuriant fertility of the soil, both which, from their novelty, made a more lively impression upon his imagination,[x] he did not find gold in such quantity as was sufficient to satisfy either the avarice of his followers, or the expectations of the court to which he was to return. The people of the country, as much astonished at his eagerness in quest of gold as the Europeans were at their ignorance and simplicity, pointed towards the east, where an island which they called *Hayti* was situated, in which that metal was more abundant than among them. Columbus ordered his squadron to

His conjectures with regard to it.

x See Note XIV.

bend its course thither; but Martin Alonzo Pinzon, impatient to be the first who should take possession of the treasures which this country was supposed to contain, quitted his companions, regardless of all the admiral's signals to slacken sail until they should come up with him.

Discovers the island Hispaniola.

Columbus, retarded by contrary winds, did not reach Hayti till the sixth of December. He called the port, where he first touched, St. Nicholas, and the island itself Espagnola, in honour of the kingdom by which he was employed; and it is the only country, of those he had yet discovered, which has retained the name that he gave it. As he could neither meet with the Pinta, nor have any intercourse with the inhabitants, who fled in great consternation towards the woods, he soon quitted St. Nicholas, and sailing along the northern coast of the island, he entered another harbour, which he called Conception. Here he was more fortunate; his people overtook a woman who was flying from them, and after treating her with great gentleness, dismissed her with a present of such toys as they knew were most valued in those regions. The description which she gave to her countrymen of the humanity and wonderful qualities of the strangers; their admiration of the trinkets, which she showed with exultation; and their eagerness to participate of the same favours, removed all their fears, and induced many of them to repair to the harbour. The strange objects which they beheld, and the baubles which Columbus bestowed upon them, amply gratified their curiosity and their wishes. They nearly resembled the people of Guanahani and Cuba. They were naked like them, ignorant and simple; and seemed to be equally unacquainted with all the arts which appear most necessary in polished societies; but they were gentle, credulous, and timid to a degree which rendered it easy to acquire the ascendant over them, especially as their excessive admiration led them into the same error with the people of the other islands, in believing the Spaniards to be more than mortals, and descended immediately from heaven. They possessed gold in greater abundance than their neighbours, which they readily exchanged for bells, beads, or pins; and in this unequal traffic both parties were highly pleased, each considering themselves as gainers by the transaction. Here Columbus was visited by a prince or *cazique* of the country. He appeared with all the pomp known among a simple people, being carried in a sort of palanquin upon the shoulders of four men, and attended by many of his subjects, who served him with great respect. His deportment was grave and stately, very reserved towards his own people, but with Columbus and the Spaniards extremely courteous. He gave the admiral some thin plates of gold, and a girdle of curious workmanship, receiving in return presents of small value, but highly acceptable to him.[y]

[y] Life of Columbus, c. 32. Herrera, dec. 1. lib. i. c. 15, &c.

Columbus, still intent on discovering the mines which yielded gold, continued to interrogate all the natives with whom he had any intercourse, concerning their situation. They concurred in pointing out a mountainous country, which they called *Cibao*, at some distance from the sea, and further towards the east. Struck with this sound, which appeared to him the same with *Cipango*, the name by which Marco Polo, and other travellers to the east, distinguished the island of Japan, he no longer doubted with respect to the vicinity of the countries which he had discovered to the remote parts of Asia; and in full expectation of reaching soon those regions which had been the object of his voyage, he directed his course towards the east. He put into a commodious harbour, which he called St. Thomas, and found that district to be under the government of a powerful cazique, named *Guacanahari*, who, as he afterwards learned, was one of the five sovereigns among whom the whole island was divided. He immediately sent messengers to Columbus, who, in his name, delivered to him the present of a mask curiously fashioned, with the ears, nose, and mouth of beaten gold, and invited him to the place of his residence, near the harbour now called Cape François, some leagues towards the east. Columbus despatched some of his officers to visit this prince, who, as he behaved himself with greater dignity, seemed to claim more attention. They returned with such favourable accounts both of the country and of the people, as made Columbus impatient for that interview with Guacanahari to which he had been invited.

One of his ships lost.

He sailed for this purpose from St. Thomas, on the twenty-fourth of December, with a fair wind, and the sea perfectly calm; and as, amidst the multiplicity of his occupations, he had not shut his eyes for two days, he retired at midnight in order to take some repose, having committed the helm to the pilot, with strict injunctions not to quit it for a moment. The pilot, dreading no danger, carelessly left the helm to an unexperienced cabin-boy, and the ship, carried away by a current, was dashed against a rock. The violence of the shock awakened Columbus. He ran up to the deck. There all was confusion and despair. He alone retained presence of mind. He ordered some of the sailors to take a boat, and carry out an anchor astern; but, instead of obeying, they made off towards the Nigna, which was about half a league distant. He then commanded the masts to be cut down, in order to lighten the ship; but all his endeavours were too late; the vessel opened near the keel, and filled so fast with water that its loss was inevitable. The smoothness of the sea, and the timely assistance of boats from the Nigna, enabled the crew to save their lives. As soon as the islanders heard of this disaster, they crowded to the shore, with their prince Guacanahari at their head. Instead of taking advantage of the

distress in which they beheld the Spaniards, to attempt any thing to their detriment, they lamented their misfortune with tears of sincere condolence. Not satisfied with this unavailing expression of their sympathy, they put to sea a number of canoes, and under the direction of the Spaniards, assisted in saving whatever could be got out of the wreck; and, by the united labour of so many hands, almost every thing of value was carried ashore. As fast as the goods were landed, Guacanahari in person took charge of them. By his orders they were all deposited in one place, and armed sentinels were posted, who kept the multitude at a distance, in order to prevent them not only from embezzling, but from inspecting too curiously what belonged to their guests.[z] Next morning this prince visited Columbus, who was now on board the Nigna, and endeavoured to console him for his loss, by offering all that he possessed to repair it.[a]

Distress of Columbus.

The condition of Columbus was such, that he stood in need of consolation. He had hitherto procured no intelligence of the Pinta, and no longer doubted but that his treacherous associate had set sail for Europe, in order to have the merit of carrying the first tidings of the extraordinary discoveries which had been made, and to pre-occupy so far the ear of their sovereign, as to rob him of the glory and reward to which he was justly entitled. There remained but one vessel, and that the smallest and most crazy of the squadron, to traverse such a vast ocean, and to carry so many men back to Europe. Each of those circumstances was alarming, and filled the mind of Columbus with the utmost solicitude. The desire of overtaking Pinzon, and of effacing the unfavourable impressions which his misrepresentations might make in Spain, made it necessary to return thither without delay. The difficulty of taking such a number of persons aboard the Nigna, confirmed him in an opinion, which the fertility of the country, and the gentle temper of the people, had already induced him to form. He resolved to leave a part of his crew in the island, that by residing there, they might learn the language of the natives, study their disposition, examine the nature of the country, search for mines, prepare for the commodious settlement of the colony, with which he purposed to return, and thus secure and facilitate the acquisition of those advantages which he expected from his discoveries. When he mentioned this to his men, all approved of the design; and from impatience under the fatigue of a long voyage, from the levity natural to sailors, or from the hopes of amassing wealth in a country, which afforded such promising specimens of its riches, many offered voluntarily to be among the number of those who should remain.

Resolves to leave a part of his crew in the island.

Nothing was now wanting towards the execution of this scheme, but to obtain the consent of Guacanahari; and his unsuspicious simplicity soon presented to the admiral a favourable opportunity of proposing it. Columbus having, in the best manner he could, by broken words and signs, expressed some curiosity to know the cause which had moved the islanders to fly with such precipitation upon the approach of his ships, the cazique informed him that the country was much infested by the incursions of certain people, whom he called *Carribeans*, who inhabited several islands to the south-east. These he described as a fierce and warlike race of men, who delighted in blood, and devoured the flesh of the prisoners who were so unhappy as to fall into their hands; and as the Spaniards at their first appearance were supposed to be Carribeans, whom the natives, however numerous, durst not face in battle, they had recourse to their usual method of securing their safety, by flying into the thickest and most impenetrable woods. Guacanahari, while speaking of those dreadful invaders, discovered such symptoms of terror, as well as such consciousness of the inability of his own people to resist them, as led Columbus to conclude that he would not be alarmed at the proposition of any scheme which afforded him the prospect of an additional security against their attacks. He instantly offered him the assistance of the Spaniards to repel his enemies; he engaged to take him and his people under the protection of the powerful monarch whom he served, and offered to leave in the island such a number of his men as should be sufficient, not only to defend the inhabitants from future incursions, but to avenge their past wrongs.

Obtains the consent of the natives.

The credulous prince closed eagerly with the proposal, and thought himself already safe under the patronage of beings sprung from heaven, and superior to the power of mortal men.

Builds a fort.

The ground was marked out for a small fort, which Columbus called *Navidad*, because he had landed there on Christmas-day. A deep ditch was drawn around it. The ramparts were fortified with pallisades, and the great guns, saved out of the admiral's ship, were planted upon them. In ten days the work was finished; that simple race of men labouring with inconsiderate assiduity in erecting this first monument of their own servitude. During this time, Columbus, by his caresses and liberality, laboured to increase the high opinion which the natives entertained of the Spaniards. But while he endeavoured to inspire them with confidence in their disposition to do good, he wished likewise to give them some striking idea of their power to punish and destroy such as were the objects of their indignation. With this view, in presence of a vast assembly, he drew up his men in order of battle, and made an ostentatious but innocent display of the sharpness of the Spanish swords, of the force of their spears, and the operation of their cross-bows. These rude people, strangers to the use of iron, and unacquainted with any hostile

z See Note XV.

a Herrera, dec. 1. lib. i. c. 18.

weapons but arrows of reeds pointed with the bones of fishes, wooden swords, and javelins hardened in the fire, wondered and trembled. Before this surprise or fear had time to abate, he ordered the great guns to be fired. The sudden explosion struck them with such terror, that they fell flat to the ground, covering their faces with their hands; and when they beheld the astonishing effect of the bullets among the trees, towards which the cannon had been pointed, they concluded that it was impossible to resist men, who had the command of such destructive instruments, and who came armed with thunder and lightning against their enemies.

His instructions to those he left in it.

After giving such impressions both of the beneficence and power of the Spaniards, as might have rendered it easy to preserve an ascendant over the minds of the natives, Columbus appointed thirty-eight of his people to remain in the island. He intrusted the command of these to Diego de Arado, a gentleman of Cordova, investing him with the same powers which he himself had received from Ferdinand and Isabella; and furnished him with every thing requisite for the subsistence or defence of this infant colony. He strictly enjoined them to maintain concord among themselves, to yield an unreserved obedience to their commander, to avoid giving offence to the natives by any violence or exaction, to cultivate the friendship of Guacanahari, but not to put themselves in his power, by straggling in small parties, or marching too far from the fort. He promised to revisit them soon, with such a reinforcement of strength as might enable them to take full possession of the country, and to reap all the fruits of their discoveries. In the mean time, he engaged to mention their names to the king and queen, and to place their merit and services in the most advantageous light.[b]

Having thus taken every precaution for the security of the colony, he left Navidad on the fourth of January, one thousand four hundred and ninety-three, and steering towards the east, discovered and gave names to most of the harbours on the northern coast of the island. On the sixth he descried the Pinta, and soon came up with her, after a separation of more than six weeks. Pinzon endeavoured to justify his conduct, by pretending that he had been driven from his course by stress of weather, and prevented from returning by contrary winds. The admiral, though he still suspected his perfidious intentions, and knew well what he urged in his own defence to be frivolous as well as false, was so sensible that this was not a proper time for venturing upon any high strain of authority, and felt such satisfaction in this junction with his consort, which delivered him from many disquieting apprehensions, that, lame as Pinzon's apology was, he admitted of it without difficulty, and restored him to favour. During his absence from the admiral, Pinzon had visited several harbours in the island, had acquired some gold by trafficking with the natives, but had made no discovery of any importance.

1493.

From the condition of his ships, as well as the temper of his men, Columbus now found it necessary to hasten his return to Europe. The former, having suffered much during a voyage of such an unusual length, were extremely leaky. The latter expressed the utmost impatience to revisit their native country, from which they had been so long absent, and where they had things so wonderful and unheard-of to relate. Accordingly, on the sixteenth of January, he directed his course towards the north-east, and soon lost sight of land. He had on board some of the natives, whom he had taken from the different islands which he discovered; and besides the gold, which was the chief object of research, he had collected specimens of all the productions which were likely to become subjects of commerce in the several countries, as well as many unknown birds, and other natural curiosities, which might attract the attention of the learned, or excite the wonder of the people. The voyage was prosperous to the fourteenth of February, and he had advanced near five hundred leagues across the Atlantic ocean, when the wind began to rise, and continued to blow with increasing rage, which terminated in a furious hurricane. Every thing that the naval skill and experience of Columbus could devise was employed, in order to save the ships. But it was impossible to withstand the violence of the storm, and, as they were still far from any land, destruction seemed inevitable. The sailors had recourse to prayers to Almighty God, to the invocation of saints, to vows and charms, to every thing that religion dictates, or superstition suggests, to the affrighted mind of man. No prospect of deliverance appearing, they abandoned themselves to despair, and expected every moment to be swallowed up in the waves. Besides the passions which naturally agitate and alarm the human mind in such awful situations, when certain death, in one of his most terrible forms, is before it, Columbus had to endure feelings of distress peculiar to himself. He dreaded that all knowledge of the amazing discoveries which he had made was now to perish; mankind were to be deprived of every benefit that might have been derived from the happy success of his schemes, and his own name would descend to posterity as that of a rash deluded adventurer, instead of being transmitted with the honour due to the author and conductor of the most noble enterprise that had ever been undertaken. These reflections extinguished all sense of his own personal danger. Less affected with the loss of life, than solicitous to preserve the memory of what he had attempted and achieved, he retired to his cabin, and wrote, upon parchment, a short account of the voyage which he had made, of the course which he had taken, of the situation and

Resolves to return to Europe.

A violent storm arises.

The conduct of Columbus.

b Oviedo ap. Ramusio, iii. p. 82. E. Herrera, dec. 1. lib. i. c. 20. Life of Columbus, c. 34.

riches of the countries which he had discovered, and of the colony that he had left there. Having wrapped up this in an oiled cloth, which he enclosed in a cake of wax, he put it into a cask carefully stopped up, and threw it into the sea, in hopes that some fortunate accident might preserve a deposit of so much importance to the world.[c]

Takes shelter in the Azores.

At length Providence interposed, to save a life reserved for other services. The wind abated, the sea became calm, and on the evening of the fifteenth, Columbus and his companions discovered land; and though uncertain what it was, they made towards it. They soon knew it to be St. Mary, one of the Azores or western isles, subject to the crown of Portugal. There, after a violent contest with the governor, in which Columbus displayed no less spirit than prudence, he obtained a supply of fresh provisions, and whatever else he needed. One circumstance, however, greatly disquieted him. The Pinta, of which he had lost sight on the first day of the hurricane, did not appear; he dreaded for some time that she had foundered at sea, and that all her crew had perished; afterwards, his former suspicions recurred, and he became apprehensive that Pinzon had borne away for Spain, that he might reach it before him, and, by giving the first account of his discoveries, might obtain some share of his fame.

Feb. 24. Arrives at Lisbon.

In order to prevent this, he left the Azores as soon as the weather would permit. At no great distance from the coast of Spain, when near the end of his voyage, and seemingly beyond the reach of any disaster, another storm arose, little inferior to the former in violence; and after driving before it during two days and two nights, he was forced to take shelter in the river Tagus. Upon application to the king of Portugal, he was allowed to come up to Lisbon; and, notwithstanding the envy which it was natural for the Portuguese to feel, when they beheld another nation entering upon that province of discovery which they had hitherto deemed peculiarly their own, and in its first essay, not only rivalling, but eclipsing their fame, Columbus was received with all the marks of distinction due to a man who had performed things so extraordinary and unexpected. The king admitted him into his presence, treated him with the highest respect, and listened to the account which he gave of his voyage with admiration mingled with regret. While Columbus, on his part, enjoyed the satisfaction of describing the importance of his discoveries, and of being now able to prove the solidity of his schemes to those very persons, who, with an ignorance disgraceful to themselves, and fatal to their country, had lately rejected them as the projects of a visionary or designing adventurer.[d]

March 4.

Returns to Spain.

Columbus was so impatient to return to Spain, that he remained only five days in Lisbon. On the fifteenth of March he arrived in the port of Palos, seven months and eleven days from the time when he set out thence upon his voyage. As soon as the ship was discovered approaching the port, all the inhabitants of Palos ran eagerly to the shore, in order to welcome their relations and fellow-citizens, and to hear tidings of their voyage. When the prosperous issue of it was known, when they beheld the strange people, the unknown animals, and singular productions, brought from the countries which had been discovered, the effusion of joy was general and unbounded. The bells were rung, the cannon fired; Columbus was received at landing with royal honours, and all the people, in solemn procession, accompanied him and his crew to the church, where they returned thanks to Heaven, which had so wonderfully conducted and crowned with success a voyage of greater length and of more importance than had been attempted in any former age. On the evening of the same day, he had the satisfaction of seeing the Pinta, which the violence of the tempest had driven far to the north, enter the harbour.

His reception.

The first care of Columbus was to inform the king and queen, who were then at Barcelona, of his arrival and success. Ferdinand and Isabella, no less astonished than delighted with this unexpected event, desired Columbus, in terms the most respectful and flattering, to repair immediately to court, that from his own mouth they might receive a full detail of his extraordinary services and discoveries. During his journey to Barcelona, the people crowded from the adjacent country, following him every where with admiration and applause. His entrance into the city was conducted, by order of Ferdinand and Isabella, with pomp suitable to the great event, which added such distinguishing lustre to their reign. The people whom he brought along with him from the countries which he had discovered, marched first, and by their singular complexion, the wild peculiarity of their features, and uncouth finery, appeared like men of another species. Next to them were carried the ornaments of gold fashioned by the rude art of the natives, the grains of gold found in the mountains, and dust of the same metal gathered in the rivers. After these appeared the various commodities of the new discovered countries, together with their curious productions. Columbus himself closed the procession, and attracted the eyes of all the spectators, who gazed with admiration on the extraordinary man, whose superior sagacity and fortitude had conducted their countrymen, by a route concealed from past ages, to the knowledge of a new world. Ferdinand and Isabella received him clad in their royal robes, and seated upon a throne, under a magnificent canopy. When he approached, they stood up, and raising him as he kneeled to kiss their hands, commanded him to take his seat upon a chair prepared for him, and to give a circumstantial account of his voyage. He delivered it with a gravity and

c Life of Columbus, c. 37. Herrera, dec. 1. lib. ii. c. 1, 2. See Note XVI.

d Life of Columbus, c. 40, 41. Herrera, dec. 1. lib. ii. c. 3.

composure no less suitable to the disposition of the Spanish nation, than to the dignity of the audience in which he spoke, and with that modest simplicity which characterizes men of superior minds, who, satisfied with having performed great actions, court not vain applause by an ostentatious display of their exploits. When he had finished his narration, the king and queen, kneeling down, offered up solemn thanks to Almighty God for the discovery of those new regions, from which they expected so many advantages to flow in upon the kingdoms subject to their government.[e] Every mark of honour that gratitude or admiration could suggest was conferred upon Columbus. Letters patent were issued, confirming to him and to his heirs all the privileges contained in the capitulation concluded at Santa Fé; his family was ennobled; the king and queen, and, after their example, the courtiers, treated him, on every occasion, with all the ceremonious respect paid to persons of the highest rank. But what pleased him most, as it gratified his active mind, bent continually upon great objects, was an order to equip, without delay, an armament of such force, as might enable him not only to take possession of the countries which he had already discovered, but to go in search of those more opulent regions, which he still confidently expected to find.[f]

Astonishment of mankind at his discoveries.

While preparations were making for this expedition, the fame of Columbus's successful voyage spread over Europe, and excited general attention. The multitude, struck with amazement when they heard that a new world had been found, could hardly believe an event so much above their conception. Men of science, capable of comprehending the nature, and of discerning the effects, of this great discovery, received the account of it with admiration and joy. They spoke of his voyage with rapture, and congratulated one another upon their felicity, in having lived in the period when, by this extraordinary event, the boundaries of human knowledge were so much extended, and such a new field of inquiry and observation opened, as would lead mankind to a perfect acquaintance with the structure and productions of the habitable globe.[g] Various opinions and conjectures were formed concerning the newfound countries, and what division of the earth they belonged to. Columbus adhered tenaciously to his original opinion, that they should be reckoned a part of those vast regions in Asia, comprehended under the general name of India. This sentiment was confirmed by the observations which he made concerning the productions of the countries he had discovered. Gold was known to abound in India, and he had met with such promising samples of it in the islands which he visited, as led him to believe that rich mines of it might be found. Cotton, another production of the East Indies, was common there. The pimento of the islands he imagined to be a species of the East Indian pepper. He mistook a root, somewhat resembling rhubarb, for that valuable drug, which was then supposed to be a plant peculiar to the East Indies.[h] The birds brought home by him were adorned with the same rich plumage which distinguishes those of India. The alligator of the one country appeared to be the same with the crocodile of the other. After weighing all these circumstances, not only the Spaniards, but the other nations of Europe, seem to have adopted the opinion of Columbus. The countries which he had discovered were considered as a part of India. In consequence of this notion, the name of Indies is given to them by Ferdinand and Isabella, in a ratification of their former agreement, which was granted to Columbus upon his return.[i] Even after the error which gave rise to this opinion was detected, and the true position of the New World was ascertained, the name has remained, and the appellation of *West Indies* is given by all the people of Europe to the country, and that of *Indians* to its inhabitants.

Distinguished by the name of the West Indies.

Preparations for a second voyage.

The name by which Columbus distinguished the countries which he had discovered was so inviting, the specimens of their riches and fertility, which he produced, were so considerable, and the reports of his companions, delivered frequently with the exaggeration natural to travellers, so favourable, as to excite a wonderful spirit of enterprise among the Spaniards. Though little accustomed to naval expeditions, they were impatient to set out upon their voyage. Volunteers of every rank solicited to be employed. Allured by the inviting prospects which opened to their ambition and avarice, neither the length nor danger of the navigation intimidated them. Cautious as Ferdinand was, and averse to every thing new or adventurous, he seems to have catched the same spirit with his subjects. Under its influence, preparations for a second expedition were carried on with a rapidity unusual in Spain, and to an extent that would be deemed not inconsiderable in the present age. The fleet consisted of seventeen ships, some of which were of good burden. It had on board fifteen hundred persons, among whom were many of noble families, who had served in honourable stations. The greater part of these being destined to remain in the country, were furnished with every thing requisite for conquest or settlement, with all kinds of European domestic animals, with such seeds and plants as were most likely to thrive in the climate of the West Indies, with utensils and instruments of every sort, and with such artificers as might be most useful in an infant colony.[k]

The right of Spain to the New World confirmed by the pope.

But, formidable and well provided as this fleet was, Ferdinand and Isabella did not rest their title to the

possession of the newly discovered countries upon its operations alone. The example of the Portuguese, as well as the superstition of the age, made it necessary to obtain from the Roman pontiff a grant of those territories which they wished to occupy. The pope, as the vicar and representative of Jesus Christ, was supposed to have a right of dominion over all the kingdoms of the earth. Alexander VI. a pontiff infamous for every crime which disgraces humanity, filled the papal throne at that time. As he was born Ferdinand's subject, and very solicitous to secure the protection of Spain, in order to facilitate the execution of his ambitious schemes in favour of his own family, he was extremely willing to gratify the Spanish monarchs. By an act of liberality which cost him nothing, and that served to establish the jurisdiction and pretensions of the papal see, he granted in full right to Ferdinand and Isabella all the countries inhabited by infidels, which they had discovered, or should discover; and, in virtue of that power which he derived from Jesus Christ, he conferred on the crown of Castile vast regions, to the possession of which he himself was so far from having any title, that he was unacquainted with their situation, and ignorant even of their existence. As it was necessary to prevent this grant from interfering with that formerly made to the crown of Portugal, he appointed that a line, supposed to be drawn from pole to pole, a hundred leagues to the westward of the Azores, should serve as a limit between them; and, in the plenitude of his power, bestowed all to the east of this imaginary line upon the Portuguese, and all to the west of it upon the Spaniards.[l] Zeal for propagating the christian faith was the consideration employed by Ferdinand in soliciting this bull, and is mentioned by Alexander as his chief motive for issuing it. In order to manifest some concern for this laudable object, several friars, under the direction of father Boyl, a Catalonian monk of great reputation, as apostolical vicar, were appointed to accompany Columbus, and to devote themselves to the instruction of the natives. The Indians, whom Columbus had brought along with him, having received some tincture of christian knowledge, were baptized with much solemnity, the king himself, the prince his son, and the chief persons of his court, standing as their godfathers. Those first fruits of the New World have not been followed by such an increase as pious men wished, and had reason to expect.

Second voyage of Columbus.

Ferdinand and Isabella having thus acquired a title, which was then deemed completely valid, to extend their discoveries and to establish their dominion over such a considerable portion of the globe, nothing now retarded the departure of the fleet. Columbus was extremely impatient to revisit the colony which he had left, and to pursue that career of glory upon which he had entered. He set sail from the bay of Cadiz on the twenty-fifth of September, and touching again at the island of Gomera, he steered further towards the south than in his former voyage. By holding this course, he enjoyed more steadily the benefit of the regular winds which reign within the tropics, and was carried towards a larger cluster of islands, situated considerably to the east of those which he had already discovered. On the twenty-sixth day after his departure from Gomera, he made land.[m] Nov. 2. It was one of the Caribbee or Leeward Islands, to which he gave the name of Deseada, on account of the impatience of his crew to discover some part of the New World. After this he visited successively Dominica, Marigalante, Guadaloupe, Antigua, San Juan de Puerto Rico, and several other islands, scattered in his way as he advanced towards the north-west. All these he found to be inhabited by that fierce race of people whom Guacanahari had painted in such frightful colours. His descriptions appeared not to have been exaggerated. The Spaniards never attempted to land without meeting with such a reception, as discovered the martial and daring spirit of the natives; and in their habitations were found relics of those horrid feasts which they had made upon the bodies of their enemies taken in war.

Arrives at Hispaniola, Nov. 22.

But as Columbus was eager to know the state of the colony which he had planted, and to supply it with the necessaries of which he supposed it to be in want, he made no stay in any of those islands, and proceeded directly to Hispaniola.[n] When he arrived off Navidad, the station in which he had left the thirty-eight men under the command of Arada, he was astonished that none of them appeared, and expected every moment to see them running with transports of joy to welcome their countrymen. Full of solicitude about their safety, and foreboding in his mind what had befallen them, he rowed instantly to land. All the natives from whom he might have received information had fled. But the fort which he had built was entirely demolished, and the tattered garments, the broken arms and utensils scattered about it, left no room to doubt concerning the unhappy fate of the garrison.[o] While the Spaniards were shedding tears over those sad memorials of their fellow-citizens, a brother of the cazique Guacanahari arrived. From him Columbus received a particular detail of what had happened after his departure from the island. The familiar intercourse of the Indians with the Spaniards tended gradually to diminish the superstitious veneration with which their first appearance had inspired that simple people. By their own indiscretion and ill conduct, the Spaniards speedily effaced those favourable impressions, and soon convinced the natives, that they had all the

wants, and weaknesses, and passions of men. As soon as the powerful restraint which the presence and authority of Columbus imposed was withdrawn, the garrison threw off all regard for the officer whom he had invested with command. Regardless of the prudent instructions which he had given them, every man became independent, and gratified his desires without control. The gold, the women, the provisions of the natives, were all the prey of those licentious oppressors. They roamed in small parties over the island, extending their rapacity and insolence to every corner of it. Gentle and timid as the people were, those unprovoked injuries at length exhausted their patience, and roused their courage. The caziquc of Cibao, whose country the Spaniards chiefly infested on account of the gold which it contained, surprised and cut off several of them, while they straggled in as perfect security as if their conduct had been altogether inoffensive. He then assembled his subjects, and surrounding the fort, set it on fire. Some of the Spaniards were killed in defending it, the rest perishing in attempting to make their escape by crossing an arm of the sea. Guacanahari, whom all their exactions had not alienated from the Spaniards, took arms in their behalf, and, in endeavouring to protect them, had received a wound, by which he was still confined.[p]

His prudent conduct.

Though this account was far from removing the suspicions which the Spaniards entertained with respect to the fidelity of Guacanahari, Columbus perceived so clearly that this was not a proper juncture for inquiring into his conduct with scrupulous accuracy, that he rejected the advice of several of his officers, who urged him to seize the person of that prince, and to revenge the death of their countryman by attacking his subjects. He represented to them the necessity of securing the friendship of some potentate of the country, in order to facilitate the settlement which they intended, and the danger of driving the natives to unite in some desperate attempt against them, by such an ill-timed and unavailing exercise of rigour. Instead of wasting his time in punishing past wrongs, he took precautions for preventing any future injury. With this view he made choice of a situation more healthy and commodious than that of Navidad. He traced out the plan of a town in a large plain near a spacious bay, and obliging every person to put his hand to a work on which their common safety depended, the houses and ramparts were soon so far advanced by their united labour, as to afford them shelter and security. This rising city, the first that the Europeans founded in the New World, he named Isabella, in honour of his patroness the queen of Castile.[q]

Discontent of his followers.

In carrying on this necessary work, Columbus had not only to sustain all the hardships, and to encounter all the difficulties, to which infant colonies are exposed when they settle in an uncultivated country, but he had to contend with what was more insuperable, the laziness, the impatience, and mutinous disposition of his followers. By the enervating influence of a hot climate, the natural inactivity of the Spaniards seemed to increase. Many of them were gentlemen, unaccustomed to the fatigue of bodily labour, and all had engaged in the enterprise with the sanguine hopes excited by the spendid and exaggeratcd description of their countrymen who returned from the first voyage, or by the mistaken opinion of Columbus, that the country which he had discovered was either the Cipango of Marco Polo, or the Ophir,[r] from which Solomon imported those precious commodities which suddenly diffused such extraordinary riches through his kingdom. But when, instead of that golden harvest which they had expected to reap without toil or pains, the Spaniards saw that their prospect of wealth was remote as well as uncertain, and that it could not be attained but by the slow and persevering efforts of industry, the disappointment of those chimerical hopes occasioned such dejection of mind as bordered on despair, and led to general discontent. In vain did Columbus endeavour to revive their spirits by pointing out the fertility of the soil, and exhibiting the specimens of gold daily brought in from different parts of the island. They had not patience to wait for the gradual returns which the former might yield, and the latter they despised as scanty and inconsiderable. The spirit of disaffection spread, and a conspiracy was formed, which might have been fatal to Columbus and the colony. Happily he discovered it; and, seizing the ringleaders, punished some of them, sent others prisoners into Spain, whither he despatched twelve of the ships which had served as transports, with an earnest request for a reinforcement of men and a large supply of provisions.[s]

1494. Examines into the state of the country.

Meanwhile, in order to banish that idleness, which, by allowing his people leisure to brood over their disappointment, nourished the spirit of discontent, Columbus planned several expeditions into the interior part of the country. He sent a detachment, under the command of Alonzo de Ojeda, a vigilant and enterprising officer, to visit the district of Cibao, which was said to yield the greatest quantity of gold, and followed him in person with the main body of his troops. In this expedition he displayed all the pomp of military magnificence that he could exhibit, in order to strike the imagination of the natives. He marched with colours flying, with martial music, and with a small body of cavalry that paraded sometimes in the front and sometimes in the rear. As those were the first horses which appeared in the New World, they were objects of terror no less than of admiration to the Indians, who, having no tame animals them-

selves, were unacquainted with that vast accession of power which man hath acquired by subjecting them to his dominion. They supposed them to be rational creatures. They imagined that the horse and the rider formed one animal, with whose speed they were astonished, and whose impetuosity and strength they considered as irresistible. But while Columbus endeavoured to inspire the natives with a dread of his power, he did not neglect the arts of gaining their love and confidence. He adhered scrupulously to the principles of integrity and justice in all his transactions with them, and treated them, on every occasion, not only with humanity, but with indulgence. The district of Cibao answered the description given of it by the natives. It was mountainous and uncultivated, but in every river and brook gold was gathered either in dust or in grains, some of which were of considerable size. The Indians had never opened any mines in search of gold. To penetrate into the bowels of the earth, and to refine the rude ore, were operations too complicated and laborious for their talents and industry, and they had no such high value for gold as to put their ingenuity and invention upon the stretch in order to obtain it.[t] The small quantity of that precious metal which they possessed, was either picked up in the beds of the rivers, or washed from the mountains by the heavy rains that fall within the tropics. But, from those indications, the Spaniards could no longer doubt that the country contained rich treasures in its bowels, of which they hoped soon to be masters.[u] In order to secure the command of this valuable province, Columbus erected a small fort to which he gave the name of St. Thomas, by way of ridicule upon some of his incredulous followers, who would not believe that the country produced gold, until they saw it with their own eyes, and touched it with their hands.[x]

The distress and disaffection of the colony increase.

The account of those promising appearances of wealth in the country of Cibao came very seasonably to comfort the desponding colony, which was affected with distresses of various kinds. The stock of provisions which had been brought from Europe was mostly consumed; what remained was so much corrupted by the heat and moisture of the climate, as to be almost unfit for use; the natives cultivated so small a portion of ground, and with so little skill, that it hardly yielded what was sufficient for their own subsistence; the Spaniards at Isabella had hitherto neither time nor leisure to clear the soil, so as to reap any considerable fruits of their own industry. On all these accounts, they became afraid of perishing with hunger, and were reduced already to a scanty allowance. At the same time, the diseases predominant in the torrid zone, and which rage chiefly in those uncultivated countries, where the hand of industry has not opened the woods, drained the marshes, and confined the rivers within a certain channel, began to spread among them. Alarmed at the violence and unusual symptoms of those maladies, they exclaimed against Columbus and his companions in the former voyage, who, by their splendid but deceitful descriptions of Hispaniola, had allured them to quit Spain for a barbarous uncultivated land, where they must either be cut off by famine, or die of unknown distempers. Several of the officers and persons of note, instead of checking, joined in those seditious complaints. Father Boyl, the apostolical vicar, was one of the most turbulent and outrageous. It required all the authority and address of Columbus to re-establish subordination and tranquillity in the colony. Threats and promises were alternately employed for this purpose; but nothing contributed more to soothe the malcontents, than the prospect of finding in the mines of Cibao such a rich store of treasure as would be a recompence for all their sufferings, and efface the memory of former disappointments.

Columbus attempts new discoveries.

When, by his unwearied endeavours, concord and order were so far restored that he could venture to leave the island, Columbus resolved to pursue his discoveries, that he might be able to ascertain whether those new countries with which he had opened a communication were connected with any region of the earth already known, or whether they were to be considered as a separate portion of the globe hitherto unvisited. He appointed his brother Don Diego, with the assistance of a council of officers, to govern the island in his absence; and gave the command of a body of soldiers to Don Pedro Margarita, with which he was to visit the different parts of the island, and endeavour to establish the authority of the Spaniards among the inhabitants. Having left them very particular instructions with respect to their conduct, he weighed anchor on the twenty-fourth of April, with one ship and two small barks, under his command. During a tedious voyage of full five months, he had a trial of almost all the numerous hardships to which persons of his profession are exposed, without making any discovery of importance, except the island of Jamaica. As he ranged along the southern coast of Cuba,[y] he was entangled in a labyrinth formed by an incredible number of small islands, to which he gave the name of the Queen's Garden. In this unknown course, among rocks, and shelves, he was retarded by contrary winds, assaulted with furious storms, and alarmed with the terrible thunder and lightning which is often almost incessant between the tropics. At length his provisions fell short; his crew, exhausted with fatigue, as well as hunger, murmured and threatened, and were ready to proceed to the most desperate extremities against him. Beset with danger in such various forms, he was obliged to keep continual watch, to observe every occurrence with his own eyes, to issue every order, and to su-

perintend the execution of it. On no occasion was the extent of his skill and experience as a navigator so much tried. To these the squadron owed its safety. But this unremitted fatigue of body, and intense application of mind, overpowering his constitution, though naturally vigorous and robust, brought on a feverish disorder, which terminated in a lethargy, that deprived him of sense and memory, and had almost proved fatal to his life.[z]

Sept. 27. On his return, finds his brother Bartholomew at Isabella.

But, on his return to Hispaniola, the sudden emotion of joy which he felt upon meeting with his brother Bartholomew at Isabella, occasioned such a flow of spirits as contributed greatly to his recovery. It was now thirteen years since the two brothers, whom similarity of talents united in close friendship, had separated from each other, and during that long period there had been no intercourse between them. Bartholomew, after finishing his negociation in the court of England, had set out for Spain by the way of France. At Paris he received an account of the extraordinary discoveries which his brother had made in his first voyage, and that he was then preparing to embark on a second expedition. Though this naturally induced him to pursue his journey with the utmost despatch, the admiral had sailed for Hispaniola before he reached Spain. Ferdinand and Isabella received him with the respect due to the nearest kinsman of a person whose merit and services rendered him so conspicuous; and as they knew what consolation his presence would afford to his brother, they persuaded him to take the command of three ships, which they had appointed to carry provisions to the colony at Isabella.[a]

The Indians take arms against the Spaniards.

He could not have arrived at any juncture when Columbus stood more in need of a friend capable of assisting him with his counsels, or of dividing with him the cares and burden of government. For although the provisions now brought from Europe afforded a temporary relief to the Spaniards from the calamities of famine, the supply was not in such quantity as to support them long, and the island did not hitherto yield what was sufficient for their sustenance. They were threatened with another danger, still more formidable than the return of scarcity, and which demanded more immediate attention. No sooner did Columbus leave the island on his voyage of discovery, than the soldiers under Margarita, as if they had been set free from discipline and subordination, scorned all restraint. Instead of conforming to the prudent instructions of Columbus, they dispersed in straggling parties over the island, lived at discretion upon the natives, wasted their provisions, seized their women, and treated that inoffensive race with all the insolence of military oppression.[b]

As long as the Indians had any prospect that their sufferings might come to a period by the voluntary departure of the invaders, they submitted in silence, and dissembled their sorrow; but they now perceived that the yoke would be as permanent as it was intolerable. The Spaniards had built a town, and surrounded it with ramparts. They had erected forts in different places. They had enclosed and sown several fields. It was apparent that they came not to visit the country, but to settle in it. Though the number of those strangers was inconsiderable, the state of cultivation among this rude people was so imperfect, and in such exact proportion to their own consumption, that it was with difficulty they could afford subsistence to their new guests. Their own mode of life was so indolent and inactive, the warmth of the climate so enervating, the constitution of their bodies naturally so feeble, and so unaccustomed to the laborious exertions of industry, that they were satisfied with a proportion of food amazingly small. A handful of maize, or a little of the insipid bread made of the cassada root, was sufficient to support men, whose strength and spirits were not exhausted by any vigorous efforts either of body or mind. The Spaniards, though the most abstemious of all the European nations, appeared to them excessively voracious. One Spaniard consumed as much as several Indians. This keenness of appetite surprised them so much, and seemed to be so insatiable, that they supposed the Spaniards had left their own country, because it did not produce as much as was requisite to gratify their immoderate desire of food, and had come among them in quest of nourishment.[c] Self-preservation prompted them to wish for the departure of guests who wasted so fast their slender stock of provisions. The injuries which they suffered added to their impatience for this event. They had long expected that the Spaniards would retire of their own accord. They now perceived that, in order to avert the destruction with which they were threatened, either by the slow consumption of famine, or by the violence of their oppressors, it was necessary to assume courage, to attack those formidable invaders with united force, and drive them from the settlements of which they had violently taken possession.

War with them.

Such were the sentiments which universally prevailed among the Indians, when Columbus returned to Isabella. Inflamed by the unprovoked outrages of the Spaniards, with a degree of rage of which their gentle natures, formed to suffer and submit, seemed hardly susceptible, they waited only for a signal from their leaders to fall upon the colony. Some of the caziques had already surprised and cut off several stragglers. The dread of this impending danger united the Spaniards, and re-established the authority of Columbus, as they saw no prospect of safety but in committing themselves to his prudent guidance.

z Life of Columbus, c. 54, &c. Herrera, dec. 1. lib. ii. c. 13, 14. P. Martyr, dec. 1. p. 34, &c.

a Herrera, dec. 1. lib. ii. c. 15. b P. Martyr, dec. p. 47.
c Herrera, dec. 1. lib. ii. c. 17.

It was now necessary to have recourse to arms, the employing of which against the Indians, Columbus had hitherto avoided with the greatest solicitude. Unequal as the conflict may seem, between the naked inhabitants of the New World, armed with clubs, sticks hardened in the fire, wooden swords, and arrows pointed with bones or flints; and troops accustomed to the discipline, and provided with the instruments of destruction, known in the European art of war, the situation of the Spaniards was far from being exempt from danger. The vast superiority of the natives in number, compensated many defects. A handful of men was about to encounter a whole nation. One adverse event, or even any unforeseen delay in determining the fate of the war, might prove fatal to the Spaniards. Conscious that success depended on the vigour and rapidity of his operations, Columbus instantly assembled his forces. They were reduced to a very small number. Diseases, engendered by the warmth and humidity of the country, or occasioned by their own licentiousness, had raged among them with much violence; experience had not yet taught them the art either of curing these, or the precautions requisite for guarding against them; two-thirds of the original adventurers were dead, and many of those who survived were incapable of service.[d] The body which took the field consisted only of two hundred foot, twenty horse, and twenty large dogs; and how strange soever it may seem to mention the last as composing part of a military force, they were not perhaps the least formidable and destructive of the whole, when employed against naked and timid Indians. All the caziques of the island, Guacanahari excepted, who retained an inviolable attachment to the Spaniards, were in arms to oppose Columbus, with forces amounting, if we may believe the Spanish historians, to a hundred thousand men. Instead of attempting to draw the Spaniards into the fastnesses of the woods and mountains, they were so imprudent as to take their station in the Vega Real, the most open plain in the country. Columbus did not allow them time to perceive their error, or to alter their position. He attacked them during the night, when undisciplined troops are least capable of acting with union and concert, and obtained an easy and bloodless victory. The consternation with which the Indians were filled by the noise and havoc made by the fire-arms, by the impetuous force of the cavalry, and the fierce onset of the dogs, was so great, that they threw down their weapons and fled, without attempting resistance. Many were slain; more were taken prisoners and reduced to servitude;[e] and so thoroughly were the rest intimidated, that from that moment they abandoned themselves to despair, relinquishing all thoughts of contending with aggressors whom they deemed invincible.

1495. March 24.

A tax imposed upon them.

Columbus employed several months in marching through the island, and in subjecting it to the Spanish government, without meeting with any opposition. He imposed a tribute upon all the inhabitants above the age of fourteen. Each person who lived in those districts where gold was found, was obliged to pay quarterly as much gold dust as filled a hawk's bell; from those in other parts of the country, twenty-five pounds of cotton were demanded. This was the first regular taxation of the Indians, and served as a precedent for exactions still more intolerable. Such an imposition was extremely contrary to those maxims which Columbus had hitherto inculcated, with respect to the mode of treating them. But intrigues were carrying on in the court of Spain at this juncture, in order to undermine his power, and discredit his operations, which constrained him to depart from his own system of administration. Several unfavourable accounts of his conduct, as well as of the countries discovered by him, had been transmitted to Spain. Margarita and father Boyl were now at court, and in order to justify their own conduct, or to gratify their resentment, watched with malevolent attention for every opportunity of spreading insinuations to his detriment. Many of the courtiers viewed his growing reputation and power with envious eyes. Fonseca, archdeacon of Seville, who was intrusted with the chief direction of Indian affairs, had conceived such an unfavourable opinion of Columbus, for some reason which the contemporary writers have not mentioned, that he listened with partiality to every invective against him. It was not easy for an unfriended stranger, unpractised in courtly arts, to counteract the machinations of so many enemies. Columbus saw that there was but one method of supporting his own credit, and of silencing all his adversaries. He must produce such a quantity of gold as would not only justify what he had reported with respect to the richness of the country, but encourage Ferdinand and Isabella to persevere in prosecuting his plans. The necessity of obtaining it, forced him not only to impose this heavy tax upon the Indians, but to exact payment of it with extreme rigour; and may be pleaded in excuse for his deviating on this occasion from the mildness and humanity with which he uniformly treated that unhappy people.[f]

Fatal effects of that measure.

The labour, attention, and foresight, which the Indians were obliged to employ in procuring the tribute demanded of them, appeared the most intolerable of all evils, to men accustomed to pass their days in a careless, improvident indolence. They were incapable of such a regular and persevering exertion of industry, and felt it such a grievous restraint upon their liberty, that they had recourse to an expedient for obtaining deliverance from this yoke, which demonstrates the excess of their impatience and despair. They formed a scheme of starving those oppressors whom they durst not attempt to expel; and from the opinion which they entertained with respect to the

d Life of Columbus, c. 61.

e See Note XX.

f Herrera, dec. 1. lib. ii. c. 17.

voracious appetite of the Spaniards, they concluded the execution of it to be very practicable. With this view they suspended all the operations of agriculture; they sowed no maize, they pulled up the roots of the manioc or cassada which were planted, and retiring to the most inaccessible parts of the mountains, left the uncultivated plains to their enemies. This desperate resolution produced in some degree the effects which they expected. The Spaniards were reduced to extreme want; but they received such seasonable supplies of provisions from Europe, and found so many resources in their own ingenuity and industry, that they suffered no great loss of men. The wretched Indians were the victims of their own ill-concerted policy. A great multitude of people, shut up in the mountainous or wooded part of the country, without any food but the spontaneous productions of the earth, soon felt the utmost distresses of famine. This brought on contagious diseases; and, in the course of a few months, more than a third part of the inhabitants of the island perished, after experiencing misery in all its various forms.[g]

Intrigues against Columbus in the court of Spain.

But while Columbus was establishing the foundations of the Spanish grandeur in the New World, his enemies laboured with unwearied assiduity to deprive him of the glory and rewards, which by his services and sufferings he was entitled to enjoy. The hardships unavoidable in a new settlement, the calamities occasioned by an unhealthy climate, the disasters attending a voyage in unknown seas, were all represented as the effects of his restless and inconsiderate ambition. His prudent attention to preserve discipline and subordination was denominated excess of rigour; the punishments which he inflicted upon the mutinous and disorderly were imputed to cruelty. These accusations gained such credit in a jealous court, that a commissioner was appointed to repair to Hispaniola, and to inspect into the conduct of Columbus. By the recommendation of his enemies, Aguado, a groom of the bed-chamber, was the person to whom this important trust was committed. But in this choice they seem to have been more influenced by the obsequious attachment of the man to their interest, than by his capacity for the station. Puffed up with such sudden elevation, Aguado displayed, in the exercise of this office, all the frivolous self-importance, and acted with all the disgusting insolence, which are natural to little minds, when raised to unexpected dignity, or employed in functions to which they are not equal. By listening with eagerness to every accusation against Columbus, and encouraging not only the malcontent Spaniards, but even the Indians, to produce their grievances, real or imaginary, he fomented the spirit of dissension in the island, without establishing any regulations of public utility, or that tended to redress the many wrongs, with the odium of which he wished to load the admiral's administration. As Columbus felt sensibly how humiliating his situation must be, if he should remain in the country while such a partial inspector observed his motions, and controlled his jurisdiction, he took the resolution of returning to Spain, in order to lay a full account of all his transactions, particularly with respect to the points in dispute between him and his adversaries, before Ferdinand and Isabella, from whose justice and discernment he expected an equal and a favourable decision. He committed the administration of affairs, during his absence, to Don Bartholomew his brother, with the title of Adelantado, or lieutenant-governor. By a choice less fortunate, and which proved the source of many calamities to the colony, he appointed Francis Roldan chief justice, with very extensive powers.[h] 1496.

Returns to Spain.

In returning to Europe, Columbus held a course different from that which he had taken in his former voyage. He steered almost due east from Hispaniola, in the parallel of twenty-two degrees of latitude; as experience had not yet discovered the more certain and expeditious method of stretching to the north, in order to fall in with the south-west winds. By this ill-advised choice, which, in the infancy of navigation between the New and Old Worlds, can hardly be imputed to the admiral as a defect in naval skill, he was exposed to infinite fatigue and danger, in a perpetual struggle with the trade-winds, which blow without variation from the east between the tropics. Notwithstanding the almost insuperable difficulties of such a navigation, he persisted in his course with his usual patience and firmness, but made so little way that he was three months without seeing land. At length his provisions began to fail, the crew was reduced to the scanty allowance of six ounces of bread a-day for each person. The admiral fared no better than the meanest sailor. But, even in this extreme distress he retained the humanity which distinguishes his character, and refused to comply with the earnest solicitations of his crew, some of whom proposed to feed upon the Indian prisoners whom they were carrying over, and others insisted to throw them overboard, in order to lessen the consumption of their small stock. He represented that they were human beings, reduced by a common calamity to the same condition with themselves, and entitled to share an equal fate. His authority and remonstrances dissipated those wild ideas suggested by despair. Nor had they time to recur; as he came soon within sight of the coast of Spain, when all their fears and sufferings ended.[i]

His reception there.

Columbus appeared at court with the modest but determined confidence of a man conscious not only of integrity, but of having performed great services. Ferdinand and Isabella, ashamed of their own facility in lending

too favourable an ear to frivolous or unfounded accusations, received him with such distinguished marks of respect as covered his enemies with shame. Their censures and calumnies were no more heard of at that juncture. The gold, the pearls, the cotton, and other commodities of value which Columbus produced, seemed fully to refute what the malcontents had propagated with respect to the poverty of the country. By reducing the Indians to obedience, and imposing a regular tax upon them, he had secured to Spain a large accession of new subjects, and the establishment of a revenue that promised to be considerable. By the mines which he had found out and examined, a source of wealth still more copious was opened. Great and unexpected as those advantages were, Columbus represented them only as preludes to future acquisitions, and as the earnest of more important discoveries, which he still meditated, and to which those he had already made would conduct him with ease and certainty.[k]

A plan formed for the more regular establishment of a colony.

The attentive consideration of all these circumstances made such an impression, not only upon Isabella, who was flattered with the idea of being the patroness of all Columbus's enterprises, but even upon Ferdinand, who having originally expressed his disapprobation of his schemes, was still apt to doubt of their success, that they resolved to supply the colony in Hispaniola with every thing which could render it a permanent establishment, and to furnish Columbus with such a fleet, that he might proceed to search for those new countries, of whose existence he seemed to be confident. The measures most proper for accomplishing both these designs were concerted with Columbus. Discovery had been the sole object of the first voyage to the New World; and though, in the second, settlement had been proposed, the precautions taken for that purpose had either been insufficient, or were rendered ineffectual by the mutinous spirit of the Spaniards, and the unforeseen calamities arising from various causes. Now a plan was to be formed of a regular colony, that might serve as a model in all future establishments. Every particular was considered with attention, and the whole arranged with a scrupulous accuracy. The precise number of adventurers who should be permitted to embark was fixed. They were to be of different ranks and professions; and the proportion of each was established, according to their usefulness and the wants of the colony. A suitable number of women was to be chosen to accompany these new settlers. As it was the first object to raise provisions in a country where scarcity of food had been the occasion of so much distress, a considerable body of husbandmen was to be carried over. As the Spaniards had then no conception of deriving any benefit from those productions of the New World which have since yielded such large returns of wealth to Europe, but had formed magnificent ideas, and entertained sanguine hopes with respect to the riches contained in the mines which had been discovered, a band of workmen, skilled in the various arts employed in digging and refining the precious metals, was provided. All these emigrants were to receive pay and subsistence for some years at the public expense.[l]

A defect in it.

Thus far the regulations were prudent, and well adapted to the end in view. But as it was foreseen that few would engage voluntarily to settle in a country, whose noxious climate had been fatal to so many of their countrymen, Columbus proposed to transport to Hispaniola such malefactors as had been convicted of crimes, which, though capital, were of a less atrocious nature; and that for the future a certain proportion of the offenders usually sent to the galleys, should be condemned to labour in the mines which were to be opened. This advice, given without due reflection, was as inconsiderately adopted. The prisons of Spain were drained, in order to collect members for the intended colony; and the judges empowered to try criminals were instructed to recruit it by their future sentences. It was not, however, with such materials that the foundations of a society, destined to be permanent, should be laid. Industry, sobriety, patience, and mutual confidence, are indispensably requisite in an infant settlement, where purity of morals must contribute more towards establishing order, than the operation or authority of laws. But when such a mixture of what is corrupt is admitted into the original constitution of the political body, the vices of those unsound and incurable members will probably infect the whole, and must certainly be productive of violent and unhappy effects. This the Spaniards fatally experienced; and the other European nations having successively imitated the practice of Spain in this particular, pernicious consequences have followed in their settlements, which can be imputed to no other cause.[m]

Executed slowly.

Though Columbus obtained, with great facility and despatch, the royal approbation of every measure and regulation that he proposed, his endeavours to carry them into execution were so long retarded, as must have tired out the patience of any man less accustomed to encounter and to surmount difficulties. Those delays were occasioned partly by that tedious formality and spirit of procrastination, with which the Spaniards conduct business; and partly by the exhausted state of the treasury, which was drained by the expense of celebrating the marriage of Ferdinand and Isabella's only son with Margaret of Austria, and that of Joanna, their second daughter, with Philip archduke of Austria;[n] but must be chiefly imputed to the malicious arts of Columbus's enemies. Astonished at the reception which he met

with upon his return, and overawed by his presence, they gave way, for some time, to a tide of favour too strong for them to oppose. Their enmity, however, was too inveterate to remain long inactive. They resumed their operations, and by the assistance of Fonseca, the minister for Indian affairs, who was now promoted to the bishopric of Badajos, they threw in so many obstacles to protract the preparations for Columbus's expedition, that a year elapsed[o] before he could procure two ships to carry over a part of the supplies destined for the colony, and almost two years were spent before the small squadron was equipped, of which he himself was to take the command.[p]

1498. Third voyage of Columbus.

This squadron consisted of six ships only, of no great burden, and but indifferently provided for a long or dangerous navigation. The voyage which he now meditated was in a course different from any he had undertaken. As he was fully persuaded that the fertile regions of India lay to the south-west of those countries which he had discovered, he proposed as the most certain method of finding out these, to stand directly south from the Canary or Cape de Verd Islands, until he came under the equinoctial line, and then to stretch to the west before the favourable wind for such a course, which blows invariably between the tropics. With this

May 30. idea he set sail, and touched first at the Canary, and then at the Cape de Verd, Islands. From the former he despatched

July 4. three of his ships with a supply of provisions for the colony in Hispaniola; with the other three, he continued his voyage towards the south. No remarkable occurrence happened until they arrived within five degrees of

July 19. the line. There they were becalmed, and at the same time the heat became so excessive, that many of their wine casks burst, the liquors in others soured, and their provisions corrupted.[q] The Spaniards, who had never ventured so far to the south, were afraid that the ships would take fire, and began to apprehend the reality of what the ancients had taught concerning the destructive qualities of that torrid region of the globe. They were relieved, in some measure, from their fears by a seasonable fall of rain. This, however, though so heavy and unintermitting that the men could hardly keep the deck, did not greatly mitigate the intenseness of the heat. The admiral, who with his usual vigilance had in person directed every operation from the beginning of the voyage, was so much exhausted by fatigue and want of sleep, that it brought on a violent fit of the gout, accompanied with a fever. All these circumstances constrained him to yield to the importunities of his crew, and to alter his course to the north-west, in order to reach some of the Caribbee islands, where he might refit, and be supplied with provisions.

Discovers the continent of America.

On the first of August, the man stationed in the round top surprised them with the joyful cry of *Land!* They stood towards it, and discovered a considerable island, which the admiral called Trinidad, a name it still retains. It lies on the coast of Guiana, near the mouth of the Orinoco. This, though a river only of the third or fourth magnitude in the New World, far surpasses any of the streams in our hemisphere. It rolls towards the ocean such a vast body of water, and rushes into it with such impetuous force, that when it meets the tide, which on that coast rises to an uncommon height, their collision occasions a swell and agitation of the waves no less surprising than formidable. In this conflict, the irresistible torrent of the river so far prevails, that it freshens the ocean many leagues with its flood.[r] Columbus, before he could conceive the danger, was entangled among those adverse currents and tempestuous waves, and it was with the utmost difficulty that he escaped through a narrow strait, which appeared so tremendous, that he called it La Boca del Drago. As soon as the consternation which this occasioned permitted him to reflect upon the nature of an appearance so extraordinary, he discerned in it a source of comfort and hope. He justly concluded that such a vast body of water as this river contained, could not be supplied by any island, but must flow through a country of immense extent, and of consequence that he was now arrived at that continent which it had long been the object of his wishes to discover. Full of this idea, he stood to the west along the coast of those provinces which are now known by the names of Paria and Cumana. He landed in several places, and had some intercourse with the people, who resembled those of Hispaniola in their appearance and manner of life. They wore, as ornaments, small plates of gold, and pearls of considerable value, which they willingly exchanged for European toys. They seemed to possess a better understanding, and greater courage, than the inhabitants of the islands. The country produced four-footed animals of several kinds, as well as a great variety of fowls and fruits.[s] The admiral was so much delighted with its beauty and fertility, that with the warm enthusiasm of a discoverer, he imagined it to be the Paradise described in Scripture, which the Almighty chose for the residence of man, while he retained innocence that rendered him worthy of such an habitation.[t] Thus Columbus had the glory not only of discovering to mankind the existence of a new world, but made considerable progress towards a perfect knowledge of it; and was the first man who conducted the Spaniards to that vast continent which have been the chief seat of their empire, and the source of their treasures in this quarter of the globe. The shattered condition of his ships, scarcity of provisions, his

own infirmities, together with the impatience of his crew, prevented him from pursuing his discoveries any further, and made it necessary to bear away for Hispaniola. In his way thither he discovered the islands of Cubagua and Margarita, which afterwards became remarkable for their pearl-fishery. When he arrived at Hispaniola, he was wasted to an extreme degree with fatigue and sickness; but found the affairs of the colony in such a situation, as afforded him no prospect of enjoying that repose of which he stood so much in need.

Aug. 30.

State of Hispaniola on his arrival there.

Many revolutions had happened in that country during his absence. His brother, the adelantado, in consequence of an advice which the admiral gave before his departure, had removed the colony from Isabella to a more commodious station, on the opposite side of the island, and laid the foundation of St. Domingo,[u] which was long the most considerable European town in the New World, and the seat of the supreme courts in the Spanish dominions there. As soon as the Spaniards were established in this new settlement, the adelantado, that they might neither languish in inactivity, nor have leisure to form new cabals, marched into those parts of the island which his brother had not yet visited or reduced to obedience. As the people were unable to resist, they submitted every where to the tribute which he imposed. But they soon found the burden to be so intolerable, that, overawed as they were by the superior power of their oppressors, they took arms against them. Those insurrections, however, were not formidable. A conflict with timid and naked Indians was neither dangerous nor of doubtful issue.

Mutiny of Roldan.

But while the adelantado was employed against them in the field, a mutiny of an aspect far more alarming broke out among the Spaniards. The ringleader of it was Francis Roldan, whom Columbus had placed in a station which required him to be the guardian of order and tranquillity in the colony. A turbulent and inconsiderate ambition precipitated him into this desperate measure, so unbecoming his rank. The arguments which he employed to seduce his countrymen were frivolous and ill-founded. He accused Columbus and his two brothers of arrogance and severity; he pretended that they aimed at establishing an independent dominion in the country; he taxed them with an intention of cutting off part of the Spaniards by hunger and fatigue, that they might more easily reduce the remainder to subjection; he represented it as unworthy of Castilians, to remain the tame and passive slaves of three Genoese adventurers. As men have always a propensity to impute the hardships of which they feel the pressure, to the misconduct of their rulers; as every nation views with a jealous eye the power and exaltation of foreigners, Roldan's insinuations made a deep impression on his countrymen. His character and rank added weight to them. A considerable number of the Spaniards made choice of him as their leader; and, taking arms against the adelantado and his brother, seized the king's magazine of provisions, and endeavoured to surprise the fort at St. Domingo. This was preserved by the vigilance and courage of Don Diego Columbus. The mutineers were obliged to retire to the province of Xaragua, where they continued not only to disclaim the adelantado's authority themselves, but excited the Indians to throw off the yoke.[x]

Such was the distracted state of the colony when Columbus landed at St. Domingo. He was astonished to find that the three ships which he had despatched from the Canaries were not yet arrived. By the unskilfulness of the pilots, and the violence of currents, they had been carried a hundred and sixty miles to the west of St. Domingo, and forced to take shelter in a harbour of the province of Xaragua, where Roldan and his seditious followers were cantoned. Roldan carefully concealed from the commanders of the ships his insurrection against the adelantado, and employing his utmost address to gain their confidence, persuaded them to set on shore a considerable part of the new settlers whom they brought over, that they might proceed by land to St. Domingo. It required but few arguments to prevail with those men to espouse his cause. They were the refuse of the gaols of Spain, to whom idleness, licentiousness, and deeds of violence were familiar; and they returned eagerly to a course of life nearly resembling that to which they had been accustomed. The commanders of the ships perceiving, when it was too late, their imprudence in disembarking so many of their men, stood away for St. Domingo, and got safe into the port a few days after the admiral; but their stock of provisions was so wasted during a voyage of such long continuance, that they brought little relief to the colony.[y]

Composed by the prudent conduct of Columbus.

By this junction with a band of such bold and desperate associates, Roldan became extremely formidable, and no less extravagant in his demands. Columbus, though filled with resentment at his ingratitude, and highly exasperated by the insolence of his followers, made no haste to take the field. He trembled at the thoughts of kindling the flames of a civil war, in which, whatever party prevailed, the power and strength of both must be so much wasted, as might encourage the common enemy to unite and complete their destruction. At the same time, he observed, that the prejudices and passions which incited the rebels to take arms, had so far infected those who still adhered to him, that many of them were adverse, and all cold to the service. From such sentiments, with respect to the public interest, as well as from this view of his own situation, he chose to negociate rather than to fight. By a

u P. Martyr, dec. p. 56. Life of Columbus, c. 74—77. Gomara, c. 23. P. Martyr, p. 78.

x Herrera, dec. 1. lib. iii. c. 5—8.

y Herrera, dec. 1. lib. iii. c. 12. Life of Columbus, c. 78, 79.

seasonable proclamation, offering free pardon to such as should merit it by returning to their duty, he made impression upon some of the malcontents. By engaging to grant such as should desire it the liberty of returning to Spain, he allured all those unfortunate adventurers, who, from sickness and disappointment, were disgusted with the country. By promising to re-establish Roldan in his former office, he soothed his pride; and, by complying with most of his demands in behalf of his followers, he satisfied their avarice. Thus, gradually, and without bloodshed, but after many tedious negociations, he dissolved this dangerous combination, which threatened the colony with ruin; and restored the appearance of order, regular government, and tranquillity.[z]

A new mode of settlement established.

In consequence of this agreement with the mutineers, lands were allotted them in different parts of the island, and the Indians settled in each district were appointed to cultivate a certain portion of ground for the use of those new masters. The performance of this work was substituted in place of the tribute formerly imposed; and how necessary soever such a regulation might be in a sickly and feeble colony, it introduced among the Spaniards the *Repartimientos*, or distributions of Indians, established by them in all their settlements, which brought numberless calamities upon that unhappy people, and subjected them to the most grievous oppression.[a] This was not the only bad effect of the insurrection in Hispaniola; it prevented Columbus from prosecuting his discoveries on the continent, as self-preservation obliged him to keep near his person his brother the adelantado, and the sailors whom he intended to have employed in that service. As soon as his affairs would permit, he sent some of his ships to Spain with a journal of the voyage which he had made, a description of the new countries which he had discovered, a chart of the coast along which he had sailed, and specimens of the gold, the pearls, and other curious or valuable productions which he had acquired by trafficking with the natives. At the same time he transmitted an account of the insurrection in Hispaniola; he accused the mutineers not only of having thrown the colony into such violent convulsions as threatened its dissolution, but of having obstructed every attempt towards discovery and improvement, by their unprovoked rebellion against their superiors; and proposed several regulations for the better government of the island, as well as the extinction of that mutinous spirit, which, though suppressed at present, might soon burst out with additional rage. Roldan and his associates did not neglect to convey to Spain, by the same ships, an apology for their own conduct, together with their recriminations upon the admiral and his brothers. Unfortunately for the

a Herrera, dec. 1. lib. iii. c. 14, &c.

honour of Spain, and the happiness of Columbus, the latter gained most credit in the court of Ferdinand and Isabella, and produced unexpected effects.[b]

The voyage of Vasco de Gama to the East Indies, by the Cape of Good Hope.

But, previous to the relating of these, it is proper to take a view of some events, which merit attention, both on account of their own importance, and their connexion with the history of the New World. While Columbus was engaged in his successive voyages to the west, the spirit of discovery did not languish in Portugal, the kingdom where it first acquired vigour, and became enterprising. Self-condemnation and regret were not the only sentiments to which the success of Columbus, and reflection upon their own imprudence in rejecting his proposals, gave rise among the Portuguese. They excited a general emulation to surpass his performances, and an ardent desire to make some reparation to their country for their own error. With this view, Emanuel, who inherited the enterprising genius of his predecessors, persisted in their grand scheme of opening a passage to the East Indies by the Cape of Good Hope, and, soon after his accession to the throne, equipped a squadron for that important voyage. He gave the command of it to Vasco de Gama, a man of noble birth, possessed of virtue, prudence, and courage, equal to the station. The squadron, like all those fitted out for discovery in the infancy of navigation, was extremely feeble, consisting of three vessels, of neither burthen nor force adequate to the service. As the Europeans were at that time little acquainted with the course of the trade-winds and periodical monsoons, which render navigation in the Atlantic ocean, as well as in the sea that separates Africa from India, at some seasons easy, and at others not only dangerous, but almost impracticable, the time chosen for Gama's departure was the most improper during the whole year. He set sail from Lisbon on the ninth of July, and standing towards the south, had to struggle for four months with contrary winds, before he could reach the Cape of Good Hope. Here their violence began to abate; and during an interval of calm weather, Gama doubled that formidable promontory, which had so long been the boundary of navigation, and directed his course towards the north-east, along the African coast. He touched at several ports; and after various adventures, which the Portuguese historians relate with high but just encomiums upon his conduct and intrepidity, he came to anchor before the city of Melinda. Throughout all the vast countries which extend along the coast of Africa, from the river Senegal to the confines of Zanguebar, the Portuguese had found a race of men rude and uncultivated, strangers to letters, to arts, and commerce, and differing from the inhabitants of Europe, no less in their features and complexion than in their manners and institutions. As they advanced from this, they

1497.

Nov. 20.

b Herrera, dec. 1. lib. iii. c. 14. Benzon. Hist. Nov. Orb. lib. i. c. 2.

observed, to their inexpressible joy, that the human form gradually altered and improved; the Asiatic features began to predominate, marks of civilization appeared, letters were known, the Mahometan religion was established, and a commerce, far from being inconsiderable, was carried on. At that time several vessels from India were in the port of Melinda. Gama now pursued his voyage with almost absolute certainty of success, and, under the conduct of a Mahometan pilot, arrived at Calecut, upon the coast of Malabar, on the twenty-second of May one thousand four hundred and ninety-eight. What he beheld of the wealth, the populousness, the cultivation, the industry, and arts of this highly civilized country, far surpassed any idea that he had formed, from the imperfect accounts which the Europeans had hitherto received of it. But as he possessed neither sufficient force to attempt a settlement, nor proper commodities with which he could carry on commerce of any consequence, he hastened back to Portugal, with an account of his success in performing a voyage, the longest, as well as most difficult, that had ever been made, since the first invention of navigation. He landed at Lisbon on the fourteenth of September one thousand four hundred and ninety-nine, two years two months and five days from the time he left that port.[c]

Thus, during the course of the fifteenth century, mankind made greater progress in exploring the state of the habitable globe, than in all the ages which had elapsed previous to that period. The spirit of discovery, feeble at first and cautious, moved within a very narrow sphere, and made its efforts with hesitation and timidity. Encouraged by success, it became adventurous, and boldly extended its operations. In the course of its progression, it continued to acquire vigour, and advanced at length with a rapidity and force which burst through all the limits within which ignorance and fear had hitherto circumscribed the activity of the human race. Almost fifty years were employed by the Portuguese in creeping along the coast of Africa from Cape Non to Cape de Verd, the latter of which lies only twelve degrees to the south of the former. In less than thirty years they ventured beyond the equinoctial line into another hemisphere, and penetrated to the southern extremity of Africa, at the distance of forty-nine degrees from Cape de Verd. During the last seven years of the century, a New World was discovered in the west, not inferior in extent to all the parts of the earth with which mankind were at that time acquainted. In the east, unknown seas and countries were found out, and a communication, long desired, but hitherto concealed, was opened between Europe and the opulent regions of India. In comparison with events so wonderful and unexpected, all that had hitherto been deemed great or splendid faded away and disappeared. Vast objects now presented themselves. The human mind, roused and interested by the prospect, engaged with ardour in pursuit of them, and exerted its active powers in a new direction.

Discoveries carried on in Spain by private adventurers.

This spirit of enterprise, though but newly awakened in Spain, began soon to operate extensively. All the attempts towards discovery made in that kingdom had hitherto been carried on by Columbus alone, and at the expense of the sovereign. But now private adventurers, allured by the magnificent descriptions he gave of the regions which he had visited, as well as by the specimens of their wealth which he produced, offered to fit out squadrons at their own risk, and to go in quest of new countries. The Spanish court, whose scanty revenues were exhausted by the charge of its expeditions to the New World, which, though they opened alluring prospects of future benefit, yielded a very sparing return of present profit, was extremely willing to devolve the burthen of discovery upon its subjects. It seized with joy an opportunity of rendering the avarice, the ingenuity, and efforts of projectors, instrumental in promoting designs of certain advantage to the public, though of doubtful success with respect to themselves. One of the first propositions of this kind was made by Alonso de Ojeda, a gallant and active officer, who had accompanied Columbus in his second voyage. His rank and character procured him such credit with the merchants of Seville, that they undertook to equip four ships, provided he could obtain the royal licence, authorizing the voyage. The powerful patronage of the bishop of Badajos easily secured success in a suit so agreeable to the court. Without consulting Columbus, or regarding the rights and jurisdiction which he had acquired by the capitulation in one thousand four hundred and ninety-two, Ojeda was permitted to set out for the New World. In order to direct his course, the bishop communicated to him the admiral's journal of his last voyage, and his charts of the countries which he had discovered.

Ojeda the first of these.

May.

Ojeda struck out into no new path of navigation, but adhering servilely to the route which Columbus had taken, arrived on the coast of Paria. He traded with the natives, and standing to the west, proceeded as far as Cape de Vela, and ranged along a considerable extent of coast beyond that on which Columbus had touched.

October.

Having thus ascertained the opinion of Columbus, that this country was a part of the continent, Ojeda returned by way of Hispaniola to Spain, with some reputation as a discoverer, but with little benefit to those who had raised the funds for the expedition.[d]

Is accompanied by Amerigo Vespucci.

Amerigo Vespucci, a Florentine gentleman, accompanied Ojeda in this voyage. In what station he served is uncertain; but as he was an experienced sailor, and eminently skilful in all the sciences subservient to navigation, he seems to have acquired such authority among his companions, that they willingly

c Ramusio, vol. i. 119. D.

d Herrera, dec. 1. lib. iv. c. 1, 2, 3.

allowed him to have a chief share in directing their operations during the voyage. Soon after his return, he transmitted an account of his adventures and discoveries to one of his countrymen; and labouring with the vanity of a traveller to magnify his own exploits, he had the address and confidence to frame his narrative, so as to make it appear that he had the glory of having first discovered the continent in the New World. Amerigo's account was drawn up not only with art, but with some elegance. It contained an amusing history of his voyage, and judicious observations upon the natural productions, the inhabitants, and the customs of the countries which he had visited. As it was the first description of any part of the New World that was published, a performance so well calculated to gratify the passion of mankind for what is new and marvellous, circulated rapidly, and was read with admiration. The country of which Amerigo was supposed to be the discoverer, came gradually to be called by his name. The caprice of mankind, often as unaccountable as unjust, has perpetuated this error. By the universal consent of nations, America is the name bestowed on this new quarter of the globe. The bold pretensions of a fortunate impostor have robbed the discoverer of the New World of a distinction which belonged to him. The name of Amerigo has supplanted that of Columbus; and mankind may regret an act of injustice, which, having received the sanction of time, it is now too late to redress.[e]

From whom the name of America is given to the New World.

Voyage of Alonso Nigno:

During the same year, another voyage of discovery was undertaken. Columbus not only introduced the spirit of naval enterprise into Spain, but all the first adventurers who distinguished themselves in this new career, were formed by his instructions, and acquired in his voyages the skill and information which qualified them to imitate his example. Alonso Nigno, who had served under the admiral in his last expedition, fitted out a single ship, in conjunction with Christopher Guerra, a merchant of Seville, and sailed to the coast of Paria. This voyage seems to have been conducted with greater attention to private emolument, than to any general or national object. Nigno and Guerra made no discoveries of any importance; but they brought home such a return of gold and pearls, as inflamed their countrymen with the desire of engaging in similar adventures.[f]

1500. Jan. 13. of Vincent Yanez Pinzon.

Soon after, Vincent Yanez Pinzon, one of the admiral's companions in his first voyage, sailed from Palos with four ships. He stood boldly towards the south, and was the first Spaniard who ventured to cross the equinoctial line; but he seems to have landed on no part of the coast beyond the mouth of the Maragnon, or river of the Amazons. All these navigators adopted the erroneous theory of Columbus, and believed that the countries which they had discovered were part of the vast continent of India.[g]

The Portuguese discover Brazil.

During the last year of the fifteenth century, that fertile district of America, on the confines of which Pinzon had stopped short, was more fully discovered. The successful voyage of Gama to the East Indies having encouraged the king of Portugal to fit out a fleet so powerful, as not only to carry on trade, but to attempt conquest, he gave the command of it to Pedro Alvarez Cabral. In order to avoid the coast of Africa, where he was certain of meeting with variable breezes, or frequent calms, which might retard his voyage, Cabral stood out to sea, and kept so far to the west, that, to his surprise, he found himself upon the shore of an unknown country, in the tenth degree beyond the line. He imagined at first that it was some island in the Atlantic ocean, hitherto unobserved; but proceeding along its coast for several days, he was led gradually to believe, that a country so extensive formed a part of some great continent. This latter opinion was well founded. The country with which he fell in belongs to that province in South America, now known by the name of Brazil. He landed; and having formed a very high idea of the fertility of the soil, and agreeableness of the climate, he took possession of it for the crown of Portugal, and despatched a ship to Lisbon with an account of this event, which appeared to be no less important than it was unexpected.[h] Columbus's discovery of the New World was the effort of an active genius, enlightened by science, guided by experience, and acting upon a regular plan, executed with no less courage than perseverance. But from this adventure of the Portuguese, it appears that chance might have accomplished that great design which it is now the pride of human reason to have formed and perfected. If the sagacity of Columbus had not conducted mankind to America, Cabral, by a fortunate accident, might have led them, a few years later, to the knowledge of that extensive continent.[i]

Machinations against Columbus.

While the Spaniards and Portuguese, by those successive voyages, were daily acquiring more enlarged ideas of the extent and opulence of that quarter of the globe which Columbus had made known to them, he himself, far from enjoying the tranquillity and honours with which his services should have been recompensed, was struggling with every distress in which the envy and malevolence of the people under his command, or the ingratitude of the court which he served, could involve him. Though the pacification with Roldan broke the union and weakened the force of the mutineers, it did not extirpate the seeds of discord out of the island. Several of the malcontents continued in arms, refusing to submit to the admiral. He and his brothers were obliged to

take the field alternately, in order to check their incursions, or to punish their crimes. The perpetual occupation and disquiet which this created, prevented him from giving due attention to the dangerous machinations of his enemies in the court of Spain. A good number of such as were most dissatisfied with his administration, had embraced the opportunity of returning to Europe with the ships which he despatched from St. Domingo. The final disappointment of all their hopes inflamed the rage of these unfortunate adventurers against Columbus to the utmost pitch. Their poverty and distress, by exciting compassion, rendered their accusations credible, and their complaints interesting. They teased Ferdinand and Isabella incessantly with memorials, containing the detail of their own grievances, and the articles of their charge against Columbus. Whenever either the king or queen appeared in public, they surrounded them in a tumultuary manner, insisting with importunate clamours for the payment of the arrears due to them, and demanding vengeance upon the author of their sufferings. They insulted the admiral's sons wherever they met them, reproaching them as the offspring of the projector, whose fatal curiosity had discovered those pernicious regions which drained Spain of its wealth, and would prove the grave of its people. These avowed endeavours of the malcontents from America to ruin Columbus, were seconded by the secret but more dangerous insinuations of that party among the courtiers which had always thwarted his schemes and envied his success and credit.[k]

Their influence on Ferdinand and Isabella.

Ferdinand was disposed to listen, not only with a willing but with a partial ear, to these accusations. Notwithstanding the flattering accounts which Columbus had given of the riches of America, the remittances from it had hitherto been so scanty, that they fell far short of defraying the expense of the armaments fitted out. The glory of the discovery, together with the prospect of remote commercial advantages, was all that Spain had yet received in return for the efforts which she had made. But time had already diminished the first sensations of joy which the discovery of a New World occasioned, and fame alone was not an object to satisfy the cold interested mind of Ferdinand. The nature of commerce was then so little understood, that where immediate gain was not acquired, the hope of distant benefit, or of slow and moderate returns, was totally disregarded. Ferdinand considered Spain, on this account, as having lost by the enterprise of Columbus, and imputed it to his misconduct and incapacity for government, that a country abounding in gold had yielded nothing of value to its conquerors. Even Isabella, who from the favourable opinion which she entertained of Columbus, had uniformly protected him, was shaken at length by the number and boldness of his accusers, and began to suspect that a disaffection so general must have been occasioned by real grievances, which called for redress. The bishop of Badajos, with his usual animosity against Columbus, encouraged these suspicions and confirmed them.

k Life of Columbus, c. 85.

Fatal effects of this.

As soon as the queen began to give way to the torrent of calumny, a resolution fatal to Columbus was taken. Francis de Bovadilla, a knight of Calatrava, was appointed to repair to Hispaniola, with full powers to inquire into the conduct of Columbus, and if he should find the charge of mal-administration proved, to supersede him, and assume the government of the island. It was impossible to escape condemnation, when this preposterous commission made it the interest of the judge to pronounce the person whom he was sent to try, guilty. Though Columbus had now composed all the dissensions in the island; though he had brought both Spaniards and Indians to submit peaceably to his government; though he had made such effectual provision for working the mines, and cultivating the country, as would have secured a considerable revenue to the king, as well as large profits to individuals, Bovadilla, without deigning to attend to the nature or merit of those services, discovered, from the moment that he landed in Hispaniola, a determined purpose of treating him as a criminal. He took possession of the admiral's house in St. Domingo, from which its master happened at that time to be absent, and seized his effects, as if his guilt had been already fully proved; he rendered himself master of the fort and of the king's stores by violence; he required all persons to acknowledge him as supreme governor; he set at liberty the prisoners confined by the admiral, and summoned him to appear before his tribunal, in order to answer for his conduct; transmitting to him, together with the summons, a copy of the royal mandate, by which Columbus was enjoined to yield implicit obedience to his commands.

Columbus sent in chains to Spain. October.

Columbus, though deeply affected with the ingratitude and injustice of Ferdinand and Isabella, did not hesitate a moment about his own conduct. He submitted to the will of his sovereigns with a respectful silence, and repaired directly to the court of that violent and partial judge whom they had authorized to try him. Bovadilla, without admitting him into his presence, ordered him instantly to be arrested, to be loaded with chains, and hurried on board a ship. Even under this humiliating reverse of fortune, the firmness of mind which distinguishes the character of Columbus did not forsake him. Conscious of his own integrity, and solacing himself with reflecting upon the great things which he had achieved, he endured this insult offered to his character, not only with composure, but with dignity. Nor had he the consolation of sympathy to mitigate his sufferings. Bovadilla had already rendered himself so extremely popular, by granting various immunities to the colony, by liberal donations of

Indians to all who applied for them, and by relaxing the reins of discipline and government, that the Spaniards, who were mostly adventurers, whom their indigence or crimes had compelled to abandon their native country, expressed the most indecent satisfaction with the disgrace and imprisonment of Columbus. They flattered themselves, that now they should enjoy an uncontrolled liberty, more suitable to their disposition and former habits of life. Among persons thus prepared to censure the proceedings and to asperse the character of Columbus, Bovadilla collected materials for a charge against him. All accusations, the most improbable, as well as inconsistent, were received. No informer, however infamous, was rejected. The result of this inquest, no less indecent than partial, he transmitted to Spain. At the same time, he ordered Columbus, with his two brothers, to be carried thither in fetters; and, adding cruelty to insult, he confined them in different ships, and excluded them from the comfort of that friendly intercourse which might have soothed their common distress. But while the Spaniards in Hispaniola viewed the arbitrary and insolent proceedings of Bovadilla with a general approbation, which reflects dishonour upon their name and country, one man still retained a proper sense of the great actions which Columbus had performed, and was touched with the sentiments of veneration and pity due to his rank, his age, and his merit. Alonzo de Valejo, the captain of the vessel on board which the admiral was confined, as soon as he was clear of the island, approached his prisoner with great respect, and offered to release him from the fetters with which he was unjustly loaded. "No," replied Columbus, with a generous indignation, "I wear these irons in consequence of an order from my sovereigns. They shall find me as obedient to this as to their other injunctions. By their command I have been confined, and their command alone shall set me at liberty."[l]

Nov. 23. Set at liberty, but deprived of all authority.

Fortunately, the voyage to Spain was extremely short. As soon as Ferdinand and Isabella were informed that Columbus was brought home a prisoner, and in chains, they perceived at once what universal astonishment this event must occasion, and what an impression to their disadvantage it must make. All Europe, they foresaw, would be filled with indignation at this ungenerous requital of a man who had performed actions worthy of the highest recompence, and would exclaim against the injustice of the nation, to which he had been such an eminent benefactor, as well as against the ingratitude of the princes whose reign he had rendered illustrious. Ashamed of their own conduct, and eager not only to make some reparation for this injury, but to efface the stain which it might fix upon their character, they instantly issued orders to set Columbus at liberty, invited him to

Dec. 17.

court, and remitted money to enable him to appear there in a manner suitable to his rank. When he entered the royal presence, Columbus threw himself at the feet of his sovereigns. He remained for some time silent; the various passions which agitated his mind suppressing his power of utterance. At length he recovered himself, and vindicated his conduct in a long discourse, producing the most satisfying proofs of his own integrity as well as good intention, and evidence, no less clear, of the malevolence of his enemies, who, not satisfied with having ruined his fortune, laboured to deprive him of what alone was now left, his honour and his fame. Ferdinand received him with decent civility, and Isabella with tenderness and respect. They both expressed their sorrow for what had happened, disavowed their knowledge of it, and joined in promising him protection and future favour. But though they instantly degraded Bovadilla, in order to remove from themselves any suspicion of having authorized his violent proceedings, they did not restore to Columbus his jurisdiction and privileges as viceroy of those countries which he had discovered. Though willing to appear the avengers of Columbus's wrongs, that illiberal jealousy which prompted them to invest Bovadilla with such authority as put it in his power to treat the admiral with indignity, still subsisted. They were afraid to trust a man to whom they had been so highly indebted, and retaining him at court under various pretexts, they appointed Nicholas de Ovando, a knight of the military order of Alcantara, governor of Hispaniola.[m]

Columbus was deeply affected with this new injury, which came from hands that seemed to be employed in making reparation for his past sufferings. The sensibility with which great minds feel every thing that implies any suspicion of their integrity, or that wears the aspect of an affront, is exquisite. Columbus had experienced both from the Spaniards; and their ungenerous conduct exasperated him to such a degree, that he could no longer conceal the sentiments which it excited. Wherever he went he carried about with him, as a memorial of their ingratitude, those fetters with which he had been loaded. They were constantly hung up in his chamber, and he gave orders, that when he died they should be buried in his grave.[n]

1501. Progress of discovery.

Meanwhile, the spirit of discovery, notwithstanding the severe check which it had received by the ungenerous treatment of the man who first excited it in Spain, continued active and vigorous. Roderigo de Bastidas, a person of distinction, fitted out two ships in copartnery with John de la Cosa, who, having served under the admiral in two of his voyages, was deemed the most skilful pilot in Spain. They steered directly towards the continent, arrived on the coast of Paria, and pro-

ceeding to the west, discovered all the coast of the province now known by the name of Tierra Firme, from Cape de Vela to the gulf of Darien. Not long after, Ojeda, with his former associate, Amerigo Vespucci, set out upon a second voyage, and being unacquainted with the destination of Bastidas, held the same course, and touched at the same places. The voyage of Bastidas was prosperous and lucrative, that of Ojeda unfortunate. But both tended to increase the ardour of discovery; for in proportion as the Spaniards acquired a more extensive knowledge of the American continent, their idea of its opulence and fertility increased.[o]

Ovando appointed governor of Hispaniola.

Before these adventurers returned from their voyages, a fleet was equipped, at the public expense, for carrying over Ovando, the new governor, to Hispaniola. His presence there was extremely requisite, in order to stop the inconsiderate career of Bovadilla, whose imprudent administration threatened the settlement with ruin. Conscious of the violence and iniquity of his proceedings against Columbus, he continued to make it his sole object to gain the favour and support of his countrymen, by accommodating himself to their passions and prejudices. With this view, he established regulations in every point the reverse of those which Columbus deemed essential to the prosperity of the colony. Instead of the severe discipline, necessary in order to habituate the dissolute and corrupted members of which the society was composed, to the restraints of law and subordination, he suffered them to enjoy such uncontrolled licence, as encouraged the wildest excesses. Instead of protecting the Indians, he gave a legal sanction to the oppression of that unhappy people. He took the exact number of such as survived their past calamities, divided them into distinct classes, distributed them in property among his adherents, and reduced all the people of the island to a state of complete servitude. As the avarice of the Spaniards was too rapacious and impatient to try any method of acquiring wealth but that of searching for gold, this servitude became as grievous as it was unjust. The Indians were driven in crowds to the mountains, and compelled to work in the mines, by masters who imposed their tasks without mercy or discretion. Labour so disproportioned to their strength and former habits of life, wasted that feeble race of men with such rapid consumption, as must have soon terminated in the utter extinction of the ancient inhabitants of the country.[p]

New regulations established.

The necessity of applying a speedy remedy to those disorders, hastened Ovando's departure. He had the command of the most respectable armament hitherto fitted out for the New World. It consisted of thirty-two ships, on board of which two thousand five hundred persons embarked, with an intention of settling in the country. Upon the arrival of the new governor with this powerful reinforcement to the colony, Bovadilla resigned his charge, and was commanded to return instantly to Spain, in order to answer for his conduct. Roldan, and the other ringleaders of the mutineers, who had been most active in opposing Columbus, were required to leave the island at the same time. A proclamation was issued, declaring the natives to be free subjects of Spain, of whom no service was to be exacted contrary to their own inclination, and without paying them an adequate price for their labour. With respect to the Spaniards themselves, various regulations were made, tending to suppress the licentious spirit which had been so fatal to the colony, and to establish that reverence for law and order on which society is founded, and to which it is indebted for its increase and stability. In order to limit the exorbitant gain which private persons were supposed to make by working the mines, an ordinance was published, directing all the gold to be brought to a public smelting-house, and declaring one half of it to be the property of the crown.[q]

1502.

The disagreeable situation of Columbus.

While these steps were taking for securing the tranquillity and welfare of the colony which Columbus had planted, he himself was engaged in the unpleasant employment of soliciting the favour of an ungrateful court, and notwithstanding all his merit and services, he solicited in vain. He demanded, in terms of the original capitulation in one thousand four hundred and ninety-two, to be reinstated in his office of viceroy over the countries which he had discovered. By a strange fatality, the circumstance which he urged in support of his claim, determined a jealous monarch to reject it. The greatness of his discoveries, and the prospect of their increasing value, made Ferdinand consider the concessions in the capitulation as extravagant and impolitic. He was afraid of intrusting a subject with the exercise of a jurisdiction that now appeared to be so extremely extensive, and might grow to be no less formidable. He inspired Isabella with the same suspicions; and under various pretexts, equally frivolous and unjust, they eluded all Columbus's requisitions to perform that which a solemn compact bound them to accomplish. After attending the court of Spain for near two years, as an humble suitor, he found it impossible to remove Ferdinand's prejudices and apprehensions; and perceived, at length, that he laboured in vain, when he urged a claim of justice or merit with an interested and unfeeling prince.

He forms new schemes of discovery.

But even this ungenerous return did not discourage him from pursuing the great object which first called forth his inventive genius, and excited him to attempt discovery. To open a new passage to the East Indies, was his original and favourite scheme. This still engrossed his thoughts; and either from his own

o Herrera, dec. 1. lib. iv. c. 11.

q Solorzano Politica Indiana, lib. i. c. 12. Herrera, dec. 1. lib. iv. c. 12.

observations in his voyage to Paria, or from some obscure hint of the natives, or from the accounts given by Bastidas and de la Cosa of their expedition, he conceived an opinion that, beyond the continent of America, there was a sea which extended to the East Indies, and hoped to find some strait or narrow neck of land, by which a communication might be opened with it and the part of the ocean already known. By a very fortunate conjecture, he supposed this strait or isthmus to be situated near the gulf of Darien. Full of this idea, though he was now of an advanced age, worn out with fatigue, and broken with infirmities, he offered, with the alacrity of a youthful adventurer, to undertake a voyage which would ascertain this important point, and perfect the grand scheme which from the beginning he proposed to accomplish. Several circumstances concurred in disposing Ferdinand and Isabella to lend a favourable ear to this proposal. They were glad to have the pretext of any honourable employment for removing from court a man with whose demands they deemed it impolitic to comply, and whose services it was indecent to neglect. Though unwilling to reward Columbus, they were not insensible of his merit, and from their experience of his skill and conduct, had reason to give credit to his conjectures, and to confide in his success. To these considerations, a third must be added of still more powerful influence. About this time the Portuguese fleet, under Cabral, arrived from the Indies; and, by the richness of its cargo, gave the people of Europe a more perfect idea than they had hitherto been able to form, of the opulence and fertility of the East. The Portuguese had been more fortunate in their discoveries than the Spaniards. They had opened a communication with countries where industry, arts, and elegance flourished; and where commerce had been longer established, and carried to greater extent, than in any region of the earth. Their first voyages thither yielded immediate as well as vast returns of profit, in commodities extremely precious and in great request. Lisbon became immediately the seat of commerce and wealth; while Spain had only the expectation of remote benefit, and of future gain, from the western world. Nothing, then, could be more acceptable to the Spaniards than Columbus's offer to conduct them to the East, by a route which he expected to be shorter, as well as less dangerous, than that which the Portuguese had taken. Even Ferdinand was roused by such a prospect, and warmly approved of the undertaking.

His fourth voyage.

But interesting as the object of this voyage was to the nation, Columbus could procure only four small barks, the largest of which did not exceed seventy tons in burden, for performing it. Accustomed to brave danger, and to engage in arduous undertakings with inadequate force, he did not hesitate to accept the command of this pitiful squadron. His brother Bartholomew, and his second son Ferdinand, the historian of his actions, accompanied him. He sailed from Cadiz on the ninth of May, and touched, as usual, at the Canary islands; from thence he proposed to have stood directly for the continent; but his largest vessel was so clumsy and unfit for service, as constrained him to bear away for Hispaniola, in hopes of exchanging her for some ship of the fleet that had carried out Ovando. When he arrived at St. Domingo, he found eighteen of these ships ready loaded, and on the point of departing for Spain. Columbus immediately acquainted the governor with the destination of his voyage, and the accident which had obliged him to alter his route. He requested permission to enter the harbour, not only that he might negociate the exchange of his ship, but that he might take shelter during a violent hurricane, of which he discerned the approach from various prognostics, which his experience and sagacity had taught him to observe. On that account, he advised him likewise to put off for some days the departure of the fleet bound for Spain. But Ovando refused his request, and despised his counsel. Under circumstances in which humanity would have afforded refuge to a stranger, Columbus was denied admittance into a country of which he had discovered the existence and acquired the possession. His salutary warning, which merited the greatest attention, was regarded as the dream of a visionary prophet, who arrogantly pretended to predict an event beyond the reach of human foresight. The fleet set sail for Spain. Next night the hurricane came on with dreadful impetuosity. Columbus, aware of the danger, took precautions against it, and saved his little squadron. The fleet destined for Spain met with the fate which the rashness and obstinacy of its commanders deserved. Of eighteen ships, two or three only escaped. In this general wreck perished Bovadilla, Roldan, and the greater part of those who had been the most active in persecuting Columbus, and oppressing the Indians. Together with themselves, all the wealth which they had acquired by their injustice and cruelty was swallowed up. It exceeded in value two hundred thousand *pesos;* an immense sum at that period, and sufficient not only to have screened them from any severe scrutiny into their conduct, but to have secured them a gracious reception in the Spanish court. Among the ships that escaped, one had on board all the effects of Columbus which had been recovered from the ruins of his fortune. Historians, struck with the exact discrimination of characters, as well as the just distribution of rewards and punishments, conspicuous in those events, universally attribute them to an immediate interposition of Divine Providence, in order to avenge the wrongs of an injured man, and to punish the oppressors of an innocent people. Upon the ignorant and superstitious race of men, who were witnesses of this occurrence, it made a different impression. From an opinion which vulgar admiration is apt to entertain with respect to persons

June 29.

who have distinguished themselves by their sagacity and inventions, they believed Columbus to be possessed of supernatural powers, and imagined that he had conjured up this dreadful storm by magical art and incantations, in order to be avenged of his enemies.[r]

July 14. Searches in vain for a passage to the Indian ocean.

Columbus soon left Hispaniola, where he met with such an inhospitable reception, and stood towards the continent. After a tedious and dangerous voyage, he discovered Guanaia, an island not far distant from the coast of Honduras. There he had an interview with some inhabitants of the continent, who arrived in a large canoe. They appeared to be a people more civilized, and who had made greater progress in the knowledge of useful arts, than any whom he had hitherto discovered. In return to the inquiries which the Spaniards made, with their usual eagerness, concerning the places where the Indians got the gold which they wore by way of ornament, they directed them to countries situated to the west, in which gold was found in such profusion, that it was applied to the most common uses. Instead of steering in quest of a country so inviting, which would have conducted him along the coast of Yucatan to the rich empire of Mexico, Columbus was so bent upon his favourite scheme of finding out the strait which he supposed to communicate with the Indian ocean, that he bore away to the east towards the gulf of Darien. In this navigation he discovered all the coast of the continent, from Cape Gracias a Dios, to a harbour which, on account of its beauty and security, he called Porto Bello. He searched in vain for the imaginary strait, through which he expected to make his way into an unknown sea; and though he went on shore several times, and advanced into the country, he did not penetrate so far as to cross the narrow isthmus which separates the gulf of Mexico from the great southern ocean. He was so much delighted, however, with the fertility of the country, and conceived such an idea of its wealth, from the specimens of gold produced by the natives, that he resolved to leave a small colony upon the river Belen, in the province of Veragua, under the command of his brother, and to return himself to Spain, in order to procure what was requisite for rendering the establishment permanent. But the ungovernable spirit of the people under his command, deprived Columbus of the glory of planting the first colony on the continent of America. Their insolence and rapaciousness provoked the natives to take arms, and as these were a more hardy and warlike race of men than the inhabitants of the islands, they cut off part of the Spaniards, and obliged the rest to abandon a station which was found to be untenable.[s]

1503.

Shipwrecked on the coast of Jamaica.

This repulse, the first that the Spaniards met with from any of the American nations, was not the only misfortune that befell Columbus; it was followed by a succession of all the disasters to which navigation is exposed. Furious hurricanes, with violent storms of thunder and lightning, threatened his leaky vessels with destruction; while his discontented crew, exhausted with fatigue, and destitute of provisions, was unwilling or unable to execute his commands. One of his ships perished; he was obliged to abandon another, as unfit for service; and with the two which remained, he quitted that part of the continent, which in his anguish he named the Coast of Vexation,[t] and bore away for Hispaniola. New distresses awaited him in this voyage. He was driven back by a violent tempest from the coast of Cuba, his ships fell foul of one another, and were so much shattered by the shock, that with the utmost difficulty they reached Jamaica, where he was obliged to run them aground, to prevent them from sinking. The measure of his calamities seemed now to be full. He was cast ashore upon an island at a considerable distance from the only settlement of the Spaniards in America. His ships were ruined beyond the possibility of being repaired. To convey an account of his situation to Hispaniola, appeared impracticable; and without this it was vain to expect relief. His genius, fertile in resources, and most vigorous in those perilous extremities when feeble minds abandon themselves to despair, discovered the only expedient which afforded any prospect of deliverance. He had recourse to the hospitable kindness of the natives, who, considering the Spaniards as beings of a superior nature, were eager, on every occasion, to minister to their wants. From them he obtained two of their canoes, each formed out of the trunk of a single tree hollowed with fire, and so mis-shapen and awkward as hardly to merit the name of boats. In these, which were fit only for creeping along the coast, or crossing from one side of a bay to another, Mendez, a Spaniard, and Fieschi, a Genoese, two gentlemen particularly attached to Columbus, gallantly offered to set out for Hispaniola, upon a voyage of above thirty leagues.[u] This they accomplished in ten days, after surmounting incredible dangers, and enduring such fatigues that several of the Indians who accompanied them sunk under it, and died. The attention paid to them by the governor of Hispaniola was neither such as their courage merited, nor the distress of the persons from whom they came required. Ovando, from a mean jealousy of Columbus, was afraid of allowing him to set foot in the island under his government. This ungenerous passion hardened his heart against every tender sentiment, which reflection upon the services and misfortunes of that great man, or compassion for his own fellow-citizens involved in the same calamities, must have excited. Mendez and Fieschi spent eight months in soliciting relief for their commander and associates, without any prospect of obtaining it.

His distress and sufferings there.

During this period, various passions agitated the mind of Columbus and his companions in adversity. At first the expectation of speedy deliverance, from the sueeess of Mendez and Fieschi's voyage, cheered the spirits of the most desponding. After some time the most timorous began to suspect that they had miscarried in their daring attempt. At length, even the most sanguine concluded that they had perished. The ray of hope which had broken in upon them, made their condition appear now more dismal. Despair, heightened by disappointment, settled in every breast. Their last resource had failed, and nothing remained but the prospect of ending their miserable days among naked savages, far from their country and their friends. The seamen, in a transport of rage, rose in open mutiny, threatened the life of Columbus, whom they reproached as the author of all their calamities, seized ten canoes, which he had purchased from the Indians, and, despising his remonstrances and entreaties, made off with them to a distant part of the island. At the same time the natives murmured at the long residence of the Spaniards in their country. As their industry was not greater than that of their neighbours in Hispaniola, like them they found the burden of supporting so many strangers to be altogether intolerable. They began to bring in provisions with reluctance, they furnished them with a sparing hand, and threatened to withdraw those supplies altogether. Such a resolution must have been quickly fatal to the Spaniards. Their safety depended upon the good-will of the Indians; and unless they could revive the admiration and reverence with which that simple people had at first beheld them, destruction was unavoidable. Though the licentious proceedings of the mutineers had, in a great measure, effaced those impressions which had been so favourable to the Spaniards, the ingenuity of Columbus suggested a happy artifice, that not only restored but heightened the high opinion which the Indians had originally entertained of them. By his skill in astronomy he knew that there was shortly to be a total eclipse of the moon. He assembled all the principal persons of the district around him on the day before it happened, and, after reproaching them for their fickleness in withdrawing their affection and assistance from men whom they had lately revered, he told them, that the Spaniards were servants of the Great Spirit who dwells in heaven, who made and governs the world; that he, offended at their refusing to support men who were the objects of his peculiar favour, was preparing to punish this crime with exemplary severity, and that very night the moon should withhold her light, and appear of a bloody hue, as a sign of the divine wrath, and an emblem of the vengeance ready to fall upon them. To this marvellous prediction some of them listened with the careless indifference peculiar to the people of America; others, with the credulous astonishment natural to barbarians. But when the moon began gradually to be darkened, and at length appeared of a red colour, all were struck with terror. They ran with consternation to their houses, and returning instantly to Columbus loaded with provisions, threw them at his feet, conjuring him to intercede with the Great Spirit to avert the destruction with which they were threatened. Columbus, seeming to be moved by their entreaties, promised to comply with their desire. The eclipse went off, the moon recovered its splendour, and from that day the Spaniards were not only furnished profusely with provisions, but the natives, with superstitious attention, avoided every thing that could give them offence.[x]

1504.

A cruel addition to them.

During those transactions, the mutineers had made repeated attempts to pass over to Hispaniola in the canoes which they had seized. But from their own misconduct, or the violence of the winds and currents, their efforts were all unsuccessful. Enraged at this disappointment, they marched towards that part of the island where Columbus remained, threatening him with new insults and danger. While they were advancing, an event happened, more cruel and afflicting than any calamity which he dreaded from them. The governor of Hispaniola, whose mind was still filled with some dark suspicions of Columbus, sent a small bark to Jamaica, not to deliver his distressed countrymen, but to spy out their condition. Lest the sympathy of those whom he employed should afford them relief, contrary to his intention, he gave the command of this vessel to Escobar, an inveterate enemy of Columbus, who, adhering to his instructions with malignant accuracy, cast anchor at some distance from the island, approached the shore in a small boat, observed the wretched plight of the Spaniards, delivered a letter of empty compliments to the admiral, received his answer, and departed. When the Spaniards first descried the vessel standing towards the island every heart exulted, as if the long-expected hour of their deliverance had at length arrived; but when it disappeared so suddenly, they sunk into the deepest dejection, and all their hopes died away. Columbus alone, though he felt most sensibly this wanton insult which Ovando added to his past neglect, retained such composure of mind as to be able to cheer his followers. He assured them, that Mendez and Fieschi had reached Hispaniola in safety; that they would speedily procure ships to carry them off; but, as Escobar's vessel could not take them all on board, that he had refused to go with her, because he was determined never to abandon the faithful companions of his distress. Soothed with the expectation of speedy deliverance, and delighted with his apparent generosity in attending more to their preservation than to his own safety, their spirits revived, and he regained their confidence.[y]

x Life of Col. c. 103. Herr. dec. 1. l. vi. c. 5, 6. Benz. Hist. l. i. c. 14.

y Life of Columbus, c. 104. Herrera, dec. 1. lib. vi. c. 17.

Without this confidence he could not have resisted the mutineers, who were now at hand. All his endeavours to reclaim those desperate men had no effect but to increase their phrensy. Their demands became every day more extravagant, and their intentions more violent and bloody. The common safety rendered it necessary to oppose them with open force. Columbus, who had been long afflicted with the gout, could not take the field. His brother, the adelantado, marched against them. They quickly met. The mutineers rejected with scorn terms of accommodation, which were once more offered them, and rushed on boldly to the attack. They fell not upon an enemy unprepared to receive them. In the first shock, several of their most daring leaders were slain. The adelantado, whose strength was equal to his courage, closed with their captain, wounded, disarmed, and took him prisoner.[z] At sight of this, the rest fled with a dastardly fear suitable to their former insolence. Soon after, they submitted in a body to Columbus, and bound themselves by the most solemn oaths to obey all his commands. Hardly was tranquillity re-established, when the ships appeared, whose arrival Columbus had promised with great address, though he could foresee it with little certainty. With transports of joy, the Spaniards quitted an island in which the unfeeling jealousy of Ovando had suffered them to languish above a year, exposed to misery in all its various forms.

May. 20.

His deliverance and arrival at Hispaniola.

When they arrived at St. Domingo, the governor, with the mean artifice of a vulgar mind, that labours to atone for insolence by servility, fawned on the man whom he envied, and had attempted to ruin. He received Columbus with the most studied respect, lodged him in his own house, and distinguished him with every mark of honour. But amidst those overacted demonstrations of regard, he could not conceal the hatred and malignity latent in his heart. He set at liberty the captain of the mutineers, whom Columbus had brought over in chains, to be tried for his crimes; and threatened such as had adhered to the admiral with proceeding to a judicial inquiry into their conduct. Columbus submitted in silence to what he could not redress; but discovered an extreme impatience to quit a country which was under the jurisdiction of a man who had treated him, on every occasion, with inhumanity and injustice.

Sept. 12.

His preparations were soon finished, and he set sail for Spain with two ships. Disasters similar to those which had accompanied him through life continued to pursue him to the end of his career. One of his vessels being disabled, was soon forced back to St. Domingo; the other, shattered by violent storms, sailed seven hundred leagues with jury-masts, and reached with difficulty the port of St. Lucar.[a]

December.

z Life of Columbus, c. 107. Herrera, dec. 1. lib. vi. c. 11.
a Ibid. c. 108. Ibid. c. 12.

There he received the account of an event the most fatal that could have befallen him, and which completed his misfortunes. This was the death of his patroness queen Isabella, in whose justice, humanity, and favour, he confided as his last resource. None now remained to redress his wrongs, or to reward him for his services and sufferings, but Ferdinand, who had so long opposed and so often injured him. To solicit a prince thus prejudiced against him, was an occupation no less irksome than hopeless. In this, however, was Columbus doomed to employ the close of his days. As soon as his health was in some degree re-established, he repaired to court; and though he was received there with civility barely decent, he plied Ferdinand with petition after petition, demanding the punishment of his oppressors, and the restitution of all the privileges bestowed upon him by the capitulation of one thousand four hundred and ninety-two. Ferdinand amused him with fair words and unmeaning promises. Instead of granting his claims, he proposed expedients in order to elude them, and spun out the affair with such apparent art, as plainly discovered his intention that it should never be terminated. The declining health of Columbus flattered Ferdinand with the hopes of being soon delivered from an importunate suitor, and encouraged him to persevere in this illiberal plan. Nor was he deceived in his expectations. Disgusted with the ingratitude of a monarch whom he had served with such fidelity and success, exhausted with the fatigues and hardships which he had endured, and broken with the infirmities which these had brought upon him, Columbus ended his life at Valladolid on the twentieth of May, one thousand five hundred and six, in the fifty-ninth year of his age. He died with a composure of mind suitable to the magnanimity which distinguished his character, and with sentiments of piety becoming that supreme respect for religion, which he manifested in every occurrence of his life.[b]

BOOK III.

While Columbus was employed in his last voyage, several events worthy of notice happened in Hispaniola. The colony there, the parent and nurse of all the subsequent establishments of Spain in the New World, gradually acquired the form of a regular and prosperous society. The humane solicitude of Isabella to protect the Indians from oppression, and particularly the proclamation by which the Spaniards were prohibited to compel them to work, retarded, it is true, for some time the progress of improvement. The natives, who considered exemption from toil

State of the colony in Hispaniola.

as supreme felicity, scorned every allurement and reward by which they were invited to labour. The Spaniards had not a sufficient number of hands either to work the mines or to cultivate the soil. Several of the first colonists, who had been accustomed to the service of the Indians, quitted the island, when deprived of those instruments without which they knew not how to carry on any operation. Many of the new settlers who came over with Ovando, were seized with the distempers peculiar to the climate, and in a short space above a thousand of them died. At the same time, the exacting one half of the product of the mines as the royal share, was found to be a demand so exorbitant, that no adventurers would engage to work them upon such terms. In order to save the colony from ruin, Ovando ventured to relax the rigour of the royal edicts. He made a new distribution of the Indians among the Spaniards, and compelled them to labour, for a stated time, in digging the mines, or in cultivating the ground; but in order to screen himself from the imputation of having subjected them again to servitude, he enjoined their masters to pay them a certain sum, as the price of their work. He reduced the royal share of the gold found in the mines from the half to the third part, and soon after lowered it to a fifth, at which it long remained. Notwithstanding Isabella's tender concern for the good treatment of the Indians, and Ferdinand's eagerness to improve the royal revenue, Ovando persuaded the court to approve of both these regulations.[a]

1505.

War with the Indians.

But the Indians, after enjoying respite from oppression, though during a short interval, now felt the yoke of bondage to be so galling, that they made several attempts to vindicate their own liberty. This the Spaniards considered as rebellion, and took arms in order to reduce them to subjection. When war is carried on between nations whose state of improvement is in any degree similar, the means of defence bear some proportion to those employed in the attack; and in this equal contest such efforts must be made, such talents are displayed, and such passions roused, as exhibit mankind to view in a situation no less striking than interesting. It is one of the noblest functions of history, to observe and to delineate men at a juncture when their minds are most violently agitated, and all their powers and passions are called forth. Hence the operations of war, and the struggles between contending states, have been deemed by historians, ancient as well as modern, a capital and important article in the annals of human actions. But in a contest between naked savages, and one of the most warlike of the European nations, where science, courage, and discipline on one side, were opposed by ignorance, timidity, and disorder on the other, a particular detail of events would be as unpleasant as uninstructive. If the simplicity and innocence of the Indians had inspired the Spaniards with humanity, had softened the pride of superiority into compasion, and had induced them to improve the inhabitants of the New World, instead of oppressing them, some sudden acts of violence, like the too rigorous chastisements of impatient instructors, might have been related without horror. But, unfortunately, this consciousness of superiority operated in a different manner. The Spaniards were advanced so far beyond the natives of America in improvement of every kind, that they viewed them with contempt. They conceived the Americans to be animals of an inferior nature, who were not entitled to the rights and privileges of men. In peace, they subjected them to servitude. In war, they paid no regard to those laws, which, by a tacit convention between contending nations, regulate hostility, and set some bounds to its rage. They considered them not as men fighting in defence of their liberty, but as slaves who had revolted against their masters. The caziques, when taken, were condemned, like the leaders of banditti, to the most cruel and ignominious punishments; and all their subjects, without regarding the distinction of ranks established among them, were reduced to the same state of abject slavery. With such a spirit and sentiments were hostilities carried on against the cazique of Higuey, a province at the eastern extremity of the island. This war was occasioned by the perfidy of the Spaniards, in violating a treaty which they had made with the natives, and it was terminated by hanging up the cazique, who defended his people with bravery so far superior to that of his countrymen, as entitled him to a better fate.[b]

The cruel and treacherous conduct of Ovando.

The conduct of Ovando, in another part of the island, was still more treacherous and cruel. The province anciently named Xaragua, which extends from the fertile plain where Leogane is now situated, to the western extremity of the island, was subject to a female cazique, named Anacoana, highly respected by the natives. She, from that partial fondness with which the women of America were attached to the Europeans, (the cause of which shall be afterwards explained,) had always courted the friendship of the Spaniards, and loaded them with benefits. But some of the adherents of Roldan having settled in her country, were so much exasperated at her endeavouring to restrain their excesses, that they accused her of having formed a plan to throw off the yoke, and to exterminate the Spaniards. Ovando, though he knew well what little credit was due to such profligate men, marched, without further inquiry, toward Xaragua, with three hundred foot and seventy horsemen. To prevent the Indians from taking alarm at this hostile appearance, he gave out that his sole intention was to visit Anacoana, to whom his countrymen had been so much indebted, in the most respectful manner, and to regulate with her the mode of levying the tribute payable to the king of Spain. Anacoana, in order to receive

a Herrera, dec. 1. lib. v. c. 3.

b Herrera, dec. 1. lib. vi. c. 9, 10.

this illustrious guest with due honour, assembled the principal men in her dominions, to the number of three hundred, and advancing at the head of these, accompanied by a great crowd of persons of inferior rank, she welcomed Ovando with songs and dances, according to the mode of the country, and conducted him to the place of her residence. There he was feasted for some days, with all the kindness of simple hospitality, and amused with the games and spectacles usual among the Americans upon occasions of mirth and festivity. But amidst the security which this inspired, Ovando was meditating the destruction of his unsuspicious entertainer and her subjects; and the mean perfidy with which he executed this scheme, equalled his barbarity in forming it. Under colour of exhibiting to the Indians the parade of an European tournament, he advanced with his troops in battle array, towards the house in which Anacoana and the chiefs who attended her, were assembled. The infantry took possession of all the avenues which led to the village. The horsemen encompassed the house. These movements were the object of admiration without any mixture of fear, until, upon a signal which had been concerted, the Spaniards suddenly drew their swords, and rushed upon the Indians, defenceless and astonished at an act of treachery which exceeded the conception of undesigning men. In a moment Anacoana was secured. All her attendants were seized and bound. Fire was set to the house; and without examination or conviction, all these unhappy persons, the most illustrious in their own country, were consumed in the flames. Anacoana was reserved for a more ignominious fate. She was carried in chains to St. Domingo, and, after the formality of a trial before Spanish judges, she was condemned, upon the evidence of those very men who had betrayed her, to be publicly hanged.[c]

Reduction of the Indians, and its effects.

Overawed and humbled by this atrocious treatment of their princes and nobles, who were objects of their highest reverence, the people in all the provinces of Hispaniola submitted, without further resistance, to the Spanish yoke. Upon the death of Isabella, all the regulations tending to mitigate the rigour of their servitude were forgotten. The small gratuity paid to them as the price of their labour was withdrawn, and at the same time the tasks imposed upon them were increased. Ovando, without any restraint, distributed Indians among his friends in the island. Ferdinand, to whom the queen had left by will one half of the revenue arising from the settlements in the New World, conferred grants of a similar nature upon his courtiers, as the least expensive mode of rewarding their services. They farmed out the Indians, of whom they were rendered proprietors, to their countrymen settled in Hispaniola; and that wretched people, being compelled to labour in order to satisfy the rapacity of both, the exactions of their oppressors no longer knew any bounds. But, barbarous as their policy was, and fatal to the inhabitants of Hispaniola, it produced, for some time, very considerable effects. By calling forth the force of a whole nation, and exerting it in one direction, the working of the mines was carried on with amazing rapidity and success. During several years, the gold brought into the royal smelting-houses in Hispaniola amounted annually to four hundred and sixty thousand pesos, above a hundred thousand pounds sterling; which, if we attend to the great change in the value of money since the beginning of the sixteenth century to the present times, must appear a considerable sum. Vast fortunes were created, of a sudden, by some. Others dissipated, in ostentatious profusion, what they acquired with facility. Dazzled by both, new adventurers crowded to America, with the most eager impatience to share in those treasures which had enriched their countrymen; and, notwithstanding the mortality occasioned by the unhealthiness of the climate, the colony continued to increase.[d]

1506.

Progress of the colony.

Ovando governed the Spaniards with wisdom and justice not inferior to the rigour with which he treated the Indians. He established equal laws; and, by executing them with impartiality, accustomed the people of the colony to reverence them. He founded several new towns in different parts of the island, and allured inhabitants to them, by the concession of various immunities. He endeavoured to turn the attention of the Spaniards to some branch of industry more useful than that of searching for gold in the mines. Some slips of the sugar-cane having been brought from the Canary Islands by way of experiment, they were found to thrive with such increase in the rich soil and warm climate to which they were transplanted, that the cultivation of them soon became an object of commerce. Extensive plantations were begun; sugar-works, which the Spaniards called *ingenios*, from the various machinery employed in them, were erected, and in a few years the manufacture of this commodity was the great occupation of the inhabitants of Hispaniola, and the most considerable source of their wealth.[e]

Political regulation of Ferdinand.

The prudent endeavours of Ovando to promote the welfare of the colony were powerfully seconded by Ferdinand. The large remittances which he received from the New World opened his eyes, at length, with respect to the importance of those discoveries, which he had hitherto affected to undervalue. Fortune, and his own address, having now extricated him out of those difficulties in which he had been involved by the death of his queen, and by his disputes with his son-in-law about the government of her dominions,[f] he had full leisure to turn his attention to the affairs of America.

1507.

d Herrera, dec. 1. lib. vi. c. 18, &c.

e Oviedo, lib. iv. c. 8.

f Hist. of the Reign of Charles V. p. 432.

To his provident sagacity, Spain is indebted for many of those regulations which gradually formed that system of profound but jealous policy, by which she governs her dominions in the New World. He erected a court distinguished by the title of the *Casa de Contratacion*, or Board of Trade, composed of persons eminent for rank and abilities, to whom he committed the administration of American affairs. This board assembled regularly in Seville, and was invested with a distinct and extensive jurisdiction. He gave a regular form to ecclesiastical government in America, by nominating archbishops, bishops, deans, together with clergymen of subordinate ranks, to take charge of the Spaniards established there, as well as of the natives who should embrace the christian faith. But notwithstanding the obsequious devotion of the Spanish court to the papal see, such was Ferdinand's solicitude to prevent any foreign power from claiming jurisdiction or acquiring influence in his new dominions, that he reserved to the crown of Spain the sole right of patronage to the benefices in America, and stipulated that no papal bull or mandate should be promulgated there, until it was previously examined and approved of by his council. With the same spirit of jealousy, he prohibited any goods to be exported to America, or any person to settle there, without a special licence from that council.[g]

The number of the Indians diminishes fast.

But, notwithstanding this attention to the police and welfare of the colony, a calamity impended which threatened its dissolution. The original inhabitants, on whose labour the Spaniards in Hispaniola depended for their prosperity, and even their existence, wasted so fast, that the extinction of the whole race seemed to be inevitable. When Columbus discovered Hispaniola, the number of its inhabitants was computed to be at least a million.[h] They were now reduced to sixty thousand in the space of fifteen years. This consumption of the human species, no less amazing than rapid, was the effect of several concurring causes. The natives of the American islands were of a more feeble constitution than the inhabitants of the other hemisphere. They could neither perform the same work, nor endure the same fatigue, with men whose organs were of a more vigorous conformation. The listless indolence in which they delighted to pass their days, as it was the effect of their debility, contributed likewise to increase it, and rendered them, from habit as well as constitution, incapable of hard labour. The food on which they subsisted afforded little nourishment, and they were accustomed to take it in small quantities, not sufficient to invigorate a languid frame, and render it equal to the efforts of active industry. The Spaniards, without attending to those peculiarities in the constitution of the Americans, imposed tasks upon them, which, though not greater than Europeans might have performed with ease, were so disproportioned to their strength, that many sunk under the fatigue, and ended their wretched days. Others, prompted by impatience and despair, cut short their own lives with a violent hand. Famine, brought on by compelling such numbers to abandon the culture of their lands, in order to labour in the mines, proved fatal to many. Diseases of various kinds, some occasioned by the hardships to which they were exposed, and others by their intercourse with the Europeans, who communicated to them some of their peculiar maladies, completed the desolation of the island. The Spaniards, being thus deprived of the instruments which they were accustomed to employ, found it impossible to extend their improvements, or even to carry on the works which they had already begun. In order to provide an immediate remedy for an evil so alarming, Ovando proposed to transport the inhabitants of the Lucayo islands to Hispaniola, under pretence that they might be civilized with more facility, and instructed to greater advantage in the christian religion, if they were united to the Spanish colony, and placed under the immediate inspection of the missionaries settled there. Ferdinand, deceived by this artifice, or willing to connive at an act of violence which policy represented as necessary, gave his assent to the proposal. Several vessels were fitted out for the Lucayos, the commanders of which informed the natives, with whose language they were now well acquainted, that they came from a delicious country, in which the departed ancestors of the Indians resided, by whom they were sent to invite their descendants to resort thither, to partake of the bliss enjoyed there by happy spirits. That simple people listened with wonder and credulity; and fond of visiting their relations and friends in that happy region, followed the Spaniards with eagerness. By this artifice, above forty thousand were decoyed into Hispaniola, to share in the sufferings which were the lot of the inhabitants of that island, and to mingle their groans and tears with those of that wretched race of men.[i]

1508.

The Spaniards had, for some time, carried on their operations in the mines of Hispaniola with such ardour, as well as success, that these seemed to have engrossed their whole attention. The spirit of discovery languished; and, since the last voyage of Columbus, no enterprise of any moment had been undertaken. But as the decrease of the Indians rendered it impossible to acquire wealth in that island with the same rapidity as formerly, this urged some of the more adventurous Spaniards to search for new countries, where their avarice might be gratified with more facility. Juan Ponce de Leon, who commanded under Ovando in the eastern district of Hispaniola, passed over to the island of St. Juan de Puerto Rico, which Columbus had discovered in his second voyage, and penetrated

New discoveries and settlements.

g Herrera, dec. 1. lib. vi. c. 19, 20.
h Ibid. dec. 1. lib. x. c. 12.

i Herrera, dec. 1. lib. vii. c. 3. Oviedo, lib. iii. c. 6. Gomara Hist. c. 41.

into the interior part of the country. As he found the soil to be fertile, and expected, from some symptoms, as well as from the information of the inhabitants, to discover mines of gold in the mountains, Ovando permitted him to attempt making a settlement in the island. This was easily effected by an officer eminent for conduct no less than for courage. In a few years Puerto Rico was subjected to the Spanish government, the natives were reduced to servitude; and, being treated with the same inconsiderate rigour as their neighbours in Hispaniola, the race of original inhabitants, worn out with fatigue and sufferings, was soon exterminated.[k]

About the same time, Juan Diaz de Solis, in conjunction with Vincent Yanez Pinzon, one of Columbus's original companions, made a voyage to the continent. They held the same course which Columbus had taken, as far as to the island of Guanaios; but, standing from thence to the west, they discovered a new and extensive province, afterwards known by the name of Yucatan, and proceeded a considerable way along the coast of that country.[l] Though nothing memorable occurred in this voyage, it deserves notice, because it led to discoveries of greater importance. For the same reason, the voyage of Sebastian de Ocampo must be mentioned. By the command of Ovando, he sailed round Cuba, and first discovered with certainty, that this country, which Columbus once supposed to be a part of the continent, was a large island.[m]

Diego Columbus appointed governor of Hispaniola.

This voyage round Cuba was one of the last occurrences under the administration of Ovando. Ever since the death of Columbus, his son Don Diego had been employed in soliciting Ferdinand to grant him the offices of viceroy and admiral in the New World, together with all the immunities and profits which descended to him by inheritance, in consequence of the original capitulation with his father. But if these dignities and revenues appeared so considerable to Ferdinand, that, at the expense of being deemed unjust as well as ungrateful, he had wrested them from Columbus, it is not surprising that he should be unwilling to confer them on his son. Accordingly, Don Diego wasted two years in incessant but fruitless importunity. Weary of this, he endeavoured at length to obtain, by a legal sentence, what he could not procure from the favour of an interested monarch. He commenced a suit against Ferdinand before the council which managed Indian affairs, and that court, with integrity which reflects honour upon its proceedings, decided against the king, and sustained Don Diego's claim of the viceroyalty, together with all the other privileges stipulated in the capitulation. Even after this decree, Ferdinand's repugnance to put a subject in possession of such extensive rights, might have thrown in new obstacles, if Don Diego had not taken a step which interested very powerful persons in the success of his claims. The sentence of the council of the Indies gave him a title to a rank so elevated, and a fortune so opulent, that he found no difficulty in concluding a marriage with Donna Maria, daughter of Don Ferdinand de Toledo, great commendator of Leon, and brother of the duke of Alva, a nobleman of the first rank, and nearly related to the king. The duke and his family espoused so warmly the cause of their new ally, that Ferdinand could not resist their solicitations. He recalled Ovando, and appointed Don Diego his successor, though, even in conferring this favour, he could not conceal his jealousy; for he allowed him to assume only the title of governor, not that of viceroy, which had been adjudged to belong to him.[n] 1509.

He repairs to Hispaniola.

Don Diego quickly repaired to Hispaniola, attended by his brother, his uncles, his wife, whom the courtesy of the Spaniards honoured with the title of vice-queen, and a numerous retinue of persons of both sexes, born of good families. He lived with a splendour and magnificence hitherto unknown in the New World; and the family of Columbus seemed now to enjoy the honours and rewards due to his inventive genius, of which he himself had been cruelly defrauded. The colony itself acquired new lustre by the accession of so many inhabitants, of a different rank and character from most of those who had hitherto migrated to America, and many of the most illustrious families in the Spanish settlements are descended from the persons who at that time accompanied Don Diego Columbus.[o]

No benefits accrued to the unhappy natives from this change of governors. Don Diego was not only authorized by a royal edict to continue the *repartimientos*, or distribution of Indians, but the particular number which he might grant to every person, according to his rank in the colony, was specified. He availed himself of that permission, and soon after he landed at St. Domingo, he divided such Indians as were still unappropriated, among his relations and attendants.[p]

Pearl fishery of Cubagua.

The next care of the new governor was to comply with an instruction which he received from the king, about settling a colony in Cubagua, a small island which Columbus had discovered in his third voyage. Though this barren spot hardly yielded subsistence to its wretched inhabitants, such quantities of those oysters which produce pearls were found on its coast, that it did not long escape the inquisitive avarice of the Spaniards, and became a place of considerable resort. Large fortunes were acquired by the fishery of pearls, which was carried on with extraordinary ardour. The Indians, especially those from the Lucayo islands, were compelled to dive for them; and this dangerous and unhealthy em-

ployment was an additional calamity, which contributed not a little to the extinction of that devoted race.[q]

New voyages.

About this period, Juan Diaz de Solis and Pinzon set out, in conjunction, upon a second voyage. They stood directly south, towards the equinoctial line, which Pinzon had formerly crossed, and advanced as far as the fortieth degree of southern latitude. They were astonished to find that the continent of America stretched on their right hand, through all this vast extent of ocean. They landed in different places, to take possession in name of their sovereign; but though the country appeared to be extremely fertile and inviting, their force was so small, having been fitted out rather for discovery than making settlements, that they left no colony behind them. Their voyage served, however, to give the Spaniards more exalted and adequate ideas with respect to the dimensions of this new quarter of the globe.[r]

A settlement on the continent attempted.

Though it was about ten years since Columbus had discovered the main land of America, the Spaniards had hitherto made no settlement in any part of it. What had been so long neglected was now seriously attempted, and with considerable vigour; though the plan for this purpose was neither formed by the crown, nor executed at the expense of the nation, but carried on by the enterprising spirit of private adventurers. This scheme took its rise from Alonso de Ojeda, who had already made two voyages as a discoverer, by which he acquired considerable reputation, but no wealth. But his character for intrepidity and conduct easily procured him associates, who advanced the money requisite to defray the charges of the expedition. About the same time, Diego de Nicuessa, who had acquired a large fortune in Hispaniola, formed a similar design. Ferdinand encouraged both; and though he refused to advance the smallest sum, was extremely liberal of titles and patents. He erected two governments on the continent, one extending from Cape de Vela to the gulf of Darien, and the other from that to Cape Gracias a Dios. The former was given to Ojeda, the latter to Nicuessa. Ojeda fitted out a ship and two brigantines, with three hundred men; Nicuessa, six vessels, with seven hundred and eighty men. They sailed about the same time from St. Domingo for their respective governments. In order to give their title to those countries some appearance of validity, several of the most eminent divines and lawyers in Spain were employed to prescribe the mode in which they should take possession of them.[s] There is not in the history of mankind any thing more singular or extravagant than the form which they devised for this purpose. They instructed those invaders, as soon as they landed on the continent, to declare to the natives the principal articles of the christian faith; to acquaint them, in particular, with the supreme jurisdiction of the pope over all the kingdoms of the earth; to inform them of the grant which this holy pontiff had made of their country to the king of Spain; to require them to embrace the doctrines of that religion which the Spaniards made known to them; and to submit to the sovereign whose authority they proclaimed. If the natives refused to comply with this requisition, the terms of which must have been utterly incomprehensible to uninstructed Indians, then Ojeda and Nicuessa were authorized to attack them with fire and sword; to reduce them, their wives and children, to a state of servitude; and to compel them by force to recognise the jurisdiction of the church, and the authority of the monarch, to which they would not voluntarily subject themselves.[t]

The disasters attending it.

As the inhabitants of the continent could not at once yield assent to doctrines too refined for their uncultivated understandings, and explained to them by interpreters imperfectly acquainted with their language; as they did not conceive how a foreign priest, of whom they had never heard, could have any right to dispose of their country, or how an unknown prince should claim jurisdiction over them as his subjects; they fiercely opposed the new invaders of their territories. Ojeda and Nicuessa endeavoured to effect by force what they could not accomplish by persuasion. The contemporary writers enter into a very minute detail in relating their transactions; but as they made no discovery of importance, nor established any permanent settlement, their adventures are not entitled to any considerable place in the general history of a period, where romantic valour, struggling with incredible hardships, distinguishes every effort of the Spanish arms. They found the natives in those countries of which they went to assume the government, to be of a character very different from that of their countrymen in the islands. They were fierce and warlike. Their arrows were dipped in a poison so noxious, that every wound was followed with certain death. In one encounter they slew above seventy of Ojeda's followers, and the Spaniards, for the first time, were taught to dread the inhabitants of the New World. Nicuessa was opposed by people equally resolute in defence of their possessions. Nothing could soften their ferocity. Though the Spaniards employed every art to soothe them, and to gain their confidence, they refused to hold any intercourse, or to exchange any friendly office, with men whose residence among them they considered as fatal to their liberty and independence. This implacable enmity of the natives, 1510. though it rendered an attempt to establish a settlement in their country extremely difficult as well as dangerous, might have been surmounted at length by the perseverance of the Spaniards, by the superiority of their arms, and their skill in

t See Note XXIII.

the art of war. But every disaster which can be accumulated upon the unfortunate, combined to complete their ruin. The loss of their ships by various accidents upon an unknown coast, the diseases peculiar to a climate the most noxious in all America, the want of provisions, unavoidable in a country imperfectly cultivated, dissension among themselves, and the incessant hostilities of the natives, involved them in a succession of calamities, the bare recital of which strikes one with horror. Though they received two considerable reinforcements from Hispaniola, the greater part of those who had engaged in this unhappy expedition perished, in less than a year, in the most extreme misery. A few who survived, settled as a feeble colony at Santa Maria el Antigua, on the gulf of Darien, under the command of Vasco Nugnez de Balboa, who, in the most desperate exigences, displayed such courage and conduct, as first gained the confidence of his countrymen, and marked him out as their leader in more splendid and successful undertakings. Nor was he the only adventurer in this expedition who will appear with lustre in more important scenes. Francisco Pizarro was one of Ojeda's companions, and in this school of adversity acquired or improved the talents which fitted him for the extraordinary actions which he afterwards performed. Hernan Cortes, whose name became still more famous, had likewise engaged early in this enterprise, which roused all the active youth of Hispaniola to arms; but the good fortune that accompanied him in his subsequent adventures, interposed to save him from the disasters to which his companions were exposed. He was taken ill at St. Domingo before the departure of the fleet, and detained there by a tedious indisposition.[u]

Conquest of Cuba.

Notwithstanding the unfortunate issue of this expedition, the Spaniards were not deterred from engaging in new schemes of a similar nature. When wealth is acquired gradually by the persevering hand of industry, or accumulated by the slow operations of regular commerce, the means employed are so proportioned to the end attained, that there is nothing to strike the imagination, and little to urge on the active powers of the mind to uncommon efforts. But when large fortunes were created almost instantaneously; when gold and pearls were procured in exchange for baubles; when the countries which produced these rich commodities, defended only by naked savages, might be seized by the first bold invader; objects so singular and alluring roused a wonderful spirit of enterprise among the Spaniards, who rushed with ardour into this new path that was opened to wealth and distinction. While this spirit continued warm and vigorous, every attempt either towards discovery or conquest was applauded, and adventurers engaged in it with emulation. The passion for new undertakings, which characterizes the age of discovery in the latter part of the fifteenth and beginning of the sixteenth century, would alone have been sufficient to prevent the Spaniards from stopping short in their career. But circumstances peculiar to Hispaniola, at this juncture, concurred with it in extending their navigation and conquests. The rigorous treatment of the inhabitants of that island having almost extirpated the race, many of the Spanish planters, as I have already observed, finding it impossible to carry on their works with the same vigour and profit, were obliged to look out for settlements in some country where people were not yet wasted by oppression. Others, with the inconsiderate levity natural to men upon whom wealth pours in with a sudden flow, had squandered, in thoughtless prodigality, what they acquired with ease, and were driven by necessity to embark in the most desperate schemes, in order to retrieve their affairs. From all these causes, when Don Diego Columbus proposed 1511. to conquer the island of Cuba, and to establish a colony there, many persons of chief distinction in Hispaniola engaged with alacrity in the measure. He gave the command of the troops destined for that service to Diego Velasquez, one of his father's companions in his second voyage, and who, having been long settled in Hispaniola, had acquired an ample fortune, with such reputation for probity and prudence, that he seemed to be well qualified for conducting an expedition of importance. Three hundred men were deemed sufficient for the conquest of an island of above seven hundred miles in length, and filled with inhabitants. But they were of the same unwarlike character with the people of Hispaniola. They were not only intimidated by the appearance of their new enemies, but unprepared to resist them. For though, from the time that the Spaniards took possession of the adjacent island, there was reason to expect a descent on their territories, none of the small communities into which Cuba was divided, had either made any provision for its own defence, or had formed any concert for their common safety. The only obstruction the Spaniards met with was from Hatuey, a cazique, who had fled from Hispaniola, and had taken possession of the eastern extremity of Cuba. He stood upon the defensive at their first landing, and endeavoured to drive them back to their ships. His feeble troops, however, were soon broken and dispersed; and he himself being taken prisoner, Velasquez, according to the barbarous maxim of the Spaniards, considered him as a slave who had taken arms against his master, and condemned him to the flames. When Hatuey was fastened to the stake, a Franciscan friar, labouring to convert him, promised him immediate admittance into the joys of heaven, if he would embrace the christian faith. "Are there any Spaniards," says he, after some pause, "in that region of bliss which you describe?" —"Yes," replied the monk, "but only such as are worthy and good."—"The best of them," returned

u Herrera, dec. 1. lib. vii. c. 11, &c. Gomara Hist. c. 57, 58, 59. Benzon. Hist. lib. i. c. 19—23. P. Martyr, decad. p. 122.

the indignant cazique, "have neither worth nor goodness: I will not go to a place where I may meet with one of that accursed race."[x] This dreadful example of vengeance struck the people of Cuba with such terror, that they scarcely gave any opposition to the progress of their invaders; and Velasquez, without the loss of a man, annexed this extensive and fertile island to the Spanish monarchy.[y]

Discovery of Florida.

The facility with which this important conquest was completed, served as an incitement to other undertakings. Juan Ponce de Leon, having acquired both fame and wealth by the reduction of Puerto Rico, was impatient to engage in some new enterprise. He fitted out three ships at his own expense for a voyage of discovery, and his reputation soon drew together a respectable body of followers. He directed his course towards the Lucayo Islands; and after touching at several of them, as well as of the Bahama Isles, he stood to the south-west, and discovered a country hitherto unknown to the Spaniards, which he called Florida, either because he fell in with it on Palm Sunday, or on account of its gay and beautiful appearance. He attempted to land in different places, but met with such vigorous opposition from the natives, who were fierce and warlike, as convinced him that an increase of force was requisite to effect a settlement. Satisfied with having opened a communication with a new country, of whose value and importance he conceived very sanguine hopes, he returned to Puerto Rico, through the channel now known by the name of the Gulf of Florida.

1512.

It was not merely the passion of searching for new countries that prompted Ponce de Leon to undertake this voyage; he was influenced by one of those visionary ideas, which at that time often mingled with the spirit of discovery, and rendered it more active. A tradition prevailed among the natives of Puerto Rico, that in the isle of Bimini, one of the Lucayos, there was a fountain of such wonderful virtue as to renew the youth and recall the vigour of every person who bathed in its salutary waters. In hopes of finding this grand restorative, Ponce de Leon and his followers ranged through the islands, searching, with fruitless solicitude and labour, for the fountain which was the chief object of their expedition. That a tale so fabulous should gain credit among simple uninstructed Indians is not surprising. That it should make any impression upon an enlightened people, appears, in the present age, altogether incredible. The fact, however, is certain; and the most authentic Spanish historians mention this extravagant sally of their credulous countrymen. The Spaniards, at that period, were engaged in a career of activity which gave a romantic turn to their imagination, and daily presented to them strange and marvellous objects. A New World was opened to their view. They visited islands and continents, of whose existence mankind in former ages had no conception. In those delightful countries nature seemed to assume another form: every tree and plant and animal was different from those of the ancient hemisphere. They seemed to be transported into enchanted ground; and after the wonders which they had seen, nothing, in the warmth and novelty of their admiration, appeared to them so extraordinary as to be beyond belief. If the rapid succession of new and striking scenes made such impression even upon the sound understanding of Columbus, that he boasted of having found the seat of Paradise, it will not appear strange that Ponce de Leon should dream of discovering the fountain of youth.[z]

Progress of Balboa in Darien.

Soon after the expedition to Florida, a discovery of much greater importance was made in another part of America. Balboa having been raised to the government of the small colony at Santa Maria in Darien, by the voluntary suffrage of his associates, was so extremely desirous to obtain from the crown a confirmation of their election, that he despatched one of his officers to Spain, in order to solicit a royal commission, which might invest him with a legal title to the supreme command. Conscious, however, that he could not expect success from the patronage of Ferdinand's ministers, with whom he was unconnected, or from negociating in a court to the arts of which he was a stranger, he endeavoured to merit the dignity to which he aspired, and aimed at performing some signal service that would secure him the preference to every competitor. Full of this idea he made frequent inroads into the adjacent country, subdued several of the caziques, and collected a considerable quantity of gold, which abounded more in that part of the continent, than in the islands. In one of those excursions, the Spaniards contended with such eagerness about the division of some gold, that they were at the point of proceeding to acts of violence against one another. A young cazique who was present, astonished at the high value which they set upon a thing of which he did not discern the use, tumbled the gold out of the balance with indignation; and, turning to the Spaniards, "Why do you quarrel (says he) about such a trifle? If you are so passionately fond of gold, as to abandon your own country, and to disturb the tranquillity of distant nations for its sake, I will conduct you to a region where the metal which seems to be the chief object of your admiration and desire, is so common that the meanest utensils are formed of it." Transported with what they heard, Balboa and his companions inquired eagerly where this happy country lay, and how they might arrive at it. He informed them that at the distance of six suns, that is, of six days' journey, towards the south, they should discover another ocean, near to which this

wealthy kingdom was situated; but if they intended to attack that powerful state, they must assemble forces far superior in number and strength to those with which they now appeared.[a]

The schemes which he forms.

This was the first information which the Spaniards received concerning the great southern ocean, or the opulent and extensive country known afterwards by the name of Peru. Balboa had now before him objects suited to his boundless ambition, and the enterprising ardour of his genius. He immediately concluded the ocean which the cazique mentioned, to be that for which Columbus had searched without success in this part of America, in hopes of opening a more direct communication with the East Indies; and he conjectured that the rich territory which had been described to him, must be part of that vast and opulent region of the earth. Elated with the idea of performing what so great a man had attempted in vain, and eager to accomplish a discovery which he knew would be no less acceptable to the king than beneficial to his country, he was impatient until he could set out upon this enterprise, in comparison of which all his former exploits appeared inconsiderable. But previous arrangement and preparation were requisite to insure success. He began with courting and securing the friendship of the neighbouring caziques. He sent some of his officers to Hispaniola with a large quantity of gold, as a proof of his past success, and an earnest of his future hopes. By a proper distribution of this, they secured the favour of the governor, and allured volunteers into the service. A considerable reinforcement from that island joined him, and he thought himself in a condition to attempt the discovery.

Difficulty of executing them.

The isthmus of Darien is not above sixty miles in breadth; but this neck of land, which binds together the continents of North and South America, is strengthened by a chain of lofty mountains stretching through its whole extent, which render it a barrier of solidity sufficient to resist the impulse of two opposite oceans. The mountains are covered with forests almost inaccessible. The valleys in that moist climate, where it rains during two-thirds of the year, are marshy, and so frequently overflowed, that the inhabitants find it necessary, in many places, to build their houses upon trees, in order to be elevated at some distance from the damp soil, and the odious reptiles engendered in the putrid waters.[b] Large rivers rush down with an impetuous current from the high grounds. In a region thinly inhabited by wandering savages, the hand of industry had done nothing to mitigate or correct those natural disadvantages. To march across this unexplored country with no other guides but Indians, whose fidelity could be little trusted, was, on all those accounts, the boldest enterprise on which the Spaniards had hitherto ventured in the New World. But the intrepidity of Balboa was such as distinguished him among his countrymen, at a period when every adventurer was conspicuous for daring courage. Nor was bravery his only merit; he was 151 prudent in conduct, generous, affable, and possessed of those popular talents which, in the most desperate undertakings, inspire confidence and secure attachment. Even after the junction of the volunteers from Hispaniola, he was able to muster only an hundred and ninety men for his expedition. But they were hardy veterans, inured to the climate of America, and ready to follow him through every danger. A thousand Indians attended them to carry their provisions; and to complete their warlike array, they took with them several of those fierce dogs, which were no less formidable than destructive to their naked enemies.

Discovers the South Sea.

Balboa set out upon this important expedition on the first of September, about the time that the periodical rains began to abate. He proceeded by sea, and without any difficulty, to the territories of a cazique whose friendship he had gained; but no sooner did he begin to advance into the interior part of the country, than he was retarded by every obstacle, which he had reason to apprehend, from the nature of the territory, or the disposition of its inhabitants. Some of the caziques, at his approach, fled to the mountains with all their people, and carried off or destroyed whatever could afford subsistence to his troops. Others collected their subjects, in order to oppose his progress, and he quickly perceived what an arduous undertaking it was to conduct such a body of men through hostile nations, across swamps, and rivers, and woods, which had never been passed but by straggling Indians. But by sharing in every hardship with the meanest soldier, by appearing the foremost to meet every danger, by promising confidently to his troops the enjoyment of honour and riches superior to what had been attained by the most successful of their countrymen, he inspired them with such enthusiastic resolution, that they followed him without murmuring. When they had penetrated a good way into the mountains, a powerful cazique appeared in a narrow pass, with a numerous body of his subjects, to obstruct their progress. But men who had surmounted so many obstacles, despised the opposition of such feeble enemies. They attacked them with impetuosity, and having dispersed them with much ease and great slaughter, continued their march. Though their guides had represented the breadth of the isthmus to be only a journey of six days, they had already spent twenty-five in forcing their way through the woods and mountains. Many of them were ready to sink under such uninterrupted fatigue in that sultry climate, several were taken ill of the dysentery and other diseases frequent in that country, and all became impatient to reach the period of their labours and sufferings. At length the Indians

a Herrera, dec. 1. lib. ix. c. 2. Gomara, c. 60. P. Martyr, dec. p. 149.

b P. Martyr, dec. p. 158.

assured them, that from the top of the next mountain they should discover the ocean which was the object of their wishes. When, with infinite toil, they had climbed up the greater part of that steep ascent, Balboa commanded his men to halt, and advanced alone to the summit, that he might be the first who should enjoy a spectacle which he had so long desired. As soon as he beheld the South Sea stretching in endless prospect below him, he fell on his knees, and lifting up his hands to heaven, returned thanks to God, who had conducted him to a discovery so beneficial to his country, and so honourable to himself. His followers, observing his transports of joy, rushed forward to join in his wonder, exultation, and gratitude. They held on their course to the shore with great alacrity, when Balboa, advancing up to the middle in the waves with his buckler and sword, took possession of that ocean in the name of the king his master, and vowed to defend it, with these arms, against all his enemies.[c]

That part of the great Pacific or Southern Ocean, which Balboa first discovered, still retains the name of the Gulf of St. Michael, which he gave to it, and is situated to the east of Panama. From several of the petty princes, who governed in the districts adjacent to that gulf, he extorted provisions and gold by force of arms. Others sent them to him voluntarily. To these acceptable presents, some of the caziques added a considerable quantity of pearls; and he learned from them, with much satisfaction, that pearl oysters abounded in the sea which he had newly discovered.

He receives information concerning a more opulent country.

Together with the acquisition of this wealth, which served to soothe and encourage his followers, he received accounts which confirmed his sanguine hopes of future and more extensive benefits from the expedition. All the people on the coast of the South Sea concurred in informing him, that there was a mighty and opulent kingdom situated at a considerable distance towards the south-east, the inhabitants of which had tame animals to carry their burthens. In order to give the Spaniards an idea of these, they drew upon the sand the figure of the llamas or sheep, afterwards found in Peru, which the Peruvians had taught to perform such services as they described. As the llama in its form nearly resembles a camel, a beast of burthen deemed peculiar to Asia, this circumstance, in conjunction with the discovery of the pearls, another noted production of that country, tended to confirm the Spaniards in their mistaken theory with respect to the vicinity of the New World to the East Indies.[d]

Obliged to return.

But though the information which Balboa received from the people on the coast, as well as his own conjectures and hopes, rendered him extremely impatient to visit this unknown country, his prudence restrained him from attempting to invade it with a handful of men, exhausted by fatigue, and weakened by diseases.[e] He determined to lead back his followers, at present, to their settlement of Santa Maria in Darien, and to return next season with a force more adequate to such an arduous enterprise. In order to acquire a more extensive knowledge of the isthmus, he marched back by a different route, which he found to be no less dangerous and difficult than that which he had formerly taken. But to men elated with success, and animated with hope, nothing is insurmountable. Balboa returned to Santa Maria, from which he had been absent four months, with greater glory and more treasure than the Spaniards had acquired in any expedition in the New World. None of Balboa's officers distinguished themselves more in this service than Francisco Pizarro, or assisted with greater courage and ardour in opening a communication with those countries, in which he was destined to act soon a most illustrious part.[f]

1514.

Pedrarias appointed governor of Darien.

Balboa's first care was to send information to Spain of the important discovery which he had made; and to demand a reinforcement of a thousand men, in order to attempt the conquest of that opulent country, concerning which he had received such inviting intelligence. The first account of the discovery of the New World hardly occasioned greater joy than the unexpected tidings, that a passage was at last found to the great southern ocean. The communication with the East Indies, by a course to the westward of the line of demarcation drawn by the pope, seemed now to be certain. The vast wealth which flowed into Portugal from its settlements and conquests in that country, excited the envy, and called forth the emulation, of other states. Ferdinand hoped now to come in for a share in this lucrative commerce, and in his eagerness to obtain it, was willing to make an effort beyond what Balboa required. But even in this exertion, his jealous policy, as well as the fatal antipathy of Fonseca, now bishop of Burgos, to every man of merit who distinguished himself in the New World, were conspicuous. Notwithstanding Balboa's recent services, which marked him out as the most proper person to finish that great undertaking which he had begun, Ferdinand was so ungenerous as to overlook these, and to appoint Pedrarias Davila governor of Darien. He gave him the command of fifteen stout vessels, and twelve hundred soldiers. These were fitted out at the public expense, with a liberality which Ferdinand had never displayed in any former armament destined for the New World; and such was the ardour of the Spanish gentlemen to follow a leader who was about to conduct them to a country, where, as fame reported, they had only to throw their nets into the sea and draw out gold,[g] that fifteen hundred embarked on board the fleet; and if they had not

g Ibid. c. 14.

been restrained, a much greater number would have engaged in the service.[h]

Pedrarias reached the gulf of Darien without any remarkable accident, and immediately sent some of his principal officers ashore to inform Balboa of his arrival, with the king's commission, to be governor of the colony. To their astonishment, they found Balboa, of whose great exploits they had heard so much, and of whose opulence they had formed such high ideas, clad in a canvass jacket, and wearing coarse hempen sandals used only by the meanest peasants, employed, together with some Indians, in thatching his own hut with reeds. Even in this simple garb, which corresponded so ill with the expectations and wishes of his new guests, Balboa received them with dignity. The fame of his discoveries had drawn so many adventurers from the islands, that he could now muster four hundred and fifty men. At the head of those daring veterans, he was more than a match for the forces which Pedrarias brought with him. But though his troops murmured loudly at the injustice of the king in superseding their commander, and complained that strangers would now reap the fruits of their toil and success, Balboa submitted with implicit obedience to the will of his sovereign, and received Pedrarias with all the deference due to his character.[i]

Dissensions between him and Balboa.

Notwithstanding this moderation, to which Pedrarias owed the peaceable possession of his government, he appointed a judicial inquiry to be made into Balboa's conduct, while under the command of Nicuessa, and imposed a considerable fine upon him, on account of the irregularities of which he had then been guilty. Balboa felt sensibly the mortification of being subjected to trial and to punishment in a place where he had so lately occupied the first station. Pedrarias could not conceal his jealousy of his superior merit: so that the resentment of the one, and the envy of the other, gave rise to dissensions extremely detrimental to the colony. It was threatened with a calamity still more fatal. Pedrarias had landed in Darien at a most unlucky time of the year, about the middle of the rainy season, in that part of the torrid zone where the clouds pour down such torrents as are unknown in more temperate climates.[k] The village of Santa Maria was seated in a rich plain, environed with marshes and woods. The constitution of Europeans was unable to withstand the pestilential influence of such a situation, in a climate naturally so noxious, and at a season so peculiarly unhealthy. A violent and destructive malady carried off many of the soldiers who accompanied Pedrarias. An extreme scarcity of provisions augmented this distress, as it rendered it impossible to find proper refreshment for the sick, or the necessary sustenance for the healthy.[l] In the space of a month, above six hundred persons perished in the utmost misery. Dejection and despair spread through the colony. Many principal persons solicited their dismission, and were glad to relinquish all their hopes of wealth, in order to escape from that pernicious region. Pedrarias endeavoured to divert those who remained from brooding over their misfortunes, by finding them employment. With this view, he sent several detachments into the interior parts of the country, to levy gold among the natives, and to search for the mines in which it was produced. Those rapacious adventurers, more attentive to present gain than to the means of facilitating their future progress, plundered without distinction wherever they marched. Regardless of the alliances which Balboa had made with several of the caziques, they stripped them of every thing valuable, and treated them, as well as their subjects, with the utmost insolence and cruelty. By their tyranny and exactions, which Pedrarias, either from want of authority or of inclination, did not restrain, all the country from the gulf of Darien to the lake of Nicaragua was desolated, and the Spaniards were inconsiderately deprived of the advantages which they might have derived from the friendship of the natives, in extending their conquests to the South Sea. Balboa, who saw with concern that such ill-judged proceedings retarded the execution of his favourite scheme, sent violent remonstrances to Spain against the imprudent government of Pedrarias, which had ruined a happy and flourishing colony. Pedrarias, on the other hand, accused him of having deceived the king, by magnifying his own exploits, as well as by a false representation of the opulence and value of the country.[m]

Violent proceedings against Balboa.

Ferdinand became sensible at length of his imprudence in superseding the most active and experienced officer he had in the New World, and, by way of compensation to Balboa, appointed him adelantado, or lieutenant-governor of the countries upon the South Sea, with very extensive privileges and authority. At the same time he enjoined Pedrarias to support Balboa in all his operations, and to consult with him concerning every measure which he himself pursued. But to effect such a sudden transition from inveterate enmity to perfect confidence, exceeded Ferdinand's power. Pedrarias continued to treat his rival with neglect; and Balboa's fortune being exhausted by the payment of his fine and other exactions of Pedrarias, he could not make suitable preparations for taking possession of his new government. At length, by the interposition and exhortations of the bishop of Darien, they were brought to a reconciliation; and, in order to cement this union more firmly, Pedrarias agreed to give his daughter in marriage to Balboa. The first effect of their concord was, that Balboa was permitted to make several small incursions into the country. These he con-

ducted with such prudence as added to the reputation which he had already acquired. Many adventurers resorted to him; and with the countenance and aid of Pedrarias, he began to prepare for his expedition to the South Sea. In order to accomplish this, it was necessary to build vessels capable of conveying his troops to those provinces which he purposed to invade. After surmounting many obstacles, and enduring a variety of those hardships which were the portion of the conquerors of America, he at length finished four small brigantines. In these, with three hundred chosen men, a force superior to that with which Pizarro afterwards undertook the same expedition, he was ready to sail towards Peru, when he received an unexpected message from Pedrarias.[n] As his reconciliation with Balboa had never been cordial, the progress which his son-in-law was making revived his ancient enmity, and added to its rancour. He dreaded the prosperity and elevation of a man whom he had injured so deeply. He suspected that success would encourage him to aim at independence upon his jurisdiction; and so violently did the passions of hatred, fear, and jealousy, operate upon his mind, that, in order to gratify his vengeance, he scrupled not to defeat an enterprise of the greatest moment to his country. Under pretexts which were false, but plausible, he desired Balboa to postpone his voyage for a short time, and to repair to Acla, in order that he might have an interview with him. Balboa, with the unsuspicious confidence of a man conscious of no crime, instantly obeyed the summons; but as soon as he entered the place, he was arrested by order of Pedrarias, whose impatience to satiate his revenge did not suffer him to languish long in confinement. Judges were immediately appointed to proceed to his trial. An accusation of disloyalty to the king, and of an intention to revolt against the governor, was preferred against him. Sentence of death was pronounced; and though the judges who passed it, seconded by the whole colony, interceded warmly for his pardon, Pedrarias continued inexorable; and the Spaniards beheld, with astonishment and sorrow, the public execution of a man whom they universally deemed more capable than any who had borne command in America, of forming and accomplishing great designs.[o] Upon his death the expedition which he had planned was relinquished. Pedrarias, notwithstanding the violence and injustice of his proceedings, was not only screened from punishment by the powerful patronage of the bishop of Burgos and other courtiers, but continued in power. Soon after he obtained permission to remove the colony from its unwholesome station of Santa Maria to Panama, on the opposite side of the isthmus; and though it did not gain much in point of healthfulness by the change, the commodious situation of this new settlement contributed greatly to facilitate the subsequent conquests of the Spaniards in the extensive countries situated upon the southern ocean.[p]

1517.

During these transactions in Darien, the history of which it was proper to carry on in an uninterrupted tenor, several important events occurred with respect to the discovery, the conquest, and government of other provinces in the New World. Ferdinand was so intent upon opening a communication with the Molucca or Spice Islands by the west, that, in the year one thousand five hundred and fifteen, he fitted out two ships at his own expense, in order to attempt such a voyage, and gave the command of them to Juan Diaz de Solis, who was deemed one of the most skilful navigators in Spain. He stood along the coast of South America, and on the first of January one thousand five hundred and sixteen entered a river which he called Janeiro, where an extensive commerce is now carried on. From thence he proceeded to a spacious bay, which he supposed to be the entrance into a strait that communicated with the Indian ocean; but upon advancing further, he found it to be the mouth of Rio de Plata, one of the vast rivers by which the southern continent of America is watered. In endeavouring to make a descent in this country, De Solis and several of his crew were slain by the natives, who, in sight of the ships, cut their bodies in pieces, roasted and devoured them. Discouraged with the loss of their commander, and terrified at this shocking spectacle, the surviving Spaniards set sail for Europe, without aiming at any further discovery.[q] Though this attempt proved abortive, it was not without benefit. It turned the attention of ingenious men to this course of navigation, and prepared the way for a more fortunate voyage, by which, a few years posterior to this period, the great design that Ferdinand had in view was accomplished.

1515. New discoveries.

Though the Spaniards were thus actively employed in extending their discoveries and settlements in America, they still considered Hispaniola as their principal colony, and the seat of government. Don Diego Columbus wanted neither inclination nor abilities to have rendered the members of this colony, who were most immediately under his jurisdiction, prosperous and happy. But he was circumscribed in all his operations by the suspicious policy of Ferdinand, who on every occasion, and under pretexts the most frivolous, retrenched his privileges, and encouraged the treasurer, the judges, and other subordinate officers, to counteract his measures, and to dispute his authority. The most valuable prerogative which the governor possessed, was that of distributing Indians among the Spaniards settled in the island. The rigorous servitude of those unhappy men having been but little mitigated by all the regulations in their favour, the power of parcelling out such ne-

cessary instruments of labour at pleasure, secured to the governor great influence in the colony. In order to strip him of this, Ferdinand created a new office, with the power of distributing the Indians, and bestowed it upon Rodrigo Albuquerque, a relation of Zapata, his confidential minister. Mortified with the injustice as well as indignity of this invasion upon his rights, in a point so essential, Don Diego could no longer remain in a place where his power and consequence were almost annihilated. He repaired to Spain with the vain hopes of obtaining redress.[r] Albuquerque entered upon his office with all the rapacity of an indigent adventurer impatient to amass wealth. He began with taking the exact number of Indians in the island, and found, that from sixty thousand, who, in the year one thousand five hundred and eight, survived after all their sufferings, they were now reduced to fourteen thousand. These he threw into separate divisions or lots, and bestowed them upon such as were willing to purchase them at the highest price. By this arbitrary distribution, several of the natives were removed from their original habitations, many were taken from their ancient masters, and all of them subjected to heavier burdens, and to more intolerable labour, in order to reimburse their new proprietors. Those additional calamities completed the misery, and hastened on the extinction, of this wretched and innocent race of men.[s]

Controversy with respect to the treatment of the Indians.

The violence of these proceedings, together with the fatal consequences which attended them, not only excited complaints among such as thought themselves aggrieved, but touched the hearts of all who retained any sentiments of humanity. From the time that ecclesiastics were sent as instructors into America, they perceived that the rigour with which their countrymen treated the natives, rendered their ministry altogether fruitless. The missionaries, in conformity to the mild spirit of that religion which they were employed to publish, early remonstrated against the maxims of the planters with respect to the Americans, and condemned the *repartimientos*, or *distributions*, by which they were given up as slaves to their conquerors, as no less contrary to natural justice and the precepts of christianity, than to sound policy. The Dominicans, to whom the instruction of the Americans was originally committed, were most vehement in testifying against the *repartimientos*. In the year one thousand five hundred and eleven, Montesino, one of their most eminent preachers, inveighed against this practice, in the great church at St. Domingo, with all the impetuosity of popular eloquence. Don Diego Columbus, the principal officers of the colony, and all the laymen who had been his hearers, complained of the monk to his superiors; but they, instead of condemning, applauded his doctrine, as equally pious and seasonable. The Franciscans, influenced by the spirit of opposition and rivalship which subsists between the two orders, discovered some inclination to take part with the laity, and to espouse the defence of the *repartimientos*. But as they could not with decency give their avowed approbation to a system of oppression so repugnant to the spirit of religion, they endeavoured to palliate what they could not justify, and alleged, in excuse for the conduct of their countrymen, that it was impossible to carry on any improvement in the colony, unless the Spaniards possessed such dominion over the natives, that they could compel them to labour.[t]

Contrary decisions concerning this point.

The Dominicans, regardless of such political and interested considerations, would not relax in any degree the rigour of their sentiments, and even refused to absolve, or admit to the sacrament, such of their countrymen as continued to hold the natives in servitude.[u] Both parties applied to the king for his decision in a matter of such importance. Ferdinand empowered a committee of his privy-council, assisted by some of the most eminent civilians and divines in Spain, to hear the deputies sent from Hispaniola, in support of their respective opinions. After a long discussion, the speculative point in controversy was determined in favour of the Dominicans, the Indians were declared to be a free people, entitled to all the natural rights of men; but, notwithstanding all this decision, the *repartimientos* were continued upon their ancient footing.[x] As this determination admitted the principle upon which the Dominicans founded their opinion, they renewed their efforts to obtain relief for the Indians with additional boldness and zeal. At length, in order to quiet the colony, which was alarmed by their remonstrances and censures, Ferdinand issued a decree of his privy-council, declaring, that after mature consideration of the Apostolic bull, and other titles by which the crown of Castile claimed a right to its possessions in the New World, the servitude of the Indians was warranted both by the laws of God and of man; that unless they were subjected to the dominion of the Spaniards, and compelled to reside under their inspection, it would be impossible to reclaim them from idolatry, or to instruct them in the principles of the christian faith; that no further scruple ought to be entertained concerning the lawfulness of the *repartimientos*, as the king and council were willing to take the charge of that upon their own consciences; and that therefore the Dominicans, and monks of other religious orders, should abstain, for the future, from those invectives, which, from an excess of charitable but ill-informed zeal, they had uttered against that practice.[y] 1513.

That his intention of adhering to this decree might be fully understood, Ferdinand conferred new grants of Indians upon several of his courtiers.[z]

But in order that he might not seem altogether inattentive to the rights of humanity, he published an edict, in which he endeavoured to provide for the mild treatment of the Indians under the yoke to which he subjected them; he regulated the nature of the work which they should be required to perform; he prescribed the mode in which they should be clothed and fed, and gave directions with respect to their instruction in the principles of christianity.[a]

Effect of these.

But the Dominicans, who, from their experience of what was passed, judged concerning the future, soon perceived the inefficacy of those provisions, and foretold, that as long as it was the interest of individuals to treat the Indians with rigour, no public regulations could render their servitude mild or tolerable. They considered it as vain to waste their own time and strength in attempting to communicate the sublime truths of religion to men, whose spirits were broken, and their faculties impaired by oppression. Some of them, in despair, requested the permission of their superiors to remove to the continent, and to pursue the object of their mission among such of the natives as were not hitherto corrupted by the example of the Spaniards, or alienated by their cruelty from the christian faith. Such as remained in Hispaniola continued to remonstrate, with decent firmness, against the servitude of the Indians.[b]

Bartholomew de las Casas appears in defence of the Indians.

The violent operations of Albuquerque, the new distributor of Indians, revived the zeal of the Dominicans against the *repartimientos*, and called forth an advocate for that oppressed people, who possessed all the courage, the talents, and activity requisite in supporting such a desperate cause. This was Bartholomew de las Casas, a native of Seville, and one of the clergymen sent out with Columbus in his second voyage to Hispaniola, in order to settle in that island. He early adopted the opinion prevalent among ecclesiastics, with respect to the unlawfulness of reducing the natives to servitude; and that he might demonstrate the sincerity of his conviction, he relinquished all the Indians who had fallen to his own share in the division of the inhabitants among their conquerors, declaring that he should ever bewail his own misfortune and guilt, in having exercised for a moment this impious dominion over his fellow-creatures.[c] From that time he became the avowed patron of the Indians; and by his bold interpositions in their behalf, as well as by the respect due to his abilities and character, he had often the merit of setting some bounds to the excesses of his countrymen. He did not fail to remonstrate warmly against the proceedings of Albuquerque, and, though he soon found that attention to his own interest rendered this rapacious officer deaf to admonition, he did not abandon the wretched people whose cause he had espoused. He instantly set out for Spain, with the most sanguine hopes of opening the eyes and softening the heart of Ferdinand, by that striking picture of the oppression of his new subjects, which he would exhibit to his view.[d]

Solicits their cause in the court of Spain.

He easily obtained admittance to the king, whom he found in a declining state of health. With much freedom, and no less eloquence, he represented to him all the fatal effects of the *repartimientos* in the New World, boldly charging him with the guilt of having authorized this impious measure, which had brought misery and destruction upon a numerous and innocent race of men, whom Providence had placed under his protection. Ferdinand, whose mind as well as body was much enfeebled by his distemper, was greatly alarmed at this charge of impiety, which at another juncture he would have despised. He listened with deep compunction to the discourse of Las Casas, and promised to take into serious consideration the means of redressing the evil of which he complained. But death prevented him from executing his resolution. Charles of Austria, to whom all his crowns devolved, resided at that time in his paternal dominions in the Low Countries. Las Casas, with his usual ardour, prepared immediately to set out for Flanders, in order to occupy the ear of the young monarch, when cardinal Ximenes, who, as regent, assumed the reins of government in Castile, commanded him to desist from the journey, and engaged to hear his complaints in person.

The regulations of cardinal Ximenes.

He accordingly weighed the matter with attention equal to its importance; and as his impetuous mind delighted in schemes bold and uncommon, he soon fixed upon a plan which astonished the ministers, trained up under the formal and cautious administration of Ferdinand. Without regarding either the rights of Don Diego Columbus, or the regulations established by the late king, he resolved to send three persons to America as superintendents of all the colonies there, with authority, after examining all circumstances on the spot, to decide finally with respect to the point in question. It was a matter of deliberation and delicacy to choose men qualified for such an important station. As all the laymen settled in America, or who had been consulted in the administration of that department, had given their opinion that the Spaniards could not keep possession of their new settlements, unless they were allowed to retain their dominion over the Indians, he saw that he could not rely on their impartiality, and determined to commit the trust to ecclesiastics. As the Dominicans and Franciscans had already espoused opposite sides in the controversy, he, from the same principle of impartiality, excluded both

these fraternities from the commission. He confined his choice to the monks of St. Jerome, a small but respectable order in Spain. With the assistance of their general, and in concert with Las Casas, he soon pitched upon three persons whom he deemed equal to the charge. To them he joined Zuazo, a private lawyer of distinguished probity, with unbounded power to regulate all judicial proceedings in the colonies. Las Casas was appointed to accompany them, with the title of Protector of the Indians.[e]

The manner in which they were executed.

To vest such extraordinary powers, as might at once overturn the system of government established in the New World, in four persons, who, from their humble condition in life, were little entitled to possess this high authority, appeared to Zapata, and other ministers of the late king, a measure so wild and dangerous, that they refused to issue the despatches necessary for carrying it into execution. But Ximenes was not of a temper patiently to brook opposition to any of his schemes. He sent for the refractory ministers, and addressed them in such a tone, that in the utmost consternation they obeyed his orders.[f] The superintendents, with their associate Zuazo, and Las Casas, sailed for St. Domingo. Upon their arrival, the first act of their authority was to set at liberty all the Indians who had been granted to the Spanish courtiers, or to any person not residing in America. This, together with the information which had been received from Spain concerning the object of the commission, spread a general alarm. The colonists concluded that they were to be deprived at once of the hands with which they carried on their labour, and that, of consequence, ruin was unavoidable. But the fathers of St. Jerome proceeded with such caution and prudence, as soon dissipated all their fears. They discovered, in every step of their conduct, a knowledge of the world, and of affairs, which is seldom acquired in a cloister; and displayed a moderation as well as gentleness still more rare among persons trained up in the solitude and austerity of a monastic life. Their ears were open to information from every quarter; they compared the different accounts which they received; and after a mature consideration of the whole, they were fully satisfied that the state of the colony rendered it impossible to adopt the plan proposed by Las Casas, and recommended by the cardinal. They plainly perceived that the Spaniards settled in America were so few in number, that they could neither work the mines which had been opened, nor cultivate the country; that they depended for effecting both upon the labour of the natives, and if deprived of it, they must instantly relinquish their conquests, or give up all the advantages which they derived from them; that no allurement was so powerful as to surmount the natural aversion of the Indians to any laborious effort, and that nothing but the authority of a master could compel them to work; and if they were not kept constantly under the eye and discipline of a superior, so great was their natural listlessness and indifference, that they would neither attend to religious instruction, nor observe those rites of christianity which they had been already taught. Upon all those accounts, the superintendents found it necessary to tolerate the *repartimientos*, and to suffer the Indians to remain under subjection to their Spanish masters. They used their utmost endeavours, however, to prevent the fatal effects of this establishment, and to secure to the Indians the consolation of the best treatment compatible with a state of servitude. For this purpose, they revived former regulations, they prescribed new ones, they neglected no circumstance that tended to mitigate the rigour of the yoke; and by their authority, their example, and their exhortations, they laboured to inspire their countrymen with sentiments of equity and gentleness towards the unhappy people upon whose industry they depended. Zuazo, in his department, seconded the endeavours of the superintendents. He reformed the courts of justice, in such a manner as to render their decisions equitable as well as expeditious, and introduced various regulations which greatly improved the interior police of the colony. The satisfaction which his conduct and that of the superintendents gave, was now universal among the Spaniards settled in the New World, and all admired the boldness of Ximenes, in having departed from the ordinary path of business in forming his plan, as well as his sagacity in pitching upon persons, whose wisdom, moderation, and disinterestedness, rendered them worthy of this high trust.[g]

Las Casas dissatisfied with them.

Las Casas alone was dissatisfied. The prudential considerations which influenced the superintendents made no impression upon him. He regarded their idea of accommodating their conduct to the state of the colony, as the maxim of an unhallowed timid policy, which tolerated what was unjust because it was beneficial. He contended that the Indians were by nature free, and as their protector, he required the superintendents not to bereave them of the common privilege of humanity. They received his most virulent remonstrances without emotion, but adhered firmly to their own system. The Spanish planters did not bear with him so patiently, and were ready to tear him in pieces for insisting in a requisition so odious to them. Las Casas, in order to screen himself from their rage, found it necessary to take shelter in a convent; and perceiving that all his efforts in America were fruitless, he soon set out for Europe, with a fixed resolution not to abandon the protection of a people whom he deemed to be cruelly oppressed.[h]

His negociations with the ministers of Charles V.

Had Ximenes retained that vigour of mind with which he usually applied to business, Las Casas must have met with no very gracious reception upon his return to Spain. But he found the cardinal languishing under a mortal distemper, and preparing to resign his authority to the young king, who was daily expected from the Low Countries. Charles arrived, took possession of the government, and, by the death of Ximenes, lost a minister, whose abilities and integrity entitled him to direct his affairs. Many of the Flemish nobility had accompanied their sovereign to Spain. From that warm predilection to his countrymen, which was natural at his age, he consulted them with respect to all the transactions in his new kingdom, and they, with an indiscreet eagerness, intruded themselves into every business, and seized almost every department of administration.[i] The direction of American affairs was an object too alluring to escape their attention. Las Casas observed their growing influence, and though projectors are usually too sanguine to conduct their schemes with much dexterity, he possessed a bustling, indefatigable activity, which sometimes accomplishes its purposes with greater success than the most exquisite discernment and address. He courted the Flemish ministers with assiduity. He represented to them the absurdity of all the maxims hitherto adopted with respect to the government of America, particularly during the administration of Ferdinand, and pointed out the defects of those arrangements which Ximenes had introduced. The memory of Ferdinand was odious to the Flemings. The superior virtue and abilities of Ximenes had long been the object of their envy. They fondly wished to have a plausible pretext for condemning the measures, both of the monarch and of the minister, and of reflecting some discredit on their political wisdom. The friends of Don Diego Columbus, as well as the Spanish courtiers, who had been dissatisfied with the cardinal's administration, joined Las Casas in censuring the scheme of sending superintendents to America. This union of so many interests and passions was irresistible; and in consequence of it the fathers of St. Jerome, together with their associate Zuazo, were recalled. Roderigo de Figueroa, a lawyer of some eminence, was appointed chief judge of the island, and received instructions, in compliance with the request of Las Casas, to examine once more, with the utmost attention, the point in controversy between him and the people of the colony, with respect to the treatment of the natives; and in the mean time to do every thing in his power to alleviate their sufferings, and prevent the extinction of the race.[k]

Scheme of supplying the colonies with negroes.

This was all that the zeal of Las Casas could procure at that juncture in favour of the Indians. The impossibility of carrying on any improvements in America, unless the Spanish planters could command the labour of the natives, was an insuperable objection to his plan of treating them as free subjects. In order to provide some remedy for this, without which he found it was in vain to mention his scheme, Las Casas proposed to purchase a sufficient number of negroes from the Portuguese settlements on the coast of Africa, and to transport them to America, in order that they might be employed as slaves in working the mines and cultivating the ground. One of the first advantages which the Portuguese had derived from their discoveries in Africa, arose from the trade in slaves. Various circumstances concurred in reviving this odious commerce, which had been long abolished in Europe, and which is no less repugnant to the feelings of humanity, than to the principles of religion. As early as the year one thousand five hundred and three, a few negro slaves had been sent into the New World.[l] In the year one thousand five hundred and eleven, Ferdinand permitted the importation of them in greater numbers.[m] They were found to be a more robust and hardy race than the natives of America. They were more capable of enduring fatigue, more patient under servitude, and the labour of one negro was computed to be equal to that of four Indians.[n] Cardinal Ximenes, however, when solicited to encourage this commerce, peremptorily rejected the proposition, because he perceived the iniquity of reducing one race of men to slavery, while he was consulting about the means of restoring liberty to another.[o] But Las Casas, from the inconsistency natural to men who hurry with headlong impetuosity towards a favourite point, was incapable of making this distinction. While he contended earnestly for the liberty of the people born in one quarter of the globe, he laboured to enslave the inhabitants of another region; and in the warmth of his zeal to save the Americans from the yoke, pronounced it to be lawful and expedient to impose one still heavier upon the Africans. Unfortunately for the latter, Las Casas's plan was adopted. Charles granted a patent to one of his Flemish favourites, containing an exclusive right of importing four thousand negroes into America. The favourite sold his patent to some Genoese merchants for twenty-five thousand ducats, and they were the first who brought into a regular form that commerce for slaves between Africa and America, which has since been carried on to such an amazing extent.[p]

1518. Las Casas proposes sending labourers to Hispaniola.

But the Genoese merchants, conducting their operations, at first, with the rapacity of monopolists, demanded such an high price for negroes, that the number imported into Hispaniola made no great change upon the state of the colony. Las Casas, whose zeal was no less inventive than indefatigable, had recourse to another expedient for the relief of the Indians. He observed, that most of

the persons who had settled hitherto in America, were sailors and soldiers employed in the discovery or conquest of the country; the younger sons of noble families, allured by the prospect of acquiring sudden wealth; or desperate adventurers, whom their indigence or crimes forced to abandon their native land. Instead of such men, who were dissolute, rapacious, and incapable of that sober persevering industry, which is requisite in forming new colonies, he proposed to supply the settlements in Hispaniola and other parts of the New World with a sufficient number of labourers and husbandmen, who should be allured by suitable premiums to remove thither. These, as they were accustomed to fatigue, would be able to perform the work, to which the Indians, from the feebleness of their constitution, were unequal, and might soon become useful and opulent citizens. But though Hispaniola stood much in need of a recruit of inhabitants, having been visited at this time with the small-pox, which swept off almost all the natives who had survived their long continued oppression, and though Las Casas had the countenance of the Flemish ministers, this scheme was defeated by the bishop of Burgos, who thwarted all his projects.[q]

Forms the idea of a new colony.

Las Casas now despaired of procuring any relief for the Indians in those places where the Spaniards were already settled. The evil was become so inveterate there, as not to admit of a cure. But such discoveries were daily making in the continent, as gave a high idea both of its extent and populousness. In all those vast regions there was but one feeble colony planted; and except a small spot on the isthmus of Darien, the natives still occupied the whole country. This opened a new and more ample field for the humanity and zeal of Las Casas, who flattered himself that he might prevent a pernicious system from being introduced there, though he had failed of success in his attempts to overturn it, where it was already established. Full of this idea, he applied for a grant of the unoccupied country, stretching along the sea-coast from the gulf of Paria to the western frontier of that province now known by the name of Santa Martha. He proposed to settle there with a colony composed of husbandmen, labourers, and ecclesiastics. He engaged, in the space of two years, to civilize ten thousand of the natives, and to instruct them so thoroughly in the arts of social life, that, from the fruits of their industry, an annual revenue of fifteen thousand ducats should arise to the king. In ten years he expected that his improvements would be so far advanced, as to yield annually sixty thousand ducats. He stipulated, that no sailor or soldier should ever be permitted to settle in this district; and that no Spaniard whatever should enter it without his permission. He even projected to clothe the people whom he took along with him in some distinguishing garb, which did not resemble the Spanish dress, that they might appear to the natives to be a different race of men from those who had brought so many calamities upon their country.[r] From this scheme, of which I have traced only the great lines, it is manifest that Las Casas had formed ideas concerning the method of treating the Indians, similar to those by which the Jesuits afterwards carried on their great operations in another part of the same continent. He supposed that the Europeans, by availing themselves of that ascendant which they possessed in consequence of their superior progress in science and improvement, might gradually form the minds of the Americans to relish those comforts of which they were destitute, might train them to the arts of civil life, and render them capable of its functions.

Favourably received.

But to the bishop of Burgos and the council of the Indies, this project appeared not only chimerical, but dangerous in a high degree. They deemed the faculties of the Americans to be naturally so limited, and their indolence so excessive, that every attempt to instruct or to improve them would be fruitless. They contended, that it would be extremely imprudent to give the command of a country extending above a thousand miles along the coast, to a fanciful presumptuous enthusiast, a stranger to the affairs of the world, and unacquainted with the arts of government. Las Casas, far from being discouraged with a repulse, which he had reason to expect, had recourse once more to the Flemish favourites, who zealously patronized his scheme, merely because it had been rejected by the Spanish ministers. They prevailed with their master, who had lately been raised to the imperial dignity, to refer the consideration of this measure to a select number of his privy-counsellors; and Las Casas having excepted against the members of the council of the Indies, as partial and interested, they were all excluded. The decision of men chosen by recommendation of the Flemings, was perfectly conformable to their sentiments. They warmly approved of Las Casas's plan; and gave orders for carrying it into execution, but restricted the territory allotted him to three hundred miles along the coast of Cumana, allowing him, however, to extend it as far as he pleased towards the interior part of the country.[s]

1519.

A solemn deliberation concerning the mode of treating the Indians.

This determination did not pass uncensured. Almost every person who had been in the West Indies exclaimed against it, and supported their opinion so confidently, and with such plausible reasons, as made it advisable to pause and to review the subject more deliberately. Charles himself, though accustomed, at this early period of his life, to adopt the sentiments of his ministers with such submissive deference as did not promise that decisive vigour of mind which distinguished his riper years, could not

q Herrera, dec. 2. lib. ii. c. 21
r Ibid. lib. iv. c. 2.

s Gomara Hist. Gener. c. 77. Herrera, dec. 2. lib. iv. c. 3. Oviedo, lib. xix. c. 5

help suspecting that the eagerness with which the Flemings took part in every affair relating to America, flowed from some improper motive, and began to discover an inclination to examine in person into the state of the question concerning the character of the Americans, and the proper manner of treating them. An opportunity of making this inquiry with great advantage soon occurred. Quevedo, the bishop of Darien, who had accompanied Pedrarias to the continent in the year one thousand five hundred and thirteen, happened to land at Barcelona, where the court then resided. It was quickly known, that his sentiments concerning the talents and disposition of the Indians differed from those of Las Casas; and Charles naturally concluded, that by confronting two respectable persons, who, during their residence in America, had full leisure to observe the manners of the people whom they pretended to describe, he might be able to discover which of them had formed his opinion with the greatest discernment and accuracy.

June 20.

A day for this solemn audience was appointed. The emperor appeared with extraordinary pomp, and took his seat on a throne in the great hall of the palace. His principal courtiers attended. Don Diego Columbus, admiral of the Indies, was summoned to be present. The bishop of Darien was called upon first to deliver his opinion. He, in a short discourse, lamented the fatal desolation of America, by the extinction of so many of its inhabitants; he acknowledged that this must be imputed, in some degree, to the excessive rigour and inconsiderate proceedings of the Spaniards, but declared that all the people of the New World whom he had seen, either in the continent or in the islands, appeared to him to be a race of men marked out, by the inferiority of their talents, for servitude, and whom it would be impossible to instruct or improve, unless they were kept under the continual inspection of a master. Las Casas, at greater length, and with more fervour, defended his own system. He rejected with indignation the idea that any race of men was born to servitude, as irreligious and inhuman. He asserted that the faculties of the Americans were not naturally despicable, but unimproved; that they were capable of receiving instruction in the principles of religion, as well as of acquiring the industry and arts which would qualify them for the various offices of social life; that the mildness and timidity of their nature rendered them so submissive and docile, that they might be led and formed with a gentle hand. He professed, that his intentions in proposing the scheme now under consideration were pure and disinterested; and though, from the accomplishment of his designs, inestimable benefits would result to the crown of Castile, he never had claimed, nor ever would receive, any recompence on that account.

Charles, after hearing both, and consulting with his ministers, did not think himself sufficiently informed to establish any general arrangement with respect to the state of the Indians; but as he had perfect confidence in the integrity of Las Casas, and as even the bishop of Darien admitted his scheme to be of such importance, that a trial should be made of its effects, he issued a patent, granting him the district in Cumana formerly mentioned, with full power to establish a colony there according to his own plan.[t]

The scheme of Las Casas approved of.

1520.

Las Casas pushed on the preparations for his voyage with his usual ardour. But, either from his own inexperience in the conduct of affairs, or from the secret opposition of the Spanish nobility, who universally dreaded the success of an institution that might rob them of the industrious and useful hands which cultivated their estates, his progress in engaging husbandmen and labourers was extremely slow, and he could not prevail on more than two hundred to accompany him to Cumana.

His preparations for executing it.

Nothing, however, could damp his zeal. With this slender train, hardly sufficient to take possession of such a large territory, and altogether unequal to any effectual attempt towards civilizing its inhabitants, he set sail. The first place at which he touched was the island of Puerto Rico. There he received an account of a new obstacle to the execution of his scheme, more insuperable than any he had hitherto encountered. When he left America in the year one thousand five hundred and sixteen, the Spaniards had little intercourse with any part of the continent, except the countries adjacent to the gulf of Darien. But as every species of internal industry began to stagnate in Hispaniola, when, by the rapid decrease of the natives, the Spaniards were deprived of those hands with which they had hitherto carried on their operations, this prompted them to try various expedients for supplying that loss. Considerable numbers of negroes were imported; but on account of their exorbitant price, many of the planters could not afford to purchase them. In order to procure slaves at an easier rate, some of the Spaniards in Hispaniola fitted out vessels to cruise along the coast of the continent. In places where they found themselves inferior in strength, they traded with the natives, and gave European toys in exchange for the plates of gold worn by them as ornaments; but, wherever they could surprise or overpower the Indians, they carried them off by force, and sold them as slaves.[u] In those predatory excursions, such atrocious acts of violence and cruelty had been committed, that the Spanish name was held in detestation all over the continent. Whenever any ships appeared, the inhabitants either fled to the woods, or rushed down

to the shore in arms to repel those hated disturbers of their tranquillity. They forced some parties of the Spaniards to retreat with precipitation; they cut off others; and in the violence of their resentment against the whole nation, they murdered two Dominican missionaries, whose zeal had prompted them to settle in the province of Cumana.[x] This outrage against persons revered for their sanctity, excited such indignation among the people of Hispaniola, who, notwithstanding all their licentious and cruel proceedings, were possessed with a wonderful zeal for religion, and a superstitious respect for its ministers, that they determined to inflict exemplary punishment, not only upon the perpetrators of that crime, but upon the whole race. With this view, they gave the command of five ships and three hundred men to Diego Ocampo, with orders to lay waste the country of Cumana with fire and sword, and to transport all the inhabitants as slaves to Hispaniola. This armament Las Casas found at Puerto Rico, in its way to the continent; and as Ocampo refused to defer his voyage, he immediately perceived that it would be impossible to attempt the execution of his pacific plan in a country destined to be the seat of war and desolation.[y]

April 12. Labours to surmount them.

In order to provide against the effects of this unfortunate incident, he set sail directly for St. Domingo, leaving his followers cantoned out among the planters in Puerto Rico. From many concurring causes, the reception which Las Casas met with in Hispaniola was very unfavourable. In his negociations for the relief of the Indians, he had censured the conduct of his countrymen settled there with such honest severity, as rendered him universally odious to them. They considered their own ruin as the inevitable consequence of his success. They were now elated with hope of receiving a large recruit of slaves from Cumana, which must be relinquished if Las Casas were assisted in settling his projected colony there. Figueroa, in consequence of the instructions which he had received in Spain, had made an experiment concerning the capacity of the Indians, that was represented as decisive against the system of Las Casas. He collected in Hispaniola a good number of the natives, and settled them in two villages, leaving them at perfect liberty, and with the uncontrolled direction of their own actions. But that people, accustomed to a mode of life extremely different from that which takes place wherever civilization has made any considerable progress, were incapable of assuming new habits at once. Dejected with their own misfortunes as well as those of their country, they exerted so little industry in cultivating the ground, appeared so devoid of solicitude or foresight in providing for their own wants, and were such strangers to arrangement in conducting their affairs, that the Spaniards pronounced them incapable of being formed to live like men in social life, and considered them as children, who should be kept under the perpetual tutelage of persons superior to themselves in wisdom and sagacity.[z]

Final miscarriage of his scheme.

Notwithstanding all those circumstances, which alienated the persons in Hispaniola to whom Las Casas applied from himself and from his measures, he, by his activity and perseverance, by some concessions, and many threats, obtained at length a small body of troops to protect him and his colony at their first landing. But upon his return to Puerto Rico, he found that the diseases of the climate had been fatal to several of his people; and that others having got employment in that island refused to follow him. With the handful that remained, he set sail and landed in Cumana. Ocampo had executed his commission in that province with such barbarous rage, having massacred many of the inhabitants, sent others in chains to Hispaniola, and forced the rest to fly for shelter to the woods, that the people of a small colony, which he had planted at a place which he named *Toledo*, were ready to perish for want in a desolated country. There, however, Las Casas was obliged to fix his residence, though deserted both by the troops appointed to protect him, and by those under the command of Ocampo, who foresaw and dreaded the calamities to which he must be exposed in that wretched station. He made the best provision in his power for the safety and subsistence of his followers; but as his utmost efforts availed little towards securing either the one or the other, he returned to Hispaniola, in order to solicit more effectual aid for the preservation of men, who, from confidence in him, had ventured into a post of so much danger. Soon after his departure, the natives, having discovered the feeble and defenceless state of the Spaniards, assembled secretly, attacked them with the fury natural to men exasperated by many injuries, cut off a good number, and compelled the rest to fly in the utmost consternation to the island of Cubagua. The small colony settled there on account of the pearl fishery, catching the panic with which their countrymen had been seized, abandoned the island, and not a Spaniard remained in any part of the continent, or adjacent islands, from the gulf of Paria to the borders of Darien. Astonished at such a succession of disasters, Las Casas was ashamed to show his face after this fatal termination of all his splendid schemes. He shut himself up in the convent of the Dominicans at St. Domingo, and soon after assumed the habit of that order.[a]

Though the expulsion of the colony from Cumana happened in the year one thousand five hundred and twenty-one, I have chosen to trace the progress of Las Casas's negociations from their first rise to their final issue without interruption. His system was the object of long and attentive discussion; and though his efforts in behalf of the op-

pressed Americans, partly from his own rashness and imprudence, and partly from the malevolent opposition of his adversaries, were not attended with that success which he promised with too sanguine confidence, great praise is due to his humane activity, which gave rise to various regulations that were of some benefit to that unhappy people. I return now to the history of the Spanish dicoveries, as they occur in the order of time.[b]

New discoveries towards the west.

Diego Velasquez, who conquered Cuba in the year one thousand five hundred and eleven, still retained the government of that island, as the deputy of Don Diego Columbus, though he seldom acknowledged his superior, and aimed at rendering his own authority altogether independent.[c] Under his prudent administration, Cuba became one of the most flourishing of the Spanish settlements. The fame of this allured thither many persons from the other colonies, in hopes of finding either some permanent establishment or some employment for their activity. As Cuba lay to the west of all the islands occupied by the Spaniards, and as the ocean, which stretches beyond it towards that quarter, had not hitherto been explored, these circumstances naturally invited the inhabitants to attempt new discoveries. An expedition for this purpose, in which activity and resolution might conduct to sudden wealth, was more suited to the genius of the age, than the patient industry requisite in clearing ground and manufacturing sugar. Instigated by this spirit, several officers, who had served under Pedrarias in Darien, entered into an association to undertake a voyage of discovery. They persuaded Francisco Hernandez Cordova, an opulent planter in Cuba, and a man of distinguished courage, to join with them in the adventure, and chose him to be their commander. Velasquez not only approved of the design, but assisted in carrying it on. As the veterans from Darien were extremely indigent, he and Cordova advanced money for purchasing three small vessels, and furnishing them with every thing requisite either for traffic or for war. A hundred and ten men embarked on board of them, and sailed from St. Jago de Cuba on the eighth of February one thousand five hundred and seventeen. By the advice of their chief pilot, Antonio Alaminos, who had served under the first admiral Columbus, they stood directly west, relying on the opinion of that great navigator, who uniformly maintained that a westerly course would lead to the most important discoveries.

On the twenty-first day after their departure from St. Jago, they saw land, which proved to be *Cape Catoche*, the eastern point of that large peninsula projecting from the continent of America, which still retains its original name of *Yucatan*. As they approached the shore, five canoes came off full of people decently clad in cotton garments; an astonishing spectacle to the Spaniards, who had found every other part of America possessed by naked savages. Cordova endeavoured by small presents to gain the good will of these people. They, though amazed at the strange objects now presented for the first time to their view, invited the Spaniards to visit their habitations, with an appearance of cordiality. They landed accordingly, and as they advanced into the country, they observed with new wonder some large houses built with stone. But they soon found that, if the people of Yucatan had made progress in improvement beyond their countrymen, they were likewise more artful and warlike. For though the cazique received Cordova with many tokens of friendship, he had posted a considerable body of his subjects in ambush behind a thicket, who, upon a signal given by him, rushed out and attacked the Spaniards with great boldness, and some degree of martial order. At the first flight of their arrows, fifteen of the Spaniards were wounded; but the Indians were struck with such terror by the sudden explosion of the fire-arms, and so surprised at the execution done by them, by the cross-bows, and by the other weapons of their new enemies, that they fled precipitately. Cordova quitted a country where he had met with such a fierce reception, carrying off two prisoners, together with the ornaments of a small temple, which he plundered in his retreat.

Yucatan.

He continued his course towards the west, without losing sight of the coast, and on the sixteenth day arrived at Campeachy. There the natives received them more hospitably; but the Spaniards were much surprised, that on all the extensive coast along which they had sailed, and which they imagined to be a large island, they had not observed any river.[d] As their water began to fail, they advanced, in hopes of finding a supply; and at length they discovered the mouth of a river at Potonchan, some leagues beyond Campeachy.

Campeachy.

Cordova landed all his troops, in order to protect the sailors while employed in filling the casks; but notwithstanding this precaution, the natives rushed down upon them with such fury, and in such numbers, that forty-seven of the Spaniards were killed upon the spot, and one man only of the whole body escaped unhurt. Their commander, though wounded in twelve different places, directed the retreat with presence of mind equal to the courage with which he had led them on in the engagement, and with much difficulty they regained their ships. After this fatal repulse, nothing remained but to hasten back to Cuba with their shattered forces. In their passage thither they suffered the most exquisite distress for want of water, that men wounded and sickly, shut up in small vessels, and exposed to the heat of the torrid zone, can be supposed to endure. Some of them, sinking under these calamities, died by the way; Cordova, their commander, expired soon after they landed in Cuba.[e]

Voyage of Grijalva.

Notwithstanding the disastrous conclusion of this expedition, it contributed rather to animate than to damp a spirit of enterprise among the Spaniards. They had discovered an extensive country, situated at no great distance from Cuba, fertile in appearance, and possessed by a people far superior in improvement to any hitherto known in America. Though they had carried on little commercial intercourse with the natives, they had brought off some ornaments of gold, not considerable in value, but of singular fabric. These circumstances, related with the exaggeration natural to men desirous of heightening the merit of their own exploits, were more than sufficient to excite romantic hopes and expectations. Great numbers offered to engage in a new expedition. Velasquez, solicitous to distinguish himself by some service so meritorious as might entitle him to claim the government of Cuba independent of the admiral, not only encouraged their ardour, but at his own expense fitted out four ships for the voyage. Two hundred and forty volunteers, among whom were several persons of rank and fortune, embarked in this enterprise. The command of it was given to Juan de Grijalva, a young man of known merit and courage, with instructions to observe attentively the nature of the countries which he should discover, to barter for gold, and, if circumstances were inviting, to settle a colony in some proper station. He

1518.

sailed from St. Jago de Cuba on the eighth of April one thousand five hundred and eighteen. The pilot Alaminos held the same course as in the former voyage; but the violence of the currents carrying the ships to the south,

Discovers New Spain.

the first land which they made was the island of *Cozumel*, to the east of Yucatan. As all the inhabitants fled to the woods and mountains at the approach of the Spaniards, they made no long stay there, and without any remarkable occurrence they reached Potonchan on the opposite side of the peninsula. The desire of avenging their countrymen who had been slain there, concurred with their ideas of good policy in prompting them to land, that they might chastise the Indians of that district with such exemplary rigour, as would strike terror into all the people around them. But though they disembarked all their troops, and carried ashore some field-pieces, the Indians fought with such courage, that the Spaniards gained the victory with difficulty, and were confirmed in their opinion that the inhabitants of this country would prove more formidable enemies than any they had met with in other parts of America. From Potonchan, they continued their voyage towards the west, keeping as near as possible to the shore, and casting anchor every evening, from dread of the dangerous accidents to which they might be exposed in an unknown sea. During the day their eyes were turned continually towards land, with a mixture of surprise and wonder at the beauty of the country, as well as the novelty of the objects which they beheld. Many villages were scattered along the coast, in which they could distinguish houses of stone that appeared white and lofty at a distance. In the warmth of their admiration, they fancied these to be cities adorned with towers and pinnacles; and one of the soldiers happening to remark that this country resembled Spain in appearance, Grijalva, with universal applause, called it *New Spain*, the name which still distinguishes this extensive and opulent province of the Spanish empire in America.[f] They landed in a river which the natives called *Tabasco*,

June 9. Tabasco.

and the fame of their victory at Potonchan having reached this place, the cazique not only received them amicably, but bestowed presents upon them of such value, as confirmed the high ideas which the Spaniards had formed with respect to the wealth and fertility of the country. These ideas were raised still higher by what occurred at the place where they next touched. This was considerably to the west of Tabasco, in the province since known by the name of Guaxaca.

Guaxaca.

There they were received with the respect paid to superior beings. The people perfumed them as they landed, with incense of gum copal, and presented to them as offerings the choicest delicacies of their country. They were extremely fond of trading with their new visitants, and in six days the Spaniards obtained ornaments of gold, of curious workmanship, to the value of fifteen thousand pesos, in exchange for European toys of small price. The two prisoners whom Cordova had brought from Yucatan, had hitherto served as interpreters; but as they did not understand the language of this country, the Spaniards learned from the natives, by signs, that they were subjects of a great monarch called Montezuma, whose dominion extended over that and many other provinces. Leaving this place, with which he had so much reason to be pleased, Grijalva continued his course towards the west. He landed on a small island, which he named

June 19.

the Isle of Sacrifices, because there the Spaniards beheld, for the first time, the horrid spectacle of human victims, which the barbarous superstition of the natives offered to their gods. He touched at another small island which he called

St. Juan de Ulua.

St. Juan de Ulua. From this place he despatched Pedro de Alvarado, one of his officers, to Velasquez, with a full account of the important discoveries which he had made, and with all the treasure that he had acquired by trafficking with the natives. After the departure of Alvarado, he himself, with the remaining vessels, proceeded along the coast as far as the river Panuco, the country still appearing to be well peopled, fertile, and opulent.

Several of Grijalva's officers contended, that it was

[f] See Note XXVII.

Reasons for not leaving a colony there.

not enough to have discovered those delightful regions, or to have performed, at their different landing-places, the empty ceremony of taking possession of them for the crown of Castile, and that their glory was incomplete, unless they planted a colony in some proper station, which might not only secure the Spanish nation a footing in the country, but, with the reinforcements which they were certain of receiving, might gradually subject the whole to the dominion of their sovereign. But the squadron had now been above five months at sea; the greatest part of their provisions was exhausted, and what remained of their stores so much corrupted by the heat of the climate, as to be almost unfit for use; they had lost some men by death; others were sickly; the country was crowded with people who seemed to be intelligent as well as brave; and they were under the government of one powerful monarch, who could bring them to act against their invaders with united force. To plant a colony under so many circumstances of disadvantage, appeared a scheme too perilous to be attempted. Grijalva, though possessed both of ambition and courage, was destitute of the superior talents capable of forming or executing such a great plan. He judged it more prudent to return to Cuba, having fulfilled the purpose of his voyage, and accomplished all that the armament which he commanded enabled him to perform. He returned to St. Jago de Cuba on the twenty-sixth of October, from which he had taken his departure about six months before.[g]

Preparations for another expedition.

This was the longest as well as the most successful voyage which the Spaniards had hitherto made in the New World. They had discovered that Yucatan was not an island as they had supposed, but part of the great continent of America. From Potonchan they had pursued their course for many hundred miles along a coast formerly unexplored, stretching at first towards the west, and then turning to the north; all the country which they had discovered appeared to be no less valuable than extensive. As soon as Alvarado reached Cuba, Velasquez, transported with success so far beyond his most sanguine expectations, immediately despatched a person of confidence to carry this important intelligence to Spain, to exhibit the rich productions of the countries which had been discovered by his means, and to solicit such an increase of authority as might enable and encourage him to attempt the conquest of them. Without waiting for the return of his messenger, or for the arrival of Grijalva, of whom he was become so jealous or distrustful that he was resolved no longer to employ him, he began to prepare such a powerful armament, as might prove equal to an enterprise of so much danger and importance.

But as the expedition upon which Velasquez was now intent, terminated in conquests of greater moment than what the Spaniards had hitherto achieved, and led them to the knowledge of a people, who, if compared with those tribes of America with whom they were hitherto acquainted, may be considered as highly civilized; it is proper to pause before we proceed to the history of events extremely different from those which we have already related, in order to take a view of the state of the New World when first discovered, and to contemplate the policy and manners of the rude uncultivated tribes that occupied all the parts of it with which the Spaniards were at this time acquainted.

BOOK IV.

What parts of America were then known.

TWENTY-SIX years had elapsed since Columbus conducted the people of Europe to the New World. During that period the Spaniards had made great progress in exploring its various regions. They had visited all the islands scattered in different clusters through that part of the ocean which flows in between North and South America. They had sailed along the eastern coast of the continent from the river De la Plata to the bottom of the Mexican gulf, and had found that it stretched without interruption through this vast portion of the globe. They had discovered the great Southern ocean, which opened new prospects in that quarter. They had acquired some knowledge of the coast of Florida, which led them to observe the continent as it extended in an opposite direction; and though they pushed their discoveries no further towards the north, other nations had visited those parts which they neglected. The English, in a voyage, the motives and success of which shall be related in another part of this History, had sailed along the coast of America from Labrador to the confines of Florida; and the Portuguese, in quest of a shorter passage to the East Indies, had ventured into the northern seas, and viewed the same regions.[a] Thus, at the period where I have chosen to take a view of the state of the New World, its extent was known almost from its northern extremity to thirty-five degrees south of the equator. The countries which stretch from thence to the southern boundary of America, the great empire of Peru, and the interior state of the extensive dominions subject to the sovereigns of Mexico, were still undiscovered.

The vast extent of the New World.

When we contemplate the New World, the first circumstance that strikes us is its immense extent. It was not a small portion of the earth, so inconsiderable that it might have escaped the observation or research of former ages, which Columbus discovered. He made known a new hemisphere, larger than either Europe, or

g Herrera, dec. 11. lib. iii. c. 1, 2, 9, 10. Bernal Diaz, c. 8, 17. Oviedo Hist. lib. xvii. c. 9, 20. Gomara, c. 49.

a Herrera dec. 1. lib. vi. c. 16.

Asia, or Africa, the three noted divisions of the ancient continent, and not much inferior in dimensions to a third part of the habitable globe.

America is remarkable, not only for its magnitude, but for its position. It stretches from the northern polar circle to a high southern latitude, above fifteen hundred miles beyond the furthest extremity of the old continent on that side of the line. A country of such extent passes through all the climates capable of becoming the habitation of man, and fit for yielding the various productions peculiar either to the temperate or to the torrid regions of the earth.

Grand objects it presents to view.

Next to the extent of the New World, the grandeur of the objects which it presents to view is most apt to strike the eye of an observer. Nature seems here to have carried on her operations upon a larger scale, and with a bolder hand, and to have distinguished the features of this country by a peculiar magnificence.

Its mountains;

The mountains in America are much superior in height to those in the other divisions of the globe. Even the plain of Quito, which may be considered as the base of the Andes, is elevated further above the sea than the top of the Pyrenees. This stupendous ridge of the Andes, no less remarkable for extent than elevation, rises in different places more than one-third above the Peak of Teneriffe, the highest land in the ancient hemisphere. The Andes may literally be said to hide their heads in the clouds; the storms often roll, and the thunder bursts below their summits, which, though exposed to the rays of the sun in the centre of the torrid zone, are covered with everlasting snows.[b]

rivers;

From these lofty mountains descend rivers, proportionably large, with which the streams in the ancient continent are not to be compared, either for length of course, or the vast body of water which they roll towards the ocean. The Maragnon, the Orinoco, the Plata in South America, the Mississippi and St. Laurence in North America, flow in such spacious channels, that, long before they feel the influence of the tide, they resemble arms of the sea rather than rivers of fresh water.[c]

lakes.

The lakes of the New World are no less conspicuous for grandeur than its mountains and rivers. There is nothing in other parts of the globe which resembles the prodigious chain of lakes in North America. They may properly be termed inland seas of fresh water; and even those of the second or third class in magnitude are of larger circuit (the Caspian sea excepted) than the greatest lake of the ancient continent.

Its form favourable to commerce.

The New World is of a form extremely favourable to commercial intercourse. When a continent is formed, like Africa, of one vast solid mass, unbroken by arms of the sea penetrating into its interior parts, with few large rivers, and those at a considerable distance from each other, the greater part of it seems destined to remain for ever uncivilized, and to be debarred from any active or enlarged communication with the rest of mankind. When, like Europe, a continent is opened by inlets of the ocean of great extent, such as the Mediterranean and Baltic; or when, like Asia, its coast is broken by deep bays advancing far into the country, such as the Black sea, the gulfs of Arabia, of Persia, of Bengal, of Siam, and of Leotang; when the surrounding seas are filled with large and fertile islands, and the continent itself watered with a variety of navigable rivers, those regions may be said to possess whatever can facilitate the progress of their inhabitants in commerce and improvement. In all these respects America may bear a comparison with the other quarters of the globe. The gulf of Mexico, which flows in between North and South America, may be considered as a Mediterranean sea, which opens a maritime commerce with all the fertile countries by which it is encircled. The islands scattered in it are inferior only to those in the Indian Archipelago, in number, in magnitude, and in value. As we stretch along the northern division of the American hemisphere, the bay of Chesapeak presents a spacious inlet, which conducts the navigator far into the interior parts of provinces no less fertile than extensive; and if ever the progress of culture and population shall mitigate the extreme rigour of the climate in the more northern districts of America, Hudson's bay may become as subservient to commercial intercourse in that quarter of the globe, as the Baltic is in Europe. The other great portion of the New World is encompassed on every side by the sea, except one narrow neck which separates the Atlantic from the Pacific ocean; and though it be not opened by spacious bays or arms of the sea, its interior parts are rendered accessible by a number of large rivers, fed by so many auxiliary streams, flowing in such various directions, that, almost without any aid from the hand of industry and art, an inland navigation may be carried on through all the provinces from the river De la Plata to the gulf of Paria. Nor is this bounty of nature confined to the southern division of America; its northern continent abounds no less in rivers which are navigable almost to their sources, and by its immense chain of lakes provision is made for an inland communication, more extensive and commodious than in any quarter of the globe. The countries stretching from the gulf of Darien on one side, to that of California on the other, which form the chain that binds the two parts of the American continent together, are not destitute of peculiar advantages. Their coast on one side is washed by the Atlantic ocean, on the other by the Pacific. Some of their rivers flow into the former, some into the latter, and secure to them all the commercial benefits that may result from a communication with both.

b See Note XXVIII.

c See Note XXIX.

Temperature of its climate.

But what most distinguishes America from other parts of the earth, is the peculiar temperature of its climate, and the different laws to which it is subject with respect to the distribution of heat and cold. We cannot determine with precision the portion of heat felt in any part of the globe, merely by measuring its distance from the equator. The climate of a country is affected, in some degree, by its elevation above the sea, by the extent of continent, by the nature of the soil, the height of adjacent mountains, and many other circumstances. The influence of these, however, is, from various causes, less considerable in the greater part of the ancient continent; and from knowing the position of any country there, we can pronounce with greater certainty, what will be the warmth of its climate, and the nature of its productions.

Predominance of cold.

The maxims which are founded upon observation of our hemisphere will not apply to the other. In the New World, cold predominates. The rigour of the frigid zone extends over half of those regions, which should be temperate by their position. Countries where the grape and the fig should ripen, are buried under snow one-half of the year; and lands situated in the same parallel with the most fertile and best cultivated provinces in Europe, are chilled with perpetual frosts, which almost destroy the power of vegetation.[d] As we advance to those parts of America which lie in the same parallel with provinces of Asia and Africa, blessed with an uniform enjoyment of such genial warmth as is most friendly to life and to vegetation, the dominion of cold continues to be felt, and winter reigns, though during a short period, with extreme severity. If we proceed along the American continent into the torrid zone, we shall find the cold prevalent in the New World extending itself also to this region of the globe, and mitigating the excess of its fervour. While the negro on the coast of Africa is scorched with unremitting heat, the inhabitant of Peru breathes an air equally mild and temperate, and is perpetually shaded under a canopy of grey clouds, which intercepts the fierce beams of the sun, without obstructing his friendly influence.[e] Along the eastern coast of America, the climate, though more similar to that of the torrid zone in other parts of the earth, is nevertheless considerably milder than in those countries of Asia and Africa which lie in the same latitude. If from the southern tropic we continue our progress to the extremity of the American continent, we meet with frozen seas, and countries horrid, barren, and scarcely habitable for cold, much sooner than in the north.[f]

Causes of this.

Various causes combine in rendering the climate of America so extremely different from that of the ancient continent. Though the utmost extent of America towards the north be not yet discovered, we know that it advances much nearer to the pole than either Europe or Asia. Both these have large seas to the north, which are open during part of the year; and even when covered with ice, the wind that blows over them is less intensely cold than that which blows over land in the same high latitudes. But in America the land stretches from the river St. Laurence towards the pole, and spreads out immensely to the west. A chain of enormous mountains, covered with snow and ice, runs through all this dreary region. The wind in passing over such an extent of high and frozen land, becomes so impregnated with cold, that it acquires a piercing keenness, which it retains in its progress through warmer climates, and it is not entirely mitigated until it reach the gulf of Mexico. Over all the continent of North America, a north-westerly wind and excessive cold are synonymous terms. Even in the most sultry weather, the moment that the wind veers to that quarter, its penetrating influence is felt in a transition from heat to cold no less violent than sudden. To this powerful cause we may ascribe the extraordinary dominion of cold, and its violent inroads into the southern provinces in that part of the globe.[g]

Other causes, no less remarkable, diminish the active power of heat in those parts of the American continent which lie between the tropics. In all that portion of the globe, the wind blows in an invariable direction from east to west. As this wind holds its course across the ancient continent, it arrives at the countries which stretch along the western shores of Africa, inflamed with all the fiery particles which it hath collected from the sultry plains of Asia, and the burning sands in the African deserts. The coast of Africa is, accordingly, the region of the earth which feels the most fervent heat, and is exposed to the unmitigated ardour of the torrid zone. But this same wind, which brings such an accession of warmth to the countries lying between the river of Senegal and Cafraria, traverses the Atlantic ocean before it reaches the American shore. It is cooled in its passage over this vast body of water, and is felt as a refreshing gale along the coast of Brazil,[h] and Guiana, rendering these countries, though among the warmest in America, temperate, when compared with those which lie opposite to them in Africa.[i] As this wind advances in its course across America, it meets with immense plains, covered with impenetrable forests, or occupied by large rivers, marshes, and stagnating waters, where it can recover no considerable degree of heat. At length it arrives at the Andes, which run from north to south through the whole continent. In passing over their elevated and frozen summits, it is so thoroughly cooled, that the greater part of the countries beyond them hardly feel the ardour to

which they seem exposed by their situation.[k] In the other provinces of America, from Tierra Ferme westward to the Mexican empire, the heat of the climate is tempered, in some places, by the elevation of the land above the sea, in others, by their extraordinary humidity, and in all, by the enormous mountains scattered over this tract. The islands of America in the torrid zone are either small or mountainous, and are fanned alternately by refreshing sea and land breezes.

The causes of the extraordinary cold towards the southern limits of America, and in the seas beyond it, cannot be ascertained in a manner equally satisfying. It was long supposed that a vast continent, distinguished by the name of *Terra Australis Incognita*, lay between the southern extremity of America, and the Antarctic pole. The same principles which account for the extraordinary degree of cold in the northern regions of America, were employed in order to explain that which is felt at Cape Horn and the adjacent countries. The immense extent of the southern continent, and the large rivers which it poured into the ocean, were mentioned and admitted by philosophers as causes sufficient to occasion the unusual sensation of cold, and the still more uncommon appearances of frozen seas in that region of the globe. But the imaginary continent to which such influence was ascribed, having been searched for in vain, and the space which it was supposed to occupy having been found to be an open sea, new conjectures must be formed with respect to the causes of a temperature of climate, so extremely different from that which we experience in countries removed at the same distance from the opposite pole.[l]

Condition when first discovered.

After contemplating those permanent and characteristic qualities of the American continent, which arise from the peculiarity of its situation, and the disposition of its parts, the next object that merits attention is its condition when first discovered, as far as that depended upon the industry and operations of man. The effects of human ingenuity and labour are more extensive and considerable, than even our own vanity is apt at first to imagine. When we survey the face of the habitable globe, no small part of that fertility and beauty which we ascribe to the hand of nature, is the work of man. His efforts, when continued through a succession of ages, change the appearance and improve the qualities of the earth. As a great part of the ancient continent has long been occupied by nations far advanced in arts and industry, our eye is accustomed to view the earth in that form which it assumes when rendered fit to be the residence of a numerous race of men, and to supply them with nourishment.

Rude and uncultivated.

But in the New World, the state of mankind was ruder, and the aspect of nature extremely different. Throughout all its vast regions, there were only two monarchies remarkable for extent of territory, or distinguished by any progress in improvement. The rest of this continent was possessed by small independent tribes, destitute of arts and industry, and neither capable to correct the defects, nor desirous to meliorate the condition, of that part of the earth allotted to them for their habitation. Countries, occupied by such people, were almost in the same state as if they had been without inhabitants. Immense forests covered a great part of the uncultivated earth; and as the hand of industry had not taught the rivers to run in a proper channel, or drained off the stagnating water, many of the most fertile plains were overflowed with inundations, or converted into marshes. In the southern provinces, where the warmth of the sun, the moisture of the climate, and the fertility of the soil, combine in calling forth the most vigorous powers of vegetation, the woods are so choked with its rank luxuriance as to be almost impervious, and the surface of the ground is hid from the eye under a thick covering of shrubs and herbs and weeds. In this state of wild unassisted nature, a great part of the large provinces in South America, which extend from the bottom of the Andes to the sea, still remain. The European colonies have cleared and cultivated a few spots along the coast, but the original race of inhabitants, as rude and indolent as ever, have done nothing to open or improve a country, possessing almost every advantage of situation and climate. As we advance towards the northern provinces of America, nature continues to wear the same uncultivated aspect, and in proportion as the rigour of the climate increases, appears more desolate and horrid. There the forests, though not encumbered with the same exuberance of vegetation, are of immense extent; prodigious marshes overspread the plains, and few marks appear of human activity in any attempt to cultivate or embellish the earth. No wonder that the colonies sent from Europe were astonished at their first entrance into the New World. It appeared to them waste, solitary, and uninviting. When the English began to settle in America, they termed the countries of which they took possession, *The Wilderness*. Nothing but their eager expectation of finding mines of gold, could have induced the Spaniards to penetrate through the woods and marshes of America, where, at every step, they observed the extreme difference between the uncultivated face of nature, and that which it acquires under the forming hand of industry and art.[m]

Unwholesome.

The labour and operations of man not only improve and embellish the earth, but render it more wholesome and friendly to life. When any region lies neglected and destitute of cultivation, the air stagnates in the woods, putrid exhalations arise from the waters; the surface of the earth, loaded with rank vegetation, feels

m See Note XXXIV.

not the purifying influence of the sun or of the wind; the malignity of the distempers natural to the climate increases, and new maladies no less noxious are engendered. Accordingly, all the provinces of America, when first discovered, were found to be remarkably unhealthy. This the Spaniards experienced in every expedition into the New World, whether destined for conquest or settlement. Though, by the natural constitution of their bodies, their habitual temperance, and the persevering vigour of their minds, they were as much formed as any people in Europe for active service in a sultry climate, they felt severely the fatal and pernicious qualities of those uncultivated regions through which they marched, or where they endeavoured to plant colonies. Great numbers were cut off by the unknown and violent diseases with which they were infected. Such as survived the destructive rage of those maladies, were not exempted from the noxious influence of the climate. They returned to Europe, according to the description of the early Spanish historians, feeble, emaciated, with languid looks, and complexions of such a sickly yellow colour, as indicated the unwholesome temperature of the countries where they had resided.[n]

Its animals.

The uncultivated state of the New World affected not only the temperature of the air, but the qualities of its productions. The principle of life seems to have been less active and vigorous there, than in the ancient continent. Notwithstanding the vast extent of America, and the variety of its climates, the different species of animals peculiar to it are much fewer in proportion, than those of the other hemisphere. In the islands, there were only four kinds of quadrupeds known, the largest of which did not exceed the size of a rabbit. On the continent, the variety was greater; and though the individuals of each kind could not fail of multiplying exceedingly, when almost unmolested by men, who were neither so numerous, nor so united in society, as to be formidable enemies to the animal creation, the number of distinct species must still be considered as extremely small. Of two hundred different kinds of animals spread over the face of the earth, only about one-third existed in America at the time of its discovery.[o] Nature was not only less prolific in the New World, but she appears likewise to have been less vigorous in her productions. The animals originally belonging to this quarter of the globe appear to be of an inferior race, neither so robust, nor so fierce, as those of the other continent. America gives birth to no creature of such bulk as to be compared with the elephant or rhinoceros, or that equals the lion and tiger in strength and ferocity.[p] The *Tapyr* of Brazil, the largest quadruped of the ravenous tribe in the New World, is not larger than a calf of six months old. The *Puma* and *Jaguar*, its fiercest beasts of prey, which Europeans have inaccurately denominated lions and tigers, possess neither the undaunted courage of the former, nor the ravenous cruelty of the latter.[q] They are inactive and timid, hardly formidable to man, and often turn their backs upon the least appearance of resistance.[r] The same qualities in the climate of America, which stinted the growth, and enfeebled the spirit, of its native animals, have proved pernicious to such as have migrated into it voluntarily from the other continent, or have been transported thither by the Europeans.[s] The bears, the wolves, the deer of America, are not equal in size to those of the Old World.[t] Most of the domestic animals, with which the Europeans have stored the provinces wherein they settled, have degenerated with respect either to bulk or quality, in a country whose temperature and soil seem to be less favourable to the strength and perfection of the animal creation.[u]

Insects and reptiles.

The same causes which checked the growth and the vigour of the more noble animals, were friendly to the propagation and increase of reptiles and insects. Though this is not peculiar to the New World, and those odious tribes, nourished by heat, moisture, and corruption, infest every part of the torrid zone; they multiply faster, perhaps, in America, and grow to a more monstrous bulk. As this country is, on the whole, less cultivated, and less peopled, than the other quarters of the earth, the active principle of life wastes its force in productions of this inferior form. The air is often darkened with clouds of insects, and the ground covered with shocking and noxious reptiles. The country around Porto-Bello swarms with toads in such multitudes, as hide the surface of the earth. At Guayaquil, snakes and vipers are hardly less numerous. Carthagena is infested with numerous flocks of bats, which annoy not only the cattle but the inhabitants.[x] In the islands, legions of ants have, at different times, consumed every vegetable production,[y] and left the earth entirely bare, as if it had been burnt with fire. The damp forests and rank soil of the countries on the banks of the Orinoco and Maragnon, teem with almost every offensive and poisonous creature, which the power of a sultry sun can quicken into life.[z]

Birds.

The birds of the New World are not distinguished by qualities so conspicuous and characteristical, as those which we have observed in its quadrupeds. Birds are more independent of man, and less affected by the changes which his industry and labour make upon the state of the earth. They have a greater propensity to

migrate from one country to another, and can gratify this instinct of their nature without difficulty or danger. Hence the number of birds common to both continents is much greater than that of quadrupeds; and even such as are peculiar to America nearly resemble those with which mankind were acquainted in similar regions of the ancient hemisphere. The American birds of the torrid zone, like those of the same climate in Asia and Africa, are decked in plumage, which dazzles the eye with the beauty of its colours; but nature, satisfied with clothing them in this gay dress, has denied most of them that melody of sound, and variety of notes, which catch and delight the ear. The birds of the temperate climates there, in the same manner as in our continent, are less splendid in their appearance; but, in compensation for that defect, they have voices of greater compass, and more melodious. In some districts of America, the unwholesome temperature of the air seems to be unfavourable even to this part of the creation. The number of birds is less than in other countries, and the traveller is struck with the amazing solitude and silence of its forests.[a] It is remarkable, however, that America, where the quadrupeds are so dwarfish and dastardly, should produce the *Condor*, which is entitled to pre-eminence over all the flying tribe, in bulk, in strength, and in courage.[b]

Soil.

The soil in a continent so extensive as America, must of course be extremely various. In each of its provinces, we find some distinguishing peculiarities; the description of which belongs to those who write their particular history. In general, we may observe, that the moisture and cold, which predominate so remarkably in all parts of America, must have great influence upon the nature of its soil; countries lying in the same parallel with those regions which never feel the extreme rigour of winter in the ancient continent, are frozen over in America during a great part of the year. Chilled by this intense cold, the ground never acquires warmth sufficient to ripen the fruits which are found in the corresponding parts of the other continent. If we wish to rear in America the productions which abound in any particular district of the ancient world, we must advance several degrees nearer to the line than in the other hemisphere, as it requires such an increase of heat to counterbalance the natural frigidity of the soil and climate.[c] At the Cape of Good Hope, several of the plants and fruits peculiar to the countries within the tropics, are cultivated with success; whereas, at St. Augustine in Florida, and Charlestown, in South Carolina, though considerably nearer the line, they cannot be brought to thrive with equal certainty.[d] But, if allowance be made for this diversity in the degree of heat, the soil of America is naturally as rich and fertile as in any part of the earth. As the country was thinly inhabited, and by a people of little industry, who had none of the domestic animals which civilized nations rear in such vast numbers, the earth was not exhausted by their consumption. The vegetable productions, to which the fertility of the soil gave birth, often remained untouched, and being suffered to corrupt on its surface, returned with increase into its bosom.[e] As trees and plants derive a great part of their nourishment from air and water, if they were not destroyed by man and other animals, they would render to the earth more, perhaps, than they take from it, and feed rather than impoverish it. Thus the unoccupied soil of America may have gone on enriching for many ages. The vast number as well as enormous size of the trees in America, indicate the extraordinary vigour of the soil in its native state. When the Europeans first began to cultivate the New World, they were astonished at the luxuriant power of vegetation in its virgin mould; and in several places the ingenuity of the planter is still employed in diminishing and wasting its superfluous fertility, in order to bring it down to a state fit for profitable culture.[f]

How was America peopled?

Having thus surveyed the state of the New World at the time of its discovery, and considered the peculiar features and qualities which distinguish and characterize it, the next inquiry that merits attention is, How was America peopled? By what course did mankind migrate from the one continent to the other? and in what quarter is it most probable that a communication was opened between them?

No tradition concerning it among themselves.

We know, with infallible certainty, that all the human race spring from the same source, and that descendants of one man, under the protection as well as in obedience to the command of Heaven, multiplied and replenished the earth. But neither the annals nor the traditions of nations reach back to those remote ages, in which they took possession of the different countries where they are now settled. We cannot trace the branches of this first family, or point out with certainty the time and manner in which they divided and spread over the face of the globe. Even among the most enlightened people, the period of authentic history is extremely short; and every thing prior to that is fabulous or obscure. It is not surprising, then, that the unlettered inhabitants of America, who have no solicitude about futurity, and little curiosity concerning what is past, should be altogether unacquainted with their own original. The people on the two opposite coasts of America, who occupy those countries in America which approach nearest to the ancient continent, are so remarkably rude, that it is altogether vain to search among them for such information as might discover the place from whence they came, or the ancestors of whom they are descended.[g] Whatever light has been thrown on this

subject, is derived, not from the natives of America, but from the inquisitive genius of their conquerors.

Various theories.

When the people of Europe unexpectedly discovered a new world, removed at a vast distance from every part of the ancient continent which was then known, and filled with inhabitants whose appearance and manners differed remarkably from the rest of the human species, the question concerning their original became naturally an object of curiosity and attention. The theories and speculations of ingenious men with respect to this subject, would fill many volumes; but are often so wild and chimerical, that I should offer an insult to the understanding of my readers, if I attempted either minutely to enumerate or to refute them. Some have presumptuously imagined that the people of America were not the offspring of the same common parent with the rest of mankind, but that they formed a separate race of men, distinguishable by peculiar features in the constitution of their bodies, as well as in the characteristic qualities of their minds. Others contend, that they are descended from some remnant of the antediluvian inhabitants of the earth, who survived the deluge, which swept away the greatest part of the human species in the days of Noah, and preposterously suppose rude, uncivilized tribes, scattered over an uncultivated continent, to be the most ancient race of people on the earth. There is hardly any nation from the north to the south pole, to which some antiquary, in the extravagance of conjecture, has not ascribed the honour of peopling America. The Jews, the Canaanites, the Phœnicians, the Carthaginians, the Greeks, the Scythians in ancient times, are supposed to have settled in this western world. The Chinese, the Swedes, the Norwegians, the Welsh, the Spaniards, are said to have sent colonies thither in later ages, at different periods, and on various occasions. Zealous advocates stand forth to support the respective claims of those people; and though they rest upon no better foundation than the casual resemblance of some customs, or the supposed affinity between a few words in their different languages, much erudition and more zeal have been employed, to little purpose, in defence of the opposite systems. Those regions of conjecture and controversy belong not to the historian. His is a more limited province, confined by what is established by certain or highly probable evidence. Beyond this I shall not venture, in offering a few observations which may contribute to throw some light upon this curious and much agitated question.

Ought not to be founded on mere conjecture;

1. There are authors who have endeavoured by mere conjecture to account for the peopling of America. Some have supposed that it was originally united to the ancient continent, and disjoined from it by the shock of an earthquake, or the irruption of a deluge. Others have imagined, that some vessel being forced from its course, by the violence of a westerly wind, might be driven by accident towards the American coast, and have given a beginning to population in that desolate continent.[h] But with respect to all those systems, it is vain either to reason or inquire, because it is impossible to come to any decision. Such events as they suppose are barely possible, and may have happened. That they ever did happen, we have no evidence, either from the clear testimony of history, or from the obscure intimations of tradition.

or on resemblance of manners;

2. Nothing can be more frivolous or uncertain than the attempts to discover the original of the Americans, merely by tracing the resemblance between their manners and those of any particular people in the ancient continent. If we suppose two tribes, though placed in the most remote regions of the globe, to live in a climate nearly of the same temperature, to be in the same state of society, and to resemble each other in the degree of their improvement, they must feel the same wants, and exert the same endeavours to supply them. The same objects will allure, the same passions will animate them, and the same ideas and sentiments will arise in their minds. The character and occupations of the hunter in America must be little different from those of an Asiatic, who depends for subsistence on the chase. A tribe of savages on the banks of the Danube must nearly resemble one upon the plains washed by the Mississippi. Instead then of presuming from this similarity, that there is any affinity between them, we should only conclude, that the dispositions and manners of men are formed by their situation, and arise from the state of society in which they live. The moment that begins to vary, the character of a people must change. In proportion as it advances in improvement, their manners refine, their powers and talents are called forth. In every part of the earth, the progress of man hath been nearly the same; and we can trace him in his career from the rude simplicity of savage life, until he attains the industry, the arts, and the elegance of polished society. There is nothing wonderful then in the similitude between the Americans and the barbarous nations of our continent. Had Lafitau, Garcia, and many other authors attended to this, they would not have perplexed a subject which they pretend to illustrate, by their fruitless endeavours to establish an affinity between various races of people, in the old and new continents, upon no other evidence than such a resemblance in their manners as necessarily arises from the similarity of their condition. There are, it is true, among every people some customs which, as they do not flow from any natural want or desire peculiar to their situation, may be denominated usages of arbitrary institution. If between two na-

h Parsons's Remains of Japhet, p. 240. Ancient Univers. Hist. vol. xx. p. 164. P. Feyjoo Teatro Critico, tom. v. p. 304, &c. Acosta Hist. Moral. Novi Orbis, lib. i. c. 16. 19.

tions settled in remote parts of the earth, a perfect agreement with respect to any of these should be discovered, one might be led to suspect that they were connected by some affinity. If, for example, a nation were found in America that consecrated the seventh day to religious worship and rest, we might justly suppose that it had derived its knowledge of this usage, which is of arbitrary institution, from the Jews. But, if it were discovered that another nation celebrated the first appearance of every new moon with extraordinary demonstrations of joy, we should not be entitled to conclude that the observation of this monthly festival was borrowed from the Jews, but ought to consider it merely as the expression of that joy which is natural to man on the return of the planet which guides and cheers him in the night. The instances of customs, merely arbitrary, common to the inhabitants of both hemispheres, are, indeed, so few and so equivocal, that no theory concerning the population of the New World ought to be founded upon them.

or of religious rites.

3. The theories which have been formed with respect to the original of the Americans, from observation of their religious rites and practices, are no less fanciful, and destitute of solid foundation. When the religious opinions of any people are neither the result of rational inquiry, nor derived from the instructions of revelation, they must needs be wild and extravagant. Barbarous nations are incapable of the former, and have not been blessed with the advantages arising from the latter. Still, however, the human mind, even where its operations appear most wild and capricious, holds a course so regular, that in every age and country the dominion of particular passions will be attended with similar effects. The savage of Europe or America, when filled with superstitious dread of invisible beings, or with inquisitive solicitude to penetrate into the events of futurity, trembles alike with fear, or glows with impatience. He has recourse to rites and practices of the same kind, in order to avert the vengeance which he supposes to be impending over him, or to divine the secret which is the object of his curiosity. Accordingly the ritual of superstition in one continent, seems, in many particulars, to be a transcript of that established in the other, and both authorize similar institutions, sometimes so frivolous as to excite pity, sometimes so bloody and barbarous as to create horror. But without supposing any consanguinity between such distant nations, or imagining that their religious ceremonies were conveyed by tradition from the one to the other, we may ascribe this uniformity, which, in many instances, seems very amazing, to the natural operation of superstition and enthusiasm upon the weakness of the human mind.

Not peopled by any nation highly civilized;

4. We may lay it down as a certain principle in this inquiry, that America was not peopled by any nation of the ancient continent, which had made considerable progress in civilization. The inhabitants of the New World were in a state of society so extremely rude, as to be unacquainted with those arts which are the first essays of human ingenuity in its advance towards improvement. Even the most cultivated nations of America were strangers to many of those simple inventions which were almost coeval with society in other parts of the world, and were known in the earliest periods of civil life with which we have any acquaintance. From this it is manifest, that the tribes which originally migrated to America, came off from nations which must have been no less barbarous than their posterity, at the time when they were first discovered by the Europeans. For, although the elegant or refined arts may decline or perish, amidst the violent shocks of those revolutions and disasters to which nations are exposed, the necessary arts of life, when once they have been introduced among any people, are never lost. None of the vicissitudes in human affairs affect these, and they continue to be practised as long as the race of men exists. If ever the use of iron had been known to the savages of America, or to their progenitors; if ever they had employed a plough, a loom, or a forge, the utility of those inventions would have preserved them, and it is impossible that they should have been abandoned or forgotten. We may conclude, then, that the Americans sprung from some people, who were themselves in such an early and unimproved stage of society, as to be unacquainted with all those necessary arts, which continued to be unknown among their posterity when first visited by the Spaniards.

nor from the southern regions of our continent.

5. It appears no less evident that America was not peopled by any colony from the more southern nations of the ancient continent. None of the rude tribes settled in that part of our hemisphere can be supposed to have visited a country so remote. They possessed neither enterprise, nor ingenuity, nor power, that could prompt them to undertake, or enable them to perform, such a distant voyage. That the more civilized nations in Asia or Africa are not the progenitors of the Americans is manifest, not only from the observations which I have already made concerning their ignorance of the most simple and necessary arts, but from an additional circumstance. Whenever any people have experienced the advantages which men enjoy by their dominion over the inferior animals, they can neither subsist without the nourishment which these afford, nor carry on any considerable operation independent of their ministry and labour Accordingly, the first care of the Spaniards, when they settled in America, was to stock it with all the domestic animals of Europe; and if, prior to them, the Tyrians, the Carthaginians, the Chinese, or any other polished people, had taken possession of that continent, we should have found there the animals peculiar to those regions of the globe, where they were originally seated. In all America, however, there is not one animal, tame or wild, which properly belongs to the warm or even

the more temperate countries of the ancient continent. The camel, the dromedary, the horse, the cow, were as much unknown in America, as the elephant or the lion. From which it is obvious, that the people who first settled in the western world did not issue from the countries where those animals abound, and where men, from having been long accustomed to their aid, would naturally consider it, not only as beneficial, but as indispensably necessary to the improvement, and even the preservation, of civil society.

The two continents seem to approach nearest to each other towards the north.

6. From considering the animals with which America is stored, we may conclude that the nearest point of contact between the old and new continents is towards the northern extremity of both, and that there the communication was opened, and the intercourse carried on between them. All the extensive countries in America which lie within the tropics, or approach near to them, are filled with indigenous animals of various kinds, entirely different from those in the corresponding regions of the ancient continent. But the northern provinces of the New World abound with many of the wild animals which are common in such parts of our hemisphere as lie in a similar situation. The bear, the wolf, the fox, the hare, the deer, the roebuck, the elk, and several other species, frequent the forests of North America, no less than those in the north of Europe and Asia.[i] It seems to be evident, then, that the two continents approach each other in this quarter, and are either united, or so nearly adjacent, that these animals might pass from the one to the other.

This ascertained by discovery.

7. The actual vicinity of the two continents is so clearly established by modern discoveries, that the chief difficulty with respect to the peopling of America is removed. While those immense regions which stretch eastward from the river Oby to the sea of Kamchatka were unknown or imperfectly explored, the north-east extremities of our hemisphere were supposed to be so far distant from any part of the New World, that it was not easy to conceive how any communication should have been carried on between them. But the Russians, having subjected the western part of Siberia to their empire, gradually extended their knowledge of that vast country, by advancing towards the east into unknown provinces. These were discovered by hunters in their excursions after game, or by soldiers employed in levying the taxes; and the court of Moscow estimated the importance of those countries, only by the small addition which they made to its revenue. At length Peter the Great ascended the Russian throne. His enlightened, comprehensive mind, intent upon every circumstance that could aggrandize his empire, or render his reign illustrious, discerned consequences of those discoveries which had escaped the observation of his ignorant predecessors. He perceived that in proportion as the regions of Asia extended towards the east, they must approach nearer to America; that the communication between the two continents, which had long been searched for in vain, would probably be found in this quarter, and that by opening it, some part of the wealth and commerce of the western world might be made to flow into his dominions by a new channel. Such an object suited a genius that delighted in grand schemes. Peter drew up instructions with his own hand for prosecuting this design, and gave orders for carrying it into execution.[k]

His successors adopted his ideas, and pursued his plan. The officers whom the Russian court employed in this service had to struggle with so many difficulties, that their progress was extremely slow. Encouraged by some faint traditions among the people of Siberia, concerning a successful voyage in the year one thousand six hundred and forty-eight, round the north-east promontory of Asia, they attempted to follow the same course. Vessels were fitted out, with this view, at different times, from the rivers Lena and Kolyma; but in a frozen ocean, which nature seems not to have destined for navigation, they were exposed to many disasters, without being able to accomplish their purpose. No vessel fitted out by the Russian court ever doubled this formidable Cape;[1] we are indebted for what is known of those extreme regions of Asia, to the discoveries made in excursions by land. In all those provinces an opinion prevails, that there are countries of great extent and fertility, which lie at no considerable distance from their own coasts. These the Russians imagined to be part of America; and several circumstances concurred not only in confirming them in this belief, but in persuading them that some portion of that continent could not be very remote. Trees of various kinds, unknown in those naked regions of Asia, are driven upon the coast by an easterly wind. By the same wind, floating ice is brought thither in a few days; flights of birds arrive annually from the same quarter; and a tradition obtains among the inhabitants, of an intercourse formerly carried on with some countries situated to the east.

After weighing all these particulars, and comparing the position of the countries in Asia which had been discovered, with such parts in the north-west of America as were already known, the Russian court formed a plan, which would have hardly occurred to a nation less accustomed to engage in arduous undertakings, and to contend with great difficulties. Orders were issued to build two vessels at the small village of Ochotz, situated on the sea of Kamchatka, to sail on a voyage of discovery. Though that dreary uncultivated region furnished nothing that could be of use in constructing them, but some larch trees: though not only the iron, the

i Buffon Hist. Nat. ix. p. 97, &c.

l See Note XLI.

cordage, the sails, and all the numerous articles requisite for their equipment, but the provisions for victualling them, were to be carried through the immense deserts of Siberia, down rivers of difficult navigation, and along roads almost impassable, the mandate of the sovereign, and the perseverance of the people, at last surmounted every obstacle. Two vessels were finished, and, under the command of the captains Behring and Tschirikow, sailed from Kamchatka, in quest of the New World, in a quarter where it had never been approached. They shaped their course towards the east; and though a storm soon separated the vessels, which never rejoined, and many disasters befell them, the expectations from the voyage were not altogether frustrated. Each of the commanders discovered land, which to them appeared to be part of the American continent; and, according to their observations, it seems to be situated within a few degrees of the north-west coast of California. Each set some of his people ashore: but in one place the inhabitants fled as the Russians approached; in another, they carried off those who landed, and destroyed their boats. The violence of the weather, and the distress of their crews, obliged both captains to quit this inhospitable coast. In their return they touched at several islands, which stretch in a chain from east to west between the country which they had discovered and the coast of Asia. They had some intercourse with the natives, who seemed to them to resemble the North Americans. They presented to the Russians the *calumet*, or pipe of peace, which is a symbol of friendship universal among the people of North America, and an usage of arbitrary institution, peculiar to them.

1741. June 4.

Though the islands of this New Archipelago have been frequented since that time by the Russian hunters, the court of St. Petersburgh, during a period of more than forty years, seems to have relinquished every thought of prosecuting discoveries in that quarter. But in the year one thousand seven hundred and sixty-eight, it was unexpectedly resumed. The sovereign, who had been lately seated on the throne of Peter the Great, possessed the genius and talents of her illustrious predecessor. During the operations of the most arduous and extensive war in which the Russian empire was ever engaged, she formed schemes and executed undertakings, to which more limited abilities would have been incapable of attending but amidst the leisure of pacific times. A new voyage of discovery from the eastern extremity of Asia was planned, and captain Krenitzin and lieutenant Levasheff were appointed to command the two vessels fitted out for that purpose. In their voyage outward they held nearly the same course with the former navigators, they touched at the same islands, observed their situation and productions more carefully, and discovered several new islands, with which Behring and Tschirikow had not fallen in. Though they did not proceed so far to the east as to revisit the country which Behring and Tschirikow supposed to be part of the American continent, yet, by returning in a course considerably to the north of theirs, they corrected some capital mistakes into which their predecessors had fallen, and have contributed to facilitate the progress of future navigators in those seas.[m]

Thus the possibility of a communication between the continents in this quarter rests no longer upon mere conjecture, but is established by undoubted evidence.[n] Some tribe or some families of wandering Tartars, from the restless spirit peculiar to their race, might migrate to the nearest islands, and, rude as their knowledge of navigation was, might, by passing from one to the other, reach at length the coast of America, and give a beginning to population in that continent. The distance between the Marian or Ladrone islands and the nearest land in Asia, is greater than that between the part of America which the Russians discovered, and the coast of Kamchatka; and yet the inhabitants of those islands are manifestly of Asiatic extract. If, notwithstanding their remote situation, we admit that the Marian islands were peopled from our continent, distance alone is no reason why we should hesitate about admitting that the Americans may derive their original from the same source. It is probable that future navigators in those seas, by steering further to the north, may find that the continent of America approaches still nearer to Asia. According to the information of the barbarous people who inhabit the country about the north-east promontory of Asia, there lies, off the coast, a small island, to which they sail in less than a day. From that they can descry a large continent, which according to their description, is covered with forests, and possessed by people whose language they do not understand.[o] By them they are supplied with the skins of martens, an animal unknown in the northern parts of Siberia, and which is never found but in countries abounding with trees. If we could rely on this account, we might conclude, that the American continent is separated from ours only by a narrow strait, and all the difficulties with respect to the communication between them would vanish. What could be offered only as a conjecture when this History was first published, is now known to be certain. The near approach of the two continents to each other has been discovered and traced in a voyage undertaken upon principles so pure and so liberal, and conducted with so much professional skill, as reflect lustre upon the reign of the sovereign by whom it was planned, and do honour to the officers intrusted with the execution of it.[p]

Another communication by the north-west.

It is likewise evident from recent discoveries, that an intercourse between our continent and America might be carried on with no less facility from the north-west extremities of Europe. As early as the

m See Note XLII.

o Muller's Voyages et Découv. i. 166.

p See Note XLIII.

A. D. 830. ninth century, the Norwegians discovered Greenland, and planted colonies there. The communication with that country, after a long interruption, was renewed in the last century. Some Lutheran and Moravian missionaries, prompted by zeal for propagating the christian faith, have ventured to settle in this frozen and uncultivated region.[q] To them we are indebted for much curious information with respect to its nature and inhabitants. We learn, that the north-west coast of Greenland is separated from America by a very narrow strait; that, at the bottom of the bay into which this strait conducts, it is highly probable that they are united;[r] that the inhabitants of the two countries have some intercourse with one another; that the Esquimaux of America perfectly resemble the Greenlanders in their aspect, dress, and mode of living; that some sailors who had acquired the knowledge of a few words in the Greenlandish language, reported that these were

A. D. 1764. understood by the Esquimaux; that, at length, a Moravian missionary, well acquainted with the language of Greenland, having visited the country of the Esquimaux, found, to his astonishment, that they spoke the same language with the Greenlanders; that they were in every respect the same people, and he was accordingly received and entertained by them as a friend and a brother.[s]

By these decisive facts, not only the consanguinity of the Esquimaux and Greenlanders is established, but the possibility of peopling America from the north of Europe is demonstrated. If the Norwegians, in a barbarous age, when science had not begun to dawn in the north of Europe, possessed such naval skill as to open a communication with Greenland, their ancestors, as much addicted to roving by sea as the Tartars are to wandering by land, might, at some more remote period, accomplish the same voyage, and settle a colony there, whose descendants might, in progress of time, migrate into America. But if, instead of venturing to sail directly from their own coast to Greenland, we suppose that the Norwegians held a more cautious course, and advanced from Shetland to the Feroe Islands, and from them to Iceland, in all which they had planted colonies; their progress may have been so gradual, that this navigation cannot be considered as either longer or more hazardous, than those voyages which that hardy and enterprising race of men is known to have performed in every age.

Probably peopled from the north-east.

8. Though it be possible that America may have received its first inhabitants from our continent, either by the north-west of Europe or the north-east of Asia, there seems to be good reason for supposing that the progenitors of all the American nations, from Cape Horn to the southern confines of Labrador, migrated from the latter rather than the former. The Esquimaux are the only people in America, who, in their aspect or character, bear any resemblance to the northern Europeans. They are manifestly a race of men distinct from all the nations of the American continent, in language, in disposition, and in habits of life. Their original, then, may warrantably be traced up to that source which I have pointed out. But among all the other inhabitants of America, there is such a striking similitude in the form of their bodies and the qualities of their minds, that, notwithstanding the diversities occasioned by the influence of climate, or unequal progress in improvement, we must pronounce them to be descended from one source. There may be a variety in the shades, but we can every where trace the same original colour. Each tribe has something peculiar which distinguishes it, but in all of them we discern certain features common to the whole race. It is remarkable, that in every peculiarity, whether in their persons or dispositions, which characterize the Americans, they have some resemblance to the rude tribes scattered over the north-east of Asia, but almost none to the nations settled in the northern extremities of Europe. We may, therefore, refer them to the former origin, and conclude that their Asiatic progenitors, having settled in those parts of America where the Russians have discovered the proximity of the two continents, spread gradually over its various regions. This account of the progress of population in America coincides with the traditions of the Mexicans concerning their own origin, which, imperfect as they are, were preserved with more accuracy, and merit greater credit, than those of any people in the New World. According to them, their ancestors came from a remote country, situated to the north-west of Mexico. The Mexicans point out their various stations as they advanced from this into the interior provinces, and it is precisely the same route which they must have held, if they had been emigrants from Asia. The Mexicans, in describing the appearance of their progenitors, their manners and habits of life at that period, exactly delineate those of the rude Tartars, from whom I suppose them to have sprung.[t]

Thus have I finished a disquisition which has been deemed of so much importance, that it would have been improper to omit it in writing the history of America. I have ventured to inquire, but without presuming to decide. Satisfied with offering conjectures, I pretend not to establish any system. When an investigation is, from its nature, so intricate and obscure, that it is impossible to arrive at conclusions which are certain, there may be some merit in pointing out such as are probable.[u]

Condition and character of the Americans;

The condition and character of the American nations at the time when they became known to the Europeans,

deserve more attentive consideration than the inquiry concerning their original. The latter is merely an object of curiosity; the former is one of the most important as well as instructive researches which can occupy the philosopher or historian. In order to complete the history of the human mind, and attain to a perfect knowledge of its nature and operations, we must contemplate man in all those various situations wherein he has been placed. We must follow him in his progress through the different stages of society, as he gradually advances from the infant state of civil life towards its maturity and decline. We must observe, at each period, how the faculties of his understanding unfold; we must attend to the efforts of his active power, watch the various movements of desire and affection, as they rise in his breast, and mark whither they tend, and with what ardour they are exerted. The philosophers and historians of ancient Greece and Rome, our guides in this as well as every other disquisition, had only a limited view of this subject, as they had hardly any opportunity of surveying man in his rudest and most early state. In all those regions of the earth with which they were well acquainted, civil society had made considerable advances, and nations had finished a good part of their career before they began to observe them. The Scythians and Germans, the rudest people of whom any ancient author has transmitted to us an authentic account, possessed flocks and herds, had acquired property of various kinds, and, when compared with mankind in their primitive state, may be reckoned to have attained to a great degree of civilization.

less improved than in any part of the earth.

But the discovery of the New World enlarged the sphere of contemplation, and presented nations to our view, in stages of their progress much less advanced than those wherein they have been observed in our continent. In America, man appears under the rudest form in which we can conceive him to subsist. We behold communities just beginning to unite, and may examine the sentiments and actions of human beings in the infancy of social life, while they feel but imperfectly the force of its ties, and have scarcely relinquished their native liberty. That state of primæval simplicity, which was known in our continent, only by the fanciful description of poets, really existed in the other. The greater part of its inhabitants were strangers to industry and labour, ignorant of arts, imperfectly acquainted with the nature of property, and enjoying almost without restriction or control the blessings which flowed spontaneously from the bounty of nature. There were only two nations in this vast continent which had emerged from this rude state, and had made any considerable progress in acquiring the ideas, and adopting the institutions, which belong to polished societies. Their government and manners will fall naturally under our review in relating the discovery and conquest of the Mexican and Peruvian empires; and we shall have there an opportunity of contemplating the Americans in the state of highest improvement to which they ever attained.

This inquiry confined to the rudest tribes.

At present, our attention and researches shall be turned to the small independent tribes which occupied every other part of America. Among these, though with some diversity in their character, their manners, and institutions, the state of society was nearly similar, and so extremely rude, that the denomination of *savage* may be applied to them all. In a general history of America, it would be highly improper to describe the condition of each petty community, or to investigate every minute circumstance which contributes to form the character of its members. Such an inquiry would lead to details of immeasurable and tiresome extent. The qualities belonging to the people of all the different tribes have such a near resemblance, that they may be painted with the same features. Where any circumstance seem to constitute a diversity in their character and manners worthy of attention, it will be sufficient to point these out as they occur, and to inquire into the cause of such peculiarities.

Difficulty of obtaining information.

It is extremely difficult to procure satisfying and authentic information concerning nations while they remain uncivilized. To discover their true character under this rude form, and to select the features by which they are distinguished, requires an observer possessed of no less impartiality than discernment. For, in every stage of society, the faculties, the sentiments, and desires of men, are so accommodated to their own state, that they become standards of excellence to themselves, they affix the idea of perfection and happiness to those attainments which resemble their own, and wherever the objects and enjoyments to which they have been accustomed are wanting, confidently pronounce a people to be barbarous and miserable. Hence the mutual contempt with which the members of communities, unequal in their degrees of improvement, regard each other. Polished nations, conscious of the advantages which they derive from their knowledge and arts, are apt to view rude nations with peculiar scorn, and, in the pride of superiority, will hardly allow either their occupations, their feelings, or their pleasures, to be worthy of men. It has seldom been the lot of communities, in their early and unpolished state, to fall under the observation of persons endowed with force of mind superior to vulgar prejudices, and capable of contemplating man, under whatever aspect he appears, with a candid and discerning eye.

from the incapacity of the first observers,

The Spaniards, who first visited America, and who had opportunity of beholding its various tribes while entire and unsubdued, and before any change had been made in their ideas or manners by intercourse with a race of men much advanced beyond them in improvement, were far from possessing the quali-

ties requisite for observing the striking spectacle presented to their view. Neither the age in which they lived, nor the nation to which they belonged, had made such progress in true science, as inspires enlarged and liberal sentiments. The conquerors of the New World were mostly illiterate adventurers, destitute of all the ideas which should have directed them in contemplating objects so extremely different from those with which they were acquainted. Surrounded continually with danger, or struggling with hardships, they had little leisure, and less capacity, for any speculative inquiry. Eager to take possession of a country of such extent and opulence, and happy in finding it occupied by inhabitants so incapable to defend it, they hastily pronounced them to be a wretched order of men, formed merely for servitude; and were more employed in computing the profits of their labour, than in inquiring into the operations of their minds, or the reasons of their customs and institutions. The persons who penetrated at subsequent periods into the interior provinces, to which the knowledge and devastations of the first conquerors did not reach, were generally of a similar character; brave and enterprising in a high degree, but so uninformed as to be little qualified either for observing or describing what they beheld.

and their prejudices;

Not only the incapacity, but the prejudices of the Spaniards, render their accounts of the people of America extremely defective. Soon after they planted colonies in their new conquests, a difference in opinion arose with respect to the treatment of the natives. One party solicitous to render their servitudeperpetual, represented them as a brutish, obstinate race, incapable either of acquiring religious knowledge, or of being trained to the functions of social life. The other full of pious concern for their conversion, contended that, though rude and ignorant, they were gentle, affectionate, docile, and by proper instructions and regulations might be formed gradually into good christians and useful citizens. This controversy, as I have already related, was carried on with all the warmth which is natural, when attention to interest on the one hand, and religious zeal on the other, animate the disputants. Most of the laity espoused the former opinion; all the ecclesiastics were advocates for the latter; and we shall uniformly find, that, accordingly as an author belonged to either of these parties, he is apt to magnify the virtues or aggravate the defects of the Americans far beyond truth. Those repugnant accounts increase the difficulty of attaining a perfect knowledge of their character, and render it necessary to peruse all the descriptions of them by Spanish writers with distrust, and to receive their information with some grains of allowance.

and from the system of philosophers.

Almost two centuries elapsed after the discovery of America, before the manners of its inhabitants attracted, in any considerable degree, the attention of philosophers. At length they discovered, that the contemplation of the condition and character of the Americans, in their original state, tended to complete our knowledge of the human species; might enable us to fill up a considerable chasm in the history of its progress; and lead to speculations no less curious than important. They entered upon this new field of study with great ardour; but, instead of throwing light upon the subject, they have contributed in some degree to involve it in additional obscurity. Too impatient to inquire, they hastened to decide; and began to erect systems, when they should have been searching for facts on which to establish their foundations. Struck with the appearance of degeneracy in the human species throughout the New World, and astonished at beholding a vast continent occupied by a naked, feeble, and ignorant race of men, some authors of great name have maintained that this part of the globe had but lately emerged from the sea, and become fit for the residence of man; that every thing in it bore marks of a recent original; and that its inhabitants, lately called into existence, and still at the beginning of their career, were unworthy to be compared with the people of a more ancient and improved continent.[x] Others have imagined, that, under the influence of an unkindly climate, which checks and enervates the principle of life, man never attained in America the perfection which belongs to his nature, but remained an animal of an inferior order, defective in the vigour of his bodily frame, and destitute of sensibility, as well as of force, in the operations of his mind.[y] In opposition to both these, other philosophers have supposed that man arrives at his highest dignity and excellence long before he reaches a state of refinement; and, in the rude simplicity of savage life, displays an elevation of sentiment, an independence of mind, and a warmth of attachment, for which it is vain to search among the members of polished societies.[z] They seem to consider that as the most perfect state of man which is the least civilized. They describe the manners of the rude Americans with such rapture, as if they proposed them for models to the rest of the species. These contradictory theories have been proposed with equal confidence, and uncommon powers of genius and eloquence have been exerted in order to clothe them with an appearance of truth.

As all those circumstances concur in rendering an inquiry into the state of the rude nations in America intricate and obscure, it is necessary to carry it on with caution. When guided in our researches by the intelligent observations of the few philosophers who have visited this part of the globe, we may venture to decide. When obliged to have recourse to the superficial remarks of vulgar travellers, of sailors, traders, buccaneers, and missionaries, we must often pause, and, comparing detached

x M. de Buffon Hist. Nat. iii. 484, &c. ix. 103. 114.

y M. de P. Recher Philos. sur les Americ. passim. z M. Rousseau.

facts, endeavour to discover what they wanted sagacity to observe. Without indulging conjecture, or betraying a propensity to either system, we must study with equal care to avoid the extremes of extravagant admiration or of supercilious contempt for those manners which we describe.

Method observed in the inquiry.

In order to conduct this inquiry with greater accuracy, it should be rendered as simple as possible. Man existed as an individual before he became the member of a community; and the qualities which belong to him under his former capacity should be known, before we proceed to examine those which arise from the latter relation. This is peculiarly necessary in investigating the manners of rude nations. Their political union is so incomplete, their civil institutions and regulations so few, so simple, and of such slender authority, that men in this state ought to be viewed rather as independent agents, than as members of a regular society. The character of a savage results almost entirely from his sentiments or feelings as an individual, and is but little influenced by his imperfect subjection to government and order. I shall conduct my researches concerning the manners of the Americans in this natural order, proceeding gradually from what is simple to what is more complicated.

I shall consider, I. The bodily constitution of the Americans in those regions now under review. II. The qualities of their minds. III. Their domestic state. IV. their political state and institutions. V. Their system of war, and public security. VI. The arts with which they were acquainted. VII. Their religious ideas and institutions. VIII. Such singular detached customs as are not reducible to any of the former heads. IX. I shall conclude with a general review and estimate of their virtues and defects.

The constitution of their bodies.

I. The bodily constitution of the Americans.—The human body is less affected by climate than that of any other animal. Some animals are confined to a particular region of the globe, and cannot exist beyond it; others, though they may be brought to bear the injuries of a climate foreign to them, cease to multiply when carried out of that district which nature destined to be their mansion. Even such as seem capable of being naturalized in various climates, feel the effect of every remove from their proper station, and gradually dwindle and degenerate from the vigour and perfection peculiar to their species. Man is the only living creature whose frame is at once so hardy and so flexible, that he can spread over the whole earth, become the inhabitant of every region, and thrive and multiply under every climate. Subject, however, to the general law of nature, the human body is not entirely exempt from the operation of climate; and when exposed to the extremes either of heat or cold, its size or vigour diminishes.

b See Note XLIV. c Ibid. XLV.
d Oviedo Som. p. 51. C. Voy. de Correal, ii. 138. Wafer's Description, p. 131.

Complexion, &c.

The first appearance of the inhabitants of the New World filled the discoverers with such astonishment, that they were apt to imagine them a race of men different from those of the other hemisphere. Their complexion is of a reddish brown, nearly resembling the colour of copper.[a] The hair of their heads is always black, long, coarse, and uncurled. They have no beard, and every part of their body is perfectly smooth. Their persons are of a full size, extremely straight, and well proportioned.[b] Their features are regular, though often distorted by absurd endeavours to improve the beauty of their natural form, or to render their aspect more dreadful to their enemies. In the islands, where four-footed animals were both few and small, and the earth yielded her productions almost spontaneously, the constitution of the natives, neither braced by the active exercises of the chase, nor invigorated by the labour of cultivation, was extremely feeble and languid. On the continent, where the forests abound with game of various kinds, and the chief occupation of many tribes was to pursue it, the human frame acquired greater firmness. Still, however, the Americans were more remarkable for agility than strength. They resembled beasts of prey, rather than animals formed for labour.[c] They were not only averse to toil, but incapable of it; and when roused by force from their native indolence, and compelled to work, they sunk under tasks which the people of the other continent would have performed with ease.[d] This feebleness of constitution was universal among the inhabitants of those regions in America which we are surveying, and may be considered as characteristic of the species there.[e]

More feeble.

The beardless countenance and smooth skin of the American seems to indicate a defect of vigour, occasioned by some vice in his frame. He is destitute of one sign of manhood and of strength. This peculiarity, by which the inhabitants of the New World are distinguished from the people of all other nations, cannot be attributed, as some travellers have supposed, to their mode of subsistence.[f] For though the food of many Americans be extremely insipid, as they are altogether unacquainted with the use of salt, rude tribes in other parts of the earth have subsisted on aliments equally simple, without this mark of degradation, or any apparent symptom of a diminution in their vigour.

Less appetite.

As the external form of the Americans leads us to suspect that there is some natural debility in their frame, the smallness of their appetite for food has been mentioned by many authors as a confirmation of this suspicion. The quantity of food which men consume varies according to the temperature of the climate in which they live, the degree of activity which they exert, and the natural vigour of their

e B. Las Casas Brev. Relac. p. 4. Torquem. Monar. i. 580. Oviedo Sommario, p. 41. Histor. lib. iii. c. 6. Herrera, dec. 1. lib. ix. c. 5. Simon, p. 41.
f Charlev. Hist. de Nouv. Fr. iii. 310.

constitutions. Under the enervating heat of the torrid zone, and when men pass their days in indolence and ease, they require less nourishment than the active inhabitants of temperate or cold countries. But neither the warmth of their climate, nor their extreme laziness, will account for the uncommon defect of appetite among the Americans. The Spaniards were astonished with observing this, not only in the islands, but in several parts of the continent. The constitutional temperance of the natives far exceeded, in their opinion, the abstinence of the most mortified hermits;[g] while on the other hand, the appetite of the Spaniards appeared to the Americans insatiably voracious; and they affirmed, that one Spaniard devoured more food in a day than was sufficient for ten Americans.[h]

Less vehemence of desire.

A proof of some feebleness in their frame, still more striking, is the insensibility of the Americans to the charms of beauty, and the power of love. That passion, which was destined to perpetuate life, to be the bond of social union, and the source of tenderness and joy, is the most ardent in the human breast. Though the perils and hardships of the savage state, though excessive fatigue, on some occasions, and the difficulty at all times of procuring subsistence, may seem to be adverse to this passion, and to have a tendency to abate its vigour, yet the rudest nations in every other part of the globe seem to feel its influence more powerfully than the inhabitants of the New World. The negro glows with all the warmth of desire natural to his climate; and the most uncultivated Asiatics discover that sensibility which, from their situation on the globe, we should expect them to have felt. But the Americans are, in an amazing degree, strangers to the force of this first instinct of nature. In every part of the New World the natives treat their women with coldness and indifference. They are neither the objects of that tender attachment which takes place in civilized society, nor of that ardent desire conspicuous among rude nations. Even in climates where this passion usually acquires its greatest vigour, the savage of America views his female with disdain, as an animal of a less noble species. He is at no pains to win her favour by the assiduity of courtship, and still less solicitous to preserve it by indulgence and gentleness.[i] Missionaries themselves, notwithstanding the austerity of monastic ideas, cannot refrain from expressing their astonishment at the dispassionate coldness of the American young men in their intercourse with the other sex.[k] Nor is this reserve to be ascribed to any opinion which they entertain with respect to the merit of female chastity. That is an idea too refined for a savage, and suggested by a delicacy of sentiment and affection to which he is a stranger.

Reflections with respect to these.

But in inquiries concerning either the bodily or mental qualities of particular races of men, there is not a more common or more seducing error, than that of ascribing to a single cause those characteristic peculiarities, which are the effect of the combined operation of many causes. The climate and soil of America differ, in so many respects, from those of the other hemisphere, and this difference is so obvious and striking, that philosophers of great eminence have laid hold on this as sufficient to account for what is peculiar in the constitution of its inhabitants. They rest on physical causes alone, and consider the feeble frame and languid desire of the Americans, as consequences of the temperament of that portion of the globe which they occupy. But the influences of political and moral causes ought not to have been overlooked. These operate with no less effect than that on which many philosophers rest as a full explanation of the singular appearances which have been mentioned. Wherever the state of society is such as to create many wants and desires, which cannot be satisfied without regular exertions of industry, the body accustomed to labour becomes robust and patient of fatigue. In a more simple state, where the demands of men are so few and so moderate, that they may be gratified, almost without any effort, by the spontaneous productions of nature, the powers of the body are not called forth, nor can they attain their proper strength. The natives of Chili and of North America, the two temperate regions in the New World, who live by hunting, may be deemed an active and vigorous race, when compared with the inhabitants of the isles, or of those parts of the continent where hardly any labour is requisite to procure subsistence. The exertions of a hunter are not, however, so regular, or so continued, as those of persons employed in the culture of the earth, or in the various arts of civilized life; and though his agility may be greater than theirs, his strength is on the whole inferior. If another direction were given to the active powers of man in the New World, and his force augmented by exercise, he might acquire a degree of vigour which he does not in his present state possess. The truth of this is confirmed by experience. Wherever the Americans have been gradually accustomed to hard labour, their constitutions become robust, and they have been found capable of performing such tasks, as seemed not only to exceed the powers of such a feeble frame as has been deemed peculiar to their country, but to equal any effort of the natives, either of Africa or of Europe.[l]

The same reasoning will apply to what has been observed concerning their slender demand for food. As a proof that this should be ascribed as much to their extreme indolence, and often total want of

occupation, as to any thing peculiar in the physical structure of their bodies, it has been observed, that in those districts where the people of America are obliged to exert any unusual effort of activity, in order to procure subsistence, or wherever they are employed in severe labour, their appetite is not inferior to that of other men, and, in some places, it has struck observers as remarkably voracious.[m]

The operation of political and moral causes is still more conspicuous, in modifying the degree of attachment between the sexes. In a state of high civilization, this passion, inflamed by restraint, refined by delicacy, and cherished by fashion, occupies and engrosses the heart. It is no longer a simple instinct of nature; sentiment heightens the ardour of desire, and the most tender emotions of which our frame is susceptible, soothe and agitate the soul. This description, however, applies only to those, who, by their situation, are exempted from the cares and labours of life. Among persons of inferior order, who are doomed by their condition to incessant toil, the dominion of this passion is less violent; their solicitude to procure subsistence, and to provide for the first demand of nature, leaves little leisure for attending to its second call. But if the nature of the intercourse between the sexes varies so much in persons of different rank in polished societies, the condition of man, while he remains uncivilized, must occasion a variation still more apparent. We may well suppose, that amidst the hardships, the dangers, and the simplicity of savage life, where subsistence is always precarious, and often scanty, where men are almost continually engaged in the pursuit of their enemies, or in guarding against their attacks, and where neither dress nor reserve are employed as arts of female allurement, that the attention of the Americans to their women would be extremely feeble, without imputing this solely to any physical defect or degradation in their frame.

It is accordingly observed, that in those countries of America, where, from the fertility of the soil, the mildness of the climate, or some further advances which the natives have made in improvement, the means of subsistence are more abundant, and the hardships of savage life are less severely felt, the animal passion of the sexes becomes more ardent. Striking examples of this occur among some tribes seated on the banks of great rivers well stored with food, among others who are masters of hunting grounds abounding so much with game, that they have a regular and plentiful supply of nourishment with little labour. The superior degree of security and affluence which these tribes enjoy, is followed by their natural effects. The passions implanted in the human frame by the hand of nature acquire additional force; new tastes and desires are formed; the women, as they are more valued and admired, become more attentive to dress and ornament; the men, beginning to feel how much of their own happiness depends upon them, no longer disdain the arts of winning their favour and affection. The intercourse of the sexes becomes very different from that which takes place among their ruder countrymen; and as hardly any restraint is imposed on the gratification of desire, either by religion, or laws, or decency, the dissolution of their manners is excessive.[n]

None of them deformed.

Notwithstanding the feeble make of the Americans, hardly any of them are deformed, or mutilated, or defective in any of their senses. All travellers have been struck with this circumstance, and have celebrated the uniform symmetry and perfection of their external figure. Some authors search for the cause of this appearance in their physical condition. As the parents are not exhausted or over-fatigued with hard labour, they suppose that their children are born vigorous and sound. They imagine, that in the liberty of savage life, the human body, naked and unconfined from its earliest age, preserves its natural form; and that all its limbs and members acquire a juster proportion, than when fettered with artificial restraints, which stint its growth and distort its shape.[o] Something, without doubt, may be ascribed to the operation of these causes; but the true reasons of this apparent advantage, which is common to all savage nations, lie deeper, and are closely interwoven with the nature and genius of that state. The infancy of man is so long and so helpless, that it is extremely difficult to rear children among rude nations. Their means of subsistence are not only scanty, but precarious. Such as live by hunting must range over extensive countries, and shift often from place to place. The care of children, as well as every other laborious task, is devolved upon the women. The distresses and hardships of the savage life, which are often such as can hardly be supported by persons in full vigour, must be fatal to those of more tender age. Afraid of undertaking a task so laborious, and of such long duration, as that of rearing their offspring, the women, in some parts of America, procure frequent abortions by the use of certain herbs, and extinguish the first sparks of that life which they are unable to cherish.[p] Sensible that only stout and well formed children have force of constitution to struggle through such a hard infancy, other nations abandon and destroy such of their progeny as appear feeble or defective, as unworthy of attention.[q] Even when they endeavour to rear all their children without distinction, so great a proportion of the whole number perishes under the rigorous treatment which must be their lot in the savage state, that few of those who laboured under any original frailty attain the age of manhood.[r] Thus, in polished societies, where the

means of subsistence are secured with certainty, and acquired with ease; where the talents of the mind are often of more importance than the powers of the body; children are preserved notwithstanding their defects or deformity, and grow up to be useful citizens. In rude nations, such persons are either cut off as soon as they are born, or, becoming a burden to themselves and to the community, cannot long protract their lives. But in those provinces of the New World, where, by the establishment of the Europeans, more regular provision has been made for the subsistence of its inhabitants, and they are restrained from laying violent hands on their children, the Americans are so far from being eminent for any superior perfection in their form, that one should rather suspect some peculiar imbecility in the race, from the extraordinary number of individuals who are deformed, dwarfish, mutilated, blind, or deaf.[s]

Uniformity of their appearance.

How feeble soever the constitution of the Americans may be, it is remarkable, that there is less variety in the human form throughout the New World, than in the ancient continent. When Columbus and the other discoverers first visited the different countries of America which lie within the torrid zone, they naturally expected to find people of the same complexion with those in the corresponding regions of the other hemisphere. To their amazement, however, they discovered that America contained no negroes;[t] and the cause of this singular appearance became as much the object of curiosity, as the fact itself was of wonder. In what part or membrane of the body that humour resides which tinges the complexion of the negro with a deep black, it is the business of anatomists to inquire and describe. The powerful operation of heat appears manifestly to be the cause which produces this striking variety in the human species. All Europe, a great part of Asia, and the temperate countries of Africa, are inhabited by men of a white complexion. All the torrid zone in Africa, some of the warmer regions adjacent to it, and several countries in Asia, are filled with people of a deep black colour. If we survey the nations of our continent, making our progress from cold and temperate countries towards those parts which are exposed to the influence of vehement and unremitting heat, we shall find, that the extreme whiteness of their skin soon begins to diminish; that its colour deepens gradually as we advance; and after passing through all the successive gradations of shade, terminates in an uniform unvarying black. But in America, where the agency of heat is checked and abated by various causes, which I have already explained, the climate seems to be destitute of that force which produces such wonderful effects on the human frame. The colour of the natives of the torrid zone in America is hardly of a deeper hue than that of the people in the more temperate parts of their continent. Accurate observers, who had an opportunity of viewing the Americans in very different climates, and in provinces far removed from each other, have been struck with the amazing similarity of their figure and aspect.[u]

But though the hand of nature has deviated so little from one standard in fashioning the human form in America, the creation of fancy hath been various and extravagant. The same fables that were current in the ancient continent, have been revived with respect to the New World, and America too has been peopled with human beings of monstrous and fantastic appearance. The inhabitants of certain provinces were described to be pigmies of three feet high; those of others to be giants of an enormous size. Some travellers published accounts of people with only one eye; others pretended to have discovered men without heads, whose eyes and mouths were planted in their breasts. The variety of nature in her productions is indeed so great, that it is presumptuous to set bounds to her fertility, and to reject indiscriminately every relation that does not perfectly accord with our own limited observation and experience. But the other extreme, of yielding a hasty assent, on the slightest evidence, to whatever has the appearance of being strange and marvellous, is still more unbecoming a philosophical inquirer; as, in every period, men are more apt to be betrayed into error, by their weakness in believing too much, than by their arrogance in believing too little. In proportion as science extends, and nature is examined with a discerning eye, the wonders which amused ages of ignorance disappear. The tales of credulous travellers concerning America are forgotten; the monsters which they describe have been searched for in vain; and those provinces where they pretend to have found inhabitants of singular forms, are now known to be possessed by people nowise different from the other Americans.

Though those relations may, without discussion, be rejected as fabulous, there are other accounts of varieties in the human species in some parts of the New World, which rest upon better evidence, and merit more attentive examination. This variety has been particularly observed in three different districts. The first of these is situated in the isthmus of Darien, near the centre of America. Lionel Wafer, a traveller possessed of more curiosity and intelligence than we should have expected to find in an associate of buccaneers, discovered there a race of men, few in number, but of a singular make. They are of low stature, according to his description, of a feeble frame, incapable of enduring fatigue. Their colour is a dead milk white; not resembling that of fair people among Europeans, but without any tincture of a blush or sanguine complexion. The skin is covered with a fine hairy down of a chalky white; the hair of their heads, their eye-brows, and eye-lashes, are of the same hue. Their eyes are of a singular form,

s Voyage de Ulloa, i. 232.

t P. Martyr, dec. p. 71.

u See Note XLVII.

and so weak, that they can hardly bear the light of the sun; but they see clearly by moon-light, and are most active and gay in the night.[u] No race similar to this has been discovered in any other part of America. Cortes, indeed, found some persons exactly resembling the white people of Darien, among the rare and monstrous animals which Montezuma had collected.[x] But as the power of the Mexican empire extended to the provinces bordering on the isthmus of Darien, they were probably brought thence. Singular as the appearance of those people may be, they cannot be considered as constituting a distinct species. Among the negroes of Africa, as well as the natives of the Indian islands, nature sometimes produces a small number of individuals, with all the characteristic features and qualities of the white people of Darien. The former are called *Albinos* by the Portuguese, the latter *Kackerlakes* by the Dutch. In Darien the parents of those *Whites* are of the same colour with the other natives of the country; and this observation applies equally to the anomalous progeny of the negroes and Indians. The same mother who produces some children of a colour that does not belong to the race, brings forth the rest with the complexion peculiar to her country.[y] One conclusion may then be formed with respect to the people described by Wafer, the *Albinos* and the *Kackerlakes;* they are a degenerate breed, not a separate class of men; and from some disease or defect of their parents, the peculiar colour and debility which mark their degradation are transmitted to them. As a decisive proof of this, it has been observed, that neither the white people of Darien, nor the Albinos of Africa, propagate their race: their children are of the colour and temperament peculiar to the natives of their respective countries.[z]

The second district that is occupied by inhabitants differing in appearance from the other people of America, is situated in a high northern latitude, extending from the coast of Labrador towards the pole, as far as the country is habitable. The people scattered over those dreary regions, are known to the Europeans by the name of *Esquimaux*. They themselves, with that idea of their own superiority which consoles the rudest and most wretched nations, assume the name of *Keralit* or *Men*. They are of a middle size, and robust, with heads of a disproportioned bulk, and feet as remarkably small. Their complexion, though swarthy, by being continually exposed to the rigour of a cold climate, inclines to the European white, rather than to the copper colour of America, and the men have beards which are sometimes bushy and long.[a] From these marks of distinction, as well as from one still less equivocal, the affinity of their language to that of the Greenlanders, which I have already mentioned, we may conclude, with some degree of confidence, that the Esquimaux are a race different from the rest of the Americans.

We cannot decide with equal certainty concerning the inhabitants of the third district, situated at the southern extremity of America. These are the famous *Patagonians*, who, during two centuries and a half, have afforded a subject of controversy to the learned, and an object of wonder to the vulgar. They are supposed to be one of the wandering tribes, which occupy the vast but least known region of America, which extends from the river de la Plata to the straits of Magellan. Their proper station is in that part of the interior country which lies on the banks of the river Negro; but in the hunting season, they often roam as far as the straits which separate Tierra del Fuego from the main land. The first accounts of this people were brought to Europe by the companions of Magellan,[b] who described them as a gigantic race, above eight feet high, and of strength in proportion to their enormous size. Among several tribes of animals, a disparity in bulk as considerable may be observed. Some large breeds of horses and dogs exceed the more diminutive races in stature and strength, as far as the Patagonian is supposed to rise above the usual standard of the human body. But animals attain the highest perfection of their species only in mild climates, or where they find the most nutritive food in greatest abundance. It is not then in the uncultivated waste of the Magellanic regions, and among a tribe of improvident savages, that we should expect to find a man possessing the highest honours of his race, and distinguished by a superiority of size and vigour, far beyond what he has reached in any other part of the earth. The most explicit and unexceptionable evidence is requisite, in order to establish a fact repugnant to those general principles and laws, which seem to affect the human frame in every other instance, and to decide with respect to its nature and qualities. Such evidence has not hitherto been produced. Though several persons, to whose testimony great respect is due, have visited this part of America since the time of Magellan, and have had interviews with the natives; though some have affirmed, that such as they saw were of gigantic stature, and others have formed the same conclusion from measuring their footsteps, or from viewing the skeletons of their dead; yet their accounts vary from each other in so many essential points, and are mingled with so many circumstances manifestly false or fabulous, as detract much from their credit. On the other hand, some navigators, and those among the most eminent of their order for discernment and accuracy, have asserted that the natives of Patagonia, with whom they had intercourse, though stout and well made, are not of such extraordinary size as to be distinguished from the rest of the human species.[c] The existence of this gigantic race of

men seems, then, to be one of those points in natural history, with respect to which a cautious inquirer will hesitate, and will choose to suspend his assent, until more complete evidence shall decide, whether he ought to admit a fact, seemingly inconsistent with what reason and experience have discovered concerning the structure and condition of man, in all the various situations in which he has been observed.

Their state of health.

In order to form a complete idea with respect to the constitution of the inhabitants of this and the other hemisphere, we should attend not only to the make and vigour of their bodies, but consider what degree of health they enjoy, and to what period of longevity they usually arrive. In the simplicity of the savage state, when man is not oppressed with labour, or enervated by luxury, or disquieted with care, we are apt to imagine that his life will flow on almost untroubled by disease or suffering, until his days be terminated, in extreme old age, by the gradual decays of nature. We find, accordingly, among the Americans, as well as among other rude people, persons, whose decrepit and shrivelled form seems to indicate an extraordinary length of life. But as most of them are unacquainted with the art of numbering, and all of them as forgetful of what is past, as they are improvident of what is to come, it is impossible to ascertain their age with any degree of precision.[d] It is evident that the period of their longevity must vary considerably, according to the diversity of climates, and their different modes of subsistence. They seem, however, to be every where exempt from many of the distempers which afflict polished nations. None of the maladies, which are the immediate offspring of luxury, ever visited them; and they have no names in their languages by which to distinguish this numerous train of adventitious evils.

Diseases.

But whatever be the situation in which man is placed, he is born to suffer; and his diseases, in the savage state, though fewer in number, are like those of the animals whom he nearly resembles in his mode of life, more violent and more fatal. If luxury engenders and nourishes distempers of one species, the rigour and distresses of savage life bring on those of another. As men in this state are wonderfully improvident, and their means of subsistenee precarious, they often pass from extreme want to exuberant plenty, according to the vicissitudes of fortune in the chase, or in consequence of the various degrees of abundance with which the earth affords to them its productions, in different seasons. Their inconsiderate gluttony in the one situation, and their severe abstinence in the other, are equally pernicious. For though the human constitution may be accustomed by habit, like that of animals of prey, to tolerate long famine, and then to gorge voraciously, it is not a little affected by such sudden and violent transitions. The strength and vigour of savages are at some seasons impaired by what they suffer from a scarcity of food; at others, they are afflicted with disorders arising from indigestion and a superfluity of gross aliment. These are so common, that they may be considered as the unavoidable consequence of their mode of subsisting, and cut off considerable numbers in the prime of life. They are likewise extremely subject to consumptions, to pleuritic, asthmatic, and paralytic disorders,[e] brought on by the immoderate hardships and fatigue which they endure in hunting and in war; or owing to the inclemency of the seasons to which they are continually exposed. In the savage state, hardships and fatigue violently assault the constitution. In polished societies, intemperance undermines it. It is not easy to determine which of them operates with most fatal effect, or tends most to abridge human life. The influence of the former is certainly most extensive. The pernicious consequences of luxury reach only a few members in any community; the distresses of savage life are felt by all. As far as I can judge, after very minute inquiry, the general period of human life is shorter among savages, than in well regulated and industrious societies.

One dreadful malady, the severest scourge with which, in this life, offended Heaven chastens the indulgence of criminal desire, seems to have been peculiar to the Americans. By communicating it to their conquerors, they have not only amply avenged their own wrongs, but by adding this calamity to those which formerly imbittered human life, they have, perhaps, more than counterbalanced all the benefits which Europe has derived from the discovery of the New World. This distemper, from the country in which it first raged, or from the people by whom it was supposed to have been spread over Europe, has sometimes been called the Neapolitan, and sometimes the French, disease. At its first appearance, the infection was so malignant, its symptoms so violent, its operation so rapid and fatal, as to baffle all the efforts of medical skill. Astonishment and terror accompanied this unknown affliction in its progress, and men began to dread the extinction of the human race by such a cruel visitation. Experience, and the ingenuity of physicians, gradually discovered remedies of such virtue as to cure or to mitigate the evil. During the course of two centuries and a half, its virulence seems to have abated considerably. At length, in the same manner with the leprosy, which raged in Europe for some centuries, it may waste its force and disappear; and in some happier age, this western infection, like that from the East, may be known only by description.[f]

Power and qualities of their minds.

II. After considering what appears to be peculiar in the bodily constitution of the Americans, our attention is naturally

d Ulloa Notic. America, 323. Bancroft Natural History of Guiana, 334.

e Charlev. N. Fran. iii. 364. Lafitau, ii. 360. De la Potherie, ii. 37.

f See Note L.

turned towards the powers and qualities of their minds. As the individual advances from the ignorance and imbecility of the infant state to vigour and maturity of understanding, something similar to this may be observed in the progress of the species. With respect to it, too, there is a period of infancy, during which several powers of the mind are not unfolded, and all are feeble and defective in their operation. In the early ages of society, while the condition of man is simple and rude, his reason is but little exercised, and his desires move within a very narrow sphere. Hence arise two remarkable characteristics of the human mind in this state. Its intellectual powers are extremely limited; its emotions and efforts are few and languid. Both these distinctions are conspicuous among the rudest and most unimproved of the American tribes, and constitute a striking part of their description.

Intellectual faculties very limited.

What, among polished nations, is called speculative reasoning or research, is altogether unknown in the rude state of society, and never becomes the occupation or amusement of the human faculties, until man be so far improved as to have secured, with certainty, the means of subsistence, as well as the possession of leisure and tranquillity. The thoughts and attention of a savage are confined within the small circle of objects immediately conducive to his preservation or enjoyment. Every thing beyond that, escapes his observation, or is perfectly indifferent to him. Like a mere animal, what is before his eyes interests and affects him; what is out of sight, or at a distance, makes little impression.[g] There are several people in America whose limited understandings seem not to be capable of forming an arrangement for futurity; neither their solicitude nor their foresight extend so far. They follow blindly the impulse of the appetite which they feel, but are entirely regardless of distant consequences, and even of those removed in the least degree from immediate apprehension. While they highly prize such things as serve for present use, or minister to present enjoyment, they set no value upon those which are not the object of some immediate want.[h] When, on the approach of the evening, a Caribbee feels himself disposed to go to rest, no consideration will tempt him to sell his hammock. But, in the morning, when he is sallying out to the business or pastime of the day, he will part with it for the slightest toy that catches his fancy.[i] At the close of winter, while the impression of what he has suffered from the rigour of the climate is fresh in the mind of the North American, he sets himself with vigour to prepare materials for erecting a comfortable hut to protect him against the inclemency of the succeeding season; but, as soon as the weather becomes mild, he forgets what is past, abandons his work, and never thinks of it more, until the return of cold compels him, when too late, to resume it.[k]

If, in concerns the most interesting, and seemingly the most simple, the reason of man, while rude and destitute of culture, differs so little from the thoughtless levity of children, or the improvident instinct of animals, its exertions in other directions cannot be very considerable. The objects towards which reason turns, and the disquisitions in which it engages, must depend upon the state in which man is placed, and are suggested by his necessities and desires. Disquisitions, which appear the most necessary and important to men in one state of society, never occur to those in another. Among civilized nations, arithmetic, or the art of numbering, is deemed an essential and elementary science; and in our continent, the invention and use of it reaches back to a period so remote as is beyond the knowledge of history. But among savages, who have no property to estimate, no hoarded treasures to count, no variety of objects or multiplicity of ideas to enumerate, arithmetic is a superfluous and useless art. Accordingly, among some tribes in America it seems to be quite unknown. There are many who cannot reckon further than three; and have no denomination to distinguish any number above it.[l] Several can proceed as far as ten, others to twenty. When they would convey an idea of any number beyond these, they point to the hair of their head, intimating that it is equal to them, or with wonder declare it to be so great that it cannot be reckoned.[m] Not only the Americans, but all nations, while extremely rude, seem to be unacquainted with the art of computation.[n] As soon, however, as they acquire such acquaintance or connexion with a variety of objects that there is frequent occasion to combine or divide them, their knowledge of numbers increases, so that the state of this art among any people may be considered as one standard, by which to estimate the degree of their improvement. The Iroquois, in North America, as they are much more civilized than the rude inhabitants of Brazil, Paraguay, or Guiana, have likewise made greater advances in this respect; though even their arithmetic does not extend beyond a thousand, as in their petty transactions they have no occasion for any higher number.[o] The Cherokee, a less considerable nation on the same continent, can reckon only as far as a hundred, and to that extent have names for the several numbers; the smaller tribes in their neighbourhood can rise no higher than ten.[p]

No abstract ideas.

In other respects, the exercise of the understanding among rude nations is still more limited. The first ideas of every human being must be such as he receives by the senses. But in the mind of man, while in the savage state, there seem to be hardly any ideas but what enter by

this avenue. The objects around him are presented to his eye. Such as may be subservient to his use, or can gratify any of his appetites, attract his notice; he views the rest without curiosity or attention. Satisfied with considering them under that simple mode in which they appear to him, as separate and detached, he neither combines them so as to form general classes, nor contemplates their qualities apart from the subject in which they inhere, nor bestows a thought upon the operations of his own mind concerning them. Thus he is unacquainted with all the ideas which have been denominated *universal*, or *abstract*, or *of reflection*. The range of his understanding must, of course, be very confined, and his reasoning powers be employed merely on what is sensible. This is so remarkably the case with the ruder nations of America, that their language (as we shall afterwards find) have not a word to express any thing but what is material or corporeal. *Time*, *space*, *substance*, and a thousand other terms, which represent abstract and universal ideas, are altogether unknown to them.[q] A naked savage, cowering over the fire in his miserable cabin, or stretched under a few branches which afford him a temporary shelter, has as little inclination as capacity for useless speculation. His thoughts extend not beyond what relates to animal life; and when they are not directed towards some of its concerns, his mind is totally inactive. In situations where no extraordinary effort either of ingenuity or labour is requisite, in order to satisfy the simple demands of nature, the powers of the mind are so seldom roused to any exertion, that the rational faculties continue almost dormant and unexercised. The numerous tribes scattered over the rich plains of South America, the inhabitants of some of the islands, and of several fertile regions on the continent, come under this description. Their vacant countenance, their staring unexpressive eye, their listless inattention, and total ignorance of subjects, which seemed to be the first which should occupy the thoughts of rational beings, made such impression upon the Spaniards, when they first beheld those rude people, that they considered them as animals of an inferior order, and could not believe that they belonged to the human species.[r] It required the authority of a papal bull to counteract this opinion, and to convince them that the Americans were capable of the functions, and entitled to the privileges, of humanity.[s] Since that time, persons more enlightened and impartial than the discoverers or conquerors of America, have had an opportunity of contemplating the most savage of its inhabitants, and they have been astonished and humbled, with observing how nearly man, in this condition, approaches to the brute creation. But in severer climates, where subsistence cannot be procured with the same ease, where men must unite more closely, and act with greater concert, necessity calls forth their talents, and sharpens their invention, so that the intellectual powers are more exercised and improved. The North American tribes and the natives of Chili, who inhabit the temperate regions in the two great districts of America, are people of cultivated and enlarged understandings, when viewed in comparison with some of those seated in the islands, or on the banks of the Maragnon and Orinoco. Their occupations are more various, their system of policy, as well as of war, more complex, their arts more numerous. But even among them, the intellectual powers are extremely limited in their operations, and unless when turned directly to those objects which interest a savage, are held in no estimation. Both the North Americans and Chilese, when not engaged in some of the functions belonging to a warrior or hunter, loiter away their time in thoughtless indolence, unacquainted with any other subject worthy of their attention, or capable of occupying their minds.[t] If even among them reason is so much circumscribed in its exertions, and never arrives, in its highest attainments, at the knowledge of those general principles and maxims which serve as the foundation of science, we may conclude, that the intellectual powers of man in the savage state are destitute of their proper object, and cannot acquire any considerable degree of vigour and enlargement.

Active efforts of the mind few and languid.

From the same causes, the active efforts of the mind are few, and, on most occasions, languid. If we examine into the motives which rouse men to activity in civilized life, and prompt them to persevere in fatiguing exertions of their ingenuity or strength, we shall find that they arise chiefly from acquired wants and appetites. These are numerous and importunate; they keep the mind in perpetual agitation, and, in order to gratify them, invention must be always on the stretch, and industry must be incessantly employed. But the desires of simple nature are few, and where a favourable climate yields almost spontaneously what suffices to gratify them, they scarcely stir the soul, or excite any violent emotion. Hence the people of several tribes in America waste their life in a listless indolence. To be free from occupation, seems to be all the enjoyment towards which they aspire. They will continue whole days stretched out in their hammocks, or seated on the earth in perfect idleness, without changing their posture, or raising their eyes from the ground, or uttering a single word.[u]

Improvident.

Such is their aversion to labour, that neither the hope of future good, nor the apprehension of future evil, can surmount it. They appear equally indifferent to both, discovering little solicitude, and taking no precautions to avoid the one, or to secure the other. The cravings of hunger may arouse them; but as they devour, with little distinction, whatever will appease its instinctive demands, the exertions which these occasion are of short duration. Destitute of ardour, as well

as variety of desire, they feel not the force of those powerful springs which give vigour to the movements of the mind, and urge the patient hand of industry to persevere in its efforts. Man, in some parts of America, appears in a form so rude, that we can discover no effects of his activity, and the principle of understanding which should direct it seems hardly to be unfolded. Like the other animals, he has no fixed residence; he has erected no habitation to shelter him from the inclemency of the weather; he has taken no measures for securing certain subsistence; he neither sows nor reaps; but roams about as led in search of the plants and fruits which the earth brings forth in succession; and in quest of the game which he kills in the forests, or of the fish which he catches in the rivers.

Some variety with respect to all these.

This description, however, applies only to some tribes. Man cannot continue long in this state of feeble and uninformed infancy. He was made for industry and action, and the powers of his nature, as well as the necessity of his condition, urge him to fulfil his destiny. Accordingly, among most of the American nations, especially those seated in rigorous climates, some efforts are employed, and some previous precautions are taken, for securing subsistence. The career of regular industry is begun, and the laborious arm has made the first essays of its power. Still, however, the improvident and slothful genius of the savage state predominates. Even among those more improved tribes, labour is deemed ignominious and degrading. It is only to work of a certain kind that a man will deign to put his hand. The greater part is devolved entirely upon the women. One half of the community remains inactive, while the other is oppressed with the multitude and variety of its occupations. Thus their industry is partial, and the foresight which regulates it is no less limited. A remarkable instance of this occurs in the chief arrangement with respect to their manner of living. They depend for their subsistence, during one part of the year, on fishing; during another, on hunting; during a third, on the produce of their agriculture. Though experience has taught them to foresee the return of those various seasons, and to make some provision for the respective exigencies of each, they either want sagacity to proportion this provision to their consumption, or are so incapable of any command over their appetites, that from their inconsiderate waste, they often feel the calamities of famine as severely as the rudest of the savage tribes. What they suffer one year does not augment their industry, or render them more provident to prevent similar distresses.[x] This inconsiderate thoughtlessness about futurity, the effect of ignorance and the cause of sloth, accompanies and characterizes man in every stage of savage life;[y] and, by a capricious singularity in his operations, he is then least solicitous about supplying his wants, when the means of satisfying them are most precarious, and procured with the greatest difficulty.[z]

Their social state.

III. After viewing the bodily constitution of the Americans, and contemplating the powers of their minds, we are led, in the natural order of inquiry, to consider them as united together in society. Hitherto our researches have been confined to the operations of understanding respecting themselves as individuals, now they will extend to the degree of their sensibility and affection towards their species.

Domestic union.

The domestic state is the first and most simple form of human association. The union of the sexes, among different animals, is of longer or shorter duration in proportion to the ease or difficulty of rearing their offspring. Among those tribes where the season of infancy is short, and the young soon acquire vigour or agility, no permanent union is formed. Nature commits the care of training up the offspring to the mother alone, and her tenderness, without any other assistance, is equal to the task. But where the state of infancy is long and helpless, and the joint assiduity of both parents is requisite in tending their feeble progeny, there a more intimate connexion takes place, and continues until the purpose of nature be accomplished, and the new race grow up to full maturity. As the infancy of man is more feeble and helpless than that of any other animal, and he is dependent, during a much longer period, on the care and foresight of his parents, the union between husband and wife came early to be considered, not only as a solemn, but as a permanent, contract. A general state of promiscuous intercourse between the sexes never existed but in the imagination of poets. In the infancy of society, when men, destitute of arts and industry, lead a hard precarious life, the rearing of their progeny demands the attention and efforts of both parents; and if their union had not been formed and continued with this view, the race could not have been preserved. Accordingly, in America, even among the rudest tribes, a regular union between husband and wife was universal, and the rights of marriage were understood and recognised. In those districts where subsistence was scanty, and the difficulty of maintaining a family was great, the man confined himself to one wife. In warmer and more fertile provinces, the facility of procuring food concurred with the influence of climate in inducing the inhabitants to increase the number of their wives.[a] In some countries, the marriage union subsisted during life; in others, the impatience of the Americans under restraint of any species, together with their natural levity and caprice, prompted them to dissolve it on very slight pretexts, and often without assigning any cause.[b]

Condition of women.

But in whatever light the Americans considered the obligation of this con-

tract, either as perpetual, or only as temporary, the condition of women was equally humiliating and miserable. Whether man has been improved by the progress of arts and civilization in society, is a question which, in the wantonness of disputation, has been agitated among philosophers. That women are indebted to the refinements of polished manners for a happy change in their state, is a point which can admit of no doubt. To despise and to degrade the female sex, is the characteristic of the savage state in every part of the globe. Man, proud of excelling in strength and in courage, the chief marks of pre-eminence among rude people, treats woman, as an inferior, with disdain. The Americans, perhaps from that coldness and insensibility which has been considered as peculiar to their constitution, add neglect and harshness to contempt. The most intelligent travellers have been struck with this inattention of the Americans to their women. It is not, as I have already observed, by a studied display of tenderness and attachment, that the American endeavours to gain the heart of the woman whom he wishes to marry. Marriage itself, instead of being an union of affection and interests between equals, becomes, among them, the unnatural conjunction of a master with his slave. It is the observation of an author, whose opinions are deservedly of great weight, that wherever wives are purchased, their condition is extremely depressed.[c] They become the property and the slaves of those who buy them. In whatever part of the globe this custom prevails, the observation holds. In countries where refinement has made some progress, women, when purchased, are excluded from society, shut up in sequestered apartments, and kept under the vigilant guard of their masters. In ruder nations, they are degraded to the meanest functions. Among many people of America, the marriage-contract is properly a purchase. The man buys his wife of her parents. Though unacquainted with the use of money, or with such commercial transactions as take place in more improved society, he knows how to give an equivalent for any object which he desires to possess. In some places, the suitor devotes his service for a certain time to the parents of the maid whom he courts; in others, he hunts for them occasionally, or assists in cultivating their fields, and forming their canoes; in others, he offers presents of such things as are deemed most valuable on account of their usefulness or rarity.[d] In return for these he receives his wife; and this circumstance, added to the low estimation of women among savages, leads him to consider her as a female servant whom he has purchased, and whom he has a title to treat as an inferior. In all unpolished nations, it is true, the functions in domestic economy, which fall naturally to the share of women, are so many, that they are subjected to hard labour, and must bear more than their full portion of the common burthen. But in America their condition is so peculiarly grievous, and their depression so complete, that servitude is a name too mild to describe their wretched state. A wife, among most tribes, is no better than a beast of burthen, destined to every office of labour and fatigue. While the men loiter out the day in sloth, or spend it in amusement, the women are condemned to incessant toil. Tasks are imposed upon them without pity, and services are received without complaisance or gratitude.[e] Every circumstance reminds women of this mortifying inferiority. They must approach their lords with reverence; they must regard them as more exalted beings, and are not permitted to eat in their presence.[f] There are districts in America where this dominion is so grievous, and so sensibly felt, that some women, in a wild emotion of maternal tenderness, have destroyed their female children in their infancy, in order to deliver them from that intolerable bondage to which they knew they were doomed.[g] Thus the first institution of social life is perverted. That state of domestic union towards which nature leads the human species, in order to soften the heart to gentleness and humanity, is rendered so unequal, as to establish a cruel distinction between the sexes, which forms the one to be harsh and unfeeling, and humbles the other to servility and subjection.

Their women not prolific.

It is owing, perhaps, in some measure to this state of depression, that women in rude nations are far from being prolific.[h] The vigour of their constitution is exhausted by excessive fatigue, and the wants and distresses of savage life are so numerous, as to force them to take various precautions in order to prevent too rapid an increase of their progeny. Among wandering tribes, or such as depend chiefly upon hunting for subsistence, the mother cannot attempt to rear a second child, until the first has attained such a degree of vigour as to be in some measure independent of her care. From this motive it is the universal practice of the American women to suckle their children during several years;[i] and as they seldom marry early, the period of their fertility is over before they can finish the long but necessary attendance upon two or three children.[k] Among some of the least polished tribes, whose industry and foresight do not extend so far as to make any regular provision for their own subsistence, it is a maxim not to burthen themselves with rearing more than two children;[l] and no such numerous families, as are frequent in civilized societies, are to be found among men in the savage state.[m] When twins are born, one of them commonly is abandoned, because the mother is not equal to the task of rearing both.[n] When a

mother dies while she is nursing a child, all hope of preserving its life fails, and it is buried together with her in the same grave.[p] As the parents are frequently exposed to want by their own improvident indolence, the difficulty of sustaining their children becomes so great, that it is not uncommon to abandon or destroy them.[q] Thus their experience of the difficulty of training up an infant to maturity, amidst the hardships of savage life, often stifles the voice of nature among the Americans, and suppresses the strong emotions of parental tenderness.

Parental affection and filial duty.

But, though necessity compels the inhabitants of America thus to set bounds to the increase of their families, they are not deficient in affection and attachment to their offspring. They feel the power of this instinct in its full force, and as long as their progeny continue feeble and helpless, no people exceed them in tenderness and care.[r] But in rude nations, the dependence of children upon their parents is of shorter continuance than in polished societies. When men must be trained to the various functions of civil life by previous discipline and education, when the knowledge of abstruse sciences must be taught, and dexterity in intricate arts must be acquired, before a young man is prepared to begin his career of action, the attentive feelings of a parent are not confined to the years of infancy, but extend to what is more remote, the establishment of his child in the world. Even then his solicitude does not terminate. His protection may still be requisite, and his wisdom and experience still prove useful guides. Thus a permanent connexion is formed; parental tenderness is exercised, and filial respect returned, throughout the whole course of life. But in the simplicity of the savage state, the affection of parents, like the instinctive fondness of animals, ceases almost entirely as soon as their offspring attain maturity. Little instruction fits them for that mode of life to which they are destined. The parents, as if their duty were accomplished, when they have conducted their children through the helpless years of infancy, leave them afterwards at entire liberty. Even in their tender age, they seldom advise or admonish, they never chide or chastise them. They suffer them to be absolute masters of their own actions.[s] In an American hut, a father, a mother, and their posterity, live together like persons assembled by accident, without seeming to feel the obligation of the duties mutually arising from this connexion.[t] As filial love is not cherished by the continuance of attention or good offices, the recollection of benefits received in early infancy is too faint to excite it. Conscious of their own liberty, and impatient of restraint, the youth of America are accustomed to act as if they were totally independent. Their parents are not objects of greater regard than other persons. They treat them always with neglect, and often with such harshness and insolence, as to fill those who have been witnesses of their conduct with horror.[u] Thus the ideas which seem to be natural to man in his savage state, as they result necessarily from his circumstances and condition in that period of his progress, affect the two capital relations in domestic life. They render the union between husband and wife unequal. They shorten the duration, and weaken the force, of the connexion between parents and children.

Political institutions.

IV. From the domestic state of the Americans, the transition to the consideration of their civil government and political institutions is natural. In every inquiry concerning the operations of men when united together in society, the first object of attention should be their mode of subsistence. Accordingly as that varies, their laws and policy must be different. The institution suited to the ideas and exigences of tribes, which subsist chiefly by fishing or hunting, and which have as yet acquired but an imperfect conception of any species of property, will be much more simple than those which must take place when the earth is cultivated with regular industry, and a right of property, not only in its productions, but in the soil itself, is completely ascertained.

Mode of subsistence;

All the people of America, now under review, belong to the former class. But though they may all be comprehended under the general denomination of savage, the advances which they had made in the art of procuring to themselves a certain and plentiful subsistence, were very unequal. On the extensive plains of South America, man appears in one of the rudest states in which he has been ever observed, or, perhaps, can exist. Several tribes depend entirely upon the bounty of nature for subsistence. They discover no solicitude, they employ little foresight, they scarcely exert any industry, to secure what is necessary for their support. The *Topayers* of Brazil, the *Guaxeros* of Tierra Firme, the *Caiguas*, the *Moxos*, and several other people of Paraguay, are unacquainted with every species of cultivation. They neither sow nor plant. Even the culture of the manioc, of which cassada bread is made, is an art too intricate for their ingenuity, or too fatiguing to their indolence. The roots which the earth produces spontaneously, the fruits, the berries, and the seeds, which they gather in the woods, together with lizards and other reptiles, which multiply amazingly with the heat of the climate in a fat soil, moistened by frequent rains, supply them with food during some part of the year.[x] At other times they subsist by fishing;

by fishing;

and nature seems to have indulged the laziness of the South American tribes by the liberality with which she ministers, in this way, to their

wants. The vast rivers of that region in America abound with an infinite variety of the most delicate fish. The lakes and marshes formed by the annual overflowing of the waters, are filled with all the different species, where they remain shut up, as in natural reservoirs, for the use of the inhabitants. They swarm in such shoals, that in some places they are catched without art or industry.[y] In others, the natives have discovered a method of infecting the water with the juice of certain plants, by which the fish are so intoxicated, that they float on the surface, and are taken with the hand.[z] Some tribes have ingenuity enough to preserve them without salt, by drying or smoking them upon hurdles over a slow fire.[a] The prolific quality of the rivers in South America induces many of the natives to resort to their banks, and to depend almost entirely for nourishment on what their waters supply with such profusion.[b] In this part of the globe, hunting seems not to have been the first employment of men, or the first effort of their invention and labour to obtain food. They were fishers before they became hunters; and as the occupations of the former do not call for equal exertions of activity or talents with those of the latter, people in that state appear to possess neither the same degree of enterprise nor of ingenuity. The petty nations, adjacent to the Maragnon and Orinoco, are manifestly the most inactive and least intelligent of all the Americans.

by hunting;

None but tribes contiguous to great rivers can sustain themselves in this manner. The greater part of the American nations, dispersed over the forests with which their country is covered, do not procure subsistence with the same facility. For although these forests, especially in the southern continent of America, are stored plentifully with game,[c] considerable efforts of activity and ingenuity are requisite in pursuit of it. Necessity incited the natives to the one, and taught them the other. Hunting became their principal occupation; and as it called forth strenuous exertions of courage, of force, and of invention, it was deemed no less honourable than necessary. This occupation was peculiar to the men. They were trained to it from their earliest youth. A bold and dexterous hunter ranked next in fame to the distinguished warrior, and an alliance with the former is often courted in preference to one with the latter.[d] Hardly any device, which the ingenuity of man has discovered for insnaring or destroying wild animals, was unknown to the Americans. While engaged in this favourite exercise, they shake off the indolence peculiar to their nature, the latent powers and vigour of their minds are roused, and they become active, persevering, and indefatigable. Their sagacity in finding their prey, and their address in killing it, are equal. Their reason and their senses being constantly directed towards this one object, the former displays such fertility of invention, and the latter acquire such a degree of acuteness, as appear almost incredible. They discern the footsteps of a wild beast, which escape every other eye, and can follow them with certainty through the pathless forest. If they attack their game openly, their arrow seldom errs from the mark;[e] if they endeavour to circumvent it by art, it is almost impossible to avoid their toils. Among several tribes, their young men were not permitted to marry, until they had given such proofs of their skill in hunting as put it beyond doubt that they were capable of providing for a family. Their ingenuity, always on the stretch, and sharpened by emulation, as well as necessity, has struck out many inventions, which greatly facilitate success in the chase. The most singular of these is the discovery of a poison in which they dip the arrows employed in hunting. The slightest wound with those envenomed shafts is mortal. If they only pierce the skin the blood fixes and congeals in a moment, and the strongest animal falls motionless to the ground. Nor does this poison, notwithstanding its violence and subtilty, infect the flesh of the animal which it kills. That may be eaten with perfect safety, and retain its native relish and qualities. All the nations situated upon the banks of the Maragnon and Orinoco are acquainted with this composition, the chief ingredient in which is the juice extracted from the root of the *curare*, a species of withe.[f] In other parts of America, they employ the juice of the *manchenille* for the same purpose, and it operates with no less fatal activity. To people possessed of those secrets, the bow is a more destructive weapon than the musket, and, in their skilful hands, does great execution among the birds and beasts which abound in the forests of America.

by agriculture.

But the life of a hunter gradually leads man to a state more advanced. The chase, even where prey is abundant, and the dexterity of the hunter much improved, affords but an uncertain maintenance, and at some seasons it must be suspended altogether. If a savage trusts to his bow alone for food, he and his family will be often reduced to extreme distress.[g] Hardly any region of the earth furnishes man spontaneously with what his wants require. In the mildest climates, and most fertile soils, his own industry and foresight must be exerted, in some degree, to secure a regular supply of food. Their experience of this surmounts the abhorrence of labour natural to savage nations, and compels them to have recourse to culture, as subsidiary to hunting. In particular situations, some small tribes may subsist by fishing, independent of any production of the earth raised

by their own industry. But throughout all America, we scarcely meet with any nation of hunters, which does not practise some species of cultivation.

The various fruits of their culture.

The agriculture of the Americans, however, is neither extensive nor laborious. As game and fish are their principal food, all they aim at, by cultivation, is to supply any occasional defect of these. In the southern continent of America, the natives confined their industry to rearing a few plants, which in a rich soil and warm climate were easily trained to maturity. The chief of these is *maize*, well known in Europe by the name of Turkey or Indian wheat, a grain extremely prolific, of simple culture, agreeable to the taste, and affording a strong hearty nourishment. The second is the *manioc*, which grows to the size of a large shrub, or small tree, and produces roots somewhat resembling parsnips. After carefully squeezing out the juice, these roots are grated down to a fine powder, and formed into thin cakes, called *cassada* bread, which, though insipid to the taste, proves no contemptible food.[g] As the juice of the manioc is a deadly poison, some authors have celebrated the ingenuity of the Americans, in converting a noxious plant into wholesome nourishment. But it should rather be considered as one of the desperate expedients for procuring subsistence, to which necessity reduces rude nations; or, perhaps, men were led to the use of it by a progress, in which there is nothing marvellous. One species of manioc is altogether free of any poisonous quality, and may be eaten without any preparation but that of roasting it in the embers. This, it is probable, was first used by the Americans as food; and necessity having gradually taught them the art of separating its pernicious juice from the other species, they have by experience found it to be more prolific as well as more nourishing.[h] The third is the *plantain*, which, though it rises to the height of a tree, it is of such quick growth, that in less than a year it rewards the industry of the cultivator with its fruit. This, when roasted, supplies the place of bread, and is both palatable and nourishing.[i] The fourth is the *potato*, whose culture and qualities are too well known to need any description. The fifth is *pimento*, a small tree yielding a strong aromatic spice. The Americans, who, like other inhabitants of warm climates, delight in whatever is hot and of poignant flavour, deem this seasoning a necessary of life, and mingle it copiously with every kind of food they take.[k]

Such are the various productions, which were the chief object of culture among the hunting tribes on the continent of America; and with a moderate exertion of active and provident industry, these might have yielded a full supply to the wants of a numerous people. But men, accustomed to the free and vagrant life of hunters, are incapable of regular application to labour, and consider agriculture as a secondary and inferior occupation. Accordingly, the provision for subsistence, arising from cultivation, was so limited and scanty among the Americans, that, upon any accidental failure of their usual success in hunting, they were often reduced to extreme distress.

In the islands, the mode of subsisting was considerably different. None of the large animals which abound on the continent were known there. Only four species of quadrupeds, besides a kind of small dumb dog, existed in the islands, the biggest of which did not exceed the size of a rabbit.[l] To hunt such diminutive prey, was an occupation which required no effort either of activity or courage. The chief employment of a hunter in the isles was to kill birds, which on the continent are deemed ignoble game, and left chiefly to the pursuit of boys.[m] This want of animals, as well as their peculiar situation, led the islanders to depend principally upon fishing for their subsistence.[n] Their rivers, and the sea with which they are surrounded, supplied them with this species of food. At some particular seasons, turtle, crabs, and other shell-fish, abounded in such numbers, that the natives could support themselves with a facility in which their indolence delighted.[o] At other times they ate lizards, and various reptiles of odious forms.[p] To fishing, the inhabitants of the islands added some degree of agriculture. Maize,[q] manioc, and other plants, were cultivated in the same manner as on the continent. But all the fruits of their industry, together with what their soil and climate produced spontaneously, afforded them but a scanty maintenance. Though their demands for food were very sparing, they hardly raised what was sufficient for their own consumption. If a few Spaniards settled in any district, such a small addition of supernumerary mouths soon exhausted their scanty stores, and brought on a famine.

Their agriculture very limited.

Two circumstances, common to all the savage nations of America, concurred with those which I have already mentioned, not only in rendering their agriculture imperfect, but in circumscribing their power in all their operations. They had no tame animals; and they were unacquainted with the useful metals.

Two causes of its imperfection.

In other parts of the globe, man, in his rudest state, appears as lord of the creation, giving law to various tribes of animals, which he has tamed, and reduced to subjection. The Tartar follows his prey on the horse which he has reared; or tends his numerous herds, which furnish him both with food and clothing: the Arab

The want of tame animals.

has rendered the camel docile, and avails himself of its persevering strength: the Laplander has formed the rein-deer to be subservient to his will; and even the people of Kamchatka have trained their dogs to labour. This command over the inferior creatures is one of the noblest prerogatives of man, and among the greatest efforts of his wisdom and power. Without this, his dominion is incomplete. He is a monarch who has no subjects; a master without servants, and must perform every operation by the strength of his own arm. Such was the condition of all the rude nations in America. Their reason was so little improved, or their union so incomplete, that they seem not to have been conscious of the superiority of their nature, and suffered all the animal creation to retain its liberty, without establishing their own authority over any one species. Most of the animals, indeed, which have been rendered domestic in our continent, do not exist in the New World; but those peculiar to it are neither so fierce nor so formidable, as to have exempted them from servitude. There are some animals of the same species in both continents. But the rein-deer, which has been tamed and broken to the yoke in the one hemisphere, runs wild in the other. The *bison* of America is manifestly of the same species with the horned cattle of the other hemisphere.[r] The latter, even among the rudest nations in our continent, have been rendered domestic; and, in consequence of his dominion over them, man can accomplish works of labour with greater facility, and has made a great addition to his means of subsistence. The inhabitants of many regions of the New World, where the bison abounds, might have derived the same advantages from it. It is not of a nature so indocile, but that it might have been trained to be as subservient to man as our cattle.[s] But a savage, in that uncultivated state wherein the Americans were discovered, is the enemy of the other animals, not their superior. He wastes and destroys, but knows not how to multiply or to govern them.[t]

This, perhaps, is the most notable distinction between the inhabitants of the Ancient and New Worlds, and a high pre-eminence of civilized men above such as continue rude. The greatest operations of man, in changing and improving the face of nature, as well as his most considerable efforts in cultivating the earth, are accomplished by means of the aid which he receives from the animals that he has tamed, and employs in labour. It is by their strength that he subdues the stubborn soil, and converts the desert or marsh into a fruitful field. But man, in his civilized state, is so accustomed to the service of the domestic animals, that he seldom reflects upon the vast benefits which he derives from it. If we were to suppose him, even when most improved, to be deprived of their useful ministry, his empire over nature must in some measure cease, and he would remain a feeble animal, at a loss how to subsist, and incapable of attempting such arduous undertakings as their assistance enables him to execute with ease.

Want of the useful metals.

It is a doubtful point, whether the dominion of man over the animal creation, or his acquiring the useful metals, has contributed most to extend his power. The era of this important discovery is unknown, and in our hemisphere very remote. It is only by tradition, or by digging up some rude instruments of our forefathers, that we learn that mankind were originally unacquainted with the use of metals, and endeavoured to supply the want of them by employing flints, shells, bones, and other hard substances, for the same purposes which metals serve among polished nations. Nature completes the formation of some metals. Gold, silver, and copper, are found in their perfect state in the clefts of rocks, in the sides of mountains, or the channels of rivers. These were accordingly the metals first known, and first applied to use. But iron, the most serviceable of all, and to which man is most indebted, is never discovered in its perfect form; its gross and stubborn ore must feel twice the force of fire, and go through two laborious processes, before it become fit for use. Man was long acquainted with the other metals before he acquired the art of fabricating iron, or attained such ingenuity as to perfect an invention, to which he is indebted for those instruments wherewith he subdues the earth, and commands all its inhabitants. But in this, as well as in many other respects, the inferiority of the Americans was conspicuous. All the savage tribes, scattered over the continent and islands, were totally unacquainted with the metals which their soil produces in great abundance, if we except some trifling quantity of gold, which they picked up in the torrents that descended from their mountains, and formed into ornaments. Their devices to supply this want of the serviceable metals, were extremely rude and awkward. The most simple operation was to them an undertaking of immense difficulty and labour. To fell a tree with no other instruments than hatchets of stone, was employment for a month.[u] To form a canoe into shape, and to hollow it, consumed years; and it frequently began to rot before they were able to finish it.[x] Their operations in agriculture were equally slow and defective. In a country covered with woods of the hardest timber, the clearing of a small field destined for culture required the united efforts of a tribe, and was a work of much time and great toil. This was the business of the men, and their indolence was satisfied with performing it in a very slovenly manner. The labour of cultivation was left to the women, who, after digging, or rather stirring, the field, with wooden mattocks, and stakes hardened in the fire, sowed or planted it; but they were more indebted

for the increase to the fertility of the soil, than to their own rude industry.[y]

Agriculture, even when the strength of man is seconded by that of the animals which he has subjected to the yoke, and his power augmented by the use of the various instruments with which the discovery of metals has furnished him, is still a work of great labour; and it is with the sweat of his brow that he renders the earth fertile. It is not wonderful, then, that people destitute of both these advantages should have made so little progress in cultivation, that they must be considered as depending for subsistenec on fishing and hunting, rather than on the fruits of their own labour.

Political institutions arising from this state.

From this description of the mode of subsisting among the rude American tribes, the form and genius of their politieal institutions may be deduced, and we are enabled to trace various circumstanees of distinetion between them and more eivilized nations.

1. Divided into small communities.

1. They were divided into small independent communities. While hunting is the chief souree of subsistenee, a vast extent of territory is requisite for supporting a small number of people. In proportion as men multiply and unite, the wild animals, on which they depend for food, diminish, or fly at a greater distanee from the haunts of their enemy. The increase of a society in this state is limited by its own nature, and the members of it must either disperse, like the game whieh they pursue, or fall upon some better method of procuring food than by hunting. Beasts of prey are by nature solitary and unsoeial; they go not forth to the chase in herds, but delight in those recesses of the forest where they can roam and destroy undisturbed. A nation of hunters resembles them both in occupation and in genius. They cannot form into large communities, because it would be impossible to find subsistence; and they must drive to a distance every rival who may eneroaeh on those domains, whieh they eonsider as their own. This was the state of all the American tribes; the numbers in eaeh were ineonsiderable, though scattered over countries of great extent; they were far removed from one another, and engaged in perpetual hostilities or rivalship.[z] In America, the word *nation* is not of the same import as in other parts of the globe. It is applied to small soeieties, not exeeeding, perhaps, two or three hundred persons, but occupying provinees greater than some kingdoms in Europe. The country of Guiana, though of larger extent than the kingdom of France, and divided among a greater number of nations, did not contain above twenty five thousand inhabitants.[a] In the provinces whieh border on the Orinoco, one may travel several hundred miles in different directions, without finding a single hut, or observing the footsteps of a human ereature.[b] In North America, where the elimate is more rigorous, and the soil less fertile, the desolation is still greater. There, journeys of some hundred leagues have been made through uninhabited plains and forests.[c] As long as hunting eontinues to be the chief employment of man, to whieh he trusts for subsistenee, he ean hardly be said to have occupied the earth.[d]

Unacquainted with the idea of property.

2. Nations which depend upon hunting are, in a great measure, strangers to the idea of property. As the animals on whieh the hunter feeds are not bred under his inspection, nor nourished by his eare, he can elaim no right to them, while they run wild in the forest. Where game is so plentiful that it may be catched with little trouble, men never dream of appropriating what is of small value, or of easy acquisition. Where it is so rare, that the labour or danger of the ehase requires the united efforts of a tribe, or village, what is killed is a common stoek, belonging equally to all, who, by their skill or their courage, have contributed to the success of the exeursion. The forest, or hunting-grounds, are deemed the property of the tribe, from which it has a title to exclude every rival nation. But no individual arrogates a right to any district of these, in preference to his fellow-citizens. They belong alike to all; and thither, as to a general and undivided store, all repair in quest of sustenanee. The same principles by which they regulate their chief oceupation, extend to that which is subordinate. Even agriculture has not introdueed among them a complete idea of property. As the men hunt, the women labour together, and after they have shared the toils of the seed-time, they enjoy the harvest in common.[e] Among some tribes, the increase of their cultivated lands is deposited in a public granary, and divided among them at stated times, according to their wants.[f] Among others, though they lay up separate stores, they do not aequire such an exclusive right of property, that they can enjoy superfluity, while those around them suffer want.[g] Thus the distinctions arising from the inequality of possessions are unknown. The terms rich or poor enter not into their language, and being strangers to property, they are unacquainted with what is the great object of laws and policy, as well as the chief motive which indueed mankind to establish the various arrangements of regular government.[h]

High sense of equality and independence.

3. People in this state retain a high sense of equality and independence. Wherever the idea of property is not established, there can be no distinction among men, but what arises from personal qualities. These can be eonspicuous only on such occasions as eall them forth into exertion. In times of danger, or in affairs of intrieacy, the wisdom and experienee of

age are consulted, and prescribe the measures which ought to be pursued. When a tribe of savages takes the field against the enemies of their country, the warrior of most approved courage leads the youth to the combat.[i] If they go forth in a body to the chase, the most expert and adventurous hunter is foremost, and directs their motions. But during seasons of tranquillity and inaction, when there is no occasion to display those talents, all pre-eminence ceases. Every circumstance indicates that all the members of the community are on a level. They are clothed in the same simple garb. They feed on the same plain fare. Their houses and furniture are exactly similar. No distinction can arise from the inequality of possessions. Whatever forms dependence on one part, or constitutes superiority on the other, is unknown. All are freemen, all feel themselves to be such, and assert with firmness the rights which belong to that condition.[k] This sentiment of independence is imprinted so deeply in their nature, that no change of condition can eradicate it, and bend their minds to servitude. Accustomed to be absolute masters of their own conduct, they disdain to execute the orders of another; and having never known control, they will not submit to correction.[l] Many of the Americans, when they found that they were treated as slaves by the Spaniards, died of grief; many destroyed themselves in despair.[m]

Sense of subordination imperfect.

4. Among people in this state, government can assume little authority, and the sense of civil subordination must remain very imperfect. While the idea of property is unknown, or incompletely conceived; while the spontaneous productions of the earth, as well as the fruits of industry, are considered as belonging to the public stock, there can hardly be any such subject of difference or discussion among the members of the same community, as will require the hand of authority to interpose in order to adjust it. Where the right of separate and exclusive possession is not introduced, the great object of law and jurisdiction does not exist. When the members of a tribe are called into the field, either to invade the territories of their enemies or to repel their attacks, when they are engaged together in the toil and dangers of the chase, they then perceive that they are part of a political body. They are conscious of their own connexion with the companions in conjunction with whom they act; and they follow and reverence such as excel in conduct and valour. But, during the intervals between such common efforts, they seem scarcely to feel the ties of political union.[n] No visible form of government is established. The names of *magistrate* and *subject* are not in use. Every one seems to enjoy his natural independence almost entire. If a scheme of public utility be proposed, the members of the community are left at liberty to choose whether they will or will not assist in carrying it into execution. No statute imposes any service as a duty, no compulsory laws oblige them to perform it. All their resolutions are voluntary, and flow from the impulse of their own minds.[o] The first step towards establishing a public jurisdiction has not been taken in those rude societies. The right of revenge is left in private hands.[p] If violence is committed, or blood is shed, the community does not assume the power either of inflicting or of moderating the punishment. It belongs to the family and friends of the person injured or slain to avenge the wrong, or to accept of the reparation offered by the aggressor. If the elders interpose, it is to advise, not to decide, and it is seldom their counsels are listened to; for as it is deemed pusillanimous to suffer an offender to escape with impunity, resentment is implacable and everlasting.[q] The object of government among savages is rather foreign than domestic. They do not aim at maintaining interior order and police by public regulations, or the exertions of any permanent authority, but labour to preserve such union among the members of their tribe, that they may watch the motions of their enemies, and act against them with concert and vigour.

To what people those descriptions apply.

Such was the form of political order established among the greater part of the American nations. In this state were almost all the tribes spread over the provinces extending eastward of the Mississippi, from the mouth of the St. Laurence to the confines of Florida. In a similar condition were the people of Brazil, the inhabitants of Chili, several tribes in Paraguay and Guiana, and in the countries which stretch from the mouth of the Orinoco to the peninsula of Yucatan. Among such an infinite number of petty associations, there may be peculiarities which constitute a distinction, and mark the various degrees of their civilization and improvement. But an attempt to trace and enumerate these would be vain, as they have not been observed by persons capable of discerning the minute and delicate circumstances which serve to discriminate nations resembling one another in their general character and features. The description which I have given of the political institutions that took place among those rude tribes in America, concerning which we have received most complete information, will apply with little variation, to every people, both in its northern and southern division, who have advanced no further in civilization, than to add some slender degree of agriculture to fishing and hunting.

Imperfect as those institutions may appear, several tribes were not so far advanced in their political progress. Among all those petty nations which trusted for subsistence entirely to fishing and hunting without any species of cultivation, the union

was so incomplete, and their sense of mutual dependence so feeble, that hardly any appearance of government or order can be discerned in their proceedings. Their wants are few, their objects of pursuit simple, they form into separate tribes, and act together, from instinct, habit, or conveniency, rather than from any formal concert and association. To this class belong the Californians, several of the small nations in the extensive country of Paraguay, some of the people on the banks of the Orinoco and on the river St. Magdalene, in the new kingdom of Granada.[r]

Some irregular appearances;

But though among these last mentioned tribes there was hardly any shadow of regular government, and even among those which I first described its authority is slender and confined within narrow bounds, there were, however, some places in America, where government was carried far beyond the degree of perfection which seems natural to rude nations. In surveying the political operations of man, either in his savage or civilized state, we discover singular and eccentric institutions, which start as it were from their station, and fly off so wide, that we labour in vain to bring them within the general laws of any system, or to account for them by those principles which influence other communities in a similar situation. Some instances of this occur among those people of America, whom I have included under the common denomination of savage. These are so curious and important that I shall describe them, and attempt to explain their origin.

particularly in some of the warmer regions;

In the New World, as well as in other parts of the globe, cold or temperate countries appear to be the favourite seat of freedom and independence. There the mind, like the body, is firm and vigorous. There men, conscious of their own dignity, and capable of the greatest efforts in asserting it, aspire to independence, and their stubborn spirits stoop with reluctance to the yoke of servitude. In warmer climates, by whose influence the whole frame is so much enervated, that present pleasure is the supreme felicity, and mere repose is enjoyment, men acquiesce, almost without a struggle, in the dominion of a superior. Accordingly, if we proceed from north to south along the continent of America, we shall find the power of those vested with authority gradually increasing, and the spirit of the people becoming more tame and passive, In Florida, the authority of the sachems, caziques, or chiefs, was not only permanent, but hereditary. They were distinguished by peculiar ornaments, they enjoyed prerogatives of various kinds, and were treated by their subjects with that reverence, which people accustomed to subjection pay to a master.[s]

among the Natchez;

Among the Natchez, a powerful tribe now extinct, formerly situated on the banks of the Mississippi, a difference of rank took place, with which the northern tribes were altogether unacquainted. Some families were reputed noble, and enjoyed hereditary dignity. The body of the people was considered as vile, and formed only for subjection. This distinction was marked by appellations which intimated the high elevation of the one state, and the ignominious depression of the other. The former were called *Respectable;* the latter, the *Stinkards*. The great Chief, in whom the supreme authority was vested, is reputed to be a being of superior nature, the brother of the sun, the sole object of their worship. They approach this great Chief with religious veneration, and honour him as the representative of their deity. His will is a law to which all submit with implicit obedience. The lives of his subjects are so absolutely at his disposal, that if any one has incurred his displeasure, the offender comes with profound humility and offers him his head. Nor does the dominion of the Chiefs end with their lives; their principal officers, their favourite wives, together with many domestics of inferior rank, are sacrificed at their tombs, that they may be attended in the next world by the same persons who served them in this; and such is the reverence in which they are held, that those victims welcome death with exultation, deeming it a recompence of their fidelity, and a mark of distinction, to be selected to accompany their deceased master.[t] Thus a perfect despotism, with its full train of superstition, arrogance, and cruelty, is established among the Natchez, and by a singular fatality, that people has tasted of the worst calamities incident to polished nations, though they themselves are not far advanced beyond the tribes around them in civility and improvement.

in the islands;

In Hispaniola, Cuba, and the larger islands, their caziques or chiefs possessed extensive power. The dignity was transmitted by hereditary right from father to son. Its honours and prerogatives were considerable. Their subjects paid great respect to the caziques, and executed their orders without hesitation or reserve.[u] They were distinguished by peculiar ornaments, and in order to preserve or augment the veneration of the people, they had the address to call in the aid of superstition to uphold their authority. They delivered their mandates as the oracles of heaven, and pretended to possess the power of regulating the seasons, and of dispensing rain or sunshine, according as their subjects stood in need of them.

in Bogota;

In some parts of the southern continent, the power of the caziques seems to have been as extensive as in the isles. In Bogota, which is now a province of the new kingdom of Granada, there was settled a nation, more considerable in number, and more improved in the various arts of life, than any in America, except the Mexi-

eans and Peruvians. The people of Bogota subsisted chiefly by agrieulture. The idea of property was introduced among them, and its rights, seeured by laws, handed down by tradition, and observed with great care.[x] They lived in towns which may be termed large when eompared with those in other parts of America. They were elothed in a decent manner, and their houses may be termed eommodious, when eompared with those of the small tribes around them. The effeets of this uneommon eivilization were conspieuous. Government had assumed a regular form. A jurisdietion was established, which took eognizance of different erimes, and punished them with rigour. A distinetion of ranks was known; their chief, to whom the Spaniards gave the title of monareh, and who merited that name on account of his splendour as well as power, reigned with absolute authority. He was attended by officers of various conditions; he never appeared in publie without a numerous retinue; he was carried in a sort of palanquin with much pomp, and harbingers went before him to sweep the road and strew it with flowers. This uncommon pomp was supported by presents or taxes received from his subjects, to whom their prince was such an object of veneration, that none of them presumed to look him directly in the face, or ever approached him but with an averted countenance.[y] There were other tribes on the same eontinent, among which, though far less advanced than the people of Bogota in their progress towards refinement, the freedom and independence, natural to man in his savage state, was much abridged, and their eaziques had assumed extensive authority.

Causes of those irregular appearances.

It is not easy to point out the circumstances, or to discover the causes, which contributed to introduce and establish among each of those people a form of government so different from that of the tribes around them, and so repugnant to the genius of rude nations. If the persons who had an opportunity of observing them in their original state had been more attentive and more discerning, we might have received information from their eonquerors sufficient to guide us in this inquiry. If the transactions of people, unacquainted with the use of letters, were not involved in impenetrable obscurity, we might have derived some information from this domestic source. But as nothing satisfactory can be gathered either from the accounts of the Spaniards, or from their own traditions, we must have reeourse to conjectures, in order to explain the irregular appearances in the political state of the people whom I have mentioned. As all those tribes whieh had lost their native liberty and independenee were seated in the torrid zone, or in eountries approaching to it, the climate may be supposed to have had some influenee in forming their minds to that servitude, which seems to be the destiny of man in those regions of the globe. But though the influence of climate, more powerful than that of any other natural cause, is not to be overlooked, that alone cannot be admitted as a solution of the point in question. The operations of men are so complex, that we must not attribute the form which they assume to the force of a single principle or cause. Although despotism be confined in America to the torrid zone, and to the warm regions bordering upon it, I have already observed that these countries eontain various tribes, some of which possess a high degree of freedom, and others are altogether unaequainted with the restraints of government. The indolenee and timidity peculiar to the inhabitants of the islands, render them so incapable of the sentiments or efforts necessary for maintaining independence, that there is no oceasion to search for any other cause of their tame submission to the will of a superior. The subjeetion of the Natchez, and of the people of Bogota, seems to have been the consequence of a differenee in their state from that of the other Americans. They were settled nations, residing eonstantly in one place. Hunting was not the chief oecupation of the former, and the latter seem hardly to have trusted to it for any part of their subsistence. Both had made such progress in agrieulture and arts, that the idea of property was introduced in some degree in the one community, and fully established in the other. Among people in this state avariee and ambition have acquired objects, and have begun to exert their power; views of interest allure the selfish; the desire of pre-eminenee excites the enterprising; dominion is courted by both; and passions unknown to man in his savage state prompt the interested and ambitious to encroaeh on the rights of their fellow-citizens. Motives, with which rude nations are equally unaequainted, induee the people to submit tamely to the usurped authority of their superiors. But even among nations in this state, the spirit of subjects could not have been rendered so obsequious, or the power of rulers so unbounded, without the intervention of superstition. By its fatal influence, the human mind, in every stage of its progress, is depressed, and its native vigour and independenee subdued. Whoever ean acquire the direction of this formidable engine, is secure of dominion over his species. Unfortunately for the people whose institutions are the subjeet of inquiry, this power was in the hands of their chiefs. The caziques of the isles could put what responses they pleased into the mouths of their *Cemis* or gods; and it was by their interposition, and in their name, that they imposed any tribute or burden on their people.[z] The same power and prerogative was exereised by the great chief of the Natchez, as the principal minister as well as the representative of the sun, their deity. The respect which the people of Bogota paid to their monarchs was likewise inspired by religion.

and the heir-apparent of the kingdom was educated in the innermost recess of their principal temple, under such austere discipline, and with such peculiar rites, as tended to fill his subjects with high sentiments concerning the sanctity of his character, and the dignity of his station.[b] Thus superstition, which, in the rudest period of society, is either altogether unknown, or wastes its force in childish unmeaning practices, had acquired such an ascendant over those people of America who had made some little progress towards refinement, that it became the chief instrument of bending their minds to an untimely servitude, and subjected them, in the beginning of their political career, to a despotism hardly less rigorous than that which awaits nations in the last stage of their corruption and decline.

Their art of war.

V. After examining the political institutions of the rude nations in America, the next object of attention is their art of war, or their provision for public security and defence. The small tribes dispersed over America are not only independent and unconnected, but engaged in perpetual hostilities with one another.[c] Though mostly strangers to the idea of separate property, vested in any individual, the rudest of the American nations are well acquainted with the rights of each community to its own domains. This right they hold to be perfect and exclusive, entitling the possessor to oppose the encroachment of neighbouring tribes. As it is of the utmost consequence to prevent them from destroying or disturbing the game in their hunting grounds, they guard this national property with a jealous attention. But as their territories are extensive, and the boundaries of them not exactly ascertained, innumerable subjects of dispute arise, which seldom terminate without bloodshed. Even in this simple and primitive state of society, interest is a source of discord, and often prompts savage tribes to take arms, in order to repel or punish such as encroach on the forests or plains, to which they trust for subsistence.

Their motives for engaging in war;

But interest is not either the most frequent or the most powerful motive of the incessant hostilities among rude nations. These must be imputed to the passion of revenge; which rages with such violence in the breast of savages, that eagerness to gratify it may be considered as the distinguishing characteristic of men in their uncivilized state. Circumstances of powerful influence, both in the interior government of rude tribes, and in their external operations against foreign enemies, concur in cherishing and adding strength to a passion fatal to the general tranquillity. When the right of redressing his own wrongs is left in the hands of every individual, injuries are felt with exquisite sensibility, and vengeance exercised with unrelenting rancour. No time can obliterate the memory of an offence, and it is seldom that it can be expiated but by the blood of the offender. In carrying on their public wars, savage nations are influenced by the same ideas, and animated with the same spirit, as in prosecuting private vengeance. In small communities, every man is touched with the injury or affront offered to the body of which he is a member, as if it were a personal attack upon his own honour or safety. The desire of revenge is communicated from breast to breast, and soon kindles into rage. As feeble societies can take the field only in small parties, each warrior is conscious of the importance of his own arm, and feels that to it is committed a considerable portion of the public vengeance. War, which between extensive kingdoms is carried on with little animosity, is prosecuted by small tribes with all the rancour of a private quarrel. The resentment of nations is as implacable as that of individuals. It may be dissembled or suppressed, but is never extinguished; and often, when least expected or dreaded, it bursts out with redoubled fury.[d] When polished nations have obtained the glory of victory, or have acquired an addition of territory, they may terminate a war with honour. But savages are not satisfied until they extirpate the community which is the object of their hatred. They fight, not to conquer, but to destroy. If they engage in hostilities, it is with a resolution never to see the face of the enemy in peace, but to prosecute the quarrel with immortal enmity.[e] The desire of vengeance is the first and almost the only principle, which a savage instils into the minds of his children.[f] This grows up with him as he advances in life; and as his attention is directed to few objects, it acquires a degree of force unknown among men whose passions are dissipated and weakened by the variety of their occupations and pursuits. The desire of vengeance, which takes possession of the heart of savages, resembles the instinctive rage of an animal, rather than the passion of a man. It turns, with undiscerning fury, even against inanimate objects. If hurt accidentally by a stone, they often seize it in a transport of anger, and endeavour to wreak their vengeance upon it.[g] If struck with an arrow in a battle, they will tear it from the wound, break and bite it with their teeth, and dash it on the ground.[h] With respect to their enemies, the rage of vengeance knows no bounds. When under the dominion of this passion, man becomes the most cruel of all animals. He neither pities, nor forgives, nor spares.

from the spirit of vengeance.

Hence the ferocity of their wars;

The force of this passion is so well understood by the Americans themselves, that they always apply to it, in order to excite their people to take arms. If the elders of any tribe attempt to rouse their youth from sloth, if a chief wishes to allure a

band of warriors to follow him in invading an enemy's country, the most persuasive topics of their martial eloquence are drawn from revenge. "The bones of our countrymen," say they, "lie uncovered; their bloody bed has not been washed clean. Their spirits cry against us; they must be appeased. Let us go and devour the people by whom they were slain. Sit no longer inactive upon your mats; lift the hatchet, console the spirits of the dead, and tell them that they shall be avenged."[i]

and their perpetuity. Animated with such exhortations, the youth snatch their arms in a transport of fury, raise the song of war, and burn with impatience to imbrue their hands in the blood of their enemies. Private chiefs often assemble small parties, and invade a hostile tribe, without consulting the rulers of the community. A single warrior, prompted by caprice or revenge, will take the field alone, and march several hundred miles to surprise and cut off a straggling enemy.[k] The exploits of a noted warrior, in such solitary excursions, often form the chief part in the history of an American campaign;[l] and their elders connive at such irregular sallies, as they tend to cherish a martial spirit, and accustom their people to enterprise and danger.[m] But when a war is national, and undertaken by public authority, the deliberations are formal and slow. The elders assemble, they deliver their opinions in solemn speeches, they weigh with maturity the nature of the enterprise, and balance its beneficial or disadvantageous consequences with no inconsiderable portion of political discernment or sagacity. Their priests and soothsayers are consulted, and sometimes they ask the advice even of their women.[n] If the determination be for war, they prepare for it with much ceremony. A leader offers to conduct the expedition, and is accepted. But no man is constrained to follow him; the resolution of the community to commence hostilities imposes no obligation upon any member to take part in the war. Each individual is still master of his own conduct, and his engagement in the service is perfectly voluntary.[o]

Mode of carrying on war; The maxims by which they regulate their military operations, though extremely different from those which take place among more civilized and populous nations, are well suited to their own political state, and the nature of the country in which they act. They never take the field in numerous bodies, as it would require a greater effort of foresight and industry, than is usual among savages, to provide for their subsistence, during a march of some hundred miles through dreary forests, or during a long voyage upon their lakes and rivers. Their armies are not encumbered with baggage or military stores. Each warrior, besides his arms, carries a mat and a small bag of pounded maize, and with these is completely equipped for any service. While at a distance from the enemy's frontier, they disperse through the woods, and support themselves with the game which they kill, or the fish which they catch. As they approach nearer to the territories of the nation which they intend to attack, they collect their troops, and advance with greater caution. Even in their hottest and most active wars, they proceed wholly by stratagem and ambuscade. They place not their glory in attacking their enemies with open force. To surprise and destroy is the greatest merit of a commander, and the highest pride of his followers. War and hunting are their only occupations, and they conduct both with the same spirit and the same arts. They follow the track of their enemies through the forest. They endeavour to discover their haunts, they lurk in some thicket near to these, and, with the patience of a sportsman lying in wait for game, will continue in their station day after day, until they can rush upon their prey when most secure, and least able to resist them. If they meet no straggling party of the enemy, they advance towards their villages, but with such solicitude to conceal their own approach, that they often creep on their hands and feet through the woods, and paint their skins of the same colour with the withered leaves, in order to avoid detection.[p] If so fortunate as to remain unobserved, they set on fire the enemies' huts in the dead of night, and massacre the inhabitants, as they fly naked and defenceless from the flames. If they hope to effect a retreat without being pursued, they carry off some prisoners, whom they reserve for a more dreadful fate. But if, notwithstanding all their address and precautions, they find that their motions are discovered, that the enemy has taken the alarm, and is prepared to oppose them, they usually deem it most prudent to retire. They regard it as extreme folly to meet an enemy who is on his guard, upon equal terms, or to give battle in an open field. The most distinguished success is a disgrace to a leader, if it has been purchased with any considerable loss of his followers,[q] and they never boast of a victory, if stained with the blood of their own countrymen.[r] To fall in battle, instead of being reckoned an honourable death, is a misfortune which subjects the memory of a warrior to the imputation of rashness or imprudence.[s]

not owing to any defect of courage; This system of war was universal in America; and the small uncivilized tribes, dispersed through all its different regions and climates, display more craft than boldness in carrying on their hostilities. Struck with this conduct, so opposite to the ideas and maxims of Europeans, several authors contend that it flows from a feeble and dastardly spirit peculiar to the Ameri-

cans, which is incapable of any generous or manly exertion.[t] But when we reflect that many of these tribes, on occasions which call for extraordinary efforts, not only defend themselves with obstinate resolution, but attack their enemies with the most daring courage, and that they possess fortitude of mind superior to the sense of danger or the fear of death, we must ascribe their habitual caution to some other cause than constitutional timidity.[u] The number of men in each tribe is so small, the difficulty of rearing new members amidst the hardships and dangers of savage life so great, that the life of a citizen is extremely precious, and the preservation of it becomes a capital object in their policy. Had the point of honour been the same among the feeble American tribes as among the powerful nations of Europe, had they been taught to court fame or victory in contempt of danger and death, they must have been ruined by maxims so ill adapted to their condition. But wherever their communities are more populous, so that they can act with considerable force, and can sustain the loss of several of their members, without being sensibly weakened, the military operations of the Americans more nearly resemble those of other nations. The Brazilians, as well as the tribes situated upon the banks of the river De la Plata, often take the field in such numerous bodies as deserve the name of armies.[x] They defy their enemies to the combat, engage in regular battles, and maintain the conflict with that desperate ferocity, which is natural to men who, having no idea of war but that of exterminating their enemies, never give or take quarter.[y] In the powerful empires of Mexico and Peru, great armies were assembled, frequent battles were fought, and the theory as well as practice of war were different from what took place in those petty societies which assume the name of nations.

Incapable of order or discipline.

But though vigilance and attention are the qualities chiefly requisite, where the object of war is to deceive and to surprise; and though the Americans, when acting singly, display an amazing degree of address in concealing their own motions, and discovering those of an enemy, yet it is remarkable, that, when they take the field in parties, they can seldom be brought to observe the precautions most essential to their own security. Such is the difficulty of accustoming savages to subordination, or to act in concert; such is their impatience under restraint, and such their caprice and presumption, that it is rarely they can be brought to conform themselves to the counsels and directions of their leaders. They never station sentinels around the place where they rest at night, and after marching some hundred miles to surprise an enemy, are often surprised themselves, and cut off, while sunk in as profound sleep as if they were not within reach of danger.[z]

If, notwithstanding this negligence and security, which often frustrate their most artful schemes, they catch the enemy unprepared, they rush upon them with the utmost ferocity, and tearing off the scalps of all those who fall victims to their rage,[a] they carry home those strange trophies in triumph. These they preserve as monuments, not only of their own prowess, but of the vengeance which their arm has inflicted upon the people who were objects of public resentment.[b] They are still more solicitous to seize prisoners. During their retreat, if they hope to effect it unmolested, the prisoners are commonly exempt from any insult, and treated with some degree of humanity, though guarded with the most strict attention.

Treatment of prisoners.

But after this temporary suspension, the rage of the conquerors rekindles with new fury. As soon as they approach their own frontier, some of their number are despatched to inform their countrymen with respect to the success of the expedition. Then the prisoners begin to feel the wretchedness of their condition. The women of the village, together with the youth who have not attained to the age of bearing arms, assemble, and forming themselves into two lines, through which the prisoners must pass, beat and bruise them with sticks or stones in a cruel manner.[c] After this first gratification of their rage against their enemies, follow lamentations for the loss of such of their own countrymen as have fallen in the service, accompanied with words and actions which seem to express the utmost anguish and grief. But in a moment, upon a signal given, their tears cease; they pass, with a sudden and unaccountable transition, from the depths of sorrow to the transports of joy; and begin to celebrate their victory with all the wild exultation of a barbarous triumph.[d] The fate of the prisoners remains still undecided. The old men deliberate concerning it. Some are destined to be tortured to death, in order to satiate the revenge of the conquerors; some to replace the members which the community has lost in that or former wars. They who are reserved for this milder fate, are led to the huts of those whose friends have been killed. The women meet them at the door, and if they receive them, their sufferings are at an end. They are adopted into the family, and according to their phrase, are seated upon the mat of the deceased. They assume his name, they hold the same rank, and are treated thenceforward with all the tenderness due to a father, a brother, a husband, or a friend. But if, either from caprice or an unrelenting desire of revenge, the women of any family refuse to accept of the prisoner who is offered to them, his doom is fixed. No power can then save him from torture and death.

Their indifference concerning their fate,

While their lot is in suspense, the prisoners themselves appear altogether unconcerned about what may befall

them. They talk, they eat, they sleep, as if they were perfectly at ease, and no danger impending. When the fatal sentence is intimated to them, they receive it with an unaltered countenance, raise their death-song, and prepare to suffer like men. Their conquerors assemble as to a solemn festival, resolved to put the fortitude of the captive to the utmost proof. A scene ensues, the bare description of which is enough to chill the heart with horror, wherever men have been accustomed, by milder institutions, to respect their species, and melt with tenderness at the sight of human sufferings. The prisoners are tied naked to a stake, but so as to be at liberty to move round it. All who are present, men, women, and children, rush upon them like furies. Every species of torture is applied that the rancour of revenge can invent. Some burn their limbs with red hot irons, some mangle their bodies with knives, others tear their flesh from their bones, pluck out their nails by the roots, and rend and twist their sinews. They vie with one another in refinements of torture. Nothing sets bounds to their rage but the dread of abridging the duration of their vengeance by hastening the death of the sufferers; and such is their cruel ingenuity in tormenting, that, by avoiding industriously to hurt any vital part, they often prolong this scene of anguish for several days. In spite of all that they suffer, the victims continue to chant their death song with a firm voice, they boast of their own exploits, they insult their tormentors for their want of skill in avenging their friends and relations, they warn them of the vengeance which awaits them on account of what they are now doing, and excite their ferocity by the most provoking reproaches and threats. To display undaunted fortitude in such dreadful situations, is the noblest triumph of a warrior. To avoid the trial by a voluntary death, or to shrink under it, is deemed infamous and cowardly. If any one betray symptoms of timidity, his tormentors often despatch him at once with contempt, as unworthy of being treated like a man.[e] Animated with those ideas, they endure, without a groan, what it seems almost impossible that human nature should sustain. They appear to be not only insensible of pain, but to court it. "Forbear," said an aged chief of the Iroquois, when his insults had provoked one of his tormentors to wound him with a knife, "forbear these stabs of your knife, and rather let me die by fire, that those dogs, your allies, from beyond the sea, may learn by my example to suffer like men."[f] This magnanimity, of which there are frequent instances among the American warriors, instead of exciting admiration, or calling forth sympathy, exasperates the fierce spirits of their torturers to fresh acts of cruelty.[g] Weary, at length, of contending with men whose constancy of mind they cannot vanquish, some chief, in a rage, puts a period to their sufferings, by despatching them with his dagger or club.[h]

and fortitude under torture.

This barbarous scene is often succeeded by one no less shocking. As it is imposible to appease the fell spirit of revenge which rages in the heart of a savage, this frequently prompts the Americans to devour those unhappy persons, who have been the victims of their cruelty. In the ancient world, tradition has preserved the memory of barbarous nations of cannibals, who fed on human flesh. But in every part of the New World there were people to whom this custom was familiar. It prevailed in the southern continent, in several of the islands,[k] and in various districts of North America.[l] Even in those parts, where circumstances, with which we are unacquainted, had in a great measure abolished this practice, it seems formerly to have been so well known, that it is incorporated into the idiom of their language. Among the Iroquois, the phrase by which they express their resolution of making war against an enemy is, "Let us go and eat that nation." If they solicit the aid of a neighbouring tribe, they invite it to "eat broth made of the flesh of their enemies."[m] Nor was the practice peculiar to rude unpolished tribes; the principle from which it took rise is so deeply rooted in the minds of the Americans, that it subsisted in Mexico, one of the civilized empires in the New World, and relics of it may be discovered among the more mild inhabitants of Peru. It was not scarcity of food, as some authors imagine, and the importunate cravings of hunger, which forced the Americans to those horrid repasts on their fellow-creatures. Human flesh was never used as common food in any country, and the various relations concerning people who reckoned it among the stated means of subsistence, flow from the credulity and mistakes of travellers. The rancour of revenge first prompted men to this barbarous action.[n] The fiercest tribes devoured none but prisoners taken in war, or such as they regarded as enemies.[o] Women and children, who were not the objects of enmity, if not cut off in the fury of their first inroad into an hostile country, seldom suffered by the deliberate effects of their revenge.[p]

Sometimes eat their prisoners.

The people of South America gratify their revenge in a manner somewhat different, but with no less unrelenting rancour. Their prisoners, after meeting at their first entrance with the same rough reception as among the North Americans,[q] are not only exempt from injury, but treated with the greatest kindness. They are feasted and caressed, and some beautiful young women are appointed to at-

tend and solace them. It is not easy to account for this part of their conduct, unless we impute it to a refinement in cruelty. For, while they seem studious to attach the captives to life, by supplying them with every enjoyment that can render it agreeable, their doom is irrevocably fixed. On a day appointed, the victorious tribe assembles, the prisoner is brought forth with great solemnity, he views the preparations for the sacrifice with as much indifference as if he himself were not the victim, and, meeting his fate with undaunted firmness, is despatched with a single blow. The moment he falls, the women seize the body, and dress it for the feast. They besmear their children with the blood, in order to kindle in their bosoms a hatred of their enemies, which is never extinguished; and all join in feeding upon the flesh with amazing greediness and exultation.[r] To devour the body of a slaughtered enemy, they deem the most complete and exquisite gratification of revenge. Wherever this practice prevails, captives never escape death, but they are not tortured with the same cruelty as among tribes which are less accustomed to such horrid feasts.[s]

As the constancy of every American warrior may be put to such severe proof, the great object of military education and discipline in the New World is to form the mind to sustain it. When nations carry on war with open force, defy their enemies to the combat, and vanquish them by the superiority of their skill or courage, soldiers are trained to be active, vigorous, and enterprising. But in America, where the genius and maxims of war are extremely different, passive fortitude is the quality in highest estimation. Accordingly, it is early the study of the Americans to acquire sentiments and habits, which will enable them to behave like men, when their resolution shall be put to the proof. As the youth of other nations exercise themselves in feats of activity and force, those of America vie with one another in exhibitions of their patience under sufferings. They harden their nerves by those voluntary trials, and gradually accustom themselves to endure the sharpest pain without complaining. A boy and girl will bind their naked arms together and place a burning coal between them, in order to try who first discovers such impatience as to shake it off.[t] All the trials, customary in America, when a youth is admitted into the class of warriors, or when a warrior is promoted to the dignity of captain or chief, are accommodated to this idea of manliness. They are not displays of valour, but of patience; they are not exhibitions of their ability to offend, but of their capacity to suffer. Among the tribes on the banks of the Orinoco, if a warrior aspires to the rank of captain, his probation begins with a long fast, more rigid than any ever observed by the most abstemious hermit. At the close of this the chiefs assemble, each gives him three lashes with a large whip, applied so vigorously, that his body is almost flayed, and if he betrays the least symptoms of impatience, or even sensibility, he is disgraced for ever, and rejected as unworthy of the honour to which he aspires. After some interval, the constancy of the candidate is proved by a more excruciating trial. He is laid in a hammock with his hands bound fast, and an innumerable multitude of venomous ants, whose bite occasions exquisite pain, and produces a violent inflammation, are thrown upon him. The judges of his merit stand around the hammock, and, while these cruel insects fasten upon the most sensible parts of his body, a sigh, a groan, an involuntary motion expressive of what he suffers, would exclude him for ever from the rank of captain. Even after this evidence of his fortitude, it is not deemed to be completely ascertained, but must stand another test more dreadful than any he has hitherto undergone. He is again suspended in his hammock, and covered with leaves of the palmetto. A fire of stinking herbs is kindled underneath, so as he may feel its heat, and be involved in its smoke. Though scorched and almost suffocated, he must continue to endure with the same patient insensibility. Many perish in this rude essay of their firmness and courage, but such as go through it with applause, receive the ensigns of their new dignity with much solemnity, and are ever after regarded as leaders of approved resolution, whose behaviour, in the most trying situations, will do honour to their country.[u] In North America, the previous trial of a warrior is neither so formal, nor so severe. Though even there, before a youth is permitted to bear arms, his patience and fortitude are proved by blows, by fire, and by insults, more intolerable to a haughty spirit than both.[x]

The amazing steadiness with which the Americans endure the most exquisite torments, has induced some authors to suppose that, from the peculiar feebleness of their frame, their sensibility is not so acute as that of other people; as women, and persons of a relaxed habit, are observed to be less affected with pain than robust men, whose nerves are more firmly braced. But the constitution of the Americans is not so different, in its texture, from that of the rest of the human species, as to account for this diversity in their behaviour. It flows from a principle of honour, instilled early, and cultivated with such care, as to inspire man in his rudest state with an heroic magnanimity, to which philosophy hath endeavoured, in vain, to form him, when more highly improved and polished. This invincible constancy he has been taught to consider as the chief distinction of a man, and the highest attainment of a warrior. The ideas which influence his conduct, and the passions which take possession of his heart, are few. They operate of course with more decisive effect, than when the mind is crowded with a multiplicity of objects, or distracted by the variety of its pursuits; and when every motive that

acts with any force in forming the sentiments of a savage, prompts him to suffer with dignity, he will bear what might seem to be impossible for human patience to sustain. But wherever the fortitude of the Americans is not roused to exertion by their ideas of honour, their feelings of pain are the same with those of the rest of mankind.[y] Nor is that patience under sufferings for which the Americans have been so justly celebrated an universal attainment. The constancy of many of the victims is overcome by the agonies of torture. Their weakness and lamentations complete the triumph of their enemies, and reflect disgrace upon their own country.[z]

Wasted by their perpetual wars.

The perpetual hostilities carried on among the American tribes are productive of very fatal effects. Even in seasons of public tranquillity, their imperfect industry does not supply them with any superfluous store of provisions; but when the irruption of an enemy desolates their cultivated lands, or disturbs them in their hunting excursions, such a calamity reduces a community, naturally improvident and destitute of resources, to extreme want. All the people of the district that is invaded, are frequently forced to take refuge in woods or mountains, which can afford them little subsistence, and where many of them perish. Notwithstanding their excessive caution in conducting their military operations, and the solicitude of every leader to preserve the lives of his followers, as the rude tribes in America seldom enjoy any interval of peace, the loss of men among them is considerable in proportion to the degree of population. Thus famine and the sword combine in thinning their numbers. All their communities are feeble, and nothing now remains of several nations, which were once considerable, but the name.[a]

Recruit their numbers by adopting prisoners.

Sensible of this continual decay, there are tribes which endeavour to recruit their national force when exhausted, by adopting prisoners taken in war, and by this expedient prevent their total extinction. The practice, however, is not universally received. Resentment operates more powerfully among savages, than considerations of policy. Far the greater part of their captives was anciently sacrificed to their vengeance, and it is only since their numbers began to decline fast, that they have generally adopted milder maxims. But such as they do naturalize, renounce for ever their native tribe, and assume the manners as well as passions of the people by whom they are adopted[b] so entirely, that they often join them in expeditions against their own countrymen. Such a sudden transition, and so repugnant to one of the most powerful instincts implanted by nature, would be deemed strange among many people; but among the members of small communities, where national enmity is violent and deep-rooted, it has the appearance of being still more unaccountable. It seems, however, to result naturally from the principles upon which war is carried on in America. When nations aim at exterminating their enemies, no exchange of prisoners can ever take place. From the moment one is made a prisoner, his country and his friends consider him as dead.[c] He has incurred indelible disgrace by suffering himself to be surprised or to be taken by an enemy; and were he to return home, after such a stain upon his honour, his nearest relations would not receive or even acknowledge that they knew him.[d] Some tribes were still more rigid, and if a prisoner returned, the infamy which he had brought on his country was expiated by putting him instantly to death.[e] As the unfortunate captive is thus an outcast from his own country, and the ties which bound him to it are irreparably broken, he feels less reluctance in forming a new connexion with people, who, as an evidence of their friendly sentiments, not only deliver him from a cruel death, but offer to admit him to all the rights of a fellow-citizen. The perfect similarity of manners among savage nations facilitates and completes the union, and induces a captive to transfer not only his allegiance, but his affection, to the community into the bosom of which he is received.

Their inferiority in war to polished nations.

But though war be the chief occupation of men in their rude state, and to excel in it their highest distinction and pride, their inferiority is always manifest when they engage in competition with polished nations. Destitute of that foresight which discerns and provides for remote events, strangers to the union and mutual confidence requisite in forming any extensive plan of operations, and incapable of the subordination no less requisite in carrying such plans into execution, savage nations may astonish a disciplined enemy by their valour, but seldom prove formidable to him by their conduct; and whenever the contest is of long continuance, must yield to superior art.[f] The empires of Peru and Mexico, though their progress in civilization, when measured by the European or Asiatic standards, was inconsiderable, acquired such an ascendency over the rude tribes around them, that they subjected most of them with great facility to their power. When the people of Europe overran the various provinces of America, this superiority was still more conspicuous. Neither the courage nor number of the natives could repel a handful of invaders. The alienation and enmity, prevalent among barbarians, prevented them from uniting in any common scheme of defence, and while each tribe fought separately, all were subdued.

Their arts.

VI. The arts of rude nations unacquainted with the use of metals, hardly merit any attention on their own account, but are worthy of some notice, as far as they serve to dis-

play the genius and manners of man in this stage of his progress. The first distress a savage must feel, will arise from the manner in which his body is affected, by the heat, or cold, or moisture, of the climate under which he lives; and his first care will be to provide some covering for his own defence. In the warmer and more mild climates of America, none of the rude tribes were clothed. To most of them nature had not even suggested any idea of impropriety in being altogether uncovered.[g] As under a mild climate there was little need of any defence from the injuries of the air, and their extreme indolence shunned every species of labour to which it was not urged by absolute necessity, all the inhabitants of the isles, and a considerable part of the people on the continent, remained in this state of naked simplicity. Others were satisfied with some slight covering, such as decency required. But though naked, they were not unadorned. They dressed their hair in many different forms. They fastened bits of gold, or shells, or shining stones, in their ears, their noses, and cheeks.[h] They stained their skins with a great variety of figures; and they spent much time, and submitted to great pain, in ornamenting their persons in this fantastic manner. Vanity, however, which finds endless occupation for ingenuity and invention, in nations where dress has become a complex and intricate art, is circumscribed within so narrow bounds, and confined to so few articles among naked savages, that they are not satisfied with those simple decorations, and have a wonderful propensity to alter the natural form of their bodies, in order to render it (as they imagine) more perfect and beautiful. This practice was universal among the rudest of the American tribes. Their operations for that purpose begin as soon as an infant is born. By compressing the bones of the skull, while still soft and flexible, some flatten the crown of their heads; some squeeze them into the shape of a cone; others mould them as much as possible into a square figure;[i] and they often endanger the lives of their posterity by their violent and absurd efforts to derange the plan of nature, or to improve upon her designs. But in all their attempts either to adorn or to new-model their persons, it seems to have been less the object of the Americans to please, or to appear beautiful, than to give an air of dignity and terror to their aspect. Their attention to dress had more reference to war than to gallantry. The difference in rank and estimation between the two sexes was so great, as seems to have extinguished, in some measure, their solicitude to appear mutually amiable. The man deemed it beneath him to adorn his person, for the sake of one on whom he was accustomed to look down as a slave. It was when the warrior had in view to enter the council of his nation, or to take the field against its enemies, that he assumed his choicest ornaments, and decked his person with the nicest care.[k] The decorations of the women were few and simple; whatever was precious or splendid was reserved for the men. In several tribes the women were obliged to spend a considerable part of their time every day in adorning and painting their husbands, and could bestow little attention upon ornamenting themselves. Among a race of men so haughty as to despise, or so cold as to neglect them, the women naturally became careless and slovenly, and the love of finery and show, which has been deemed their favourite passion, was confined chiefly to the other sex.[l] To deck his person was the distinction of a warrior, as well as one of his most serious occupations.[m] In one part of their dress, which, at first sight, appears the most singular and capricious, the Americans have discovered considerable sagacity in providing against the chief inconveniences of their climate, which is often sultry and moist to excess. All the different tribes, which remain unclothed, are accustomed to anoint and rub their bodies with the grease of animals, with viscous gums, and with oils of different kinds. By this they check that profuse perspiration, which, in the torrid zone, wastes the vigour of the frame, and abridges the period of human life. By this, too, they provide a defence against the extreme moisture during the rainy season.[n] They likewise, at certain seasons, temper paint of different colours with those unctuous substances, and bedaub themselves plentifully with that composition. Sheathed with this impenetrable varnish, their skins are not only protected from the penetrating heat of the sun, but as all the innumerable tribes of insects have an antipathy to the smell or taste of that mixture, they are delivered from their teasing persecution, which amidst forests and marshes, especially in the warmer regions, would have been altogether intolerable in a state of perfect nakedness.[o]

Dress and ornaments.

The next object to dress that will engage the attention of a savage, is to prepare some habitation which may afford him shelter by day, and a retreat at night. Whatever is connected with his ideas of personal dignity, whatever bears any reference to his military character, the savage warrior deems an object of importance. Whatever relates only to peaceable and inactive life, he views with indifference. Hence, though finically attentive to dress, he is little solicitous about the elegance or disposition of his habitation. Savage nations, far from that state of improvement, in which the mode of living is considered as a mark of distinction, and unacquainted with those wants

Habitations.

which require a variety of accommodation, regulate the construction of their houses according to their limited ideas of necessity. Some of the American tribes were so extremely rude, and had advanced so little beyond the primeval simplicity of nature, that they had no houses at all. During the day, they take shelter from the scorching rays of the sun under thick trees; at night they form a shed with their branches and leaves.[p] In the rainy season they retire into coves, formed by the hand of nature, or hollowed out by their own industry.[q] Others, who have no fixed abode, and roam through the forest in quest of game, sojourn in temporary huts, which they erect with little labour, and abandon without any concern. The inhabitants of those vast plains, which are deluged by the overflowing of rivers during the heavy rains that fall periodically between the tropics, raise houses upon piles fastened in the ground, or place them among the boughs of trees, and are thus safe amidst that wide extended inundation which surrounds them.[r] Such were the first essays of the rudest Americans towards providing themselves with habitations. But even among tribes which are more improved, and whose residence is become altogether fixed, the structure of their houses is extremely mean and simple. They are wretched huts, sometimes of an oblong and sometimes of a circular form, intended merely for shelter, with no view to elegance, and little attention to convenicncy. The doors are so low that it is necessary to bend or to creep on the hands and feet in order to enter them. They are without windows, and have a large hole in the middle of the roof, to convey out the smoke. To follow travellers in other minute circumstances of their descriptions, is not only beneath the dignity of history, but would be foreign to the object of my researches. One circumstance merits attention, as it is singular, and illustrates the character of the people. Some of their houses are so large as to contain accommodation for fourscore or a hundred persons. These are built for the reception of different families, which dwell together under the same roof,[s] and often around a common fire, without separate apartments, or any kind of screen or partition between the spaces which they respectively occupy. As soon as men have acquired distinct ideas of property; or when they are so much attached to their females, as to watch them with care and jealousy; families of course divide and settle in separate houses, where they can secure and guard whatever they wish to preserve. This singular mode of habitation among several people of America, may therefore be considered, not only as the effect of their imperfect notions concerning property, but as a proof of inattention and indifference towards their women. If they had not been accustomed to perfect equality, such an arrangement could not have taken place. If their sensibility had been apt to have taken alarm, they would not have trusted the virtue of their women amidst the temptations and opportunities of such a promiscuous intercourse. At the same time, the perpetual concord which reigns in habitations where so many families are crowded together, is surprising, and affords a striking evidence that they must be people of either a very gentle or of a very phlegmatic temper, who, in such a situation, are unacquainted with animosity, brawling, and discord.[t]

Their arms.

After making some provision for his dress and habitation, a savage will perceive the necessity of preparing proper arms with which to assault or repel an enemy. This, accordingly, has early exercised the ingenuity and invention of all rude nations. The first offensive weapons were doubtless such as chance presented, and the first efforts of art to improve upon these, were extremely awkward and simple. Clubs made of some heavy wood, stakes hardened in the fire, lances whose heads were armed with flint or the bones of some animal, are weapons known to the rudest nations All these, however, were of use only in close encounter. But men wished to annoy their enemies while at a distance, and the bow and arrow is the most early invention for this purpose. This weapon is in the hands of people, whose advances in improvement are extremely inconsiderable, and is familiar to the inhabitants of every quarter of the globe. It is remarkable, however, that some tribes in America were so destitute of art and ingenuity, that they had not attained to the discovery of this simple invention,[u] and seem to have been unacquainted with the use of any missive weapon. The sling, though in its construction not more complex than the bow, and among many nations of equal antiquity, was little known to the people of North America,[x] or the islands, but appears to have been used by a few tribes in the southern continent.[y] The people, in some provinces of Chili, and those of Patagonia, towards the southern extremity of America, use a weapon peculiar to themselves. They fasten stones, about the size of a fist, to each end of a leather thong of eight feet in length, and swinging these round their heads, throw them with such dexterity, that they seldom miss the object at which they aim.[z]

Their domestic utensils.

Among people who had hardly any occupation but war or hunting, the chief exertions of their invention,[a] as well as industry, were naturally directed towards these objects. With respect to every thing else, their wants and desires were so limited, that their invention was not upon the stretch. As their food and habitations are perfectly simple, their domestic utensils are few

and rude. Some of the southern tribes had discovered the art of forming vessels of earthen ware, and baking them in the sun, so as they could endure the fire. In North America, they hollowed a piece of hard wood into the form of a kettle, and filling it with water, brought it to boil by putting red-hot stones into it.[b] These vessels they used in preparing part of their provisions; and this may be considered as a step towards refinement and luxury, for men in their rudest state were not acquainted with any method of dressing their victuals but by roasting them on the fire; and among several tribes in America, this is the only species of cookery yet known.[c] But the masterpiece of art, among the savages of America, is the construction of the canoes. An Esquimaux, shut up in his boat of whalebone, covered with the skins of seals, can brave that stormy ocean, on which the barrenness of his country compels him to depend for the chief part of his subsistence.[d] The people of Canada venture upon their rivers and lakes in boats made of the bark of trees, and so light that two men can carry them, wherever shallows or cataracts obstruct the navigation.[e] In these frail vessels they undertake and accomplish long voyages.[f] The inhabitants of the isles and of the southern continent form their canoes by hollowing the trunk of a large tree, with infinite labour; and though in appearance they are extremely awkward and unwieldy, they paddle and steer them with such dexterity, that Europeans, well acquainted with all the improvements in the science of navigation, have been astonished at the rapidity of their motion, and the quickness of their evolutions. Their *pirogues*, or war-boats, are so large as to carry forty or fifty men; their canoes employed in fishing and in short voyages are less capacious.[g] The form as well as materials of all these various kinds of vessels is well adapted to the service for which they are destined; and the more minutely they are examined, the mechanism of their structure, as well as neatness of their fabric, will appear the more surprising.

Dressing their food.

Construction of their canoes.

But, in every attempt towards industry among the Americans, one striking quality in their character is conspicuous. They apply to work without ardour, carry it on with little activity, and, like children, are easily diverted from it. Even in operations which seem the most interesting, and where the most powerful motives urge them to vigorous exertions, they labour with a languid listlessness. Their work advances under their hand with such slowness, that an eye-witness compares it to the imperceptible progress of vegetation.[h] They will spend so many years in forming a canoe, that it often begins to rot with age before they finish it. They will suffer one part of a roof to decay and perish, before they complete the other.[i] The slightest manual operation consumes an amazing length of time, and what in polished nations would hardly be an effort of industry, is among savages an arduous undertaking. This slowness of the Americans in executing works of every kind may be imputed to various causes. Among savages, who do not depend for subsistence upon the efforts of regular industry, time is of so little importance, that they set no value upon it; and provided they can finish a design, they never regard how long they are employed about it. The tools which they employ are so awkward and defective, that every work in which they engage must necessarily be tedious. The hand of the most industrious and skilful artist, were it furnished with no better instrument than a stone hatchet, a shell, or the bone of some animal, would find it difficult to perfect the most simple work. It is by length of labour that he must endeavour to supply his defect of power. But above all, the cold phlegmatic temper peculiar to the Americans renders their operations languid. It is almost impossible to rouse them from that habitual indolence to which they are sunk; and unless when engaged in war or hunting, they seem incapable of exerting any vigorous effort. Their ardour of application is not so great as to call forth that inventive spirit which suggests expedients for facilitating and abridging labour. They will return to a task day after day, but all their methods of executing it are tedious and operose.[k] Even since the Europeans have communicated to them the knowledge of their instruments, and taught them to imitate their arts, the peculiar genius of the Americans is conspicuous in every attempt they make. They may be patient and assiduous in labour, they can copy with a servile and minute accuracy, but discover little invention and no talents for despatch. In spite of instruction and example, the spirit of the race predominates; their motions are naturally tardy, and it is vain to urge them to quicken their pace. Among the Spaniards in America, *the work of an Indian* is a phrase by which they describe any thing, in the execution of which an immense time has been employed, and much labour wasted.[l]

Listlessness with which they apply to labour.

VII. No circumstance respecting rude nations has been the object of greater curiosity than their religious tenets and rites; and none, perhaps, has been so imperfectly understood, or represented with so little fidelity. Priests and missionaries are the persons who have had the best opportunities of carrying on this inquiry, among the most uncivilized of the American tribes. Their minds, engrossed by the doctrines of their own religion, and habituated to its institutions, are apt to discover something which resembles those objects of their veneration, in the opinions and rites of every people. Whatever they contemplate, they view through one medium, and draw and accommo-

date it to their own system. They study to reconcile the institutions, which fall under their observation, to their own creed, not to explain them according to the rude notions of the people themselves. They ascribe to them ideas which they are incapable of forming, and suppose them to be acquainted with principles and facts, which it is impossible that they should know. Hence, some missionaries have been induced to believe, that even among the most barbarous nations in America, they had discovered traces, no less distinct than amazing, of their acquaintance with the sublime mysteries and peculiar institutions of christianity. From their own interpretation of certain expressions and ceremonies, they have concluded that these people had some knowledge of the doctrine of the Trinity, of the incarnation of the Son of God, of his expiatory sacrifice, of the virtue of the cross, and of the efficacy of the sacraments.[m] In such unintelligent and credulous guides, we can place little confidence.

But even when we make our choice of conductors with the greatest care, we must not follow them with implicit faith. An inquiry into the religious notions of rude nations is involved in peculiar intricacies, and we must often pause in order to separate the facts which our informers relate from the reasonings with which they are accompanied, or the theories which they build upon them. Several pious writers, more attentive to the importance of the subject than to the condition of the people whose sentiments they were endeavouring to discover, have bestowed much unprofitable labour in researches of this nature.[n]

Confined to two articles.

There are two fundamental doctrines, upon which the whole system of religion, as far as it can be discovered by the light of nature, is established. The one respects the being of a God, the other the immortality of the soul. To discover the ideas of the uncultivated nations under our review with regard to those important points, is not only an object of curiosity, but may afford instruction. To these two articles I shall confine my researches, leaving subordinate opinions, and the detail of local superstitions, to more minute inquirers.

The being of God.

Whoever has had any opportunity of examining into the religious opinions of persons in the inferior ranks of life, even in the most enlightened and civilized nations, will find that their system of belief is derived from instruction, not discovered by inquiry. That numerous part of the human species, whose lot is labour, whose principal and almost sole occupation is to secure subsistence, views the arrangement and operations of nature with little reflection, and has neither leisure nor capacity for entering into that path of refined and intricate speculation which conducts to the knowledge of the principles of natural religion. In the early and most rude periods of savage life, such disquisitions are altogether unknown. When the intellectual powers are just beginning to unfold, and their first feeble exertions are directed towards a few objects of primary necessity and use; when the faculties of the mind are so limited, as not to have formed abstract or general ideas; when language is so barren, as to be destitute of names to distinguish any thing that is not perceived by some of the senses; it is preposterous to expect that man should be capable of tracing with accuracy the relation between cause and effect; or to suppose that he should rise from the contemplation of the one to the knowledge of the other, and form just conceptions of a Deity, as the Creator and Governor of the universe. The idea of creation is so familiar wherever the mind is enlarged by science, and illuminated with revelation, that we seldom reflect how profound and abstruse this idea is, or consider what progress man must have made in observation and research, before he could arrive at any knowledge of this elementary principle in religion. Accordingly, several tribes have been discovered in America, which have no idea whatever of a Supreme Being, and no rites of religious worship. Inattentive to that magnificent spectacle of beauty and order presented to their view, unaccustomed to reflect either upon what they themselves are, or to inquire who is the author of their existence, men, in their savage state, pass their days like the animals around them, without knowledge or veneration of any superior power, Some rude tribes have not in their language any name for the Deity, nor have the most accurate observers been able to discover any practice or institution which seemed to imply that they recognised his authority, or were solicitous to obtain his favour.[o] It is however only among men in the most uncultivated state of nature, and while their intellectual faculties are so feeble and limited as hardly to elevate them above the irrational creation, that we discover this total insensibility to the impressions of any invisible power.

But the human mind, formed for religion, soon opens to the reception of ideas, which are destined, when corrected and refined, to be the great source of consolation amidst the calamities of life. Among some of the American tribes, still in the infancy of improvement, we discern apprehensions of some invisible and powerful beings. These apprehensions are originally indistinct and perplexed, and seem to be suggested rather by the dread of impending evils, than to flow from gratitude for blessings received. While nature holds on her course with uniform and undisturbed regularity, men enjoy the benefits resulting from it, without inquiring concerning its cause. But every deviation from this regular course

rouses and astonishes them. When they behold events to which they are not accustomed, they search for the reasons of them with eager curiosity. Their understanding is unable to penetrate into these; but imagination, a more forward and ardent faculty of the mind, decides without hesitation. It ascribes the extraordinary occurrences in nature to the influence of invisible beings, and supposes that the thunder, the hurricane, and the earthquake, are effects of their interposition. Some such confused notion of spiritual or invisible power, superintending over those natural calamities which frequently desolate the earth, and terrify its inhabitants, may be traced among many rude nations.[p] But besides this, the disasters and dangers of savage life are so many, and men often find themselves in situations so formidable, that the mind, sensible of its own weakness, has no resource but in the guidance and protection of wisdom and power superior to what is human. Dejected with calamities which oppress him, and exposed to dangers which he cannot repel, the savage no longer relies upon himself; he feels his own impotence, and sees no prospect of being extricated, but by the interposition of some unseen arm. Hence, in all unenlightened nations, the first rites or practices which bear any resemblance to acts of religion, have it for their object to avert evils which men suffer or dread. The *Manitous* or *Okkis* of the North Americans were amulets or charms, which they imagined to be of such virtue, as to preserve the persons who reposed confidence in them from every disastrous event; or they were considered as tutelar spirits, whose aid they might implore in circumstances of distress.[q] The *Cemis* of the islanders were reputed by them to be the authors of every calamity that afflicts the human race; they were represented under the most frightful forms, and religious homage was paid to them with no other view than to appease these furious deities.[r] Even among those tribes whose religious system was more enlarged, and who had formed some conception of benevolent beings, which delighted in conferring benefits, as well as of malicious powers prone to inflict evil, superstition still appears as the offspring of fear, and all its efforts were employed to avert calamities. They were persuaded that their good deities, prompted by the beneficence of their nature, would bestow every blessing in their power, without solicitation or acknowledgment; and their only anxiety was to soothe and deprecate the wrath of the powers whom they regarded as the enemies of mankind.[s]

Such were the imperfect conceptions of the greater part of the Americans with respect to the interpositions of invisible agents, and such, almost universally, was the mean and illiberal object of their superstitions. Were we to trace back the ideas of other nations to that rude state in which history first presents them to our view, we should discover a surprising resemblance in their tenets and practices; and should be convinced, that, in similar circumstances, the faculties of the human mind hold nearly the same course in their progress, and arrive at almost the same conclusions. The impressions of fear are conspicuous in all the systems of superstition formed in this situation. The most exalted notions of men rise no higher than to a perplexed apprehension of certain beings, whose power, though supernatural, is limited as well as partial.

Remarkable diversity in their religious notions.

But, among other tribes, which have been longer united, or have made greater progress in improvement, we discern some feeble pointing towards more just and adequate conceptions of the power that presides in nature. They seem to perceive that there must be some universal cause to whom all things are indebted for their being. If we may judge by some of their expressions, they appear to acknowledge a divine power to be the maker of the world, and the disposer of all events. They denominate him the *Great Spirit*.[t] But these ideas are faint and confused, and when they attempt to explain them, it is manifest, that among them the word *spirit* has a meaning very different from that in which we employ it, and that they have no conception of any deity but what is corporeal. They believe their gods to be of the human form, though of a nature more excellent than man, and retail such wild incoherent fables concerning their functions and operations, as are altogether unworthy of a place in history. Even among these tribes, there is no established form of public worship; there are no temples erected in honour of their deities; and no ministers peculiarly consecrated to their service. They have the knowledge, however, of several superstitious ceremonies and practices handed down to them by tradition, and to these they have recourse with a childish credulity, when roused by any emergence from their usual insensibility, and excited to acknowledge the power, and to implore the protection, of superior beings.[u]

System of the Natchez.

The tribe of the Natchez, and the people of Bogota, had advanced beyond the other uncultivated nations of America in their ideas of religion, as well as in their political institutions; and it is no less difficult to explain the cause of this distinction than of that which we have already considered. The sun was the chief object of religious worship among the Natchez. In their temples, which were constructed with some magnificence, and decorated with various ornaments, according to their mode of architecture, they preserved a perpetual fire, as the purest emblem of their divinity. Ministers were appointed to watch and feed this sacred flame. The first function of the great chief of the nation, every morning, was an act of obeisance to the sun; and festivals returned

at stated seasons, which were celebrated by the whole community with solemn but unbloody rites.[x] This is the most refined species of superstition known in America, and, perhaps, one of the most natural as well as most seducing. The sun is the apparent source of the joy, fertility, and life, diffused through nature; and while the human mind, in its earliest essays towards inquiry, contemplates and admires his universal and animating energy, its admiration is apt to stop short at what is visible, without reaching to the unseen cause; and pays that adoration to the most glorious and beneficial work of God, which is due only to him who formed it. As fire is the purest and most active of the elements, and in some of its qualities and effects resembles the sun, it was, not improperly, chosen to be the emblem of his powerful operation. The ancient Persians, a people far superior, in every respect, to that rude tribe whose rites I am describing, founded their religious system on similar principles, and established a form of public worship, less gross and exceptionable than that of any people destitute of guidance from revelation. This surprising coincidence in sentiment between two nations, in such different states of improvement, is one of the many singular and unaccountable circumstances which occur in the history of human affairs.

Among the people of Bogota, the sun and moon were, likewise, the chief objects of veneration. Their system of religion was more regular and complete, though less pure, than that of the Natchez. They had temples, altars, priests, sacrifices, and that long train of ceremonies, which superstition introduces wherever she has fully established her dominion over the minds of men. But the rites of their worship were cruel and bloody. They offered human victims to their deities, and many of their practices nearly resembled the barbarous institutions of the Mexicans, the genius of which we shall have an opportunity of considering more attentively in its proper place.[y]

Their ideas concerning the immortality of the soul;

With respect to the other great doctrine of religion, concerning the immortality of the soul, the sentiments of the Americans were more united: the human mind, even when least improved and invigorated by culture, shrinks from the thoughts of annihilation, and looks forward with hope and expectation to a state of future existence. This sentiment, resulting from a secret consciousness of its own dignity, from an instinctive longing after immortality, is universal, and may be deemed natural. Upon this are founded the most exalted hopes of man in his highest state of improvement; nor has nature withheld from him this soothing consolation, in the most early and rude period of his progress. We can trace this opinion from one extremity of America to the other, in some regions more faint and obscure, in others more perfectly developed, but nowhere unknown. The most uncivilized of its savage tribes do not apprehend death as the extinction of being. All entertain hopes of a future and more happy state, where they shall be for ever exempt from the calamities which imbitter human life in its present condition. This future state they conceive to be a delightful country, blessed with perpetual spring, whose forests abound with game, whose rivers swarm with fish, where famine is never felt, and uninterrupted plenty shall be enjoyed without labour or toil. But as men, in forming their first imperfect ideas concerning the invisible world, suppose that there they shall continue to feel the same desires, and to be engaged in the same occupations, as in the present world; they naturally ascribe eminence and distinction, in that state, to the same qualities and talents which are here the object of their esteem. The Americans, accordingly, allotted the highest place, in their country of spirits, to the skilful hunter, to the adventurous and successful warrior, and to such as had tortured the greatest number of captives, and devoured their flesh.[z] These notions were so prevalent, that they gave rise to an universal custom, which is at once the strongest evidence that the Americans believe in a future state, and the best illustration of what they expect there. As they imagine, that departed spirits begin their career anew in the world whither they are gone, that their friends may not enter upon it defenceless and unprovided, they bury together with the bodies of the dead, their bow, their arrows, and other weapons used in hunting or war; they deposit in their tombs the skins or stuffs of which they make garments, Indian corn, manioc, venison, domestic utensils, and whatever is reckoned among the necessaries in their simple mode of life.[a] In some provinces, upon the decease of a cazique or chief, a certain number of his wives, of his favourites, and of his slaves, were put to death, and interred together with him, that he might appear with the same dignity in his future station, and be waited upon by the same attendants.[b] This persuasion is so deep-rooted, that many of the deceased person's retainers offer themselves as voluntary victims, and court the privilege of accompanying their departed master, as a high distinction. It has been found difficult, on some occasions, to set bounds to this enthusiasm of affectionate duty, and to reduce the train of a favourite leader to such a number as the tribe could afford to spare.[c]

induce them to bury arms, &c. with the dead.

Among the Americans, as well as other uncivilized nations, many of the rites and observances which bear some

Superstition connected with devotion.

resemblance to acts of religion, have no connexion with devotion, but proceed from a fond desire of prying into futurity. The human mind is most apt to feel and to discover this vain curiosity, when its own powers are most feeble and uninformed. Astonished with occurrences, of which it is unable to comprehend the cause, it naturally fancies, that there is something mysterious and wonderful in their origin. Alarmed at events of which it cannot discern the issue or the consequences, it has recourse to other means of discovering them, than the exercise of its own sagacity. Wherever superstition is so established as to form a regular system, this desire of penetrating into the secrets of futurity is connected with it. Divination becomes a religious act. Priests, as the ministers of Heaven, pretend to deliver its oracles to men. They are the only soothsayers, augurs, and magicians, who profess the sacred and important art of disclosing what is hid from other eyes.

This department belongs to their physicians.

But, among rude nations, who pay no veneration to any superintending power, and who have no established rites or ministers of religion, their curiosity to discover what is future and unknown, is cherished by a different principle, and derives strength from another alliance. As the diseases of men in a savage state are, as has been already observed, like those of the animal creation, few but extremely violent, their impatience under what they suffer, and solicitude for the recovery of health, soon inspired them with extraordinary reverence for such as pretended to understand the nature of their maladies, and to be possessed of knowledge sufficient to preserve or deliver them from their sudden and fatal effects. These ignorant pretenders, however, were such utter strangers to the structure of the human frame, as to be equally unacquainted with the causes of its disorders, and the manner in which they will terminate. Superstition, mingled frequently with some portion of craft, supplied what they wanted in science. They imputed the origin of diseases to supernatural influence, and prescribed or performed a variety of mysterious rites, which they gave out to be of such efficacy as to remove the most dangerous and inveterate maladies. The credulity and love of the marvellous, natural to uninformed men, favoured the deception, and prepared them to be the dupes of those impostors. Among savages, their first physicians are a kind of conjurers or wizards, who boast that they know what is past, and can foretell what is to come. Incantations, sorcery, and mummeries of diverse kinds, no less strange than frivolous, are the means which they employ to expel the imaginary causes of malignity;[d] and, relying upon the efficacy of these, they predict with confidence what will be the fate of their deluded patients. Thus superstition, in its earliest form, flowed from the solicitude of man to be delivered from present distress, not from his dread of evils awaiting him in a future life, and was originally ingrafted on medicine, not on religion. One of the first and most intelligent historians of America was struck with this alliance between the art of divination and that of physic, among the people of Hispaniola.[e] But this was not peculiar to them. The *Alexis*, the *Piayas*, the *Autmoins*, or whatever was the distinguishing name of their diviners and charmers in other parts of America, were all the physicians of their respective tribes, in the same manner as the *Bubitos* of Hispaniola. As their function led them to apply to the human mind when enfeebled by sickness, and as they found it, in that season of dejection, prone to be alarmed with imaginary fears, or amused with vain hopes, they easily induced it to rely with implicit confidence on the virtue of their spells, and the certainty of their predictions.[f]

Gradually extends.

Whenever men acknowledge the reality of supernatural power and discernment in one instance, they have a propensity to admit it in others. The Americans did not long suppose the efficacy of conjuration to be confined to one subject. They had recourse to it in every situation of danger or distress. When the events of war were peculiarly disastrous, when they met with unforeseen disappointment in hunting, when inundations or drought threatened their crops with destruction, they called upon their conjurers to begin their incantations, in order to discover the causes of those calamities, or to foretell what would be their issue.[g] Their confidence in this delusive art gradually increased, and manifested itself in all the occurrences of life. When involved in any difficulty, or about to enter upon any transaction of moment, every individual regularly consulted the sorcerer, and depended upon his instructions to extricate him from the former, as well as to direct his conduct in the latter. Even among the rudest tribes in America, superstition appears in this form, and divination is an art in high esteem. Long before man had acquired such knowledge of a deity as inspires reverence and leads to adoration, we observe him stretching out a presumptuous hand to draw aside that veil with which Providence kindly conceals its purpose from human knowledge; and we find him labouring with fruitless anxiety to penetrate into the mysteries of the divine administration. To discern and to worship a superintending power, is an evidence of the enlargement and maturity of the human understanding; a vain desire of prying into futurity, is the error of its infancy, and a proof of its weakness.

From this weakness proceeded likewise the faith of the Americans in dreams, their observation of omens, their attention to the chirping of birds, and

the cries of animals, all which they suppose to be indications of future events; and if any one of these prognostics is deemed unfavourable, they instantly abandon the pursuit of those measures on which they are most eagerly bent.[h]

Detached customs.

VIII. But if we would form a complete idea of the uncultivated nations of America, we must not pass unobserved some singular customs, which, though universal and characteristic, could not be reduced, with propriety, to any of the articles into which I have divided my inquiry concerning their manners.

Love of dancing.

Among savages, in every part of the globe, the love of dancing is a favourite passion. As, during a great part of their time, they languish in a state of inactivity and indolence, without any occupation to rouse or interest them, they delight universally in a pastime which calls forth the active powers of their nature into exercise. The Spaniards, when they first visited America, were astonished at the fondness of the natives for dancing, and beheld with wonder a people, cold and unanimated in most of their other pursuits, kindle into life, and exert themselves with ardour, as often as this favourite amusement recurred. Among them, indeed, dancing ought not to be denominated an amusement. It is a serious and important occupation, which mingles in every occurrence of public or private life. If any intercourse be necessary between two American tribes, the ambassadors of the one approach in a solemn dance, and present the calumet or emblem of peace; the sachems of the other receive it with the same ceremony.[i] If war is denounced against an enemy, it is by a dance, expressive of the resentment which they feel, and of the vengeance which they meditate.[k] If the wrath of their gods is to be appeased, or their beneficence to be celebrated; if they rejoice at the birth of a child, or mourn the death of a friend,[l] they have dances appropriated to each of these situations, and suited to the different sentiments with which they are then animated. If a person is indisposed, a dance is prescribed as the most effectual means of restoring him to health; and if he himself cannot endure the fatigue of such an exercise, the physician or conjurer performs it in his name, as if the virtue of his activity could be transferred to his patient.[m]

All their dances are imitations of some action; and though the music by which they are regulated is extremely simple and tiresome to the ear by its dull monotony, some of their dances appear wonderfully expressive and animated. The war dance is, perhaps, the most striking. It is the representation of a complete American campaign. The departure of the warriors from their village, their march into the enemy's country, the caution with which they encamp, the address with which they station some of their party in ambush, the manner of surprising the enemy, the noise and ferocity of the combat, the scalping of those who are slain, the seizing of prisoners, the triumphant return of the conquerors, and the torture of the victims, are successively exhibited. The performers enter with such enthusiastic ardour into their several parts; their gestures, their countenance, their voice, are so wild and so well adapted to their various situations, that Europeans can hardly believe it to be a mimic scene, or view it without emotions of fear and horror.[n]

But however expressive some of the American dances may be, there is one circumstance in them remarkable, and connected with the character of the race. The songs, the dances, the amusements of other nations, expressive of the sentiments which animate their hearts, are often adapted to display or excite that sensibility which mutually attaches the sexes. Among some people, such is the ardour of this passion, that love is almost the sole object of festivity and joy; and as rude nations are strangers to delicacy, and unaccustomed to disguise any emotion of their minds, their dances are often extremely wanton and indecent. Such is the *Calenda*, of which the natives of Africa are so passionately fond;[o] and such the feats of the dancing girls, which the Asiatics contemplate with so much avidity of desire. But, among the Americans, more cold and indifferent to their females, from causes which I have already explained, the passion of love mingles but little with their festivals and pastimes. Their songs and dances are mostly solemn and martial; they are connected with some of the serious and important affairs of life;[p] and having no relation to love or gallantry, are seldom common to the two sexes, but executed by the men and women apart.[q] If, on some occasions, the women are permitted to join in the festival, the character of the entertainment is still the same, and no movement or gesture is expressive of attachment, or encourages familiarity.[r]

Passion for gaming.

An immoderate love of play, especially games of hazard, which seems to be natural to all people unaccustomed to the occupations of regular industry, is likewise universal among the Americans. The same causes, which so often prompt persons in civilized life, who are at their ease, to have recourse to this pastime, render it the delight of the savage. The former are independent of labour, the latter do not feel the necessity of it; and as both are unemployed, they run with transport to whatever is interesting enough to stir and to agitate their minds. Hence the Americans,

r Barrere, Fr. Equin. p. 191.

who at other times are so indifferent, so phlegmatic, so silent, and animated with so few desires, as soon as they engage in play become rapacious, impatient, noisy, and almost frantic with eagerness. Their furs, their domestic utensils, their clothes, their arms, are staked at the gaming-table, and when all is lost, high as their sense of independence is, in a wild emotion of despair or of hope, they will often risk their personal liberty upon a single cast.[s] Among several tribes, such gaming parties frequently recur, and become their most acceptable entertainment at every great festival. Superstition, which is apt to take hold of those passions which are most vigorous, frequently lends its aid to confirm and strengthen this favourite inclination. Their conjurers are accustomed to prescribe a solemn match at play, as one of the most efficacious methods of appeasing their gods, or of restoring the sick to health.[t]

And for drinking.

From causes similar to those which render them fond of play, the Americans are extremely addicted to drunkenness. It seems to have been one of the first exertions of human ingenuity to discover some composition of an intoxicating quality; and there is hardly any nation so rude, or so destitute of invention, as not to have succeeded in this fatal research. The most barbarous of the American tribes have been so unfortunate as to attain this art; and even those which are so deficient in knowledge, as to be unacquainted with the method of giving an inebriating strength to liquors by fermentation, can accomplish the same end by other means. The people of the islands of North America, and of California, used, for this purpose, the smoke of tobacco, drawn up with a certain instrument into the nostrils, the fumes of which ascending to the brain, they felt all the transports and phrensy of intoxication.[u] In almost every other part of the New World, the natives possessed the art of extracting an intoxicating liquor from maize or the manioc root, the same substances which they convert into bread. The operation by which they effect this, nearly resembles the common one of brewing, but with this difference, that in place of yeast, they use a nauseous infusion of a certain quantity of maize or manioc chewed by their women. The saliva excites a vigorous fermentation, and in a few days the liquor becomes fit for drinking. It is not disagreeable to the taste, and when swallowed in large quantities, is of an intoxicating quality.[x] This is the general beverage of the Americans, which they distinguish by various names, and for which they feel such a violent and insatiable desire, as it is not easy either to conceive or describe. Among polished nations, where a succession of various functions and amusements keeps the mind in continual occupation, the desire for strong drink is regulated in a great measure by the climate, and increases or diminishes according to the variations of its temperature. In warm regions, the delicate and sensible frame of the inhabitants does not require the stimulation of fermented liquors. In colder countries, the constitution of the natives, more robust and more sluggish, stands in need of generous liquors to quicken and animate it. But among savages, the desire of something that is of power to intoxicate, is in every situation the same. All the people of America, if we except some small tribes near the Straits of Magellan, whether natives of the torrid zone, or inhabitants of its more temperate regions, or placed by a harder fate in the severe climates towards its northern or southern extremity, appear to be equally under the dominion of this appetite.[y] Such a similarity of taste, among people in such different situations, must be ascribed to the influence of some moral cause, and cannot be considered as the effect of any physical or constitutional want. While engaged in war or in the chase, the savage is often in the most interesting situations, and all the powers of his nature are roused to the most vigorous exertions. But those animating scenes are succeeded by long intervals of repose, during which the warrior meets with nothing that he deems of sufficient dignity or importance to merit his attention. He languishes and mopes in this season of indolence. The posture of his body is an emblem of the state of his mind. In one climate, cowering over the fire in his cabin; in another, stretched under the shade of some tree, he dozes away his time in sleep, or in an unthinking joyless inactivity, not far removed from it. As strong liquors awake him from this torpid state, give a brisker motion to his spirits, and enliven him more thoroughly than either dancing or gaming, his love of them is excessive. A savage when not engaged in action, is a pensive melancholy animal; but as soon as he tastes, or has a prospect of tasting, the intoxicating draught, he becomes gay and frolicksome.[z] Whatever be the occasion or pretext on which the Americans assemble, the meeting always terminates in a debauch. Many of their festivals have no other object, and they welcome the return of them with transports of joy. As they are not accustomed to restrain any appetite, they set no bounds to this. The riot often continues without intermission several days; and whatever may be the fatal effects of their excess, they never cease from drinking as long as one drop of liquor remains. The persons of greatest eminence, the most distinguished warriors, and the chiefs most renowned for their wisdom, have no greater command of themselves than the most obscure members of the community. Their eagerness for present enjoyment renders them blind to its fatal consequences; and those very men, who in other situations seem to possess a force of mind more than human, are in this instance inferior to

z Melendez Tesorez Verdad. iii. 369.

children in foresight, as well as consideration, and mere slaves of brutal appetite.[a] When their passions, naturally strong, are heightened and inflamed by drink, they are guilty of the most enormous outrages, and the festivity seldom concludes without deeds of violence or bloodshed.[b]

But, amidst this wild debauch, there is one circumstance remarkable; the women, in most of the American tribes, are not permitted to partake of it.[c] Their province is to prepare the liquor, to serve it about to the guests, and to take care of their husbands and friends, when their reason is overpowered. This exclusion of the women from an enjoyment so highly valued by savages, may be justly considered as a mark of their inferiority, and as an additional evidence of that contempt with which they were treated in the New World. The people of North America, when first discovered, were not acquainted with any intoxicating drink; but as the Europeans early found it their interest to supply them with spirituous liquors, drunkenness soon became as universal among them as among their countrymen to the south; and their women having acquired this new taste, indulge it with as little decency and moderation as the men.[d]

Put to death the aged and incurable.

It were endless to enumerate all the detached customs which have excited the wonder of travellers in America; but I cannot omit one seemingly as singular as any that has been mentioned. When their parents and other relations become old, or labour under any distemper which their slender knowledge of the healing art cannot remove, the Americans cut short their days with a violent hand, in order to be relieved from the burden of supporting and tending them. This practice prevailed among the ruder tribes in every part of the continent, from Hudson's Bay to the river De la Plata; and however shocking it may be to those sentiments of tenderness and attachment, which, in civilized life, we are apt to consider as congenial with our frame, the condition of man in the savage state leads and reconciles him to it. The same hardships and difficulty of procuring subsistence, which deter savages, in some cases, from rearing their children, prompt them to destroy the aged and infirm. The declining state of the one is as helpless as the infancy of the other. The former are no less unable than the latter to perform the functions that belong to a warrior or hunter, or to endure those various distresses in which savages are so often involved, by their own want of foresight and industry. Their relations feel this; and, incapable of attending to the wants or weaknesses of others, their impatience under an additional burden prompts them to extinguish that life which they find it difficult to sustain. This is not regarded as a deed of cruelty, but as an act of mercy. An American, broken with years and infirmities, conscious that he can no longer depend on the aid of those around him, places himself contentedly in his grave; and it is by the hands of his children or nearest relations that the thong is pulled, or the blow inflicted, which releases him for ever from the sorrows of life.[e]

General estimate of their character.

IX. After contemplating the rude American tribes in such various lights; after taking a view of their customs and manners from so many different stations, nothing remains but to form a general estimate of their character, compared with that of more polished nations. A human being, as he comes originally from the hand of nature, is every where the same. At his first appearance in the state of infancy, whether it be among the rudest savages, or in the most civilized nation, we can discern no quality which marks any distinction or superiority. The capacity of improvement seems to be the same; and the talents he may afterwards acquire, as well as the virtues he may be rendered capable of exercising, depend, in a great measure, upon the state of society in which he is placed. To this state his mind naturally accommodates itself, and from it receives discipline and culture. In proportion to the wants which it accustoms a human being to feel, and the functions in which these engage him, his intellectual powers are called forth. According to the connexions which it establishes between him and the rest of his species, the affections of his heart are exerted. It is only by attending to this great principle, that we can discover what is the character of man in every different period of his progress.

Intellectual powers.

If we apply it to savage life, and measure the attainments of the human mind in that state by this standard, we shall find, according to an observation which I have already made, that the intellectual powers of man must be extremely limited in their operations. They are confined within the narrow sphere of what he deems necessary for supplying his own wants. Whatever has not some relation to these, neither attracts his attention, nor is the object of his inquiries. But however narrow the bounds may be within which the knowledge of a savage is circumscribed, he possesses thoroughly that small portion which he has attained. It was not communicated to him by formal instruction; he does not attend to it as a matter of mere speculation and curiosity; it is the result of his own observation, the fruit of his own experience, and accommodated to his condition and exigencies. While employed in the active occupations of war or of hunting, he often finds himself in difficult and perilous situations, from which the efforts of his own sagacity must extricate him. He is frequently engaged in measures, where every step depends upon his own ability to decide, where he must rely solely upon his own penetration to discern the dangers to which he is exposed, and upon his own wisdom in providing against them. In conse-

d Hutchinson, Hist. of Massachus. 469. Lafitau, ii. 125. Sagard, 146.
e Cassani, Hist. de N. Reyno de Gran. p. 300. Piso, p. 6. Ellis, Voy. 191. Gumilla, i. 333.

quence of this, he feels the knowledge which he possesses, and the efforts which he makes, and either in deliberation or action rests on himself alone.

Political talents.

As the talents of individuals are exercised and improved by such exertions, much political wisdom is said to be displayed in conducting the affairs of their small communities. The council of old men in an American tribe, deliberating upon its interests, and determining with respect to peace or war, has been compared to the senate in more polished republics. The proceedings of the former, we are told, are often no less formal and sagacious than those of the latter. Great political wisdom is exhibited in pondering the various measures proposed, and in balancing their probable advantages, against the evils of which they may be productive. Much address and eloquence are employed by the leaders, who aspire at acquiring such confidence with their countrymen as to have an ascendent in those assemblies.[f] But, among savage tribes, the field for displaying political talents cannot be extensive. Where the idea of private property is incomplete, and no criminal jurisdiction is established, there is hardly any function of internal government to exercise. Where there is no commerce, and scarcely any intercourse among separate tribes; where enmity is implacable, and hostilities are carried on almost without intermission; there will be few points of public concern to adjust with their neighbours; and that department of their affairs which may be denominated foreign, cannot be so intricate as to require much refined policy in conducting it. Where individuals are so thoughtless and improvident as seldom to take effectual precautions for self-preservation, it is vain to expect that public measures and deliberations will be regulated by the contemplation of remote events. It is the genius of savages to act from the impulse of present passion. They have neither foresight nor temper to form complicated arrangements with respect to their future conduct. The consultations of the Americans, indeed, are so frequent, and their negociations are so many,[g] and so long protracted, as to give their proceedings an extraordinary aspect of wisdom. But this is not owing so much to the depth of their schemes, as to the coldness and phlegm of their temper, which render them slow in determining.[h] If we except the celebrated league that united the Five Nations in Canada into a federal republic, which shall be considered in its proper place, we can discern few such traces of political wisdom among the rude American tribes, as discover any great degree of foresight or extent of intellectual abilities. Even among them, we shall find public measures more frequently directed by the impetuous ferocity of their youth, than regulated by the experience and wisdom of their old men.

Degree of affection.

As the condition of man in the savage state is unfavourable to the progress of the understanding, it has a tendency likewise, in some respects, to check the exercise of affection, and to render the heart contracted. The strongest feeling in the mind of a savage is a sense of his own independence. He has sacrificed so small a portion of his natural liberty by becoming a member of society, that he remains, in a great degree, the sole master of his own actions.[i] He often takes his resolutions alone, without consulting, or feeling any connexion with the persons around him. In many of his operations, he stands as much detached from the rest of his species, as if he had formed no union with them. Conscious how little he depends upon other men, he is apt to view them with a careless indifference. Even the force of his mind contributes to increase this unconcern; and as he looks not beyond himself in deliberating with respect to the part which he should act, his solicitude about the consequences of it seldom extends further. He pursues his own career, and indulges his own fancy, without inquiring or regarding whether what he does be agreeable or offensive to others, whether they may derive benefit or receive hurt from it. Hence the ungovernable caprice of savages, their impatience under any species of restraint, their inability to suppress or moderate any inclination, the scorn or neglect with which they receive advice, their high estimation of themselves, and their contempt of other men. Among them, the pride of independence produces almost the same effects with interestedness in a more advanced state of society; it refers every thing to a man himself, it leads him to be indifferent about the manner in which his actions may affect other men, and renders the gratification of his own wishes the measure and end of conduct.

Hardness of heart.

To the same cause may be imputed the hardness of heart, and insensibility, remarkable in all savage nations. Their minds, roused only by strong emotions, are little susceptible of gentle, delicate, or tender affections.[k] Their union is so incomplete, that each individual acts as if he retained all his natural rights entire and undiminished. If a favour is conferred upon him, or any beneficial service is performed on his account, he receives it with much satisfaction, because it contributes to his enjoyment; but this sentiment extends not beyond himself; it excites no sense of obligation; he neither feels gratitude, nor thinks of making any return.[l] Even among persons the most closely connected, the exchange of those good offices which strengthen attachment, mollify the heart, and sweeten the intercourse of life, is not frequent. The high ideas of independence among the Americans nourish a sullen reserve, which keeps them at a distance from each other. The nearest relations are mutually afraid to make any demand, or to solicit any service,[m] lest it should be considered by the other as imposing a burden, or laying a restraint upon his will.

Insensibility.

I have already remarked the influence of this hard unfeeling temper upon domestic life, with respect to the connexion between husband and wife, as well as that between parents and children. Its effects are no less conspicuous, in the performance of those mutual offices of tenderness which the infirmities of our nature frequently exact. Among some tribes, when any of their number are seized with any violent disease, they are generally abandoned by all around them, who, careless of their recovery, fly in the utmost consternation from the supposed danger of infection.[n] But even where they are not thus deserted, the cold indifference with which they are attended can afford them little consolation. No look of sympathy, no soothing expressions, no officious services, contribute to alleviate the distress of the sufferers, or to make them forget what they endure.[o] Their nearest relations will often refuse to submit to the smallest inconvenience, or to part with the least trifle, however much it may tend to their accommodation or relief.[p] So little is the breast of a savage susceptible of those sentiments which prompt men to that feeling attention which mitigates the calamities of human life, that in some provinces of America, the Spaniards have found it necessary to enforce the common duties of humanity by positive laws, and to oblige husbands and wives, parents and children, under severe penalties, to take care of each other during their sickness.[q] The same harshness of temper is still more conspicuous in their treatment of the animal creation. Prior to their intercourse with the people of Europe, the North Americans had some tame dogs, which accompanied them in their hunting excursions, and served them with all the ardour and fidelity peculiar to the species. But, instead of that fond attachment which the hunter naturally feels towards those useful companions of his toils, they requite their services with neglect, seldom feed, and never caress them.[r] In other provinces the Americans have become acquainted with the domestic animals of Europe, and avail themselves of their service; but it is universally observed that they always treat them harshly,[s] and never employ any method, either for breaking or managing them, but force and cruelty. In every part of the deportment of man in his savage state, whether towards his equals of the human species, or towards the animals below him, we recognise the same character, and trace the operations of a mind intent on its own gratifications, and regulated by its own caprice, with little attention or sensibility to the sentiments and feelings of the beings around him.

Taciturnity.

After explaining how unfavourable the savage state is to the cultivation of the understanding and to the improvement of the heart, I should not have thought it necessary to mention what may be deemed its lesser defects, if the character of nations, as well as of individuals, were not often more distinctly marked by circumstances apparently trivial than by those of greater moment. A savage, frequently placed in situations of danger and distress, depending on himself alone, and wrapped up in his own thoughts and schemes, is a serious melancholy animal. His attention to others is small. The range of his own ideas is narrow. Hence that taciturnity which is so disgusting to men accustomed to the open intercourse of social conversation. When they are not engaged in action, the Americans often sit whole days in one posture, without opening their lips.[t] When they go forth to war, or to the chase, they usually march in a line at some distance from one another, and without exchanging a word. The same profound silence is observed when they row together in a canoe.[u] It is only when they are animated by intoxicating liquors, or roused by the jollity of the festival and dance, that they become gay and conversible.

Cunning.

To the same causes may be imputed the refined cunning with which they form and execute their schemes. Men who are not habituated to a liberal communication of their own sentiments and wishes, are apt to be so distrustful, as to place little confidence in others, and to have recourse to an insidious craft in accomplishing their own purposes. In civilized life, those persons who, by their situations, have but a few objects of pursuit on which their minds incessantly dwell, are most remarkable for low artifice in carrying on their little projects. Among savages, whose views are equally confined, and their attention no less persevering, those circumstances must operate still more powerfully, and gradually accustom them to a disingenuous subtilty in all their transactions. The force of this is increased by habits which they acquire in carrying on the two most interesting operations wherein they are engaged. With them war is a system of craft, in which they trust for success to stratagem more than to open force, and have their invention continually on the stretch to circumvent and surprise their enemies. As hunters, it is their constant object to insnare, in order that they may destroy. Accordingly, art and cunning have been universally observed as distinguishing characteristics of all savages. The people of the rude tribes of America are remarkable for their artifice and duplicity. Impenetrably secret in forming their measures, they pursue them with a patient undeviating attention, and there is no refinement of dissimulation which they cannot employ, in order to insure success. The natives of Peru were engaged above thirty years in concerting the plan of that insurrection which took place under the vice-royalty of the Marquis de Villa Garcia; and

though it was communicated to a great number of persons, in all different ranks, no indication of it ever transpired during that long period; no man betrayed his trust, or by an unguarded look, or rash word, gave rise to any suspicion of what was intended.[x] The dissimulation and craft of individuals is no less remarkable than that of nations. When set upon deceiving, they wrap themselves up so artificially, that it is impossible to penetrate into their intentions, or to detect their designs.[y]

Virtues.

But if there be defects or vices peculiar to the savage state, there are likewise virtues which it inspires, and good qualities, to the exercise of which it is friendly. The bonds of society sit so loose upon the members of the more rude American tribes, that they hardly feel any restraint. Hence the spirit of independence, which is the pride of a savage, and which he considers as the unalienable prerogative of man. Incapable of control, and disdaining to acknowledge any superior, his mind, though limited in its powers, and erring in many of its pursuits, acquires such elevation by the consciousness of its own freedom, that he acts on some occasions with astonishing force, and perseverance, and dignity.

Independent spirit.

Fortitude.

As independence nourishes this high spirit among savages, the perpetual wars in which they are engaged call it forth into action. Such long intervals of tranquillity as are frequent in polished societies, are unknown in the savage state. Their enmities, as I have observed, are implacable and immortal. The valour of the young men is never allowed to rust in inaction. The hatchet is always in their hand, either for attack or defence. Even in their hunting excursions, they must be on their guard against surprise from the hostile tribes by which they are surrounded. Accustomed to continual alarms, they grow familiar with danger; courage becomes an habitual virtue, resulting naturally from their situation, and strengthened by constant exertions. The mode of displaying fortitude may not be the same in small and rude communities, as in more powerful and civilized states. Their system of war, and standard of valour, may be formed upon different principles, but in no situation does the human mind rise more superior to the sense of danger, or the dread of death, than in its most simple and uncultivated state.

Attachment to their community.

Another virtue remarkable among savages, is attachment to the community of which they are members. From the nature of their political union, one might expect this tie to be extremely feeble. But there are circumstances which render the influence, even of their loose mode of association, very powerful. The American tribes are small; combined against their neighbours, in prosecuting of ancient enmities, or in avenging recent injuries, their interests and operations are neither numerous nor complex. These are objects,

x Voy. de Ulloa, ii. 309. y Gumilla. i. 162. Charlev. iii. 109.

which the uncultivated understanding of a savage can comprehend. His heart is capable of forming connexions which are so little diffused. He assents with warmth to public measures, dictated by passions similar to those which direct his own conduct. Hence the ardour with which individuals undertake the most perilous service, when the community deems it necessary. Hence their fierce and deep-rooted antipathy to the public enemies. Hence their zeal for the honour of their tribe, and that love of their country, which prompts them to brave danger that it may triumph, and to endure the most exquisite torments, without a groan, that it may not be disgraced.

Satisfaction with their own condition.

Thus, in every situation where a human being can be placed, even in the most unfavourable, there are virtues which peculiarly belong to it; there are affections which it calls forth; there is a species of happiness which it yields. Nature, with most beneficent intention, conciliates and forms the mind to its condition; the ideas and wishes of man extend not beyond that state of society to which he is habituated. What it presents as objects of contemplation or enjoyment, fills and satisfies his mind, and he can hardly conceive any other mode of life to be pleasant, or even tolerable. The Tartar, accustomed to roam over extensive plains, and to subsist on the product of his herds, imprecates upon his enemy, as the greatest of all curses, that he may be condemned to reside in one place, and to be nourished with the top of a weed. The rude Americans, fond of their own pursuits, and satisfied with their own lot, are equally unable to comprehend the intention or utility of the various accommodations, which, in more polished society, are deemed essential to the comfort of life. Far from complaining of their own situation, or viewing that of men in a more improved state with admiration or envy, they regard themselves as the standard of excellence, as beings the best entitled, as well as the most perfectly qualified, to enjoy real happiness. Unaccustomed to any restraint upon their will or their actions, they behold with amazement the inequality of rank and the subordination which takes place in civilized life, and consider the voluntary submission of one man to another, as a renunciation, no less base than unaccountable, of the first distinction of humanity. Void of foresight as well as free from care themselves, and delighted with that state of indolent security, they wonder at the anxious precautions, the unceasing industry, and complicated arrangements of Europeans, in guarding against distant evils, or providing for future wants; and they often exclaim against their preposterous folly, in thus multiplying the troubles and increasing the labour of life.[z] This preference of their own manners is conspicuous on every occasion. Even the names, by which the various nations wish to be distin-

z Charlev. N. Fr. iii. 338. Lahontan, ii. 97.

guished, are assumed from this idea of their own pre-eminence. The appellation which the Iroquois give to themselves is, *the chief of men*.[a] *Caraibe*, the original name of the fierce inhabitants of the Windward Islands, signifies, *the warlike people*.[b] The Cherokee, from an idea of their own superiority, call the Europeans *Nothings*, or *the accursed race*, and assume to themselves the name of *the beloved people*.[c] The same principle regulated the notions of the other Americans concerning the Europeans; for although, at first, they were filled with astonishment at their arts, and with dread of their power, they soon came to abate their estimation of men whose maxims of life were so different from their own. Hence they called them the froth of the sea, men without father or mother. They supposed, that either they had no country of their own, and therefore invaded that which belonged to others;[d] or that, being destitute of the necessaries of life at home, they were obliged to roam over the ocean, in order to rob such as were more amply provided.

Men, thus satisfied with their condition, are far from any inclination to relinquish their own habits, or to adopt those of civilized life. The transition is too violent to be suddenly made. Even where endeavours have been used to wean a savage from his own customs, and to render the accommodations of polished society familiar to him; even where he has been allowed to taste of those pleasures, and has been honoured with those distinctions, which are the chief objects of our desire, he droops and languishes under the restraint of laws and forms, he seizes the first opportunity of breaking loose from them, and returns with transport to the forest or the wild, where he can enjoy a careless and uncontrolled freedom.[e]

Thus I have finished a laborious delineation of the character and manners of the uncivilized tribes scattered over the vast continent of America. In this, I aspire not at rivalling the great masters who have painted and adorned savage life, either in boldness of design, or in the glow and beauty of their colouring. I am satisfied with the more humble merit of having persisted with patient industry, in viewing my subject in many various lights, and collecting from the most accurate observers such detached, and often minute features, as might enable me to exhibit a portrait that resembles the original.

General caution with respect to this inquiry.

Before I close this part of my work, one observation more is necessary, in order to justify the conclusions which I have formed, or to prevent the mistakes into which such as examine them may fall. In contemplating the inhabitants of a country so widely extended as America, great attention should be paid to the diversity of climates under which they are placed. The influence of this I have pointed out with respect to several important particulars which have been the object of research; but even where it has not been mentioned, it ought not to be overlooked. The provinces of America are of such different temperament, that this alone is sufficient to constitute a distinction between their inhabitants. In every part of the earth where man exists, the power of climate operates, with decisive influence, upon his condition and character. In those countries which approach near to the extremes of heat or cold, this influence is so conspicuous as to strike every eye. Whether we consider man merely as an animal, or as being endowed with rational powers which fit him for activity and speculation, we shall find that he has uniformly attained the greatest perfection of which his nature is capable, in the temperate regions of the globe. There his constitution is most vigorous, his organs most acute, and his form most beautiful. There, too, he possesses a superior extent of capacity, greater fertility of imagination, more enterprising courage, and a sensibility of heart which gives birth to desires, not only ardent, but persevering. In this favourite situation he has displayed the utmost efforts of his genius, in literature, in policy, in commerce, in war, and in all the arts which improve or embellish life.[f]

This powerful operation of climate is felt most sensibly by rude nations, and produces greater effects than in societies more improved. The talents of civilized men are continually exerted in rendering their own condition more comfortable; and by their ingenuity and inventions, they can, in a great measure, supply the defects, and guard against the inconveniences, of any climate. But the improvident savage is affected by every circumstance peculiar to his situation. He takes no precaution either to mitigate or improve it. Like a plant, or an animal, he is formed by the climate under which he is placed, and feels the full force of its influence.

In surveying the rude nations of America, this natural distinction between the inhabitants of the temperate and torrid zones is very remarkable. They may, accordingly, be divided into two great classes. The one comprehends all the North Americans, from the river St. Laurence to the gulf of Mexico, together with the people of Chili, and a few small tribes towards the extremity of the southern continent. To the other belong all the inhabitants of the islands, and those settled in the various provinces which extend from the isthmus of Darien almost to the southern confines of Brazil, along the east side of the Andes. In the former, which comprehends all the regions of the temperate zone that in America are inhabited, the human species appear manifestly to be more perfect. The natives are more robust, more active, more intelligent, and more courageous. They possess, in the most eminent degree, that force of mind, and love of independence, which

e Charlev. N. Fr. iii. 322.
f Dr. Ferguson's Essay on the Hist. of Civil Society, part. iii. c. 1.

I have pointed out as the chief virtues of man in his savage state. They have defended their liberty with persevering fortitude against the Europeans, who subdued the other rude nations of America with the greatest ease. The natives of the temperate zone are the only people in the New World who are indebted for their freedom to their own valour. The North Americans, though long encompassed by three formidable European powers, still retain part of their original possessions, and continue to exist as independent nations. The people of Chili, though early invaded, still maintain a gallant contest with the Spaniards, and have set bounds to their encroachments; whereas, in the warmer regions, men are more feeble in their frame, less vigorous in the efforts of their minds, of a gentle but dastardly spirit, more enslaved by pleasure, and more sunk in indolence. Accordingly, it is in the torrid zone that the Europeans have most completely established their dominion over America; the most fertile and desirable provinces in it are subject to their yoke; and if several tribes there still enjoy independence, it is either because they have never been attacked by an enemy already satiated with conquest, and possessed of larger territories than he was able to occupy, or because they have been saved from oppression by their remote and inaccessible situation.

Conspicuous as this distinction may appear between the inhabitants of those different regions, it is not, however, universal. Moral and political causes, as I have formerly observed, affect the disposition and character of individuals, as well as nations, still more powerfully than the influence of climate. There are, accordingly, some tribes, in various parts of the torrid zone, possessed of courage, high spirit, and love of independence, in a degree hardly inferior to the natives of more temperate climates. We are too little acquainted with the history of those people, to be able to trace the several circumstances in their progress and condition, to which they are indebted for this remarkable pre-eminence. The fact, nevertheless, is certain. As early as the first voyage of Columbus, he received information that several of the islands were inhabited by the *Caribbees*, a fierce race of men, nowise resembling their feeble and timid neighbours. In his second expedition to the New World, he found this information to be just, and was himself a witness of their intrepid valour.[g] The same character they have maintained invariably in all subsequent contests with the people of Europe;[h] and, even in our own times, we have seen them make a gallant stand in defence of the last territory which the rapacity of their invaders had left in their possession.[i] Some nations in Brazil were no less eminent for vigour of mind and bravery in war.[k] The people of the isthmus of Darien boldly met the Spaniards in the field, and frequently repelled those formidable invaders.[l] Other instances might be produced. It is not by attending to any single cause or principle, how powerful and extensive soever its influence may appear, that we can explain the actions, or account for the character, of men. Even the law of climate, more universal, perhaps, in its operation than any that affects the human species, cannot be applied, in judging of their conduct, without many exceptions.

BOOK V.

1518. Preparations of Velasquez for invading New Spain.

When Grijalva returned to Cuba, he found the armament destined to attempt the conquest of that rich country which he had discovered, almost complete. Not only ambition, but avarice, had urged Velasquez to hasten his preparations; and having such a prospect of gratifying both, he had advanced considerable sums out of his private fortune towards defraying the expenses of the expedition. At the same time, he exerted his influence as governor, in engaging the most distinguished persons in the colony to undertake the service.[a] At a time when the spirit of the Spanish nation was adventurous to excess, a number of soldiers, eager to embark in any daring enterprise, soon appeared. But it was not so easy to find a person qualified to take the command in an expedition of so much importance; and the character of Velasquez, who had the right of nomination, greatly increased the difficulty of the choice. Though of most aspiring ambition, and not destitute of talents for government, he possessed neither such courage nor such vigour and activity of mind, as to undertake in person the conduct of the armament which he was preparing. In this embarrassing situation, he formed the chimerical scheme, not only of achieving great exploits by a deputy, but of securing to himself the glory of conquests which were to be made by another. In the execution of this plan he fondly aimed at reconciling contradictions. He was solicitous to choose a commander of intrepid resolution, and of superior abilities, because he knew these to be requisite in order to insure success; but, at the same time, from the jealousy natural to little minds, he wished this person to be of a spirit so tame and obsequious, as to be entirely dependent on his will. But when he came to apply those ideas in forming an opinion concerning the several officers who occurred to his thoughts as worthy of being intrusted with the command, he soon perceived that it was impossible to find such incompatible qualities united in one character. Such as were distinguished for courage and talents were too high-spirited to be passive instruments in his hands. Those who appeared more gentle and

k Lery ap. de Bry, iii. 207, &c.
l Herrera, dec. 1. lib. x. c. 15, &c.; dec. 2. passim.
a See Note XCVII.

tractable were destitute of capacity, and unequal to the charge. This augmented his perplexity and his fears. He deliberated long, and with much solicitude, and was still wavering in his choice, when Amador de Lares, the royal treasurer in Cuba, and Andres Duero, his own secretary, the two persons in whom he chiefly confided, were encouraged by this irresolution to propose a new candidate, and they supported their recommendation with such assiduity and address, that, no less fatally for Velasquez than happily for their country, it proved successful.[b]

He appoints Cortes commander.

The man whom they pointed out to him was Fernando Cortes. He was born at Medellin, a small town in Estremadura, in the year one thousand four hundred and eighty-five, and descended from a family of noble blood, but of very moderate fortune. Being originally destined by his parents to the study of law, as the most likely method of bettering his condition, he was sent early to the university of Salamanca, where he imbibed some tincture of learning. But he was soon disgusted with an academic life, which did not suit his ardent and restless genius, and retired to Medellin, where he gave himself up entirely to active sports and martial exercises. At this period of life, he was so impetuous, so overbearing, and so dissipated, that his father was glad to comply with his inclination, and send him abroad as an adventurer in arms. There were in that age two conspicuous theatres, on which such of the Spanish youth as courted military glory might display their valour; one in Italy, under the command of the great captain; the other in the New World. Cortes preferred the former, but was prevented by indisposition from embarking with a reinforcement of troops sent to Naples. Upon this disappointment he turned his views towards America, whither he was allured by the prospect of the advantages which he might derive from the patronage of Ovando,[c] the governor of Hispaniola, who was his kinsman. When he landed at St. Domingo in one thousand five hundred and four, his reception was such as equalled his most sanguine hopes, and he was employed by the governor in several honourable and lucrative stations. These, however, did not satisfy his ambition; and in the year one thousand five hundred and eleven he obtained permission to accompany Diego Velasquez in his expedition to Cuba. In this service he distinguished himself so much, that notwithstanding some violent contests with Velasquez, occasioned by trivial events unworthy of remembrance, he was at length taken into favour, and received an ample concession of lands and of Indians, the recompence usually bestowed upon adventurers in the New World.[d]

Though Cortes had not hitherto acted in high command, he had displayed such qualities in several scenes of difficulty and danger, as raised universal expectation, and turned the eyes of his countrymen towards him, as one capable of performing great things. The turbulence of youth, as soon as he found objects and occupations suited to the ardour of his mind, gradually subsided, and settled into a habit of regular indefatigable activity. The impetuosity of his temper, when he came to act with his equals, insensibly abated, by being kept under restraint, and mellowed into a cordial soldierly frankness. These qualities were accompanied with calm prudence in concerting his schemes, with persevering vigour in executing them, and with what is peculiar to superior genius, the art of gaining the confidence and governing the minds of men. To all which were added the inferior accomplishments that strike the vulgar, and command their respect; a graceful person, a winning aspect, extraordinary address in martial exercises, and a constitution of such vigour as to be capable of enduring any fatigue.

As soon as Cortes was mentioned to Velasquez by his two confidants, he flattered himself that he had at length found what he had hitherto sought in vain, a man with talents for command, but not an object for jealousy. Neither the rank nor the fortune of Cortes, as he imagined, were such that he could aspire at independence. He had reason to believe that by his own readiness to bury ancient animosities in oblivion, as well as his liberality in conferring several recent favours, he had already gained the good-will of Cortes, and hoped, by this new and unexpected mark of confidence, that he might attach him for ever to his interest.

Soon becomes jealous of him. Oct. 23.

Cortes, receiving his commission with the warmest expressions of respect and gratitude to the governor, immediately erected his standard before his own house, appeared in a military dress, and assumed all the ensigns of his new dignity. His utmost influence and activity were exerted in persuading many of his friends to engage in the service, and in urging forward the preparations for the voyage. All his own funds, together with what money he could raise by mortgaging his lands and Indians, were expended in purchasing military stores and provisions, or in supplying the wants of such of his officers as were unable to equip themselves in a manner suited to their rank.[e] Inoffensive, and even laudable as this conduct was, his disappointed competitors were malicious enough to give it a turn to his disadvantage. They represented him as aiming already, with little disguise, at establishing an independent authority over his troops, and endeavouring to secure their respect or love by his ostentatious and interested liberality. They reminded Velasquez of his former dissensions with the man in whom he now reposed so much confidence, and foretold that Cortes would be more apt to avail himself of the power which the governor was inconsiderately putting in his hands, to avenge past injuries, than

b B. Diaz. c. 19. Gomara, Cron. c. 7. Herrera, dec. 2. lib. iii. c. 11.
c See Note XCVIII.
d Gomara, Cron. c. 1, 2, 3.
e See Note XCIX.

to requite recent obligations. These insinuations made such impression upon the suspicious mind of Velasquez, that Cortes soon observed some symptoms of a growing alienation and distrust in his behaviour, and was advised by Lares and Duero to hasten his departure, before these should become so confirmed as to break out with open violence. Fully sensible of this danger, he urged forward his preparations with such rapidity, that he set sail from St. Jago de Cuba on the eighteenth of November, Velasquez accompanying him to the shore, and taking leave of him with an appearance of perfect friendship and confidence, though he had secretly given it in charge to some of Cortes's officers, to keep a watchful eye upon every part of their commander's conduct.[f]

Endeavours to deprive him of his commission,

Cortes proceeded to Trinidad, a small settlement on the same side of the island, where he was joined by several adventurers, and received a supply of provisions and military stores, of which his stock was still very incomplete. He had hardly left St. Jago, when the jealousy which had been working in the breast of Velasquez grew so violent, that it was impossible to suppress it. The armament was no longer under his own eye and direction; and he felt, that as his power over it ceased, that of Cortes would become more absolute. Imagination now aggravated every circumstance which had formerly excited suspicion: the rivals of Cortes industriously threw in reflections which increased his fears; and with no less art than malice they called superstition to their aid, employing the predictions of an astrologer in order to complete the alarm. All these, by their united operation, produced the desired effect. Velasquez repented bitterly of his own imprudence, in having committed a trust of so much importance to a person whose fidelity appeared so doubtful, and hastily despatched instructions to Trinidad, empowering Verdugo, the chief magistrate there, to deprive Cortes of his commission. But Cortes had already made such progress in gaining the esteem and confidence of his troops, that, finding officers as well as soldiers equally zealous to support his authority, he soothed or intimidated Verdugo, and was permitted to depart from Trinidad without molestation.

and to lay him under arrest.

From Trinidad Cortes sailed for the Havana, in order to raise more soldiers, and to complete the victualling of his fleet. There several persons of distinction entered into the service, and engaged to supply what provisions were still wanting; but as it was necessary to allow them some time for performing what they had promised, Velasquez, sensible that he ought no longer to rely on a man of whom he had so openly discovered his distrust, availed himself of the interval which this unavoidable delay afforded, in order to make one attempt more to wrest the command out of the hands of Cortes. He loudly complained of Verdugo's conduct, accusing him either of childish facility, or of manifest treachery, in suffering Cortes to escape from Trinidad. Anxious to guard against a second disappointment, he sent a person of confidence to the Havana, with peremptory injunctions to Pedro Barba, his lieutenant-governor in that colony, instantly to arrest Cortes, to send him prisoner to St. Jago under a strong guard, and to countermand the sailing of the armament until he should receive further orders. He wrote likewise to the principal officers, requiring them to assist Barba in executing what he had given him in charge. But before the arrival of this messenger, a Franciscan friar of St. Jago had secretly conveyed an account of this interesting transaction to Bartholomew de Olmedo, a monk of the same order, who acted as chaplain to the expedition.

Cortes defeats his schemes, and continues his preparations.

Cortes, forewarned of the danger, had time to take precautions for his own safety. His first step was to find some pretext for removing from the Havana Diego de Ordaz, an officer of great merit, but in whom, on account of his known attachment to Velasquez, he could not confide in this trying and delicate juncture. He gave him the command of a vessel, destined to take on board some provisions in a small harbour beyond cape Antonio, and thus made sure of his absence, without seeming to suspect his fidelity. When he was gone, Cortes no longer concealed the intentions of Velasquez from his troops; and as officers and soldiers were equally impatient to set out on an expedition, in preparing for which most of them had expended all their fortunes, they expressed their astonishment and indignation at that illiberal jealousy, to which the governor was about to sacrifice, not only the honour of their general, but all their sanguine hopes of glory and wealth. With one voice they entreated that he would not abandon the important station to which he had such a good title. They conjured him not to deprive them of a leader whom they followed with such well-founded confidence, and offered to shed the last drop of their blood in maintaining his authority. Cortes was easily induced to comply with what he himself so ardently desired. He swore that he would never desert soldiers who had given him such a signal proof of their attachment, and promised instantly to conduct them to that rich country, which had been so long the object of their thoughts and wishes. This declaration was received with transports of military applause, accompanied with threats and imprecations against all who should presume to call in question the jurisdiction of their general, or to obstruct the execution of his designs.

The amount of his forces.

Every thing was now ready for their departure; but though this expedition was fitted out by the united efforts of the Spanish power in Cuba; though every settlement had contributed its quota of men and provisions; though

f Gomara, Cron. c. 7. B. Diaz, c. 20.

the governor had laid out considerable sums, and each adventurer had exhausted his stock or strained his credit, the poverty of the preparations was such as must astonish the present age, and bore, indeed, no resemblance to an armament destined for the conquest of a great empire. The fleet consisted of eleven vessels; the largest of a hundred tons, which was dignified by the name of admiral; three of seventy or eighty tons, and the rest small open barks. On board of these were six hundred and seventeen men; of which five hundred and eight belonged to the land service, and a hundred and nine were seamen or artificers. The soldiers were divided into eleven companies, according to the number of the ships; to each of which Cortes appointed a captain, and committed to him the command of the vessel while at sea, and of the men when on shore.[g] As the use of fire-arms among the nations of Europe was hitherto confined to a few battalions of regularly disciplined infantry, only thirteen soldiers were armed with muskets, thirty-two were cross-bowmen, and the rest had swords and spears. Instead of the usual defensive armour, which must have been cumbersome in a hot climate, the soldiers wore jackets quilted with cotton, which experience had taught the Spaniards to be a sufficient protection against the weapons of the Americans. They had only sixteen horses, ten small field pieces, and four falconets.[h]

1519. Feb. 10. His departure from Cuba.

With this slender and ill-provided train did Cortes set sail, to make war upon a monarch whose dominions were more extensive than all the kingdoms subject to the Spanish crown. As religious enthusiasm always mingled with the spirit of adventure in the New World, and, by a combination still more strange, united with avarice, in prompting the Spaniards to all their enterprises, a large cross was displayed in their standards, with this inscription, *Let us follow the cross, for under this sign we shall conquer.*

So powerfully were Cortes and his followers animated with both these passions, that no less eager to plunder the opulent country whither they were bound, than zealous to propagate the Christian faith among its inhabitants, they set out, not with the solicitude natural to men going upon dangerous services, but with that confidence which arises from security of success, and certainty of the divine protection.

Touches at Cozumel;

As Cortes had determined to touch at every place which Grijalva had visited, he steered directly towards the island of Cozumel; there he had the good fortune to redeem Jerome de Aguilar, a Spaniard, who had been eight years a prisoner among the Indians. This man was perfectly acquainted with a dialect of their language understood through a large extent of country, and possessing besides a considerable share of prudence and sagacity, proved extremely useful as an interpreter. From Cozumel Cortes proceeded to the river of Tabasco, in hopes of a reception as friendly as Grijalva had met with there, and of finding gold in the same abundance; but the disposition of the natives, from some unknown cause, was totally changed. After repeated endeavours to conciliate their good-will, he was constrained to have recourse to violence. Though the forces of the enemy were numerous, and advanced with extraordinary courage, they were routed with great slaughter, in several successive actions. The loss which they sustained, and still more the astonishment and terror excited by the destructive effect of the fire-arms, and the dreadful appearance of the horses, humbled their fierce spirits, and induced them to sue for peace. They acknowledged the king of Castile as their sovereign, and granted Cortes a supply of provisions, with a present of cotton garments, some gold, and twenty female slaves.[i]

March 4. and at Tabasco.

Cortes continued his course to the westward, keeping as near the shore as possible, in order to observe the country; but could discover no proper place for landing, until he arrived at St. Juan de Ulua.[k] As he entered this harbour, a large canoe full of people, among whom were two who seemed to be persons of distinction, approached his ship with signs of peace and amity. They came on board without fear or distrust, and addressed him in a most respectful manner, but in a language altogether unknown to Aguilar. Cortes was in the utmost perplexity and distress, at an event of which he instantly foresaw all the consequences, and already felt the hesitation and uncertainty with which he should carry on the great schemes which he meditated, if, in his transactions with the natives, he must depend entirely upon such an imperfect, ambiguous, and conjectural mode of communication, as the use of signs. But he did not remain long in his embarrassing situation; a fortunate accident extricated him, when his own sagacity could have contributed little towards his relief. One of the female slaves, whom he had received from the cazique of Tabasco, happened to be present at the first interview between Cortes and his new guests. She perceived his distress, as well as the confusion of Aguilar; and as she perfectly understood the Mexican language, she explained what they had said in the Yucatan tongue, with which Aguilar was acquainted. This woman, known afterwards by the name of Donna Marina, and who makes a conspicuous figure in the history of the New World, where great revolutions were brought about by small causes and inconsiderable instruments, was born in one of the provinces of the Mexican empire. Having been sold as a slave in the early part of her life, after a variety of adventures she fell

into the hands of the Tabascans, and had resided long enough among them to acquire their language, without losing the use of her own. Though it was both tedious and troublesome to converse by the intervention of two different interpreters, Cortes was so highly pleased with having discovered this method of carrying on some intercourse with the people of a country into which he was determined to penetrate, that in the transports of his joy he considered it as a visible interposition of Providence in his favour.[1]

Lands his troops.

He now learned, that the two persons whom he had received on board of his ship were deputies from Teutile and Pilpatoe, two officers intrusted with the government of that province, by a great monarch, whom they called Montezuma; and that they were sent to inquire what his intentions were in visiting their coast, and to offer him what assistance he might need, in order to continue his voyage. Cortes, struck with the appearance of those people, as well as the tenor of the message, assured them, in respectful terms, that he approached their country with most friendly sentiments, and came to propose matters of great importance to the welfare of their prince and his kingdom, which he would unfold more fully, in person, to the governor and the general. Next morning, without waiting for any answer, he landed his troops, his horses, and artillery; and having chosen proper ground, began to erect huts for his men and to fortify his camp. The natives, instead of opposing the entrance of those fatal guests into their country, assisted them in all their operations, with an alacrity of which they had ere long good reason to repent.

His first interview with the Mexicans.

Next day Teutile and Pilpatoe entered the Spanish camp with a numerous retinue, and Cortes considering them as the ministers of a great monarch, entitled to a degree of attention very different from that which the Spaniards were accustomed to pay the petty caziques with whom they had intercourse in the isles, received them with much formal ceremony. He informed them, that he came as ambassador from Don Carlos of Austria, king of Castile, the greatest monarch of the east, and was intrusted with propositions of such moment, that he could impart them to none but the emperor Montezuma himself, and therefore required them to conduct him, without loss of time, into the presence of their master. The Mexican officers could not conceal their uneasiness at a request, which they knew would be disagreeable, and which they foresaw might prove extremely embarrassing to their sovereign, whose mind had been filled with many disquieting apprehensions, ever since the former appearance of the Spaniards on his coasts. But before they attempted to dissuade Cortes from insisting on this demand, they endeavoured to conciliate his good-will, by entreating him to accept of certain presents, which, as humble slaves of Montezuma, they laid at his feet. They were introduced with great parade, and consisted of fine cotton cloth, of plumes of various colours, and of ornaments of gold and silver to a considerable value; the workmanship of which appeared to be as curious as the materials were rich. The display of these produced an effect very different from what the Mexicans intended. Instead of satisfying it increased the avidity of the Spaniards, and rendered them so eager and impatient to become masters of a country which abounded with such precious productions, that Cortes could hardly listen with patience to the arguments which Pilpatoe and Teutile employed to dissuade him from visiting the capital, and in a haughty determined tone he insisted on his demand, of being admitted to a personal audience of their sovereign. During this interview, some painters, in the train of the Mexican chiefs, had been diligently employed in delineating, upon white cotton cloths, figures of the ships, the horses, the artillery, the soldiers, and whatever else attracted their eyes as singular. When Cortes observed this, and was informed that these pictures were to be sent to Montezuma, in order to convey to him a more lively idea of the strange and wonderful objects now presented to their view, than any words could communicate, he resolved to render the representation still more animating and interesting, by exhibiting such a spectacle as might give both them and their monarch an awful impression of the extraordinary prowess of his followers, and the irresistible force of their arms. The trumpets, by his order, sounded an alarm; the troops, in a moment, formed in order of battle, the infantry performed such martial exercises as were best suited to display the effect of their different weapons; the horse, in various evolutions, gave a specimen of their agility and strength; the artillery pointed towards the thick woods which surrounded the camp, were fired, and made dreadful havoc among the trees. The Mexicans looked on with that silent amazement which is natural when the mind is struck with objects, which are both awful and above its comprehension. But, at the explosion of the cannon, many of them fled, some fell to the ground, and all were so much confounded at the sight of men whose power so nearly resembled that of the gods, that Cortes found it difficult to compose and re-assure them. The painters had now many new objects on which to exercise their art, and they put their fancy on the stretch in order to invent figures and symbols to represent the extraordinary things which they had seen.

Negociations with Montezuma.

Messengers were immediately despatched to Montezuma with those pictures, and a full account of every thing that had passed since the arrival of the Spaniards, and by them Cortes sent a present of some European curiosities to Montezuma, which, though of no great

[1] B. Diaz, c. 37, 38, 39. Gomara, Cron. c. 25, 26. Herrera, dec. 2. lib v. c. 4.

value, he believed would be acceptable on account of their novelty. The Mexican monarchs, in order to obtain early information of every occurrence in all the corners of their extensive empire, had introduced a refinement in police, unknown, at that time, in Europe. They had couriers posted at proper stations along the principal roads; and as these were trained to agility by a regular education, and relieved one another at moderate distances, they conveyed intelligence with surprising rapidity. Though the capital in which Montezuma resided was above an hundred and eighty miles from St. Juan de Ulua, Cortes's presents were carried thither, and an answer to his demands was received in a few days. The same officers who had hitherto treated with the Spaniards, were employed to deliver this answer; but as they knew how repugnant the determination of their master was to all the schemes and wishes of the Spanish commander, they would not venture to make it known until they had previously endeavoured to soothe and mollify him. For this purpose they renewed their negociation, by introducing a train of a hundred Indians, loaded with presents sent to him by Montezuma. The magnificence of these was such as became a great monarch, and far exceeded any idea which the Spaniards had hitherto formed of his wealth. They were placed on mats spread on the ground, in such order as showed them to the greatest advantage. Cortes and his officers viewed, with admiration, the various manufactures of the country; cotton stuffs so fine, and of such delicate texture, as to resemble silk; pictures of animals, trees, and other natural objects, formed with feathers of different colours, disposed and mingled with such skill and elegance, as to rival the works of the pencil in truth and beauty of imitation. But what chiefly attracted their eyes, were two large plates of a circular form, one of massive gold representing the sun, the other of silver, an emblem of the moon.[m] These were accompanied with bracelets, collars, rings, and other trinkets of gold; and, that nothing might be wanting which could give the Spaniards a complete idea of what the country afforded, with some boxes filled with pearls, precious stones, and grains of gold unwrought, as they had been found in the mines or rivers. Cortes received all these with an appearance of profound veneration for the monarch by whom they were bestowed. But when the Mexicans, presuming upon this, informed him, that their master, though he desired him to accept of what he had sent as a token of regard for that monarch whom Cortes represented, would not give his consent that foreign troops should approach nearer to his capital, or even allow them to continue longer in his dominions, the Spanish general declared, in a manner more resolute and peremptory than formerly, that he must insist on his first demand, as he could not, without dishonour, return to his own country, until he was admitted into the presence of the prince whom he was appointed to visit in the name of his sovereign. The Mexicans, astonished at seeing any man dare to oppose that will, which they were accustomed to consider as supreme and irresistible, yet afraid of precipitating their country into an open rupture with such formidable enemies, prevailed with Cortes to promise, that he would not move from his present camp, until the return of a messenger whom they sent to Montezuma for further instructions.[n]

His presents.

Forbids Cortes to approach his capital.

The firmness with which Cortes adhered to his original proposal, should naturally have brought the negociation between him and Montezuma to a speedy issue, as it seemed to leave the Mexican monarch no choice, but either to receive him with confidence as a friend, or to oppose him openly as an enemy. The latter was what might have been expected from a haughty prince in possession of extensive power. The Mexican empire, at this period, was at a pitch of grandeur to which no society ever attained in so short a period. Though it had subsisted, according to their own traditions, only a hundred and thirty years, its dominion extended from the North to the South sea, over territories stretching, with some small interruption, above five hundred leagues from east to west, and more than two hundred from north to south, comprehending provinces not inferior in fertility, population, and opulence, to any in the torrid zone. The people were warlike and enterprising, the authority of the monarch unbounded, and his revenues considerable. If, with the forces which might have been suddenly assembled in such an empire, Montezuma had fallen upon the Spaniards while encamped on a barren unhealthy coast, unsupported by any ally, without a place of retreat, and destitute of provisions, it seems to be impossible, even with all the advantages of their superior discipline and arms, that they could have stood the shock, and they must either have perished in such an unequal contest, or have abandoned the enterprise.

State of the Mexican empire at that period.

As the power of Montezuma enabled him to take this spirited part, his own dispositions were such as seemed naturally to prompt him to it. Of all the princes who had swayed the Mexican sceptre, he was the most haughty, the most violent, and the most impatient of control. His subjects looked up to him with awe, and his enemies with terror. The former he governed with unexampled rigour; but they were impressed with such an opinion of his capacity, as commanded their respect; and, by many victories over the latter, he had spread far the dread of his arms, and had added several considerable provinces to his dominions. But though his talents might be suited to the transactions of a state so imperfectly polished as the Mexican empire, and sufficient to conduct them while in their accustomed course,

Character of the monarch.

m See Note CII.

n B. Diaz, c. 39. Gomara, Cron. c. 27. Herr. dec. 2. lib. v. c. 5, 6.

they were altogether inadequate to a conjuncture so extraordinary, and did not qualify him either to judge with the discernment or to act with the decision requisite in such a trying emergence.

His perplexity and terror upon the arrival of the Spaniards.

From the moment that the Spaniards appeared on his coast, he discovered symptoms of timidity and embarrassment. Instead of taking such resolutions as the consciousness of his own power, or the memory of his former exploits, might have inspired, he deliberated with an anxiety and hesitation which did not escape the notice of his meanest courtiers. The perplexity and discomposure of Montezuma's mind upon this occasion, as well as the general dismay of his subjects, were not owing wholly to the impression which the Spaniards had made by the novelty of their appearance and the terror of their arms. Its origin may be traced up to a more remote source. There was an opinion, if we may believe the earliest and most authentic Spanish historians, almost universal among the Americans, that some dreadful calamity was impending over their heads, from a race of formidable invaders, who should come from regions towards the rising sun, to overrun and desolate their country. Whether this disquieting apprehension flowed from the memory of some natural calamity which had afflicted that part of the globe, and impressed the minds of the inhabitants with superstitious fears and forebodings, or whether it was an imagination accidentally suggested by the astonishment which the first sight of a new race of men occasioned, it is impossible to determine. But as the Mexicans were more prone to superstition than any people in the New World, they were more deeply affected by the appearance of the Spaniards, whom their credulity instantly represented as the instrument destined to bring about this fatal revolution which they dreaded. Under those circumstances, it ceases to be incredible that a handful of adventurers should alarm the monarch of a great empire, and all his subjects.[o]

Continues to negociate.

Notwithstanding the influence of this impression, when the messenger arrived from the Spanish camp with an account that the leader of the strangers, adhering to his original demand, refused to obey the order enjoining him to leave the country, Montezuma assumed some degree of resolution, and, in a transport of rage natural to a fierce prince unaccustomed to meet with any opposition to his will, he threatened to sacrifice those presumptuous men to his gods. But his doubts and fears quickly returned, and instead of issuing orders to carry his threats into execution, he again called his ministers to confer and offer their advice. Feeble and temporizing measures will always be the result when men assemble to deliberate in a situation where they ought to act. The Mexican counsellors took no effectual measure for expelling such troublesome intruders, and were satisfied with issuing a more positive injunction, requiring them to leave the country; but this they preposterously accompanied with a present of such value, as proved fresh inducement to remain there.

Anxiety and apprehensions of the Spaniards.

Meanwhile, the Spaniards were not without solicitude, or a variety of sentiments, in deliberating concerning their own future conduct. From what they had already seen, many of them formed such extravagant ideas concerning the opulence of the country, that, despising danger or hardships, when they had in view treasures which appeared to be inexhaustible, they were eager to attempt the conquest. Others, estimating the power of the Mexican empire by its wealth, and enumerating the various proofs which had occurred of its being under a well-regulated administration, contended, that it would be an act of the wildest phrensy to attack such a state with a small body of men, in want of provisions, unconnected with any ally, and already enfeebled by the diseases peculiar to the climate, and the loss of several of their number.[p] Cortes secretly applauded the advocates for bold measures, and cherished their romantic hopes, as such ideas corresponded with his own, and favoured the execution of the schemes which he had formed. From the time that the suspicions of Velasquez broke out with open violence in the attempts to deprive him of the command, Cortes saw the necessity of dissolving a connexion which would obstruct and embarrass all his operations, and watched for a proper opportunity of coming to a final rupture with him. Having this in view, he had laboured by every art to secure the esteem and affection of his soldiers. With his abilities for command, it was easy to gain their esteem; and his followers were quickly satisfied that they might rely, with perfect confidence, on the conduct and courage of their leader. Nor was it more difficult to acquire their affection. Among adventurers, nearly of the same rank, and serving at their own expense, the dignity of command did not elevate a general above mingling with those who acted under him. Cortes availed himself of this freedom of intercourse, to insinuate himself into their favour, and by his affable manners, by well-timed acts of liberality to some, by inspiring all with vast hopes, and by allowing them to trade privately with the natives,[q] he attached the greater part of his soldiers so firmly to himself, that they almost forgot that the armament had been fitted out by the authority and at the expense of another.

Schemes of Cortes.

His address in carrying them on.

During those intrigues, Teutile arrived with the present from Montezuma, and, together with it, delivered the ultimate order of that monarch to depart instantly out of his dominions; and when Cortes, instead of complying, renewed his request of an audience, the Mexican turned from him abruptly, and quitted the camp

o Cortes Relatione Seconda, ap. Ramus. iii. 234, 235. Herrera, dec. 2. lib. iii. c. 1. lib. v. c. 11. lib. vii. c. 6. Gomara, Cron. c. 66, 92, 144.

p B. Diaz. c. 40.

q See Note CIII.

with looks and gestures which strongly expressed his surprise and resentment. Next morning, none of the natives who used to frequent the camp in great numbers, in order to barter with the soldiers and to bring in provisions, appeared. All friendly correspondence seemed now to be at an end, and it was expected every moment that hostilities would commence. This, though an event that might have been foreseen occasioned a sudden consternation among the Spaniards, which imboldened the adherents of Velasquez not only to murmur and cabal against their general, but to appoint one of their number to remonstrate openly against his imprudence in attempting the conquest of a mighty empire with such inadequate force, and to urge the necessity of returning to Cuba, in order to refit the fleet and augment the army. Diego de Ordaz, one of his principal officers, whom the malcontents charged with this commission, delivered it with a soldierly freedom and bluntness, assuring Cortes that he spoke the sentiments of the whole army. He listened to this remonstrance without any appearance of emotion, and as he well knew the temper and wishes of his soldiers, and foresaw how they would receive a proposition fatal at once to all the splendid hopes and schemes which they had been forming with such complacency, he carried his dissimulation so far as to seem to relinquish his own measures in compliance with the request of Ordaz, and issued orders that the army should be in readiness next day to re-embark for Cuba. As soon as this was known, the disappointed adventurers exclaimed and threatened; the emissaries of Cortes, mingling with them, inflamed their rage; the ferment became general; the whole camp was almost in open mutiny; all demanding with eagerness to see their commander. Cortes was not slow in appearing; when, with one voice, officers and soldiers expressed their astonishment and indignation at the orders which they had received. It was unworthy, they cried, of the Castilian courage, to be daunted at the first aspect of danger, and infamous to fly before any enemy appeared. For their parts, they were determined not to relinquish an enterprise that had hitherto been successful, and which tended so visibly to spread the knowledge of true religion, and to advance the glory and interest of their country. Happy under his command, they would follow him with alacrity through every danger, in quest of those settlements and treasures which he had so long held out to their view; but if he chose rather to return to Cuba, and tamely give up all his hopes of distinction and opulence to an envious rival, they would instantly choose another general to conduct them in that path of glory which he had not spirit to enter.

Cortes, delighted with their ardour, took no offence at the boldness with which it was uttered. The sentiments were what he himself had inspired, and the warmth of expression satisfied him that his followers had imbibed them thoroughly. He affected, however, to be surprised at what he heard, declaring that his orders to prepare for embarking were issued from a persuasion that this was agreeable to his troops; that, from deference to what he had been informed was their inclination, he had sacrificed his own private opinion, which was firmly bent on establishing immediately a settlement on the sea-coast, and then on endeavouring to penetrate into the interior part of the country; that now he was convinced of his error; and as he perceived that they were animated with the generous spirit which breathed in every true Spaniard, he would resume, with fresh ardour, his original plan of operation, and doubted not to conduct them, in the career of victory, to such independent fortunes as their valour merited. Upon this declaration, shouts of applause testified the excess of their joy. The measure seemed to be taken with unanimous consent; such as secretly condemned it being obliged to join in the acclamations, partly to conceal their disaffection from their general, and partly to avoid the imputation of cowardice from their fellow-soldiers.[r]

Establishing a form of civil government.

Without allowing his men time to cool or to reflect, Cortes set about carrying his design into execution. In order to give a beginning to a colony, he assembled the principal persons in his army, and by their suffrage elected a council and magistrates, in whom the government was to be vested. As men naturally transplant the institutions and forms of the mother-country into their new settlements, this was framed upon the model of a Spanish corporation. The magistrates were distinguished by the same names and ensigns of office, and were to exercise a similar jurisdiction. All the persons chosen were most firmly devoted to Cortes, and the instrument of their election was framed in the king's name, without any mention of their dependence on Velasquez. The two principles of avarice and enthusiasm, which prompted the Spaniards to all their enterprises in the New World, seem to have concurred in suggesting the name which Cortes bestowed on his infant settlement. He called it, *The rich town of the true Cross.*[s]

Resigns his commission.

The first meeting of the new council was distinguished by a transaction of great moment. As soon as it assembled, Cortes applied for leave to enter; and approaching with many marks of profound respect, which added dignity to the tribunal, and set an example of reverence for its authority, he began a long harangue, in which, with much art, and in terms extremely flattering to persons just entering upon their new function, he observed, that as the supreme jurisdiction over the colony which they had planted was now vested in this court, he considered them as clothed with the authority, and representing the person, of their sovereign; that accordingly he

r B. Diaz, c. 40, 41, 42. Herrera, dec. 2. lib. v. c. 6, 7.

s Villa rica de la vera Cruz.

would communicate to them what he deemed essential to the public safety, with the same dutiful fidelity as if he were addressing his royal master; that the security of a colony settled in a great empire, whose sovereign had already discovered his hostile intentions, depended upon arms, and the efficacy of these upon the subordination and discipline preserved among the troops; that his right to command was derived from a commission granted by the governor of Cuba; and as that had been long since revoked, the lawfulness of his jurisdiction might well be questioned; that he might be thought to act upon a defective, or even a dubious, title; nor could they trust an army which might dispute the powers of its general, at a juncture when it ought implicitly to obey his orders; that, moved by these considerations, he now resigned all his authority to them, that they, having both right to choose, and power to confer full jurisdiction, might appoint one in the king's name, to command the army in its future operations; and as for his own part, such was his zeal for the service in which they were engaged, that he would most cheerfully take up a pike with the same hand that laid down the general's truncheon, and convince his fellow-soldiers, that though accustomed to command, he had not forgotten how to obey. Having finished his discourse, he laid the commission from Velasquez upon the table, and after kissing his truncheon, delivered it to the chief magistrate, and withdrew.

and is chosen chief-justice and captain-general.

The deliberations of the council were not long, as Cortes had concerted this important measure with his confidants, and had prepared the other members with great address, for the part which he wished them to take. His resignation was accepted; and as the uninterrupted tenor of their prosperity under his conduct afforded the most satisfying evidence of his abilities for command, they, by their unanimous suffrage, elected him chief-justice of the colony, and captain-general of its army, and appointed his commission to be made out in the king's name, with most ample powers, which were to continue in force until the royal pleasure should be further known. That this deed might not be deemed the machination of a junto, the council called together the troops, and acquainted them with what had been resolved. The soldiers, with eager applause, ratified the choice which the council had made; the air resounded with the name of Cortes, and all vowed to shed their blood in support of his authority.

Asserts his authority with vigour.

Cortes having now brought his intrigues to the desired issue, and shaken off his mortifying dependence on the governor of Cuba, accepted of the commission which vested in him supreme jurisdiction, civil as well as military, over the colony, with many professions of respect to the council, and gratitude to the army. Together with his new command, he assumed greater dignity, and began to exercise more extensive powers. Formerly he had felt himself to be only the deputy of a subject; now he acted as the representative of his sovereign. The adherents of Velasquez, fully aware of what would be the effect of this change in the situation of Cortes, could no longer continue silent and passive spectators of his actions. They exclaimed openly against the proceedings of the council as illegal, and against those of the army as mutinous. Cortes, instantly perceiving the necessity of giving a timely check to such seditious discourse by some vigorous measure, arrested Ordaz, Escudero, and Velasquez de Leon, the ringleaders of this faction, and sent them prisoners aboard the fleet, loaded with chains. Their dependants, astonished and overawed, remained quiet; and Cortes, more desirous to reclaim than to punish his prisoners, who were officers of great merit, courted their friendship with such assiduity and address, that the reconciliation was perfectly cordial; and on the most trying occasions, neither their connexion with the governor of Cuba, nor the memory of the indignity with which they had been treated, tempted them to swerve from an inviolable attachment to his interest.[t] In this as well as his other negociations at this critical conjuncture, which decided with respect to his future fame and fortune, Cortes owed much of his success to the Mexican gold, which he distributed with a liberal hand both among his friends and his opponents.[u]

His friendship courted by the Zempoallans.

Cortes, having thus rendered the union between himself and his army indissoluble, by engaging it to join him in disclaiming any dependence on the governor of Cuba, and in repeated acts of disobedience to his authority, thought he might now venture to quit the camp in which he had hitherto remained, and advance into the country. To this he was encouraged by an event no less fortunate than seasonable. Some Indians having approached his camp in a mysterious manner, were introduced into his presence. He found that they were sent with a proffer of friendship from the cazique of Zempoalla, a considerable town at no great distance; and from their answers to a variety of questions which he put to them, according to his usual practice in every interview with the people of the country, he gathered, that their master, though subject to the Mexican empire, was impatient of the yoke, and filled with such dread and hatred of Montezuma, that nothing could be more acceptable to him than any prospect of deliverance from the oppression under which he groaned. On hearing this, a ray of light and hope broke in upon the mind of Cortes. He saw that the great empire which he intended to attack was neither perfectly united, nor its sovereign universally beloved. He concluded, that the causes of disaffection could not be confined to one province;

t B. Diaz, c. 42, 43. Gomara, Cron. c. 30, 31. Herrera, dec. 2. lib. v. c. 7

u B. Diaz, c. 44.

but that in other corners there must be malcontents, so weary of subjection, or so desirous of change, as to be ready to follow the standard of any protector. Full of those ideas, on which he began to form a scheme, that time, and more perfect information concerning the state of the country, enabled him to mature, he gave a most gracious reception to the Zempoallans, and promised soon to visit their cazique.[x]

Marches to Zempoalla.

In order to perform this promise, it was not necessary to vary the route which he had already fixed for his march. Some officers, whom he had employed to survey the coast, having discovered a village named Quiabislan, about forty miles to the northward, which, both on account of the fertility of the soil and commodiousness of the harbour, seemed to be a more proper station for a settlement than that where he was encamped, Cortes determined to remove thither. Zempoalla lay in his way, where the cazique received him in the manner which he had reason to expect—with gifts and caresses, like a man solicitous to gain his good-will; with respect approaching almost to adoration, like one who looked up to him as a deliverer. From him he learned many particulars with respect to the character of Montezuma, and the circumstances which rendered his dominion odious. He was a tyrant, as the cazique told him with tears, haughty, cruel, and suspicious; who treated his own subjects with arrogance, ruined the conquered provinces by excessive exactions, and often tore their sons and daughters from them by violence; the former, to be offered as victims to his gods; the latter, to be reserved as concubines for himself or favourites. Cortes, in reply to him, artfully insinuated, that one great object of the Spaniards in visiting a country so remote from their own, was to redress grievances, and to relieve the distressed; and having encouraged him to hope for this interposition in due time, he continued his march to Quiabislan.

Builds a fort.

The spot which his officers had recommended as a proper situation, appeared to him to be so well chosen, that he immediately marked out ground for a town. The houses to be erected were only huts; but these were to be surrounded with fortifications, of sufficient strength to resist the assaults of an Indian army. As the finishing of those fortifications was essential to the existence of a colony, and of no less importance in prosecuting the designs which the leader and his followers meditated, both in order to secure a place of retreat, and to preserve their communication with the sea, every man in the army, officers as well as soldiers, put his hand to the work, Cortes himself setting them an example of activity and perseverance in labour. The Indians of Zempoalla and Quiabislan lent their aid; and this petty station, the parent of so many mighty settlements, was soon in a state of defence.[y]

Concludes a formal alliance with several caziques.

While engaged in this necessary work, Cortes had several interviews with the caziques of Zempoalla and Quiabislan; and availing himself of their wonder and astonishment at the new objects which they daily beheld, he gradually inspired them with such a high opinion of the Spaniards, as beings of a superior order and irresistible in arms, that, relying on their protection, they ventured to insult the Mexican power, at the very name of which they were accustomed to tremble. Some of Montezuma's officers having appeared to levy the usual tribute, and to demand a certain number of human victims as an expiation for their guilt in presuming to hold intercourse with those strangers whom the emperor had commanded to leave his dominions, instead of obeying the order, the caziques made them prisoners, treated them with great indignity, and as their superstition was no less barbarous than that of the Mexicans, they prepared to sacrifice them to their gods. From this last danger they were delivered by the interposition of Cortes, who manifested the utmost horror at the mention of such a deed. The two caziques having now been pushed to an act of such open rebellion, as left them no hope of safety but in attaching themselves inviolably to the Spaniards, they soon completed their union with them, by formally acknowledging themselves to be vassals of the same monarch. Their example was followed by the Totonaques, a fierce people who inhabited the mountainous part of the country. They willingly subjected themselves to the crown of Castile, and offered to accompany Cortes with all their forces in his march towards Mexico.[z]

His measures to procure a confirmation of his authority by the king.

Cortes had now been above three months in New Spain; and though this period had not been distinguished by martial exploits, every moment had been employed in operations, which though less splendid, were more important. By his address in conducting his intrigues with his own army, as well as his sagacity in carrying on his negociations with the natives, he had already laid the foundations of his future success. But whatever confidence he might place in the plan which he had formed, he could not but perceive, that as his title to command was derived from a doubtful authority, he held it by a precarious tenure. The injuries which Velasquez had received, were such as would naturally prompt him to apply for redress to their common sovereign; and such a representation, he foresaw, might be given of his conduct, that he had reason to apprehend, not only that he might be degraded from his present rank, but subjected to punishment. Before he began his march, it was necessary to take the most effectual precautions against this impending danger. With this view he persuaded the magistrates of the colony at Vera Cruz to ad-

x B. Diaz, c. 41. Gomara Cron. c. 28.
y B. Diaz, c. 45, 46, 48. Gomara Cron. c. 32, 33, 37. Herrera, dec. 2. lib. v. c. 8, 9.

z B. Diaz, c. 47. Gomara Cron. 35, 36. Herrera, dec. 2. lib. v. c. 9, 10, 11.

dress a letter to the king, the chief object of which was to justify their own conduct in establishing a colony independent on the jurisdiction of Velasquez. In order to accomplish this, they endeavoured to detract from his merit in fitting out the two former armaments under Cordova and Grijalva, affirming that these had been equipped by the adventurers who engaged in the expeditions, and not by the governor. They contended that the sole object of Velasquez was to trade or barter with the natives, not to attempt the conquest of New Spain, or to settle a colony there. They asserted that Cortes and the officers who served under him had defrayed the greater part of the expense in fitting out the armament. On this account, they humbly requested their sovereign to ratify what they had done in his name, and to confirm Cortes in the supreme command by his royal commission. That Charles might be induced to grant more readily what they demanded, they gave him a pompous description of the country which they had discovered: of its riches, the number of its inhabitants, their civilization and arts; they related the progress which they had already made in annexing some parts of the country situated on the sea-coast to the crown of Castile; and mentioned the schemes which they had formed, as well as the hopes which they entertained, of reducing the whole to subjection.[a] Cortes himself wrote in a similar strain; and as he knew that the Spanish court, accustomed to the exaggerated representations of every new country by its discoverers, would give little credit to their splendid accounts of New Spain, if these were not accompanied with such a specimen of what it contained as would excite a high idea of its opulence, he solicited his soldiers to relinquish what they might claim as their part of the treasures which had hitherto been collected, in order that the whole might be sent to the king. Such was the ascendant which he had acquired over their minds, and such their own romantic expectations of future wealth, that an army of indigent and rapacious adventurers was capable of this generous effort, and offered to their sovereign the richest present that had hitherto been transmitted from the New World.[b] Portocarrero and Montejo, the chief magistrates of the colony, were appointed to carry this present to Castile, with express orders not to touch at Cuba in their passage thither.[c]

A conspiracy against Cortes.

While a vessel was preparing for their departure, an unexpected event occasioned a general alarm. Some soldiers and sailors, secretly attached to Velasquez, or intimidated at the prospect of the dangers unavoidable in attempting to penetrate into the heart of a great empire with such unequal force, formed the design of seizing one of the brigantines, and making their escape to Cuba, in order to give the governor such intelligence as might enable him to intercept the ship which was to carry the treasure and despatches to Spain. This conspiracy, though formed by persons of low rank, was conducted with profound secrecy; but at the moment when every thing was ready for execution, they were betrayed by one of their associates.

He destroys his fleet.

Though the good fortune of Cortes interposed so seasonably on this occasion, the detection of this conspiracy filled his mind with most disquieting apprehensions, and prompted him to execute a scheme which he had long revolved. He perceived that the spirit of disaffection still lurked among his troops; that though hitherto checked by the uniform success of his schemes, or suppressed by the hand of authority, various events might occur which would encourage and call it forth. He observed, that many of his men, weary of the fatigue of service, longed to revisit their settlements in Cuba; and that upon any appearance of extraordinary danger, or any reverse of fortune, it would be impossible to restrain them from returning thither. He was sensible that his forces, already too feeble, could bear no diminution, and that a very small defection of his followers would oblige him to abandon the enterprise. After ruminating often, and with much solicitude, upon those particulars, he saw no hope of success but in cutting off all possibility of retreat, and in reducing his men to the necessity of adopting the same resolution with which he himself was animated, either to conquer or to perish. With this view, he determined to destroy his fleet; but as he durst not venture to execute such a bold resolution by his single authority, he laboured to bring his soldiers to adopt his ideas with respect to the propriety of this measure. His address in accomplishing this was not inferior to the arduous occasion in which it was employed. He persuaded some, that the ships had suffered so much by having been long at sea, as to be altogether unfit for service; to others he pointed out what a seasonable reinforcement of strength they would derive from the junction of a hundred men, now unprofitably employed as sailors; and to all he represented the necessity of fixing their eyes and wishes upon what was before them, without allowing the idea of a retreat once to enter their thoughts. With universal consent the ships were drawn ashore, and after stripping them of their sails, rigging, iron works, and whatever else might be of use, they were broke in pieces. Thus, from an effort of magnanimity, to which there is nothing parallel in history, five hundred men voluntarily consented to be shut up in a hostile country, filled with powerful and unknown nations; and having precluded every means of escape, left themselves

a In this letter it is asserted, that though a considerable number of Spaniards have been wounded in their various encounters with the people of Tabasco, not one of them died, and all had recovered in a very short time. This seems to confirm what I observe in p. 863. concerning the imperfection of the offensive weapons used by the Americans. In this letter, the human sacrifices offered by the Mexicans to their deities are described minutely, and with great horror; some of the Spaniards, it is said, had been eye-witnesses of those barbarous rites. To the letter is subjoined a catalogue and description of the presents sent to the emperor. That published by Gomara, Cron. c. 29. seems to have been copied from it. Pet. Martyr describes many of the articles in his treatise 'De Insulis nuper inventis,' p. 354, &c.

b See Note CIV.

c B. Diaz, c. 54. Gomara Cron. c. 40.

without any resource but their own valour and perseverance.[d]

Nothing now retarded Cortes; the alacrity of his troops and the disposition of his allies were equally favourable. All the advantages, however, derived from the latter, though procured by much assiduity and address, were well nigh lost in a moment, by an indiscreet sally of religious zeal, which, on many occasions, precipitated Cortes into actions inconsistent with the prudence that distinguishes his character. Though hitherto he had neither time nor opportunity to explain to the natives the errors of their own superstition, or to instruct them in the principles of the christian faith, he commanded his soldiers to overturn the altars and to destroy the idols in the chief temple of Zempoalla, and in their place to erect a crucifix and an image of the Virgin Mary. The people beheld this with astonishment and horror; the priests excited them to arms; but such was the authority of Cortes, and so great the ascendant which the Spaniards had acquired, that the commotion was appeased without bloodshed, and concord perfectly re-established.[e]

Advances into the country.

Cortes began his march from Zempoalla on the sixteenth of August, with five hundred men, fifteen horse, and six field-pieces. The rest of his troops, consisting chiefly of such as from age or infirmity were less fit for active service, he left as a garrison in Villa Rica, under the command of Escalante, an officer of merit, and warmly attached to his interest. The cazique of Zempoalla supplied him with provisions, and with two hundred of those Indians called *Tamemes*, whose office, in a country where tame animals were unknown, was to carry burthens, and to perform all servile labour. They were a great relief to the Spanish soldiers, who hitherto had been obliged, not only to carry their own baggage, but to drag along the artillery by main force. He offered likewise a considerable body of his troops, but Cortes was satisfied with four hundred; taking care, however, to choose persons of such note as might prove hostages for the fidelity of their master. Nothing memorable happened in his progress, until he arrived on the confines of Tlascala. The inhabitants of that province, a warlike people, were implacable enemies of the Mexicans, and had been united in an ancient alliance with the caziques of Zempoalla. Though less civilized than the subjects of Montezuma, they were advanced in improvement far beyond the rude nations of America, whose manners we have described. They had made considerable progress in agriculture; they dwelt in large towns; they were not strangers to some species of commerce; and in the imperfect accounts of their institutions and laws, transmitted to us by the early Spanish writers, we discern traces both of distributive justice and of criminal jurisdiction in their interior police. But still, as the degree of their civilization was incomplete, and as they depended for subsistence, not on agriculture alone, but trusted for it in a great measure to hunting, they retained many of the qualities natural to men in this state. Like them, they were fierce and revengeful; like them, too, they were high-spirited and independent. In consequence of the former, they were involved in perpetual hostilities, and had but a slender and occasional intercourse with neighbouring states. The latter inspired them with such detestation of servitude, that they not only refused to stoop to a foreign yoke, and maintained an obstinate and successful contest in defence of their liberty against the superior power of the Mexican empire, but they guarded with equal solicitude against domestic tyranny; and disdaining to acknowledge any master, they lived under the mild and limited jurisdiction of a council elected by their several tribes.

His war with the Tlascalans.

Cortes, though he had received information concerning the martial character of this people, flattered himself that his professions of delivering the oppressed from the tyranny of Montezuma, their inveterate enmity to the Mexicans, and the example of their ancient allies the Zempoallans, might induce the Tlascalans to grant him a friendly reception. In order to dispose them to this, four Zempoallans of great eminence were sent ambassadors, to request, in his name, and in that of their cazique, that they would permit the Spaniards to pass through the territories of the republic, in their way to Mexico. But instead of the favourable answer which was expected, the Tlascalans seized the ambassadors, and without any regard to their public character, made preparations for sacrificing them to their gods. At the same time, they assembled their troops, in order to oppose those unknown invaders, if they should attempt to make their passage good by force of arms. Various motives concurred in precipitating the Tlascalans into this resolution. A fierce people, shut up within its own narrow precincts, and little accustomed to any intercourse with foreigners, is apt to consider every stranger as an enemy, and is easily excited to arms. They concluded, from Cortes's proposal of visiting Montezuma in his capital, that, notwithstanding all his professions, he courted the friendship of a monarch whom they both hated and feared. The imprudent zeal of Cortes in violating the temples in Zempoalla filled the Tlascalans with horror; and as they were no less attached to their superstition than the other nations of New Spain, they were impatient to avenge their injured gods, and to acquire the merit of offering up to them, as victims, those impious men who had dared to profane their altars; they contemned the small number of the Spaniards, as they had not yet measured their own strength with that of these new enemies, and had no idea of the superiority which they derived from their arms and discipline.

d Relat. di Cortes. Ramus. iii. 225. B. Diaz, c. 57, 58. Herrera, dec. 2. lib. v. c. 14.

e B. Diaz, c. 41, 42. Herrera, dec. 2. lib. v. c. 3, 4.

Aug. 30. Success of it.

Cortes, after waiting some days in vain for the return of his ambassadors, advaneed into the Tlascalan territories. As the resolutions of people who delight in war are executed with no less promptitude than they are formed, he found troops in the field ready to oppose him. They attaeked him with great intrepidity, and, in the first eneounter, wounded some of the Spaniards, and killed two horses; a loss, in their situation, of great moment, because it was irreparable. From this specimen of their courage, Cortes saw the necessity of proceeding with eaution. His army marched in close order; he chose the stations where he halted with attention, and fortified every camp with extraordinary eare. During fourteen days he was exposed to almost uninterrupted assaults, the Tlascalans advancing with numerous armies, and renewing the attack in various forms, with a degree of valour and perseverance to which the Spaniards had seen nothing parallel in the New World. The Spanish historians describe those successive battles with great pomp, and enter into a minute detail of particulars, mingling many exaggerated and incredible circumstanees [f] with such as are real and marvellous. But no power of words can render the recital of a combat interesting, where there is no equality of danger; and when the narrative closes with an account of thousands slain on the one side, while not a single person falls on the other, the most laboured descriptions of the previous disposition of the troops, or of the various vicissitudes in the engagement, command no attention.

Some singular circumstances in it.

There are some circumstances, however, in this war, which are memorable, and merit notice, as they throw light upon the character both of the people of New Spain, and of their conquerors. Though the Tlasealans brought into the field such numerous armies as appear sufficient to have overwhelmed the Spaniards, they were never able to make any impression upon their small battalion. Singular as this may seem, it is not inexplicable. The Tlascalans, though addicted to war, were, like all unpolished nations, strangers to military order and discipline, and lost in a great measure the advantage which they might have derived from their numbers, and the impetuosity of their attack, by their constant solicitude to carry off the dead and wounded. This point of honour, founded on a sentiment of tenderness natural to the human mind, and strengthened by anxiety to preserve the bodies of their countrymen from being devoured by their enemies, was universal among the people of New Spain. Attention to this pious office occupied them even during the heat of combat,[g] broke their union, and diminished the force of the impression which they might have made by a joint effort.

Not only was their superiority in number of little avail, but the imperfection of their military weapons rendered their valour in a great measure inoffensive. After three battles, and many skirmishes and assaults, not one Spaniard was killed in the field. Arrows and spears, headed with flint or the bones of fishes, stakes hardened in the fire, and wooden swords, though destructive weapons among naked Indians, were easily turned aside by the Spanish bucklers, and could hardly penetrate the *escaupiles*, or quilted jackets, which the soldiers wore. The Tlascalans advanced boldly to the charge, and often fought hand to hand. Many of the Spaniards were wounded, though all slightly, which cannot be imputed to any want of courage or strength in their enemies, but to the defect of the arms with which they assailed them.

Notwithstanding the fury with which the Tlascalans attacked the Spaniards, they seemed to have conducted their hostilities with some degree of barbarous generosity. They gave the Spaniards warning of their hostile intentions, and as they knew that their invaders wanted provisions, and imagined, perhaps, like the other Americans, that they had left their own country because it did not afford them subsistence, they sent to their camp a large supply of poultry and maize, desiring them to eat plentifully, because they scorned to attack an enemy enfeebled by hunger; and it would be an affront to their gods to offer them famished victims, as well as disagreeable to themselves to feed on such emaciated prey.[h]

When they were taught by the first encounter with their new enemies, that it was not easy to execute this threat; when they perceived, in the subsequent engagements, that notwithstanding all the efforts of their own valour, of which they had a very high opinion, not one of the Spaniards was slain or taken, they began to conceive them to be a superior order of beings, against whom human power could not avail. In this extremity they had recourse to their priests, requiring them to reveal the mysterious causes of such extraordinary events, and to declare what new means they should employ in order to repulse those formidable invaders. The priests, after many sacrifices and incantations, delivered this response: That these strangers were the offspring of the sun, procreated by his animating energy in the regions of the east; that, by day, while cherished with the influence of his parental beams, they were invincible; but by night, when his reviving heat was withdrawn, their vigour declined and faded like the herbs in the field, and they dwindled down into mortal men.[i] Theories less plausible have gained credit with more enlightened nations, and have influenced their conduet. In consequence of this, the Tlascalans, with the implicit confidence of men who fancy themselves to be under the guidance of Heaven, acted in contradiction to one of their most established maxims in war, and ventured to attaek the enemy with a strong body in the night-time, in hopes of destroying them when enfeebled and surprised. But Cortes had greater vigilanee and discernment than to be de-

ccived by the rude stratagems of an Indian army. The sentinels at his out-posts, observing some extraordinary movement among the Tlascalans, gave the alarm. In a moment the troops were under arms, and sallying out, dispersed the party with great slaughter, without allowing it to approach the camp. The Tlascalans convinced by sad experience that their priests had deluded them, and satisfied that they attempted in vain, either to deceive or to vanquish their enemies, their fierceness abated, and they began to incline seriously to peace.

The Tlascalans disposed to peace.

They were at a loss, however, in what manner to address the strangers, what idea to form of their character, and whether to consider them as beings of a gentle or of a malevolent nature. There were circumstances in their conduct which seemed to favour each opinion. On the one hand, as the Spaniards constantly dismissed the prisoners whom they took, not only without injury, but often with presents of European toys, and renewed their offers of peace after every victory; this lenity amazed people, who, according to the exterminating system of war known in America, were accustomed to sacrifice and devour without mercy all the captives taken in battle, and disposed them to entertain favourable sentiments of the humanity of their new enemies. But, on the other hand, as Cortes had seized fifty of their countrymen who brought provisions to his camp, and, supposing them to be spies, had cut off their hands;[k] this bloody spectacle, added to the terror occasioned by the fire-arms and horses, filled them with dreadful impressions of the ferocity of their invaders.[l] This uncertainty was apparent in the mode of addressing the Spaniards. "If," said they, "you are divinities of a cruel and savage nature, we present to you five slaves, that you may drink their blood and eat their flesh. If you are mild deities, accept an offering of incense and variegated plumes. If you are men, here is meat, and bread, and fruit to nourish you."[m] The peace which both parties now desired with equal ardour, was soon concluded. The Tlascalans yielded themselves as vassals to the crown of Castile, and engaged to assist Cortes in all his future operations. He took the republic under his protection, and promised to defend their persons and possessions from injury or violence.

Concluded.

Advantages of it to the Spaniards.

This treaty was concluded at a seasonable juncture for the Spaniards. The fatigue of service among a small body of men, surrounded by such a multitude of enemies, was incredible. Half the army was on duty every night, and even they whose turn it was to rest, slept always upon their arms, that they might be ready to run to their posts on a moment's warning. Many of them were wounded; a good number, and among these Cortes himself, laboured under the distempers prevalent in hot climates, and several had died since they set out from Vera Cruz. Notwithstanding the supplies which they received from the Tlascalans, they were often in want of provisions, and so destitute of the necessaries most requisite in dangerous service, that they had no salve to dress their wounds, but what was composed with the fat of the Indians whom they had slain.[n] Worn out with such intolerable toil and hardships, many of the soldiers began to murmur, and, when they reflected on the multitude and boldness of their enemies, more were ready to despair. It required the utmost exertion of Cortes's authority and address to check this spirit of despondency in its progress, and to reanimate his followers with their wonted sense of their own superiority over the enemies with whom they had to contend.[o] The submission of the Tlascalans, and their own triumphant entry into the capital city, where they were received with the reverence paid to beings of a superior order, banished, at once, from the minds of the Spaniards, all memory of past sufferings, dispelled every anxious thought with respect to their future operations, and fully satisfied them that there was not now any power in America able to withstand their arms.[p]

Cortes solicitous to gain their confidence,

Cortes remained twenty days in Tlascala, in order to allow his troops a short interval of repose after such hard service. During that time he was employed in transactions and inquiries of great moment with respect to his future schemes. In his daily conferences with the Tlascalan chiefs, he received information concerning every particular relative to the state of the Mexican empire, or to the qualities of its sovereign, which could be of use in regulating his conduct, whether he should be obliged to act as a friend or as an enemy. As he found that the antipathy of his new allies to the Mexican nation was no less implacable than had been represented, and perceived what benefit he might derive from the aid of such powerful confederates, he employed all his powers of insinuation in order to gain their confidence. Nor was any extraordinary exertion of these necessary. The Tlascalans, with the levity of mind natural to unpolished men, were, of their own accord, disposed to run from the extreme of hatred to that of fondness. Every thing in the appearance and conduct of their guests was to them matter of wonder.[q] They gazed with admiration at whatever the Spaniards did, and fancying them to be of heavenly origin, were eager not only to comply with their demands, but to anticipate their wishes. They offered, accordingly, to accompany Cortes in his march to Mexico, with all the forces of the republic, under the command of their most experienced captains

which he had almost lost by his rash zeal.

But, after bestowing so much pains on cementing this union, all the beneficial fruits of it were on the point of being lost, by a new effusion of that intemperate religious zeal with which Cortes was animated, no less than the other adventurers of the age. They all considered themselves as instruments employed by Heaven to propagate the christian faith, and the less they were qualified, either by their knowledge or morals, for such a function, they were more eager to discharge it. The profound veneration of the Tlascalans for the Spaniards, having encouraged Cortes to explain to some of their chiefs the doctrines of the christian religion, and to insist that they should abandon their own superstitions, and embrace the faith of their new friends, they, according to an idea universal among barbarous nations, readily acknowledged the truth and excellence of what he taught; but contended, that the *Teules* of Tlascala were divinities no less than the God in whom the Spaniards believed; and as that Being was entitled to the homage of Europeans, so they were bound to revere the same powers which their ancestors had worshipped. Cortes continued, nevertheless, to urge his demand in a tone of authority, mingling threats with his arguments, until the Tlascalans could bear it no longer, and conjured him never to mention this again, lest the gods should avenge on their heads the guilt of having listened to such a proposition. Cortes, astonished and enraged at their obstinacy, prepared to execute by force what he could not accomplish by persuasion, and was going to overturn their altars, and cast down their idols with the same violent hand as at Zempoalla, if Father Bartholomew de Olmedo, chaplain to the expedition, had not checked his inconsiderate impetuosity. He represented the imprudence of such an attempt in a large city newly reconciled, and filled with people no less superstitious than warlike; he declared, that the proceeding at Zempoalla had always appeared to him precipitate and unjust; that religion was not to be propagated by the sword, or infidels to be converted by violence; that other weapons were to be employed in this ministry; patient instruction must enlighten the understanding, and pious example captivate the heart, before men could be induced to abandon error, and embrace the truth.[r] Amidst scenes, where a narrow-minded bigotry appears in such close union with oppression and cruelty, sentiments so liberal and humane soothe the mind with unexpected pleasure; and at a time when the rights of conscience were little understood in the christian world, and the idea of toleration unknown, one is astonished to find a Spanish monk of the sixteenth century among the first advocates against persecution, and in behalf of religious liberty. The remonstrances of an ecclesiastic, no less respectable for wisdom than virtue, had their proper weight with Cortes. He left the Tlascalans in the undisturbed exercise of their own rites, requiring only that they should desist from their horrid practice of offering human victims in sacrifice.

Advances to Cholula.

Cortes, as soon as his troops were fit for service, resolved to continue his march towards Mexico, notwithstanding the earnest dissuasives of the Tlascalans, who represented his destruction as unavoidable, if he put himself in the power of a prince so faithless and cruel as Montezuma. As he was accompanied by six thousand Tlascalans, he had now the command of forces which resembled a regular army. They directed their course towards Cholula; Montezuma, who had at length consented to admit the Spaniards into his presence, having informed Cortes that he had given orders for his friendly reception there. Cholula was a considerable town, and though only five leagues distant from Tlascala, was formerly an independent state, but had been lately subjected to the Mexican empire. This was considered by all the people of New Spain as a holy place, the sanctuary and chief seat of their gods, to which pilgrims resorted from every province, and a greater number of human victims were offered in its principal temple than even in that of Mexico.[s] Montezuma seems to have invited the Spaniards thither, either from some superstitious hope that the gods would not suffer this sacred mansion to be defiled, without pouring down their wrath upon those impious strangers, who ventured to insult their power in the place of its peculiar residence; or from a belief that he himself might there attempt to cut them off with more certain success, under the immediate protection of his divinities.

Oct. 13.

The severity of his procedure there.

Cortes had been warned by the Tlascalans, before he set out on his march, to keep a watchful eye over the Cholulans. He himself, though received into the town with much seeming respect and cordiality, observed several circumstances in their conduct which excited suspicion. Two of the Tlascalans, who were encamped at some distance from the town, as the Cholulans refused to admit their ancient enemies within its precincts, having found means to enter in disguise, acquainted Cortes, that they observed the women and children of the principal citizens retiring in great hurry every night; and that six children had been sacrificed in the chief temple, a rite which indicated the execution of some warlike enterprise to be approaching. At the same time, Marina the interpreter received information from an Indian woman of distinction, whose confidence she had gained, that the destruction of her friends was concerted; that a body of Mexican troops lay concealed near the town; that some of the streets were barricaded, and in others, pits or deep trenches were dug, and slightly covered over, as traps into which the horses might fall; that

r B. Diaz, c. 77. p. 54. c. 83. p. 61.

s Torquemada, Monar. Ind. i. 281, 282. ii. 291. Gomara Cron. c. 61. Herrera, dec. 2. lib. vii. c. 2.

stones or missive weapons were collected on the tops of the temples, with which to overwhelm the infantry; that the fatal hour was now at hand, and their ruin unavoidable. Cortes, alarmed at this concurring evidence, secretly arrested three of the chief priests, and extorted from them a confession that confirmed the intelligence which he had received. As not a moment was to be lost, he instantly resolved to prevent his enemies, and to inflict on them such dreadful vengeance as might strike Montezuma and his subjects with terror. For this purpose, the Spaniards and Zempoallans were drawn up in a large court, which had been allotted for their quarters, near the centre of the town; the Tlascalans had orders to advance; the magistrates and several of the chief citizens were sent for, under various pretexts, and seized. On a signal given, the troops rushed out, and fell upon the multitude, destitute of leaders, and so much astonished, that the weapons dropping from their hands, they stood motionless, and incapable of defence. While the Spaniards pressed them in front, the Tlascalans attacked them in the rear. The streets were filled with bloodshed and death. The temples, which afforded a retreat to the priests and some of the leading men, were set on fire, and they perished in the flames. This scene of horror continued two days; during which the wretched inhabitants suffered all that the destructive rage of the Spaniards, or the implacable revenge of their Indian allies, could inflict. At length the carnage ceased, after the slaughter of six thousand Cholulans, without the loss of a single Spaniard. Cortes then released the magistrates, and reproaching them bitterly for their intended treachery, declared, that as justice was now appeased, he forgave the offence, but required them to recall the citizens who had fled, and re-establish order in the town. Such was the ascendant which the Spaniards had acquired over this superstitious race of men, and so deeply were they impressed with an opinion of their superior discernment, as well as power, that, in obedience to this command, the city was in a few days filled again with people, who, amidst the ruins of their sacred buildings, yielded respectful service to men whose hands were stained with the blood of their relations and fellow-citizens.

Oct. 29. Advances towards Mexico.

From Cholula, Cortes advanced directly towards Mexico, which was only twenty leagues distant. In every place through which he passed, he was received as a person possessed of sufficient power to deliver the empire from the oppression under which it groaned; and the caziques or governors communicated to him all the grievances which they felt under the tyrannical government of Montezuma, with that unreserved confidence which men naturally repose in superior beings. When Cortes first observed the seeds of discontent in the remote provinces of the empire, hope dawned upon his mind; but when he now discovered such symptoms of alienation from their monarch near the seat of government, he concluded that the vital parts of the constitution were affected, and conceived the most sanguine expectations of overturning a state, whose natural strength was thus divided and impaired. While those reflections encouraged the general to persist in his arduous undertaking, the soldiers were no less animated by observations more obvious to their capacity. In descending from the mountains of Chalco, across which the road lay, the vast plain of Mexico opened gradually to their view. When they first beheld this prospect, one of the most striking and beautiful on the face of the earth; when they observed fertile and cultivated fields stretching further than the eye could reach; when they saw a lake resembling the sea in extent, encompassed with large towns, and discovered the capital city rising upon an island in the middle, adorned with its temples and turrets; the scene so far exceeded their imagination, that some believed the fanciful descriptions of romance were realized, and that its enchanted palaces and gilded domes were presented to their sight; others could hardly persuade themselves that this wonderful spectacle was any thing more than a dream.[u] As they advanced, their doubts were removed, but their amazement increased. They were now fully satisfied that the country was rich beyond any conception which they had formed of it, and flattered themselves that at length they should obtain an ample recompence for all their services and sufferings.

First view of it.

Hitherto they had met with no enemy to oppose their progress, though several circumstances occurred which led them to suspect that some design was formed to surprise and cut them off. Many messengers arrived successively from Montezuma, permitting them one day to advance, requiring them on the next to retire, as his hopes or fears alternately prevailed; and so wonderful was this infatuation, which seems to be unaccountable on any supposition but that of a superstitious dread of the Spaniards, as beings of a superior nature, that Cortes was almost at the gates of the capital, before the monarch had determined whether to receive him as a friend, or to oppose him as an enemy. But as no sign of open hostility appeared, the Spaniards, without regarding the fluctuations of Montezuma's sentiments, continued their march along the causeway which led to Mexico through the lake, with great circumspection and the strictest discipline, though without seeming to suspect the prince whom they were about to visit.

The irresolution of Montezuma.

When they drew near the city, about a thousand persons, who appeared to be of distinction, came forth to meet them, adorned with plumes and clad in mantles of fine cotton. Each of these, in his order, passed by

His first interview with the Spaniards.

t Cortes Relat. Ramus. iii. 231. B. Diaz, c. 83. Gomara Cron. c. 64. Herrera, dec. 2. lib. vii. c. 1, 2. See Note CVIII.

u See Note CIX.

Cortes, and saluted him according to the mode deemed most respectful and submissive in their country. They announced the approach of Montezuma himself, and soon after his harbingers came in sight. There appeared first two hundred persons in an uniform dress, with large plumes of feathers, alike in fashion, marching two and two, in deep silence, bare-footed, with their eyes fixed on the ground. These were followed by a company of higher rank, in their most showy apparel, in the midst of whom was Montezuma, in a chair or litter richly ornamented with gold and feathers of various colours. Four of his principal favourites carried him on their shoulders, others supported a canopy of curious workmanship over his head. Before him marched three officers with rods of gold in their hands, which they lifted up on high at certain intervals, and at that signal all the people bowed their heads, and hid their faces, as unworthy to look on so great a monarch. When he drew near, Cortes dismounted, advancing towards him with officious haste, and in a respectful posture. At the same time Montezuma alighted from his chair, and leaning on the arms of two of his near relations, approached with a slow and stately pace, his attendants covering the street with cotton cloths, that he might not touch the ground. Cortes accosted him with profound reverence, after the European fashion. He returned the salutation, according to the mode of his country, by touching the earth with his hand, and then kissing it. This ceremony, the customary expression of veneration from inferiors towards those who were above them in rank, appeared such amazing condescension in a proud monarch, who scarcely deigned to consider the rest of mankind as of the same species with himself, that all his subjects firmly believed those persons, before whom he humbled himself in this manner, to be something more than human. Accordingly, as they marched through the crowd, the Spaniards frequently, and with much satisfaction, heard themselves denominated *Teules*, or divinities. Nothing material passed in this first interview. Montezuma conducted Cortes to the quarters which he had prepared for his reception, and immediately took leave of him, with a politeness not unworthy of a court more refined. "You are now," says he, "with your brothers in your own house; refresh yourselves after your fatigue, and be happy until I return."[x] The place allotted to the Spaniards for their lodging was a house built by the father of Montezuma. It was surrounded by a stone wall, with towers at proper distances, which served for defence as well as for ornament, and its apartments and courts were so large, as to accommodate both the Spaniards and their Indian allies. The first care of Cortes was to take precautions for his security, by planting the artillery so as to command the different avenues which led to it, by appointing a large division of his troops to be always on guard, and by posting sentinels at proper stations, with injunctions to observe the same vigilant discipline as if they were within sight of an enemy's camp.

His idea of the Spaniards.

In the evening, Montezuma returned to visit his guests with the same pomp as in their first interview, and brought presents of such value, not only to Cortes and to his officers, but even to the private men, as proved the liberality of the monarch to be suitable to the opulence of his kingdom. A long conference ensued, in which Cortes learned what was the opinion of Montezuma with respect to the Spaniards. It was an established tradition, he told him, among the Mexicans, that their ancestors came originally from a remote region, and conquered the provinces now subject to his dominion; that after they were settled there, the great captain who conducted this colony, returned to his own country, promising, that at some future period his descendants should visit them, assume the government, and reform their constitution and laws; that from what he had heard and seen of Cortes and his followers, he was convinced that they were the very persons whose appearance the Mexican traditions and prophecies taught them to expect; that accordingly he had received them, not as strangers, but as relations of the same blood and parentage, and desired that they might consider themselves as masters in his dominions, for both himself and his subjects should be ready to comply with their will, and even to prevent their wishes. Cortes made a reply in his usual style, with respect to the dignity and power of his sovereign, and his intention in sending him into that country; artfully endeavouring so to frame his discourse, that it might coincide as much as possible with the idea which Montezuma had formed concerning the origin of the Spaniards. Next morning, Cortes and some of his principal attendants were admitted to a public audience of the emperor. The three subsequent days were employed in viewing the city, the appearance of which, so far superior in the order of its buildings and the number of its inhabitants to any place the Spaniards had beheld in America, and yet so little resembling the structure of a European city, filled them with surprise and admiration.

Mexico, or *Tenuchtitlan*, as it was anciently called by the natives, is situated in a large plain, environed by mountains of such height, that, though within the torrid zone, the temperature of its climate is mild and healthful. All the moisture which descends from the high grounds is collected in several lakes, the two largest of which, of about ninety miles in circuit, communicate with each other. The waters of the one are fresh, those of the others brackish. On the banks of the latter, and on some small islands adjoining to them, the capital of Montezuma's empire was built. The access to the city was by artificial causeways or streets formed of stones and earth, about thirty feet in breadth. As the

x Cortes Relat. Ram. iii. 232—235. B. Diaz. c. 83—88. Gomara Cron. c. 64, 65. Herrera, dec. 2. lib. vii. c. 3, 4, 5.

waters of the lake during the rainy season overflowed the flat country, these causeways were of considerable length. That of Tacuba, on the west, extended a mile and a half; that of Tepeaca,[y] on the northwest, three miles; that of Cuoyacan, towards the south, six miles. On the east there was no causeway, and the city could be approached only by canoes.[z] In each of these causeways were openings at proper intervals, through which the waters flowed, and over these beams of timber were laid, which being covered with earth, the causeway or street had everywhere an uniform appearance. As the approaches to the city were singular, its construction was remarkable. Not only the temples of their gods, but the houses belonging to the monarch, and to persons of distinction, were of such dimensions, that in comparison with any other buildings which had been hitherto discovered in America, they might be termed magnificent. The habitations of the common people were mean, resembling the huts of other Indians. But they were all placed in a regular manner, on the banks of the canals which passed through the city, in some of its districts, or on the sides of the streets which intersected it in other quarters. In several places were large openings or squares, one of which, allotted for the great market, is said to have been so spacious, that forty or fifty thousand persons carried on traffic there. In this city, the pride of the New World, and the noblest monument of the industry and art of man, while unacquainted with the use of iron, and destitute of aid from any domestic animal, the Spaniards, who are most moderate in their computations, reckon that there were at least sixty thousand inhabitants.[a]

Their dangerous situation.

But how much soever the novelty of those objects might amuse or astonish the Spaniards, they felt the utmost solicitude with respect to their own situation. From a concurrence of circumstances, no less unexpected than favourable to their progress, they had been allowed to penetrate into the heart of a powerful kingdom, and were now lodged in its capital, without having once met with open opposition from its monarch. The Tlascalans, however, had earnestly dissuaded them from placing such confidence in Montezuma as to enter a city of such peculiar situation as Mexico, where that prince would have them at mercy, shut up as it were in a snare, from which it was impossible to escape. They assured them that the Mexican priests had, in the name of the gods, counselled their sovereign to admit the Spaniards into the capital, that he might cut them off there at one blow with perfect security.[b] They now perceived too plainly, that the apprehensions of their allies were not destitute of foundation; that, by breaking the bridges placed at certain intervals on the causeways, or by destroying part of the causeways themselves, their retreat would be rendered impracticable, and they must remain cooped up in the centre of a hostile city, surrounded by multitudes sufficient to overwhelm them, and without a possibility of receiving aid from their allies. Montezuma had, indeed, received them with distinguished respect. But ought they to reckon upon this as real, or to consider it as feigned? Even if it were sincere, could they promise on its continuance? Their safety depended upon the will of a monarch in whose attachment they had no reason to confide; and an order flowing from his caprice, or a word uttered by him in passion, might decide irrevocably concerning their fate.[c]

Solicitude and perplexity of Cortes.

These reflections, so obvious as to occur to the meanest soldier, did not escape the vigilant sagacity of their general. Before he set out from Cholula, Cortes had received advice from Villa Rica,[d] that Qualpopoca, one of the Mexican generals on the frontiers, having assembled an army in order to attack some of the people whom the Spaniards had encouraged to throw off the Mexican yoke, Escalante had marched out with part of the garrison to support his allies; that an engagement had ensued, in which, though the Spanish were victorious, Escalante, with seven of his men, had been mortally wounded, his horse killed, and one Spaniard had been surrounded by the enemy and taken alive; that the head of this unfortunate captive, after being carried in triumph to different cities in order to convince the people that their invaders were not immortal, had been sent to Mexico.[e] Cortes, though alarmed with this intelligence, as an indication of Montezuma's hostile intentions, had continued his march. But as soon as he entered Mexico, he became sensible, that, from an excess of confidence in the superior valour and discipline of his troops, as well as from the disadvantage of having nothing to guide him in an unknown country, but the defective intelligence which he had received from people with whom his mode of communication was very imperfect, he had pushed forward into a situation, where it was difficult to continue, and from which it was dangerous to retire. Disgrace, and perhaps ruin, was the certain consequence of attempting the latter. The success of his enterprise depended upon supporting the high opinion which the people of New Spain had formed with respect to the irresistible power of his arms. Upon the first symptom of timidity on his part, their veneration would cease, and Montezuma, whom fear alone restrained at present, would let loose upon him the whole force of his empire. At the same time, he knew that the countenance of his own sovereign was to be obtained only by a series of victories, and that nothing but the merit of extraordinary success

y I am indebted to M. Clavigero for correcting an error of importance in my description of Mexico. From the east, where Tezeuco was situated, there was no causeway, as I have observed, and yet by some inattention on my part, or on that of the printer, in all the former editions one of the causeways was said to lead to Tezeuco. M. Clavigero's measurement of the length of these causeways differs somewhat from that which I have adopted from F. Torribio. Clavig. ii. p. 72.

could screen his conduct from the censure of irregularity. From all these considerations, it was necessary to maintain his station, and to extricate himself out of the difficulties in which one bold step had involved him, by venturing upon another still bolder. The situation was trying, but his mind was equal to it; and after revolving the matter with deep attention, he fixed upon a plan no less extraordinary than daring. He determined to seize Montezuma in his palace, and to carry him as a prisoner to the Spanish quarters. From the superstitious veneration of the Mexicans for the person of their monarch, as well as their implicit submission to his will, he hoped, by having Montezuma in his power, to acquire the supreme direction of their affairs; or, at least, with such a sacred pledge in his hands, he made no doubt of being secure from any effort of their violence.

Resolves to seize Montezuma.

This he immediately proposed to his officers. The timid startled at a measure so audacious, and raised objections. The more intelligent and resolute, conscious that it was the only resource in which there appeared any prospect of safety, warmly approved of it, and brought over their companions so cordially to the same opinion, that it was agreed instantly to make the attempt. At his usual hour of visiting Montezuma, Cortes went to the palace, accompanied by Alvarado, Sandoval, Lugo, Velasquez de Leon, and Davila, five of his principal officers, and as many trusty soldiers. Thirty chosen men followed, not in regular order, but sauntering at some distance, as if they had no object but curiosity; small parties were posted at proper intervals, in all the streets leading from the Spanish quarters to the court; and the remainder of his troops, with the Tlascalan allies, were under arms ready to sally out on the first alarm. Cortes and his attendants were admitted without suspicion: the Mexicans retiring, as usual, out of respect. He addressed the monarch in a tone very different from that which he had employed in former conferences, reproaching him bitterly as the author of the violent assault made upon the Spaniards by one of his officers, and demanded public reparation for the loss which they had sustained by the death of some of their companions, as well as for the insult offered to the great prince whose servants they were. Montezuma, confounded at this unexpected accusation, and changing colour, either from consciousness of guilt, or from feeling the indignity with which he was treated, asserted his own innocence with great earnestness, and, as a proof of it, gave orders instantly to bring Qualpopoca and his accomplices prisoners to Mexico. Cortes replied, with seeming complaisance, that a declaration so respectable left no doubt remaining in his own mind, but that something more was requisite to satisfy his followers, who would never be convinced that Montezuma did not harbour hostile intentions against them, unless, as an evidence of his confidence and attachment, he removed from his own palace, and took up his residence in the Spanish quarters, where he should be served and honoured as became a great monarch. The first mention of so strange a proposal bereaved Montezuma of speech, and almost of motion. At length, indignation gave him utterance, and he haughtily answered, "That persons of his rank were not accustomed voluntarily to give up themselves as prisoners; and were he mean enough to do so, his subjects would not permit such an affront to be offered to their sovereign." Cortes, unwilling to employ force, endeavoured alternately to soothe and to intimidate him. The altercation became warm; and having continued above three hours, Velasquez de Leon, an impetuous and gallant young man, exclaimed with impatience, "Why waste more time in vain? Let us either seize him instantly, or stab him to the heart." The threatening voice and fierce gestures with which these words were uttered, struck Montezuma. The Spaniards, he was sensible, had now proceeded so far, as left him no hope that they would recede. His own danger was imminent, the necessity unavoidable. He saw both, and abandoning himself to his fate, complied with their request.

His manner of executing this.

His officers were called. He communicated to them his resolution. Though astonished and afflicted, they presumed not to question the will of their master, but carried him in silent pomp, all bathed in tears, to the Spanish quarters. When it was known that the strangers were conveying away the emperor, the people broke out into the wildest transports of grief and rage, threatening the Spaniards with immediate destruction, as the punishment justly due to their impious audacity. But as soon as Montezuma appeared with a seeming gaiety of countenance, and waved his hand, the tumult was hushed; and upon his declaring it to be of his own choice that he went to reside for some time among his new friends, the multitude, taught to revere every intimation of their sovereign's pleasure, quietly dispersed.[f]

Montezuma carried to the Spanish quarters.

Thus was a powerful prince seized by a few strangers in the midst of his capital, at noon-day, and carried off as a prisoner without opposition or bloodshed. History contains nothing parallel to this event, either with respect to the temerity of the attempt, or the success of the execution; and were not all the circumstances of this extraordinary transaction authenticated by the most unquestionable evidence, they would appear so wild and extravagant, as to go far beyond the bounds of that probability which must be preserved even in fictitious narrations.

Montezuma was received in the Spanish quarters with all the ceremonious respect which Cortes had promised. He was attended by his own domestics, and served with his usual state. His principal officers had free access to him, and

Received with apparent respect.

[f] B. Diaz, c. 95. Gomara Cron. c. 83. Cortes Relat. Ram. iii. p. 235, 236. Herrera, dec. 2. lib. viii. c. 2, 3.

he carried on every function of government as if he had been at perfect liberty. The Spaniards, however, watched him with the scrupulous vigilance which was natural in guarding such an important prize,[g] endeavouring at the same time to soothe and reconcile him to his situation, by every external demonstration of regard and attachment. But from captive princes the hour of humiliation and suffering is never far distant. Qualpopoca, his son, and five of the principal officers who served under him, were brought prisoners to the capital, in consequence of the orders which Montezuma had issued. The emperor gave them up to Cortes, that he might inquire into the nature of their crime, and determine their punishment. They were formally tried by a Spanish court-martial; and though they had acted no other part than what became loyal subjects and brave men, in obeying the orders of their lawful sovereign, and in opposing the invaders of their country, they were condemned to be burnt alive. The execution of such atrocious deeds is seldom long suspended. The unhappy victims were instantly led forth. The pile on which they were laid was composed of the weapons collected in the royal magazine for the public defence. An innumerable multitude of Mexicans beheld, in silent astonishment, the double insult offered to the majesty of their empire, an officer of distinction committed to the flames by the authority of strangers, for having done what he owed in duty to his natural sovereign; and the arms provided by the foresight of their ancestors for avenging public wrongs, consumed before their eyes.

Subjected to cruel indignities.

Dec. 4.

But these were not the most shocking indignities which the Mexicans had to bear. The Spaniards, convinced that Qualpopoca would not have ventured to attack Escalante without orders from his master, were not satisfied with inflicting vengeance on the instrument employed in committing that crime, while the author of it escaped with impunity. Just before Qualpopoca was led out to suffer, Cortes entered the apartment of Montezuma, followed by some of his officers, and a soldier carrying a pair of fetters; and approaching the monarch with a stern countenance, told him, that as the persons who were now to undergo the punishment which they merited, had charged him as the cause of the outrage committed, it was necessary that he likewise should make atonement for that guilt; then turning away abruptly, without waiting for a reply, commanded the soldiers to clap the fetters on his legs. The orders were instantly executed. The disconsolate monarch, trained up with an idea that his person was sacred and inviolable, and considering this profanation of it as the prelude of immediate death, broke out into loud lamentations and complaints. His attendants, speechless with horror, fell at his feet, bathing them with their tears; and bearing up the fetters in their hands, endeavoured with officious tenderness to lighten their pressure. Nor did their grief and despondency abate until Cortes returned from the execution, and with a cheerful countenance ordered the fetters to be taken off. As Montezuma's spirits had sunk with unmanly dejection, they now rose into indecent joy; and with an unbecoming transition, he passed at once from the anguish of despair to transports of gratitude and expressions of fondness towards his deliverer.

Reasons of Cortes's conduct.

In those transactions, as represented by the Spanish historians, we search in vain for the qualities which distinguish other parts of Cortes's conduct. To usurp a jurisdiction which could not belong to a stranger, who assumed no higher character than that of an ambassador from a foreign prince, and under colour of it, to inflict a capital punishment on men whose conduct entitled them to esteem, appears an act of barbarous cruelty. To put the monarch of a great kingdom in irons, and, after such ignominious treatment, suddenly to release him, seems to be a display of power no less inconsiderate than wanton. According to the common relation, no account can be given either of one action or the other, but that Cortes, intoxicated with success, and presuming on the ascendant which he had acquired over the minds of the Mexicans, thought nothing too bold for him to undertake, or too dangerous to execute. But, in one view, these proceedings, however repugnant to justice and humanity, may have flowed from that artful policy which regulated every part of Cortes's behaviour towards the Mexicans. They had conceived the Spaniards to be an order of beings superior to men. It was of the utmost consequence to cherish this illusion, and to keep up the veneration which it inspired. Cortes wished that shedding the blood of a Spaniard should be deemed the most heinous of all crimes; and nothing appeared better calculated to establish this opinion, than to condemn the first Mexicans who had ventured to commit it to a cruel death, and to oblige their monarch himself to submit to a mortifying indignity, as an expiation for being accessory to a deed so atrocious.[h]

1520. The power which Cortes acquired.

The rigour with which Cortes punished the unhappy persons who first presumed to lay violent hands upon his followers, seems accordingly to have made all the impression that he desired. The spirit of Montezuma was not only overawed, but subdued. During six months that Cortes remained in Mexico, the monarch continued in the Spanish quarters, with an appearance of as entire satisfaction and tranquillity, as if he had resided there, not from constraint, but through choice. His ministers and officers attended him as usual. He took cognizance of all affairs; every order was issued in his name. The external aspect of government appearing the same, and all its ancient forms being scrupulously ob-

g See Note CX.

h See Note CXI.

served, the people were so little sensible of any change, that they obeyed the mandates of their monarch with the same submissive reverence as ever. Such was the dread which both Montezuma and his subjects had of the Spaniards, or such the veneration in which they held them, that no attempt was made to deliver their sovereign from confinement; and though Cortes, relying on this ascendant which he had acquired over their minds, permitted him not only to visit his temples, but to make hunting excursions beyond the lake, a guard of a few Spaniards carried with it such a terror as to intimidate the multitude, and secure the captive monarch.[i]

Thus, by the fortunate temerity of Cortes in seizing Montezuma, the Spaniards at once secured to themselves more extensive authority in the Mexican empire than it was possible to have acquired in a long course of time by open force; and they exercised more absolute sway in the name of another than they could have done in their own. The arts of polished nations, in subjecting such as are less improved, have been nearly the same in every period. The system of screening a foreign usurpation, under the sanction of authority derived from the natural rulers of a country, the device of employing the magistrates and forms already established as instruments to introduce a new dominion, of which we are apt to boast as sublime refinements in policy peculiar to the present age, were inventions of a more early period, and had been tried with success in the west, long before they were practised in the east.

Use which he makes of it.

Cortes availed himself to the utmost of the powers which he possessed by being able to act in the name of Montezuma. He sent some Spaniards, whom he judged best qualified for such commissions, into different parts of the empire, accompanied by persons of distinction, whom Montezuma appointed to attend them both as guides and protectors. They visited most of the provinces, viewed their soil and productions, surveyed with particular care the districts which yielded gold or silver, pitched upon several places as proper stations for future colonies, and endeavoured to prepare the minds of the people for submitting to the Spanish yoke. While they were thus employed, Cortes, in the name and by the authority of Montezuma, degraded some of the principal officers in the empire, whose abilities or independent spirit excited his jealousy, and substituted in their place persons less capable or more obsequious.

One thing still was wanting to complete his security. He wished to have such command of the lake as might insure a retreat, if, either from levity or disgust, the Mexicans should take arms against him, and break down the bridges or causeways. This, too, his own address, and the facility of Montezuma, enabled him to accomplish. Having frequently entertained his prisoner with pompous accounts of the European marine and art of navigation, he awakened his curiosity to see those moving palaces which made their way through the water without oars. Under pretext of gratifying this desire, Cortes persuaded Montezuma to appoint some of his subjects to fetch part of the naval stores which the Spaniards had deposited at Vera Cruz to Mexico, and to employ others in cutting down and preparing timber. With their assistance, the Spanish carpenters soon completed two brigantines, which afforded a frivolous amusement to the monarch, and were considered by Cortes as a certain resource, if he should be obliged to retire.

Montezuma acknowledges himself a vassal of Spain.

Encouraged by so many instances of the monarch's tame submission to his will, Cortes ventured to put it to a proof still more trying. He urged Montezuma to acknowledge himself a vassal of the king of Castile, to hold his crown of him as superior, and to subject his dominions to the payment of an annual tribute. With this requisition, the last and most humbling that can be made to one possessed of sovereign authority, Montezuma was so obsequious as to comply. He called together the chief men of his empire, and in a solemn harangue, reminding them of the traditions and prophecies which led them to expect the arrival of a people sprung from the same stock with themselves, in order to take possession of the supreme power, he declared his belief that the Spaniards were this promised race; that therefore he recognised the right of their monarch to govern the Mexican empire; that he would lay his crown at his feet, and obey him as a tributary. While uttering these words, Montezuma discovered how deeply he was affected in making such a sacrifice. Tears and groans frequently interrupted his discourse. Overawed and broken as his spirit was, it still retained such a sense of dignity, as to feel that pang which pierces the heart of princes when constrained to resign independent power. The first mention of such a resolution struck the assembly dumb with astonishment. This was followed by a sudden murmur of sorrow, mingled with indignation, which indicated some violent eruption of rage to be near at hand. This Cortes foresaw, and seasonably interposed to prevent it, by declaring that his master had no intention to deprive Montezuma of the royal dignity, or to make any innovation upon the constitution and laws of the Mexican empire. This assurance, added to their dread of the Spanish power, and to the authority of their monarch's example, extorted a reluctant consent from the assembly.[k] The act of submission and homage was executed with all the formalities which the Spaniards were pleased to prescribe.[l]

The amount of the treasure collected by the Spaniards.

Montezuma, at the desire of Cortes, accompanied this profession of fealty and homage with a magnificent present

i Cortes Relat. p. 236. E. B. Diaz, c. 97, 98, 99.
k See Note CXII.

l Cortes Relat. 238. D. B. Diaz, c. 101. Gomara Cron. c. 92. Herrera, dec. 2. lib. x. c. 4.

to his new sovereign; and after his example, his subjects brought in very liberal contributions. The Spaniards now collected all the treasure which had been either voluntarily bestowed upon them at different times by Montezuma, or had been extorted from his people under various pretexts; and having melted the gold and silver, the value of these, without including jewels and ornaments of various kinds, which were preserved on account of their curious workmanship, amounted to six hundred thousand *pesos*. The soldiers were impatient to have it divided, and Cortes complied with their desire. A fifth of the whole was first set apart as the tax due to the king. Another fifth was allotted to Cortes as commander in chief. The sums advanced by Velasquez, by Cortes, and by some of the officers, towards defraying the expense of fitting out the armament, were then deducted. The remainder was divided among the army, including the garrison of Vera Cruz, in proportion to their different ranks. After so many defalcations, the share of a private man did not exceed a hundred pesos. This sum fell so far below their sanguine expectations, that some soldiers rejected it with scorn, and others murmured so loudly at this cruel disappointment of their hopes, that it required all the address of Cortes, and no small exertion of his liberality, to appease them. The complaints of the army were not altogether destitute of foundation. As the crown had contributed nothing towards the equipment or success of the armament, it was not without regret that the soldiers beheld it sweep away so great a proportion of the treasure purchased by their blood and toil. What fell to the share of the general appeared, according to the ideas of wealth in the sixteenth century, an enormous sum. Some of Cortes's favourites had secretly appropriated to their own use several ornaments of gold, which neither paid the royal fifth, nor were brought into account as part of the common stock. It was, however, so manifestly the interest of Cortes at this period to make a large remittance to the king, that it is highly probable those concealments were not of great consequence.

Division of it, and the discontent it occasioned.

Reasons why gold was found in such small quantities.

The total sum amassed by the Spaniards bears no proportion to the ideas which might be formed, either by reflecting on the descriptions given by historians of the ancient splendour of Mexico, or by considering the productions of its mines in modern times. But among the ancient Mexicans, gold and silver were not the standards by which the worth of other commodities was estimated; and, destitute of the artificial value derived from this circumstance, were no further in request than as they furnished materials for ornaments and trinkets. These were either consecrated to the gods in their temples, or were worn as marks of distinction by their princes and some of their most eminent chiefs. As the consumption of the precious metals was inconsiderable, the demand for them was not such as to put either the ingenuity or industry of the Mexicans on the stretch, in order to augment their store. They were altogether unacquainted with the art of working the rich mines with which their country abounded. What gold they had was gathered in the beds of rivers, native, and ripened into a pure metallic state.[m] The utmost effort of their labour in search of it was to wash the earth carried down by torrents from the mountains, and to pick out the grains of gold which subsided; and even this simple operation, according to the report of the persons whom Cortes appointed to survey the provinces where there was a prospect of finding mines, they performed very unskilfully.[n] From all those causes, the whole mass of gold in possession of the Mexicans was not great. As silver is rarely found pure, and the Mexican art was too rude to conduct the process for refining it in a proper manner, the quantity of this metal was still less considerable.[o] Thus, though the Spaniards had exerted all the power which they possessed in Mexico, and often with indecent rapacity, in order to gratify their predominant passion, and though Montezuma had fondly exhausted his treasures, in hopes of satiating their thirst for gold, the product of both, which probably included a great part of the bullion in the empire, did not rise in value above what has been mentioned.[p]

Montezuma inflexible with respect to religion.

But however pliant Montezuma might be in other matters, with respect to one point he was inflexible. Though Cortes often urged him, with the importunate zeal of a missionary, to renounce his false gods, and to embrace the christian faith, he always rejected the proposition with horror. Superstition, among the Mexicans, was formed into such a regular and complete system, that its institutions naturally took fast hold of the mind; and while the rude tribes in other parts of America were easily induced to relinquish a few notions and rites, so loose and arbitrary as hardly to merit the name of a public religion, the Mexicans adhered tenaciously to their mode of worship, which, however barbarous, was accompanied with such order and solemnity as to render it an object of the highest veneration. Cortes, finding all his attempts ineffectual to shake the constancy of Montezuma, was so much enraged at his obstinacy, that in a transport of zeal he led out his soldiers to throw down the idols in the grand temple by force. But the priests taking arms in defence of their altars, and the people crowding with great ardour to support them, Cortes's prudence overruled his zeal, and induced him to desist from his rash attempt, after dislodging the idols from one of the shrines, and placing in their stead an image of the Virgin Mary.[q]

Schemes of the Mexicans to destroy the Spaniards.

From that moment the Mexicans, who had permitted the imprisonment of their sovereign, and suffered the exactions of strangers without a struggle, began to meditate how they might expel or destroy the Spaniards, and thought themselves called upon to avenge their insulted deities. The priests and leading men held frequent consultations with Montezuma for this purpose. But as it might prove fatal to the captive monarch to attempt either the one or the other by violence, he was willing to try more gentle means. Having called Cortes into his presence, he observed, that now, as all the purposes of his embassy were fully accomplished, the gods had declared their will, and the people signified their desire, that he and his followers should instantly depart out of the empire. With this he required them to comply, or unavoidable destruction would fall suddenly on their heads. The tenor of this unexpected requisition, as well as the determined tone in which it was uttered, left Cortes no room to doubt that it was the result of some deep scheme concerted between Montezuma and his subjects. He quickly perceived that he might derive more advantage from a seeming compliance with the monarch's inclination, than from an ill-timed attempt to change or to oppose it; and replied, with great composure, that he had already begun to prepare for returning to his own country; but as he had destroyed the vessels in which he arrived, some time was requisite for building other ships. This appeared reasonable. A number of Mexicans were sent to Vera Cruz to cut down timber, and some Spanish carpenters were appointed to superintend the work. Cortes flattered himself, that during this interval he might either find means to avert the threatened danger, or receive such reinforcements as would enable him to despise it.

Anxiety and danger of Cortes.

Almost nine months were elapsed since Portocarrero and Montejo had sailed with his despatches to Spain; and he daily expected their return with a confirmation of his authority from the king. Without this, his condition was insecure and precarious; and after all the great things which he had done, it might be his doom to bear the name and suffer the punishment of a traitor. Rapid and extensive as his progress had been, he could not hope to complete the reduction of a great empire with so small a body of men, which by this time diseases of various kinds had considerably thinned; nor could he apply for recruits to the Spanish settlements in the islands, until he received the royal approbation of his proceedings.

The arrival of a new armament,

While he remained in this cruel situation, anxious about what was past, uncertain with respect to the future, and by the late declaration of Montezuma oppressed with a new addition of cares, a Mexican courier arrived with an account of some ships having appeared on the coast. Cortes with fond credulity imagining that his messengers were returned from Spain, and that the completion of all his wishes and hopes was at hand, imparted the glad tidings to his companions, who received them with transports of mutual gratulation. Their joy was not of long continuance. A courier from Sandoval, whom Cortes had appointed to succeed Escalante in command at Vera Cruz, brought certain information that the armament was fitted out by Velasquez, governor of Cuba, and instead of bringing the aid which they expected, threatened them with immediate destruction.

fitted out by Velasquez,

The motives which prompted Velasquez to this violent measure are obvious. From the circumstances of Cortes's departure, it was impossible not to suspect his intention of throwing off all dependence upon him. His neglecting to transmit any account of his operations to Cuba, strengthened this suspicion, which was at last confirmed beyond doubt, by the indiscretion of the officers whom Cortes sent to Spain. They, from some motive which is not clearly explained by the contemporary historians, touched at the island of Cuba, contrary to the peremptory orders of their general.[r] By this means Velasquez not only learned that Cortes and his followers, after formally renouncing all connexion with him, had established an independent colony in New Spain, and were soliciting the king to confirm their proceedings by his authority; but he obtained particular information concerning the opulence of the country, the valuable presents which Cortes had received, and the inviting prospects of success that opened to his view. Every passion which can agitate an ambitious mind; shame, at having been so grossly over-reached; indignation at being betrayed by the man whom he had selected as the object of his favour and confidence; grief, for having wasted his fortune to aggrandize an enemy; and despair of recovering so fair an opportunity of establishing his fame and extending his power, now raged in the bosom of Velasquez. All these, with united force, excited him to make an extraordinary effort in order to be avenged on the author of his wrongs, and to wrest from him his usurped authority and conquests. Nor did he want the appearance of a good title to justify such an attempt. The agent whom he sent to Spain with an account of Grijalva's voyage, had met with a most favourable reception; and from the specimens which he produced, such high expectations were formed concerning the opulence of New Spain, that Velasquez was authorized to prosecute the discovery of the country, and appointed governor of it during life, with more extensive power and privileges than had been granted to any adventurer from the time of Columbus.[s] Elated by this distinguishing mark of favour, and warranted to consider Cortes not only as intruding upon his jurisdiction, but as disobedient to the royal mandate, he determined to vindi-

s Herrera, dec. 2. lib. iii. c. 11.

cate his own rights, and the honour of his sovereign, by force of arms.[t] His ardour in carrying on his preparations was such as might have been expected from the violence of the passions with which he was animated; and in a short time an armament was completed, consisting of eighteen ships, which had on board fourscore horsemen, eight hundred foot soldiers, of which eighty were musketeers, and a hundred and twenty cross-bow men, together with a train of twelve pieces of cannon. As Velasquez's experience of the fatal consequence of committing to another what he ought to have executed himself, had not rendered him more enterprising, he vested the command of this formidable body, which, in the infancy of the Spanish power in America, merits the appellation of an army, in Pamphilo de Narvaez, with instructions to seize Cortes and his principal officers, to send them prisoners to him, and then to complete the discovery and conquest of the country in his name.

under the command of Narvaez.

The proceedings of Narvaez. April.

After a prosperous voyage, Narvaez landed his men without opposition near St. Juan de Ulua. Three soldiers, whom Cortes had sent to search for mines in that district, immediately joined him. By this accident he not only received information concerning the progress and situation of Cortes, but as these soldiers had made some progress in the knowledge of the Mexican language, he acquired interpreters, by whose means he was enabled to hold some intercourse with the people of the country. But, according to the low cunning of deserters, they framed their intelligence with more attention to what they thought would be agreeable, than to what they knew to be true; and represented the situation of Cortes to be so desperate, and the disaffection of his followers to be so general, as increased the natural confidence and presumption of Narvaez. His first operation, however, might have taught him not to rely on their partial accounts. Having sent to summon the governor of Vera Cruz to surrender, Guevara, a priest whom he employed in that service, made the requisition with such insolence, that Sandoval, an officer of high spirit, and zealously attached to Cortes, instead of complying with his demands, seized him and his attendants, and sent them in chains to Mexico

Cortes deeply alarmed.

Cortes received them, not like enemies, but as friends, and condemning the severity of Sandoval, set them immediately at liberty. By this well-timed clemency, seconded by caresses and presents, he gained their confidence, and drew from them such particulars concerning the force and intentions of Narvaez, as gave him a view of the impending danger in its full extent. He had not to contend now with half-naked Indians, no match for him in war, and still more inferior in the arts of policy, but to take the field against an army in courage and martial discipline equal to his own, in number far superior, acting under the sanction of royal authority, and commanded by an officer of known bravery. He was informed that Narvaez, more solicitous to gratify the resentment of Velasquez, than attentive to the honour or interest of his country, had begun his intercourse with the natives, by representing him and his followers as fugitives and outlaws, guilty of rebellion against their own sovereign, and of injustice in invading the Mexican empire; and had declared that his chief object in visiting the country was to punish the Spaniards who had committed these crimes, and to rescue the Mexicans from oppression. He soon perceived that the same unfavourable representations of his character and actions had been conveyed to Montezuma, and that Narvaez had found means to assure him, that as the conduct of those who kept him under restraint was highly displeasing to the king his master, he had it in charge not only to rescue an injured monarch from confinement, but to reinstate him in the possession of his ancient power and independence. Animated with this prospect of being set free from subjection to strangers, the Mexicans in several provinces began openly to revolt from Cortes, and to regard Narvaez as a deliverer no less able than willing to save them. Montezuma himself kept up a secret intercourse with the new commander, and seemed to court him as a person superior in power and dignity to those Spaniards whom he had hitherto revered as the first of men.[u]

His deliberations concerning his own conduct.

Such were the various aspects of danger and difficulty which presented themselves to the view of Cortes. No situation can be conceived more trying to the capacity and firmness of a general, or where the choice of the plan which ought to be adopted was more difficult. If he should wait the approach of Narvaez in Mexico, destruction seemed to be unavoidable; for while the Spaniards pressed him from without, the inhabitants, whose turbulent spirit he could hardly restrain with all his authority and attention, would easily lay hold on such a favourable opportunity of avenging all their wrongs. If he should abandon the capital, set the captive monarch at liberty, and march out to meet the enemy; he must at once forego the fruits of all his toils and victories, and relinquish advantages which could not be recovered without extraordinary efforts and infinite danger. If, instead of employing force, he should have recourse to conciliating measures, and attempt an accommodation with Narvaez; the natural haughtiness of that officer, augmented by consciousness of his present superiority, forbade him to cherish any sanguine hope of success. After revolving every scheme with deep attention, Cortes fixed upon that which in execution was most hazardous, but, if successful, would prove most beneficial to himself and to his country; and with the decisive intrepidity suited to desperate situations,

t See Note CXV.

u See Note CXVI.

determined to make one bold effort for victory under every disadvantage, rather than sacrifice his own conquests and the Spanish interests in Mexico.

His negociations with the followers of Narvaez.

But though he foresaw that the contest must be terminated finally by arms, it would have been not only indecent, but criminal, to have marched against his countrymen, without attempting to adjust matters by an amicable negociation. In this service he employed Olmedo, his chaplain, to whose character the function was well suited, and who possessed, besides, such prudence and address as qualified him to carry on the secret intrigues in which Cortes placed his chief confidence. Narvaez rejected, with scorn, every scheme of accommodation that Olmedo proposed, and was with difficulty restrained from laying violent hands on him and his attendants. He met, however, with a more favourable reception among the followers of Narvaez, to many of whom he delivered letters, either from Cortes or his officers, their ancient friends and companions. Cortes artfully accompanied these with presents of rings, chains of gold, and other trinkets of value, which inspired those needy adventurers with high ideas of the wealth that he had acquired, and with envy of their good fortune who were engaged in his service. Some, from hopes of becoming sharers in those rich spoils, declared for an immediate accommodation with Cortes. Others, from public spirit, laboured to prevent a civil war, which, whatever party should prevail, must shake, and perhaps subvert, the Spanish power, in a country where it was so imperfectly established. Narvaez disregarded both, and by a public proclamation denounced Cortes and his adherents rebels and enemies to their country. Cortes, it is probable, was not much surprised at the untractable arrogance of Narvaez; and, after having given such a proof of his own pacific disposition as might justify his recourse to other means, he determined to advance towards an enemy whom he had laboured in vain to appease.

Marches against him. May.

He left a hundred and fifty men in the capital, under the command of Pedro de Alvarado, an officer of distinguished courage, for whom the Mexicans had conceived a singular degree of respect. To the custody of this slender garrison he committed a great city, with all the wealth he had amassed, and, what was still of greater importance, the person of the imprisoned monarch. His utmost art was employed in concealing from Montezuma the real cause of his march. He laboured to persuade him, that the strangers who had lately arrived were his friends and fellow-subjects; and that, after a short interview with them, they would depart together, and return to their own country. The captive prince, unable to comprehend the designs of the Spaniards, or to reconcile what he now heard with the declarations of Narvaez, and afraid to discover any symptom of suspicion or distrust of Cortes, promised to remain quietly in the Spanish quarters, and to cultivate the same friendship with Alvarado which he had uniformly maintained with him. Cortes, with seeming confidence in this promise, but relying principally upon the injunctions which he had given Alvarado to guard his prisoner with the most scrupulous vigilance, set out from Mexico.

Number of his troops.

His strength, even after it was reinforced by the junction of Sandoval and the garrison of Vera Cruz, did not exceed two hundred and fifty men. As he hoped for success chiefly from the rapidity of his motions, his troops were not encumbered either with baggage or artillery. But as he dreaded extremely the impression which the enemy might make with their cavalry, he had provided against this danger with the foresight and sagacity which distinguish a great commander. Having observed that the Indians in the province of Chinantla used spears of extraordinary length and force, he armed his soldiers with these, and accustomed them to that deep and compact arrangement which the use of this formidable weapon, the best perhaps that ever was invented for defence, enabled them to assume.

Continues to negociate as he advanced.

With this small but firm battalion, Cortes advanced towards Zempoalla, of which Narvaez had taken possession. During his march, he made repeated attempts towards some accommodation with his opponent. But Narvaez requiring that Cortes and his followers should instantly recognise his title to be governor of New Spain, in virtue of the powers which he derived from Velasquez; and Cortes refusing to submit to any authority which was not founded on a commission from the emperor himself, under whose immediate protection he and his adherents had placed their infant colony; all these attempts proved fruitless. The intercourse, however, which this occasioned between the two parties, proved of no small advantage to Cortes, as it afforded him an opportunity of gaining some of Narvaez's officers by liberal presents, of softening others by a semblance of moderation, and of dazzling all by the appearance of wealth among his troops, most of his soldiers having converted their share of the Mexican gold into chains, bracelets, and other ornaments, which they displayed with military ostentation. Narvaez and a little junto of his creatures excepted, all the army leaned towards an accommodation with their countrymen. This discovery of their inclination irritated his violent temper almost to madness. In a transport of rage, he set a price upon the head of Cortes, and of his principal officers; and having learned that he was now advanced within a league of Zempoalla with his small body of men, he considered this as an insult which merited immediate chastisement, and marched out with all his troops to offer him battle.

Attacks Narvaez in the night,

But Cortes was a leader of greater abilities and experience than, on equal ground, to fight an enemy so far superior in number, and so much better appointed. Having taken

his station on the opposite bank of the river de Canoas, where he knew that he could not be attacked, he beheld the approach of the enemy without concern, and disregarded this vain bravado. It was then the beginning of the wet season,[x] and the rain had poured down, during a great part of the day, with the violence peculiar to the torrid zone. The followers of Narvaez, unaccustomed to the hardships of military service, murmured so much at being thus fruitlessly exposed, that, from their unsoldier-like impatience, as well as his own contempt of his adversary, their general permitted them to retire to Zempoalla. The very circumstance which induced them to quit the field, encouraged Cortes to form a scheme by which he hoped at once to terminate the war. He observed, that his hardy veterans, though standing under the torrents which continued to fall, without a single tent or any shelter whatsoever to cover them, were so far from repining at hardships which were become familiar to them, that they were still fresh and alert for service. He foresaw that the enemy would naturally give themselves up to repose after their fatigue, and that, judging of the conduct of others by their own effeminacy, they would deem themselves perfectly secure at a season so unfit for action. He resolved, therefore, to fall upon them in the dead of night, when the surprise and terror of this unexpected attack might more than compensate the inferiority of his numbers. His soldiers, sensible that no resource remained but in some desperate effort of courage, approved of the measure with such warmth, that Cortes, in a military oration which he addressed to them before they began their march, was more solicitous to temper than to inflame their ardour. He divided them into three parties. At the head of the first he placed Sandoval; intrusting this gallant officer with the most dangerous and important service, that of seizing the enemy's artillery, which was planted before the principal tower of the temple, where Narvaez had fixed his headquarters. Christoval de Olid commanded the second, with orders to assault the tower, and lay hold on the general. Cortes himself conducted the third and smallest division, which was to act as a body of reserve, and to support the other two as there should be occasion. Having passed the river de Canoas, which was much swelled with the rains, not without difficulty, the water reaching almost to their chins, they advanced in profound silence, without beat of drum, or sound of any warlike instrument; each man armed with his sword, his dagger, and his Chinantlan spear. Narvaez, remiss in proportion to his security, had posted only two sentinels to watch the motions of an enemy whom he had such good cause to dread. One of these was seized by the advanced guard of Cortes's troops, the other made his escape, and hurrying to the town with all the precipitation of fear and zeal, gave such timely notice of the enemy's approach, that there was full leisure to have prepared for their reception. But through the arrogance and infatuation of Narvaez, this important interval was lost. He imputed this alarm to the cowardice of the sentinel, and treated with derision the idea of being attacked by forces so unequal to his own. The shouts of Cortes's soldiers, rushing on to the assault, convinced him at last that the danger which he despised was real. The rapidity with which they advanced was such, that only one cannon could be fired before Sandoval's party closed with the enemy, drove them from their guns, and began to force their way up the steps of the tower. Narvaez, no less brave in action than presumptuous in conduct, armed himself in haste, and by his voice and example animated his men to the combat. Olid advanced to sustain his companions; and Cortes himself, rushing to the front, conducted and added new vigour to the attack. The compact order in which this small body pressed on, and the impenetrable front which they presented with their long spears, bore down all opposition before it. They had now reached the gate, and were struggling to burst it open, when a soldier having set fire to the reeds with which the tower was covered, compelled Narvaez to sally out. In the first encounter he was wounded in the eye with a spear, and, falling to the ground, was dragged down the steps, and in a moment clapt in fetters. The cry of victory resounded among the troops of Cortes. Those who had sallied out with their leader now maintained the conflict feebly, and began to surrender. Among the remainder of his soldiers, stationed in two smaller towers of the temple, terror and confusion prevailed. The darkness was so great, that they could not distinguish between their friends and foes. Their own artillery was pointed against them. Wherever they turned their eyes, they beheld lights gleaming through the obscurity of night, which, though proceeding only from a variety of shining insects that abound in moist and sultry climates, their affrighted imaginations represented as numerous bands of musketeers advancing with kindled matches to the attack. After a short resistance, the soldiers compelled their officers to capitulate, and before morning all laid down their arms, and submitted quietly to their conquerors.

and overcomes him.

This complete victory proved more acceptable, as it was gained almost without bloodshed, only two soldiers being killed on the side of Cortes, and two officers, with fifteen private men, of the adverse faction. Cortes treated the vanquished not like enemies, but as countrymen and friends, and offered either to send them back directly to Cuba, or to take them into his service, as partners in his fortune, on equal terms with his own soldiers. This latter proposition, seconded by a seasonable distribution of some presents from Cortes, and liberal promises of more, opened prospects so agreeable to the romantic expectations which had

The effects of this victory.

x Hackluyt, vol. iii. 467. De Laet Descr. Ind. Occid. 221.

invited them to engage in this service, that all, a few partisans of Narvaez excepted, closed with it, and vied with each other in professions of fidelity and attachment to a general, whose recent success had given them such a striking proof of his abilities for command. Thus, by a series of events no less fortunate than uncommon, Cortes not only escaped from perdition which seemed inevitable, but, when he had least reason to expect it, was placed at the head of a thousand Spaniards, ready to follow wherever he should lead them. Whoever reflects upon the facility with which this victory was obtained, or considers with what sudden and unanimous transition the followers of Narvaez ranged themselves under the standard of his rival, will be apt to ascribe both events as much to the intrigues as to the arms of Cortes, and cannot but suspect that the ruin of Narvaez was occasioned, no less by the treachery of his own followers, than by the valour of the enemy.[y]

The Mexicans take arms against the Spaniards.

But, in one point, the prudent conduct and good fortune of Cortes were equally conspicuous. If, by the rapidity of his operations after he began his march, he had not brought matters to such a speedy issue, even this decisive victory would have come too late to have saved his companions whom he left in Mexico. A few days after the discomfiture of Narvaez, a courier arrived with an account that the Mexicans had taken arms, and having seized and destroyed the two brigantines which Cortes had built in order to secure the command of the lake, and attacked the Spaniards in their quarters, had killed several of them, and wounded more, had reduced to ashes their magazine of provisions, and carried on hostilities with such fury, that though Alvarado and his men defended themselves with undaunted resolution, they must either be soon cut off by famine, or sink under the multitude of their enemies. This revolt was excited by motives which rendered it still more alarming. On the departure of Cortes for Zempoalla, the Mexicans flattered themselves, that the long-expected opportunity of restoring their sovereign to liberty, and of vindicating their country from the odious dominion of strangers, was at length arrived; that while the forces of their oppressors were divided, and the arms of one party turned against the other, they might triumph with greater facility over both. Consultations were held, and schemes formed with this intention. The Spaniards in Mexico, conscious of their own feebleness, suspected and dreaded those machinations. Alvarado, though a gallant officer, possessed neither that extent of capacity, nor dignity of manners, by which Cortes had acquired such an ascendant over the minds of the Mexicans, as never allowed them to form a just estimate of his weakness or of their own strength. Alvarado knew no mode of supporting his authority but force. Instead of employing address to disconcert the plans, or to soothe the spirits of the Mexicans, he waited the return of one of their solemn festivals, when the principal persons in the empire were dancing, according to custom, in the court of the great temple; he seized all the avenues which led to it, and, allured partly by the rich ornaments which they wore in honour of their gods, and partly by the facility of cutting off at once the authors of that conspiracy which he dreaded, he fell upon them, unarmed and unsuspicious of any danger, and massacred a great number, none escaping but such as made their way over the battlements of the temple. An action so cruel and treacherous filled not only the city, but the whole empire, with indignation and rage. All called aloud for vengeance; and regardless of the safety of their monarch, whose life was at the mercy of the Spaniards, or of their own danger in assaulting an enemy who had been so long the object of their terror, they committed all those acts of violence of which Cortes received an account.

He marches back to the capital.

To him the danger appeared so imminent, as to admit neither of deliberation nor delay. He set out instantly with all his forces, and returned from Zempoalla with no less rapidity than he had advanced thither. At Tlascala he was joined by two thousand chosen warriors. On entering the Mexican territories, he found that disaffection to the Spaniards was not confined to the capital. The principal inhabitants had deserted the towns through which he passed; no person of note appearing to meet him with the usual respect; no provision was made for the subsistence of his troops; and though he was permitted to advance without opposition, the solitude and silence which reigned in every place, and the horror with which the people avoided all intercourse with him, discovered a deep-rooted antipathy, that excited the most just alarm. But implacable as the enmity of the Mexicans was, they were so unacquainted with the science of war, that they knew not how to take the proper measures, either for their own safety or the destruction of the Spaniards. Uninstructed by their former error in admitting a formidable enemy into their capital, instead of breaking down the causeways and bridges, by which they might have enclosed Alvarado and his party, and have effectually stopped the career of Cortes, they again suffered him to march into the city without molestation, and to take quiet possession of his ancient station.

June 24.

Improper conduct of Cortes.

The transports of joy with which Alvarado and his soldiers received their companions cannot be expressed. Both parties were so much elated, the one with their seasonable deliverance, and the other with the great exploits which they had achieved, that this intoxication of success seems to have reached Cortes himself; and he behaved on this occasion neither with his usual sagacity nor attention. He not only neglected to visit Montezuma, but imbittered the insult by expressions full of contempt for that unfortunate

[y] Cortes Relat. 242. D. B. Diaz, c. 110—125. Herrera. dec. 2. lib. ix. c. 18, &c. Gomara Cron. c. 97, &c

prince and his people. The forces of which he had now the command appeared to him so irresistible, that he might assume a higher tone, and lay aside the mask of moderation under which he had hitherto concealed his designs. Some Mexicans, who understood the Spanish language, heard the contemptuous words which Cortes uttered, and reporting them to their countrymen, kindled their rage anew. They were now convinced that the intentions of the general were equally bloody with those of Alvarado, and that his original purpose in visiting their country had not been, as he pretended, to court the alliance of their sovereign, but to attempt the conquest of his dominions. They resumed their arms with the additional fury which this discovery inspired, attacked a considerable body of Spaniards who were marching towards the great square in which the public market was held, and compelled them to retire with some loss. Imboldened by this success, and delighted to find that their oppressors were not invincible, they advanced next day with extraordinary martial pomp to assault the Spaniards in their quarters. Their number was formidable, and their undaunted courage still more so. Though the artillery pointed against their numerous battalions, crowded together in narrow streets, swept off multitudes at every discharge; though every blow of the Spanish weapons fell with mortal effect upon their naked bodies, the impetuosity of the assault did not abate. Fresh men rushed forward to occupy the places of the slain, and meeting with the same fate, were succeeded by others no less intrepid and eager for vengeance. The utmost efforts of Cortes's abilities and experience, seconded by the disciplined valour of his troops, were hardly sufficient to defend the fortifications that surrounded the post where the Spaniards were stationed, into which the enemy were more than once on the point of forcing their way.

The violent hostility of the Mexicans.

Distress of the Spaniards.

Cortes beheld, with wonder, the implacable ferocity of a people who seemed at first to submit tamely to the yoke, and had continued so long passive under it. The soldiers of Narvacz, who fondly imagined that they followed Cortes to share in the spoils of a conquered empire, were astonished to find that they were involved in a dangerous war, with an enemy whose vigour was still unbroken, and loudly execrated their own weakness, in giving such easy credit to the delusive promises of their new leader.[z] But surprise and complaints were of no avail. Some immediate and extraordinary effort was requisite to extricate themselves out of their present situation. As soon as the approach of evening induced the Mexicans to retire, in compliance with their national custom of ceasing from hostilities with the setting sun, Cortes began to prepare for a sally, next day, with such a considerable force, as might either drive the enemy out of the city, or compel them to listen to terms of accommodation.

z B. Diaz, c. 126.

Cortes attacks them without success.

He conducted, in person, the troops destined for this important service. Every invention known in the European art of war, as well as every precaution suggested by his long acquaintance with the Indian mode of fighting, were employed to insure success. But he found an enemy prepared and determined to oppose him. The force of the Mexicans was greatly augmented by fresh troops, which poured in continually from the country, and their animosity was in no degree abated. They were led by their nobles, inflamed by the exhortations of their priests, and fought in defence of their temples and families, under the eye of their gods, and in presence of their wives and children. Notwithstanding their numbers, and enthusiastic contempt of danger and death, wherever the Spaniards could close with them, the superiority of their discipline and arms obliged the Mexicans to give way. But in narrow streets, and where many of the bridges of communication were broken down, the Spaniards could seldom come to a fair rencounter with the enemy, and as they advanced, were exposed to showers of arrows and stones from the tops of houses. After a day of incessant exertion, though vast numbers of the Mexicans fell, and part of the city was burnt, the Spaniards, weary with the slaughter, and harassed by multitudes which successively relieved each other, were obliged at length to retire, with the mortification of having accomplished nothing so decisive as to compensate the unusual calamity of having twelve soldiers killed, and above sixty wounded. Another sally, made with greater force, was not more effectual, and in it the general himself was wounded in the hand.

Montezuma slain.

Cortes now perceived, too late, the fatal error into which he had been betrayed by his own contempt of the Mexicans, and was satisfied that he could neither maintain his present station in the centre of an hostile city, nor retire from it without the most imminent danger. One resource still remained, to try what effect the interposition of Montezuma might have to soothe or overawe his subjects. When the Mexicans approached next morning to renew the assault, that unfortunate prince, at the mercy of the Spaniards, and reduced to the sad necessity of becoming the instrument of his own disgrace, and of the slavery of his people,[a] advanced to the battlements in his royal robes, and with all the pomp in which he used to appear on solemn occasions. At sight of their sovereign, whom they had long been accustomed to honour, and almost to revere as a god, the weapons dropped from their hands, every tongue was silent, all bowed their heads, and many prostrated themselves on the ground. Montezuma addressed them with every argument that could mitigate their rage, or persuade them to cease from hostilities. When he ended his discourse, a sullen murmur of disapprobation ran through the ranks; to this succeeded

a See Note CXVII.

reproaches and threats; and the fury of the multitude rising in a moment above every restraint of decency or respect, flights of arrows and volleys of stones poured in so violently upon the ramparts, that before the Spanish soldiers appointed to cover Montezuma with their bucklers, had time to lift them in his defence, two arrows wounded the unhappy monarch, and the blow of a stone on his temple struck him to the ground. On seeing him fall, the Mexicans were so much astonished, that with a transition not uncommon in popular tumults, they passed in a moment from one extreme to the other; remorse succeeded to insult, and they fled with horror, as if the vengeance of Heaven were pursuing the crime which they had committed. The Spaniards without molestation carried Montezuma to his apartments, and Cortes hastened thither to console him under his misfortune. But the unhappy monarch now perceived how low he was sunk, and the haughty spirit which seemed to have been so long extinct, returning, he scorned to survive this last humiliation, and to protract an ignominious life, not only as the prisoner and tool of his enemies, but as the object of contempt or detestation among his subjects. In a transport of rage he tore the bandages from his wounds, and refused, with such obstinacy, to take any nourishment, that he soon ended his wretched days, rejecting with disdain all the solicitations of the Spaniards to embrace the christian faith.

New conflicts.

Upon the death of Montezuma, Cortes having lost all hope of bringing the Mexicans to an accommodation, saw no prospect of safety but in attempting a retreat, and began to prepare for it. But a sudden motion of the Mexicans engaged him in new conflicts. They took possession of a high tower in the great temple which overlooked the Spanish quarters, and placing there a garrison of their principal warriors, not a Spaniard could stir without being exposed to their missile weapons. From this post it was necessary to dislodge them at any risk; and Juan de Escobar, with a numerous detachment of chosen soldiers, was ordered to make the attack. But Escobar, though a gallant officer, and at the head of troops accustomed to conquer, and who now fought under the eyes of their countrymen, was thrice repulsed. Cortes, sensible that not only the reputation but the safety of his army depended on the success of this assault, ordered a buckler to be tied to his arm, as he could not manage it with his wounded hand, and rushed with his drawn sword into the thickest of the combatants. Encouraged by the presence of their general, the Spaniards returned to the charge with such vigour, that they gradually forced their way up the steps, and drove the Mexicans to the platform at the top of the tower. There a dreadful carnage began, when two young Mexicans of high rank, observing Cortes as he animated his soldiers by his voice and example, resolved to sacrifice their own lives in order to cut off the author of all the calamities which desolated their country. They approached him in a supplicant posture, as if they had intended to lay down their arms, and seizing him in a moment, hurried him towards the battlements, over which they threw themselves headlong, in hopes of dragging him along to be dashed in pieces by the same fall. But Cortes, by his strength and agility, broke loose from their grasp, and the gallant youths perished in this generous though unsuccessful attempt to save their country.[b] As soon as the Spaniards became masters of the tower, they set fire to it, and, without further molestation, continued the preparations for their retreat.

The Spaniards abandon the city.

This became the more necessary, as the Mexicans were so much astonished at the last effort of the Spanish valour, that they began to change their whole system of hostility, and, instead of incessant attacks, endeavoured, by barricading the streets, and breaking down the causeways, to cut off the communication of the Spaniards with the continent, and thus to starve an enemy whom they could not subdue. The first point to be determined by Cortes and his followers was, whether they should march out open in the face of day, when they could discern every danger, and see how to regulate their own motions, as well as how to resist the assaults of the enemy; or, whether they should endeavour to retire secretly in the night? The latter was preferred, partly from hopes that their national superstition would restrain the Mexicans from venturing to attack them in the night, and partly from their own fond belief in the predictions of a private soldier, who, having acquired universal credit by a smattering of learning, and his pretensions to astrology, boldly assured his countrymen of success if they made their retreat in this manner. They began to move, towards midnight, in three divisions. Sandoval led the van; Pedro Alvarado, and Velasquez de Leon, had the conduct of the rear; and Cortes commanded in the centre, where he placed the prisoners, among whom were a son and two daughters of Montezuma, together with several Mexicans of distinction, the artillery, the baggage, and a portable bridge of timber, intended to be laid over the breaches in the causeway. They marched in profound silence along the causeway which led to Tacuba, because it was shorter than any of the rest, and, lying most remote from the road towards Tlascala and the sea-coast, had been left more entire by the Mexicans. They reached the first breach in it without molestation, hoping that their retreat was undiscovered.

Attacked by the Mexicans.

But the Mexicans, unperceived, had not only watched all their motions with attention, but had made proper dispositions for a most formidable attack. While the Spaniards

b M. Clavigero has censured me with asperity for relating this gallant action of the two Mexicans, and for supposing that there were battlements round the temple of Mexico. I related the attempt to destroy Cortes on the authority of Herrera, dec. 2. lib. x. c. 9. and of Torquemado, lib. iv. c. 69. I followed them likewise in supposing the uppermost platform of the temple to be encompassed by a battlement or rail.

were intent upon placing their bridge in the breach, and occupied in conducting their horses and artillery along it, they were suddenly alarmed with a tremendous sound of warlike instruments, and a general shout from an innumerable multitude of enemies; the lake was covered with canoes; flights of arrows and showers of stones poured in upon them from every quarter; the Mexicans rushing forward to the charge with fearless impetuosity, as if they hoped in that moment to be avenged for all their wrongs. Unfortunately the wooden bridge, by the weight of the artillery, was wedged so fast into the stones and mud, that it was impossible to remove it. Dismayed at this accident, the Spaniards advanced with precipitation towards the second breach. The Mexicans hemmed them in on every side, and though they defended themselves with their usual courage, yet crowded together as they were on a narrow causeway, their discipline and military skill were of little avail, nor did the obscurity of the night permit them to derive great advantage from their fire-arms, or the superiority of their other weapons. All Mexico was now in arms, and so eager were the people on the destruction of their oppressors, that they who were not near enough to annoy them in person, impatient of the delay, pressed forward with such ardour, as drove on their countrymen in the front with irresistible violence. Fresh warriors instantly filled the place of such as fell. The Spaniards, weary with slaughter, and unable to sustain the weight of the torrent that poured in upon them, began to give way. In a moment the confusion was universal; horse and foot, officers and soldiers, friends and enemies, were mingled together; and while all fought, and many fell, they could hardly distinguish from what hand the blow came.

Their disasters,

Cortes, with about a hundred foot soldiers and a few horse, forced his way over the two remaining breaches in the causeway, the bodies of the dead serving to fill up the chasms, and reached the main land. Having formed them as soon as they arrived, he returned with such as were yet capable of service, to assist his friends in their retreat, and to encourage them, by his presence and example, to persevere in the efforts requisite to effect it. He met with part of his soldiers, who had broke through the enemy, but found many more overwhelmed by the multitude of their agressors, or perishing in the lake; and heard the piteous lamentations of others, whom the Mexicans, having taken alive, were carrying off in triumph to be sacrificed to the god of war. Before day, all who had escaped assembled at Tacuba. But when the morning dawned, and discovered to the view of Cortes his shattered battalion, reduced to less than half its number, the survivors dejected, and most of them covered with wounds, the thoughts of what they had suffered, and the remembrance of so many faithful friends and gallant followers who had fallen in that night of sorrow,[c] pierced his soul with such anguish, that while he was forming their ranks, and issuing some necessary orders, his soldiers observed the tears trickling from his eyes, and remarked, with much satisfaction, that while attentive to the duties of a general, he was not insensible to the feelings of a man.

and loss.

In this fatal retreat many officers of distinction perished,[d] and among these Velasquez de Leon, who having forsaken the party of his kinsman, the governor of Cuba, to follow the fortune of his companions, was, on that account, as well as for his superior merit, respected by them as the second person in the army. All the artillery, ammunition, and baggage, were lost; the greater part of the horses, and above two thousand Tlascalans, were killed, and only a very small portion of the treasure which they had amassed was saved. This, which had been always their chief object, proved a great cause of their calamity; for many of the soldiers having so overloaded themselves with bars of gold as rendered them unfit for action, and retarded their flight, fell, ignominiously, the victims of their own inconsiderate avarice. Amidst so many disasters, it was some consolation to find that Aguilar and Marina, whose function as interpreters was of such essential importance, had made their escape.[e]

Difficult retreat of the Spaniards.

The first care of Cortes was to find some shelter for his wearied troops; for as the Mexicans infested them on every side, and the people of Tacuba began to take arms, he could not continue in his present station. He directed his march towards the rising ground, and having fortunately discovered a temple situated on an eminence, took possession of it. There he found not only the shelter for which he wished, but, what was no less wanted, some provisions to refresh his men; and though the enemy did not intermit their attacks throughout the day, they were with less difficulty prevented from making any impression. During this time Cortes was engaged in deep consultation with his officers, concerning the route which they ought to take in their retreat. They were now on the west side of the lake. Tlascala, the only place where they could hope for a friendly reception, lay about sixty-four miles to the east of Mexico;[f] so that they were obliged to go round the north end of the lake before they could fall into the road which led thither. A Tlascalan soldier undertook to be their guide, and conducted them through a country, in some places marshy, in others mountainous, in all ill cultivated and thinly peopled. They marched for six days with little respite, and under continual alarms, numerous bodies of the Mexicans hovering around them, sometimes harassing them at a distance with their missile weapons, and sometimes attacking them closely in front, in rear, in flank, with great boldness, as they now knew that they were not in-

c *Noche Triste* is the name by which it is still distinguished in New Spain.

vincible. Nor were the fatigue and danger of those incessant conflicts the worst evils to which they were exposed. As the barren country through which they passed afforded hardly any provisions, they were reduced to feed on berries, roots, and the stalks of green maize; and at the very time that famine was depressing their spirits and wasting their strength, their situation required the most vigorous and unremitting exertions of courage and activity. Amidst those complicated distresses, one circumstance supported and animated the Spaniards. Their commander sustained this sad reverse of fortune with unshaken magnanimity. His presence of mind never forsook him; his sagacity foresaw every event, and his vigilance provided for it. He was foremost in every danger, and endured every hardship with cheerfulness. The difficulties with which he was surrounded seemed to call forth new talents; and his soldiers, though despairing themselves, continued to follow him with increasing confidence in his abilities.

Battle of Otumba.

On the sixth day they arrived near to Otumba, not far from the road between Mexico and Tlascala. Early next morning they began to advance towards it, flying parties of the enemy still hanging on the rear; and, amidst the insults with which they accompanied their hostilities, Marina remarked that they often exclaimed with exultation, "Go on, robbers; go to the place where you shall quickly meet the vengeance due to your crimes." The meaning of this threat the Spaniards did not comprehend, until they reached the summit of an eminence before them. There a spacious valley opened to their view covered with a vast army, extending as far as the eye could reach. The Mexicans, while with one body of their troops they harrassed the Spaniards in their retreat, had assembled their principal force on the other side of the lake; and marching along the road which led directly to Tlascala, posted it in the plain of Otumba, through which they knew Cortes must pass. At the sight of this incredible multitude, which they could survey at once from the rising ground, the Spaniards were astonished, and even the boldest began to despair. But Cortes, without allowing leisure for their fears to acquire strength by reflection, after warning them briefly that no alternative now remained but to conquer or to die, led them instantly to the charge. The Mexicans waited their approach with unusual fortitude. Such, however, was the superiority of the Spanish discipline and arms, that the impression of this small body was irresistible; and whichever way its force was directed, it penetrated and dispersed the most numerous battalions. But while these gave way in one quarter, new combatants advanced from another, and the Spaniards, though successful in every attack, were ready to sink under those repeated efforts, without seeing any end to their toil, or any hope of victory. At that time Cortes observed the great standard of the empire, which was carried before the Mexican general, advancing; and fortunately recollecting to have heard, that on the fate of it depended the event of every battle, he assembled a few of his bravest officers, whose horses were still capable of service, and placing himself at their head, pushed forward towards the standard with an impetuosity which bore down every thing before it. A chosen body of nobles, who guarded the standard, made some resistance, but were soon broken. Cortes, with a stroke of his lance, wounded the Mexican general, and threw him to the ground. One of the Spanish officers alighting, put an end to his life, and laid hold of the imperial standard. The moment that their leader fell, and the standard, towards which all directed their eyes, disappeared, an universal panic struck the Mexicans, and, as if the bond which held them together had been dissolved, every ensign was lowered, each soldier threw away his weapons, and all fled with precipitation to the mountains. The Spaniards, unable to pursue them far, returned to collect the spoils of the field, which were so valuable as to be some compensation for the wealth which they had lost in Mexico; for in the enemy's army were most of their principal warriors, dressed out in their richest ornaments, as if they had been marching to assured victory. Next day, to their great joy, they entered the Tlascalan territories.[g] July 8.

Reception of the Spaniards in Tlascala.

But amidst their satisfaction in having got beyond the precincts of an hostile country, they could not look forward without solicitude, as they were still uncertain what reception they might meet with from allies, to whom they returned in a condition very different from that in which they had lately set out from their dominions. Happily for them, the enmity of the Tlascalans to the Mexican name was so inveterate, their desire to avenge the death of their countrymen so vehement, and the ascendant which Cortes had acquired over the chiefs of the republic so complete, that far from entertaining a thought of taking any advantage of the distressed situation in which they beheld the Spaniards, they received them with a tenderness and cordiality which quickly dissipated all their suspicions.

New deliberations of Cortes.

Some interval of tranquillity and indulgence was now absolutely necessary; not only that the Spaniards might give attention to the cure of their wounds, which had been too long neglected, but in order to recruit their strength, exhausted by such a long succession of fatigue and hardships. During this, Cortes learned that he and his companions were not the only Spaniards who had felt the effects of the Mexican enmity. A considerable detachment which was marching from Zempoalla towards the capital had been cut off by the people of Tepeaca. A smaller party, returning from Tlascala to Vera Cruz, with the share of the Mexican gold allotted to the garri-

g Cortes Relat. p. 219. B. Diaz, c. 128. Gomara Cron. c. 110. Herr. dec. 2. lib. x. c. 12, 13.

son, had been surprised and destroyed in the mountains. At a juncture when the life of every Spaniard was of importance, such losses were deeply felt. The schemes which Cortes was meditating rendered them peculiarly afflictive to him. While his enemies, and even many of his own followers, considered the disasters which had befallen him as fatal to the progress of his arms, and imagined that nothing now remained but speedily to abandon a country which he had invaded with unequal force, his mind, as eminent for perseverance as for enterprise, was still bent on accomplishing his original purpose, of subjecting the Mexican empire to the crown of Castile. Severe and unexpected as the check was which he had received, it did not appear to him a sufficient reason for relinquishing the conquests which he had already made, or against resuming his operations with better hopes of success. The colony at Vera Cruz was not only safe, but had remained unmolested. The people of Zempoalla and the adjacent districts had discovered no symptoms of defection. The Tlascalans continued faithful to their alliance. On their martial spirit, easily roused to arms, and inflamed with implacable hatred of the Mexicans, Cortes depended for powerful aid. He had still the command of a body of Spaniards, equal in number to that with which he had opened his way into the centre of the empire, and had taken possession of the capital; so that with the benefit of greater experience, as well as more perfect knowledge of the country, he did not despair of quickly recovering all that he had been deprived of by untoward events.

The measures he takes.

Full of this idea, he courted the Tlascalan chiefs with such attention, and distributed among them so liberally the rich spoils of Otumba, that he was secure of obtaining whatever he should require of the republic. He drew a small supply of ammunition, and two or three field-pieces, from his stores at Vera Cruz. He despatched an officer of confidence with four ships of Narvaez's fleet to Hispaniola and Jamaica, to engage adventurers, and to purchase horses, gunpowder, and other military stores. As he knew that it would be vain to attempt the reduction of Mexico unless he could secure the command of the lake, he gave orders to prepare, in the mountains of Tlascala, materials for building twelve brigantines, so as they might be carried thither in pieces ready to be put together, and launched when he stood in need of their service.[h]

Mutinous spirit of his troops.

But while, with provident attention, he was taking those necessary steps towards the execution of his measures, an obstacle arose in a quarter where it was least expected, but most formidable. The spirit of discontent and mutiny broke out in his own army. Many of Narvaez's followers were planters rather than soldiers, and had accompanied him to New Spain with sanguine hopes of obtaining settlements, but with little inclination to engage in the hardships and dangers of war. As the same motives had induced them to enter into their new engagements with Cortes, they no sooner became acquainted with the nature of the service, than they bitterly repented of their choice. Such of them as had the good fortune to survive the perilous adventures in which their own imprudence had involved them, happy in having made their escape, trembled at the thoughts of being exposed a second time to similar calamities. As soon as they discovered the intention of Cortes, they began secretly to murmur and cabal, and waxing gradually more audacious, they, in a body, offered a remonstrance to their general against the imprudence of attacking a powerful empire with his shattered forces, and formally required him to lead them back directly to Cuba. Though Cortes, long practised in the arts of command, employed arguments, entreaties, and presents to convince or to soothe them; though his own soldiers, animated with the spirit of their leader, warmly seconded his endeavours; he found their fears too violent and deep-rooted to be removed, and the utmost he could effect was to prevail with them to defer their departure for some time, on a promise that he would, at a more proper juncture, dismiss such as should desire it.

Means he employs to revive their confidence.

That the malcontents might have no leisure to brood over the causes of their disaffection, he resolved instantly to call forth his troops into action. He proposed to chastise the people of Tepeaca for the outrage which they had committed, and as the detachment which they had cut off happened to be composed mostly of soldiers who had served under Narvaez, their companions, from the desire of vengeance, engaged the more willingly in this war. He took the command in person, accompanied by a numerous body of Tlascalans, and in the space of a few weeks, after various encounters, with great slaughter of the Tepeacans, reduced that province to subjection. During several months, while he waited for the supplies of men and ammunition which he expected, and was carrying on his preparations for constructing the brigantines, he kept his troops constantly employed in various expeditions against the adjacent provinces, all of which were conducted with an uniform tenor of success. By these, his men became again accustomed to victory, and resumed their wonted sense of superiority; the Mexican power was weakened; the Tlascalan warriors acquired the habit of acting in conjunction with the Spaniards; and the chiefs of the republic, delighted to see their country enriched with the spoils of all the people around them, and astonished every day with fresh discoveries of the irresistible prowess of their allies, declined no effort requisite to support them.

August.

Strengthened by several reinforcements.

All those preparatory arrangements, however, though the most prudent and efficacious which the situation of

h Cortes Relat. p. 253. E. Gomara Cron. c. 117.

Cortes allowed him to make, would have been of little avail without a reinforcement of Spanish soldiers. Of this he was so deeply sensible, that it was the chief object of his thoughts and wishes; and yet his only prospect of obtaining it, from the return of the officer whom he had sent to the isles to solicit aid, was both distant and uncertain. But what neither his own sagacity nor power could have procured, he owed to a series of fortunate and unforeseen incidents. The governor of Cuba, to whom the success of Narvaez appeared an event of infallible certainty, having sent two small ships after him with new instructions, and a supply of men and military stores, the officer whom Cortes had appointed to command on the coast, artfully decoyed them into the harbour of Vera Cruz, seized the vessels, and easily persuaded the soldiers to follow the standard of a more able leader than him whom they were destined to join.[i] Soon after, three ships of more considerable force came into the harbour separately. These belonged to an armament fitted out by Francisco de Garay, governor of Jamaica, who, being possessed with the rage of discovery and conquest which animated every Spaniard settled in America, had long aimed at intruding into some district of New Spain, and dividing with Cortes the glory and gain of annexing that empire to the crown of Castile. They unadvisedly made their attempt on the northern provinces, where the country was poor, and the people fierce and warlike; and after a cruel succession of disasters, famine compelled them to venture into Vera Cruz, and cast themselves upon the mercy of their countrymen. Their fidelity was not proof against the splendid hopes and promises which had seduced other adventurers, and, as if the spirit of revolt had been contagious in New Spain, they likewise abandoned the master whom they were bound to serve, and enlisted under Cortes.[k] Nor was it America alone that furnished such unexpected aid; a ship arrived from Spain, freighted by some private merchants with military stores, in hopes of a profitable market in a country, the fame of whose opulence began to spread over Europe. Cortes eagerly purchased a cargo which to him was invaluable, and the crew, following the general example, joined him at Tlascala.[l]

October 28.

From those various quarters, the army of Cortes was augmented with a hundred and eighty men, and twenty horses, a reinforcement too inconsiderable to produce any consequence which would entitle it to have been mentioned in the history of other parts of the globe. But in that of America, where great revolutions were brought about by causes which seemed to bear no proportion to their effects, such small events rise into importance, because they were sufficient to decide with respect to the fate of kingdoms. Nor is it the least remarkable instance of the singular felicity conspicuous in many passages of Cortes's story, that the two persons chiefly instrumental in furnishing him with those seasonable supplies, should be an avowed enemy who aimed at his destruction, and an envious rival who wished to supplant him.

Number of his forces.

The first effect of the junction with his new followers was to enable him to dismiss such of Narvaez's soldiers as remained with reluctance in his service. After their departure, he still mustered five hundred and fifty infantry, of which fourscore were armed with muskets or cross-bows, forty horsemen, and a train of nine field-pieces.[m] At the head of these, accompanied by ten thousand Tlascalans and other friendly Indians, Cortes began his march towards Mexico, on the twenty-eighth of December, six months after his disastrous retreat from that city.[n]

Preparations of the Mexicans for their defence.

Nor did he advance to attack an enemy unprepared to receive him. Upon the death of Montezuma, the Mexican chiefs, in whom the right of electing the emperor was vested, had instantly raised his brother Quetlavaca to the throne. His avowed and inveterate enmity to the Spaniards would have been sufficient to gain their suffrages, although he had been less distinguished for courage and capacity. He had an immediate opportunity of showing that he was worthy of their choice, by conducting, in person, those fierce attacks which compelled the Spaniards to abandon his capital; and as soon as their retreat afforded them any respite from action, he took measures for preventing their return to Mexico, with prudence equal to the spirit which he had displayed in driving them out of it. As, from the vicinity of Tlascala, he could not be unacquainted with the motions and intentions of Cortes, he observed the storm that was gathering, and began early to provide against it. He repaired what the Spaniards had ruined in the city, and strengthened it with such new fortifications as the skill of his subjects was capable of erecting. Besides filling his magazines with the usual weapons of war, he gave directions to make long spears headed with the swords and daggers taken from the Spaniards, in order to annoy the cavalry. He summoned the people in every province of the empire to take arms against their oppressors, and as an encouragement to exert themselves with vigour, he promised them exemption from all the taxes which his predecessors had imposed.[o] But what he laboured with the greatest earnestness was, to deprive the Spaniards of the advantages which they derived from the friendship of the Tlascalans, by endeavouring to persuade that people to renounce all connexion with men, who were not only avowed enemies of the gods whom they worshipped, but who would not fail to subject them at last to the same yoke, which they were now inconsiderately lending their aid to impose upon others. These representations, no less striking than

well founded, were urged so forcibly by his ambassadors, that it required all the address of Cortes to prevent their making a dangerous impression.[p]

But while Quetlavaca was arranging his plan of defence, with a degree of foresight uncommon in an American, his days were cut short by the small-pox. This distemper, which raged at that time in New Spain with fatal malignity, was unknown in that quarter of the globe until it was introduced by the Europeans, and may be reckoned among the greatest calamities brought upon them by their invaders. In his stead the Mexicans raised to the throne Guatimozin, nephew and son-in-law of Montezuma, a young man of such high reputation for abilities and valour, that in this dangerous crisis his countrymen, with one voice, called him to the supreme command.[q]

1521. Cortes advances towards Mexico.

As soon as Cortes entered the enemy's territories, he discovered various preparations to obstruct his progress. But his troops forced their way with little difficulty, and took possession of Tezcuco, the second city of the empire, situated on the banks of the lake, about twenty miles from Mexico.[r] Here he determined to establish his head-quarters, as the most proper station for launching his brigantines, as well as for making his approaches to the capital. In order to render his residence there more secure, he deposed the cazique or chief who was at the head of that community, under pretext of some defect in his title, and substituted in his place a person whom a faction of the nobles pointed out as the right heir of that dignity. Attached to him by this benefit, the new cazique and his adherents served the Spaniards with inviolable fidelity.[s]

His operations slow and cautious.

As the preparations for constructing the brigantines advanced slowly under the unskilful hands of soldiers and Indians, whom Cortes was obliged to employ in assisting three or four carpenters who happened fortunately to be in his service, and as he had not yet received the reinforcement which he expected from Hispaniola, he was not in a condition to turn his arms directly against the capital. To have attacked, at this period, a city so populous, so well prepared for defence, and in a situation of such peculiar strength, must have exposed his troops to inevitable destruction. Three months elapsed before the materials for the brigantines were finished, and before he heard any thing with respect to the success of the officer whom he had sent to Hispaniola. This, however, was not a season of inaction to Cortes. He attacked successively several of the towns situated around the lake; and though all the Mexican power was exerted to obstruct his operations, he either compelled them to submit to the Spanish crown, or reduced them to ruins. The inhabitants of other towns he endeavoured to conciliate by more gentle means, and though he could not hold any intercourse with them but by the intervention of interpreters, yet, under all the disadvantage of that tedious and imperfect mode of communication, he had acquired such thorough knowledge of the state of the country, as well as of the dispositions of the people, that he conducted his negociations and intrigues with astonishing dexterity and success. Most of the cities adjacent to Mexico were originally the capitals of small independent states; and some of them, having been but lately annexed to the Mexican empire, still retained the remembrance of their ancient liberty, and bore with impatience the rigorous yoke of their new masters. Cortes, having early observed symptoms of their disaffection, availed himself of this knowledge to gain their confidence and friendship. By offering with confidence to deliver them from the odious dominion of the Mexicans, and by liberal promises of more indulgent treatment if they would unite with him against their oppressors, he prevailed on the people of several considerable districts, not only to acknowledge the king of Castile as their sovereign, but to supply the Spanish camp with provisions, and to strengthen his army with auxiliary troops. Guatimozin, on the first appearance of defection among his subjects, exerted himself with vigour to prevent or to punish their revolt; but, in spite of his efforts, the spirit continued to spread. The Spaniards gradually acquired new allies, and with deep concern he beheld Cortes arming against his empire those very hands which ought to have been active in its defence; and ready to advance against the capital at the head of a numerous body of his own subjects.[t]

While, by those various methods, Cortes was gradually circumscribing the Mexican power in such a manner that his prospect of overturning it seemed neither to be uncertain nor remote, all his schemes were well nigh defeated by a conspiracy no less unexpected than dangerous. The soldiers of Narvaez had never united perfectly with the original companions of Cortes, nor did they enter into his measures with the same cordial zeal. Upon every occasion that required any extraordinary effort of courage or of patience, their spirits were apt to sink; and now, on a near view of what they had to encounter, in attempting to reduce a city so inaccessible as Mexico, and defended by a numerous army, the resolution even of those among them who had adhered to Cortes when he was deserted by their associates, began to fail. Their fears led them to presumptuous and unsoldier-like discussions concerning the propriety of their general's measures, and the improbability of their success. From these they proceeded to censure and invectives, and at last began to deliberate how they might provide for their own safety, of which they deemed their commander to be totally negligent.

t Cortes Relat. 256—260. B. Diaz, c. 137—140. Gomara Cron. c. 122, 123. Herrera, dec. 3. lib. i. c. 1, 2.

Antonio Villefagna, a private soldier, but bold, intriguing, and strongly attached to Velasquez, artfully fomented this growing spirit of disaffection. His quarters became the rendezvous of the malcontents, where, after many consultations, they could discover no method of checking Cortes in his career, but by assassinating him and his most considerable officers, and conferring the command upon some person who would relinquish his wild plans, and adopt measures more consistent with the general security. Despair inspired them with courage. The hour for perpetrating the crime, the persons whom they destined as victims, the officers to succeed them in command, were all named; and the conspirators signed an association, by which they bound themselves with most solemn oaths to mutual fidelity. But on the evening before the appointed day, one of Cortes's ancient followers, who had been seduced into the conspiracy, touched with compunction at the imminent danger of a man whom he had long been accustomed to revere, or struck with horror at his own treachery, went privately to his general, and revealed to him all that he knew. Cortes, though deeply alarmed, discerned at once what conduct was proper in a situation so critical. He repaired instantly to Villefagna's quarters, accompanied by some of his most trusty officers. The astonishment and confusion of the man at this unexpected visit anticipated the confession of his guilt. Cortes, while his attendants seized the traitor, snatched from his bosom a paper containing the association, signed by the conspirators. Impatient to know how far the defection extended, he retired to read it, and found there names which filled him with surprise and sorrow. But aware how dangerous a strict scrutiny might prove at such a juncture, he confined his judicial inquiries to Villefagna alone. As the proofs of his guilt were manifest, he was condemned after a short trial, and next morning he was seen hanging before the door of the house in which he had lodged. Cortes called his troops together, and having explained to them the atrocious purpose of the conspirators, as well as the justice of the punishment inflicted on Villefagna, he added, with an appearance of satisfaction, that he was entirely ignorant with respect to all the circumstances of this dark transaction, as the traitor, when arrested, had suddenly torn and swallowed a paper which probably contained an account of it, and under the severest tortures possessed such constancy as to conceal the names of his accomplices. This artful declaration restored tranquillity to many a breast that was throbbing, while he spoke, with consciousness of guilt and dread of detection; and by this prudent moderation, Cortes had the advantage of having discovered, and of being able to observe, such of his followers as were disaffected; while they, flattering themselves that their past crime was unknown, endeavoured to avert any suspicion of it, by redoubling their activity and zeal in his service.[u]

His singular preparations for building brigantines.

Cortes did not allow them leisure to ruminate on what had happened; and, as the most effectual means of preventing the return of a mutinous spirit, he determined to call forth his troops immediately to action. Fortunately a proper occasion for this occurred without his seeming to court it. He received intelligence that the materials for building the brigantines were at length completely finished, and waited only for a body of Spaniards to conduct them to Tezcuco. The command of this convoy, consisting of two hundred foot soldiers, fifteen horsemen, and two field-pieces, he gave to Sandoval, who, by the vigilance, activity, and courage which he manifested on every occasion, was growing daily in his confidence, and in the estimation of his fellow-soldiers. The service was no less singular than important; the beams, the planks, the masts, the cordage, the sails, the iron-work, and all the infinite variety of articles requisite for the construction of thirteen brigantines, were to be carried sixty miles over land, through a mountainous country, by people who were unacquainted with the ministry of domestic animals, or the aid of machines to facilitate any work of labour. The Tlascalans furnished eight thousand *Tamenes*, an inferior order of men destined for servile tasks, to carry the materials on their shoulders, and appointed fifteen thousand warriors to accompany and defend them. Sandoval made the disposition for their progress with great propriety, placing the *Tamenes* in the centre, one body of warriors in the front, another in the rear, with considerable parties to cover the flanks. To each of these he joined some Spaniards, not only to assist them in danger, but to accustom them to regularity and subordination. A body so numerous, and so much encumbered, advanced leisurely, but in excellent order; and in some places, where it was confined by the woods or mountains, the line of march extended above six miles. Parties of Mexicans frequently appeared hovering around them on the high grounds; but perceiving no prospect of success in attacking an enemy continually on his guard, and prepared to receive them, they did not venture to molest him; and Sandoval had the glory of conducting safely to Tezcuco a convoy on which all the future operations of his countrymen depended.[x]

Receives a new reinforcement.

This was followed by another event of no less moment. Four ships arrived at Vera Cruz from Hispaniola, with two hundred soldiers, eighty horses, two battering cannon, and a considerable supply of ammunition and arms.[y] Elevated with observing that all his preparatory schemes, either for recruiting his own army, or impairing the force of the enemy, had now produced their full effect, Cortes, impatient to begin the siege

u Cortes Relat. 283. C. B. Diaz, c. 146. Herrera, dec. 3. lib. i. c. 1.

y Cortes Relat. 259. F. 262. D. Gomara Cron. c. 129.

in form, hastened the launching of the brigantines. To facilitate this he had employed a vast number of Indians, for two months, in deepening the small rivulet which runs by Tezeuco into the lake, and in forming it into a canal near two miles in length;[z] and though the Mexicans, aware of his intentions, as well as of the danger which threatened them, endeavoured frequently to interrupt the labourers, or to burn the brigantines, the work was at last completed.[a] On the twenty-eighth of April all the Spanish troops, together with the auxiliary Indians, were drawn up on the banks of the canal; and with extraordinary military pomp, rendered more solemn by the celebration of the most sacred rites of religion, the brigantines were launched. As they fell down the canal in order, father Olmedo blessed them, and gave each its name. Every eye followed them with wonder and hope, until they entered the lake, when they hoisted their sails, and bore away before the wind. A general shout of joy was raised; all admiring that bold inventive genius, which, by means so extraordinary that their success almost exceeded belief, had acquired the command of a fleet, without the aid of which Mexico would have continued to set the Spanish power and arms at defiance.[b]

The brigantines launched.

Cortes determined to attack the city from three different quarters; from Tepeaca on the north side of the lake, from Tacuba on the west, and from Cuyocan towards the south. Those towns were situated on the principal causeways which led to the capital, and intended for their defence. He appointed Sandoval to command in the first, Pedro de Alvarado in the second, and Christoval de Olid in the third; allotting to each a numerous body of Indian auxiliaries, together with an equal division of Spaniards, who, by the junction of the troops from Hispaniola, amounted now to eighty-six horsemen, and eight hundred and eighteen foot soldiers; of whom one hundred and eighteen were armed with muskets or cross-bows. The train of artillery consisted of three battering cannon, and fifteen field-pieces.[c] He reserved for himself, as the station of greatest importance and danger, the conduct of the brigantines, each armed with one of his small cannon, and manned with twenty-five Spaniards.

Dispositions for the siege.

May 10. As Alvarado and Olid proceeded towards the posts assigned them, they broke down the aqueducts which the ingenuity of the Mexicans had erected for conveying water into the capital, and by the distress to which this reduced the inhabitants, gave a beginning to the calamities which they were destined to suffer.[d] Alvarado and Olid found the towns of which they were ordered to take possession deserted by their inhabitants, who had fled for safety to the capital, were Guatimozin had collected the chief force of his empire, as there alone he could hope to make a successful stand against the formidable enemies who were approaching to assault him.

The first effort of the Mexicans was to destroy the fleet of brigantines, the fatal effects of whose operations they foresaw and dreaded. Though the brigantines, after all the labour and merit of Cortes in forming them, were of inconsiderable bulk, rudely constructed, and manned chiefly with landsmen, hardly possessed of skill enough to conduct them, they must have been objects of terror to a people unacquainted with any navigation but that of their lake, and possessed of no vessel larger than a canoe. Necessity, however, urged Guatimozin to hazard the attack; and hoping to supply by numbers what he wanted in force, he assembled such a multitude of canoes as covered the face of the lake. They rowed on boldly to the charge, while the brigantines, retarded by a dead calm, could scarcely advance to meet them. But as the enemy drew near, a breeze suddenly sprung up; in a moment the sails were spread, the brigantines, with the utmost ease broke through their feeble opponents, overset many canoes, and dissipated the whole armament with such slaughter as convinced the Mexicans, that the progress of the Europeans in knowledge and arts rendered their superiority greater on this new element than they had hitherto found it by land.[e]

Mexicans attack the brigantines.

Repulsed.

From that time Cortes remained master of the lake, and the brigantines not only preserved a communication between the Spaniards in their different stations, though at considerable distance from each other, but were employed to cover the causeways on each side, and keep off the canoes, when they attempted to annoy the troops as they advanced towards the city. Cortes formed the brigantines in three divisions, appointing one to cover each of the stations from which an attack was to be carried on against the city, with orders to second the operations of the officer who commanded there. From all the three stations he pushed on the attack against the city with equal vigour; but in a manner so very different from the conduct of sieges in regular war, that he himself seems afraid it would appear no less improper than singular, to persons unacquainted with his situation.[f] Each morning his troops assaulted the barricades which the enemy had erected on the causeways, forced their way over the trenches which they had dug, and through the canals where the bridges were broken down, and endeavoured to penetrate into the heart of the city, in hopes of obtaining some decisive advantage, which might force the enemy to surrender, and terminate the war at once; but when the obstinate valour of the Mexicans rendered the efforts of the day ineffectual, the Spaniards retired in the evening to their former quarters. Thus their toil and danger were, in some measure, continually renewed; the Mexicans re-

pairing in the night what the Spaniards had destroyed through the day, and recovering the posts from which they had driven them. But necessity prescribed this slow and untoward mode of operation. The number of his troops was so small, that Cortes durst not, with a handful of men, attempt to make a lodgment in a city where he might be surrounded and annoyed by such a multitude of enemies. The remembrance of what he had already suffered by the ill-judged confidence with which he had ventured into such a dangerous situation, was still fresh in his mind. The Spaniards, exhausted with fatigue, were unable to guard the various posts which they daily gained; and though their camp was filled with Indian auxiliaries, they durst not devolve this charge upon them, because they were so little accustomed to discipline, that no confidence could be placed in their vigilance. Besides this, Cortes was extremely solicitous to preserve the city as much as possible from being destroyed, both because he destined it to be the capital of his conquests, and wished that it might remain as a monument of his glory. From all these considerations, he adhered obstinately, for a month after the siege was opened, to the system which he had adopted. The Mexicans, in their own defence, displayed valour which was hardly inferior to that with which the Spaniards attacked them. On land, on water, by night and by day, one furious conflict succeeded to another. Several Spaniards were killed, more wounded, and all were ready to sink under the toils of unintermitting service, which were rendered more intolerable by the injuries of the season, the periodical rains being now set in with their usual violence.[g]

Endeavours to take the city by storm.

Astonished and disconcerted with the length and difficulties of the siege, Cortes determined to make one great effort to get possession of the city, before he relinquished the plan which he had hitherto followed, and had recourse to any other mode of attack. With this view, he sent instructions to Alvarado and Sandoval to advance with their divisions to a general assault, and took the command in person of that posted on the causeway of Cuyocan. Animated by his presence, and the expectation of some decisive event, the Spaniards pushed forward with irresistible impetuosity. They broke through one barricade after another, forced their way over the ditches and canals, and having entered the city, gained ground incessantly, in spite of the multitude and ferocity of their opponents. Cortes, though delighted with the rapidity of his progress, did not forget that he might still find it necessary to retreat; and in order to secure it, appointed Julien de Alderete, a captain of chief note in the troops which he had received from Hispaniola, to fill up the canals and gaps in the causeway as the main body advanced. That officer, deeming it inglorious to be thus employed while his companions were in the heat of action and the career of victory, neglected the important charge committed to him, and hurried on, inconsiderately, to mingle with the combatants. The Mexicans, whose military attention and skill were daily improving, no sooner observed this, than they carried an account of it to their monarch.

July 3.

Repulsed,

Guatimozin instantly discerned the consequence of the error which the Spaniards had committed, and, with admirable presence of mind, prepared to take advantage of it. He commanded the troops posted in the front to slacken their efforts, in order to allure the Spaniards to push forward, while he despatched a large body of chosen warriors through different streets, some by land, and others by water, towards the great breach in the causeway, which had been left open. On a signal which he gave, the priests in the principal temple struck the great drum consecrated to the god of war. No sooner did the Mexicans hear its doleful solemn sound, calculated to inspire them with contempt of death and enthusiastic ardour, than they rushed upon the enemy with frantic rage. The Spaniards, unable to resist men urged on no less by religious fury than hope of success, began to retire, at first leisurely, and with a good countenance; but as the enemy pressed on, and their own impatience to escape increased, the terror and confusion became so general, that when they arrived at the gap in the causeway, Spaniards and Tlascalans, horsemen and infantry, plunged in promiscuously, while the Mexicans rushed upon them fiercely from every side, their light canoes carrying them through shoals which the brigantines could not approach. In vain did Cortes attempt to stop and rally his flying troops; fear rendered them regardless of his entreaties or commands. Finding all his endeavours to renew the combat fruitless, his next care was to save some of those who had thrown themselves into the water; but while thus employed, with more attention to their situation than to his own, six Mexican captains suddenly laid hold of him, and were hurrying him off in triumph; and though two of his officers rescued him at the expense of their own lives, he received several dangerous wounds before he could break loose. Above sixty Spaniards perished in the rout; and what rendered the disaster more afflicting, forty of these fell alive into the hands of an enemy never known to show mercy to a captive.[h]

with considerable loss.

Those who were taken sacrificed to the god of war.

The approach of night, though it delivered the dejected Spaniards from the attacks of the enemy, ushered in what was hardly less grievous, the noise of their barbarous triumph, and of the horrid festival with which they celebrated their victory. Every quarter of the city was illuminated; the great temple shone with such peculiar splendour, that the Spaniards

g B. Diaz, c. 151.

h Cortes Relat. p. 273. B. Diaz, c. 152. Gomara Cron. c. 138. Her. dec. 3. lib. i. c. 23.

could plainly see the people in motion, and the priests busy in hastening the preparations for the death of the prisoners. Through the gloom, they fancied that they discerned their companions by the whiteness of their skins, as they were stript naked, and compelled to dance before the image of the god to whom they were to be offered. They heard the shrieks of those who were sacrificed, and thought that they could distinguish each unhappy victim by the well-known sound of his voice. Imagination added to what they really saw or heard, and augmented its horror. The most unfeeling melted into tears of compassion, and the stoutest heart trembled at the dreadful spectacle which they beheld.[i]

New schemes and efforts of the Mexicans.

Cortes, who, besides all that he felt in common with his soldiers, was oppressed with the additional load of anxious reflections natural to a general on such an unexpected calamity, could not, like them, relieve his mind by giving vent to its anguish. He was obliged to assume an air of tranquillity, in order to revive the spirit and hopes of his followers. The juncture, indeed, required an extraordinary exertion of fortitude. The Mexicans, elated with their victory, sallied out next morning to attack him in his quarters. But they did not rely on the efforts of their own arms alone. They sent the heads of the Spaniards whom they had sacrificed to the leading men in the adjacent provinces, and assured them that the god of war, appeased by the blood of their invaders, which had been shed so plentifully on his altars, had declared with an audible voice, that in eight days' time those hated enemies should be finally destroyed, and peace and prosperity re-established in the empire.

Cortes deserted by many of his Indian allies.

A prediction uttered with such confidence, and in terms so void of ambiguity, gained universal credit among a people prone to superstition. The zeal of the provinces which had already declared against the Spaniards augmented; and several which had hitherto remained inactive, took arms, with enthusiastic ardour, to execute the decree of the gods. The Indian auxiliaries who had joined Cortes, accustomed to venerate the same deities with the Mexicans, and to receive the responses of their priests with the same implicit faith, abandoned the Spaniards as a race of men devoted to certain destruction. Even the fidelity of the Tlascalans was shaken, and the Spanish troops were left almost alone in their stations. Cortes, finding that he attempted in vain to dispel the superstitious fears of his confederates by argument, took advantage, from the imprudence of those who had framed the prophecy, in fixing its accomplishment so near at hand, to give a striking demonstration of its falsity. He suspended all military operations during the period marked out by the oracle. Under cover of the brigantines, which kept the enemy at a distance, his troops lay in safety, and the fatal term expired without any disaster.[k]

He regains their friendship,

Many of his allies, ashamed of their own credulity, returned to their station. Other tribes, judging that the gods who had now deceived the Mexicans, had decreed finally to withdraw their protection from them, joined his standard; and such was the levity of a simple people, moved by every slight impression, that in a short time after such a general defection of his confederates, Cortes saw himself, if we may believe his own account, at the head of a hundred and fifty thousand Indians.

and adopts a new system of attack.

Even with such a numerous army, he found it necessary to adopt a new and more wary system of operation. Instead of renewing his attempts to become master of the city at once, by such bold but dangerous efforts of valour as he had already tried, he made his advances gradually, and with every possible precaution against exposing his men to any calamity similar to that which they still bewailed. As the Spaniards pushed forward, the Indians regularly repaired the causeways behind them. As soon as they got possession of any part of the town, the houses were instantly levelled with the ground. Day by day, the Mexicans, forced to retire as their enemies gained ground, were hemmed in within more narrow limits. Guatimozin, though unable to stop the career of the enemy, continued to defend his capital with obstinate resolution, and disputed every inch of ground. The Spaniards not only varied their mode of attack, but, by orders of Cortes, changed the weapons with which they fought. They were again armed with the long Chinantlan spears, which they had employed with such success against Narvaez; and, by the firm array in which this enabled them to range themselves, they repelled, with little danger, the loose assault of the Mexicans; incredible numbers of them fell in the conflicts which they renewed every day.[l] While war wasted without, famine began to consume them within, the city. The Spanish brigantines, having the entire command of the lake, rendered it almost impossible to convey to the besieged any supply of provisions by water. The immense number of his Indian auxiliaries enabled Cortes to shut up the avenues to the city by land. The stores which Guatimozin had laid up were exhausted by the multitudes which had crowded into the capital to defend their sovereign and the temples of their gods. Not only the people, but persons of the highest rank, felt the utmost distresses of famine. What they suffered brought on infectious and mortal distempers, the last calamity that visits besieged cities, and which filled up the measure of their woes.[m]

Courage and constancy of Guatimozin.

But, under the pressure of so many and such various evils, the spirit of Guatimozin remained firm and un-

subdued. He rejected, with scorn, every overture of peace from Cortes; and, disdaining the idea of submitting to the oppressors of his country, determined not to survive its ruin. The Spaniards continued their progress. At length all the three divisions penetrated into the great square in the centre of the city, and made a secure lodgment there. Three-fourths of the city were now reduced, and laid in ruins. The remaining quarter was so closely pressed, that it could not long withstand assailants, who attacked it from their new station with superior advantage, and more assured expectation of success. The Mexican nobles, solicitous to save the life of a monarch whom they revered, prevailed on Guatimozin to retire from a place where resistance was now vain, that he might rouse the more distant provinces of the empire to arms, and maintain there a more successful struggle with the public enemy. In order to facilitate the execution of this measure, they endeavoured to amuse Cortes with the overtures of submission, that, while his attention was employed in adjusting the articles of pacification, Guatimozin might escape unperceived. But they made this attempt upon a leader of greater sagacity and discernment than to be deceived by their arts. Cortes, suspecting their intention, and aware of what moment it was to defeat it, appointed Sandoval, the officer on whose vigilance he could most perfectly rely, to take the command of the brigantines, with strict injunctions to watch every motion of the enemy. Sandoval, attentive to the charge, observing some large canoes crowded with people rowing across the lake with extraordinary rapidity, instantly gave the signal to chase. Garcia Holguin, who commanded the swiftest sailing brigantine, soon overtook them, and was preparing to fire on the foremost canoe, which seemed to carry some person whom all the rest followed and obeyed. At once the rowers dropped their oars, and all on board, throwing down their arms, conjured him with cries and tears to forbear, as the emperor was there. Holguin eagerly seized his prize; and Guatimozin, with a dignified composure, gave himself up into his hands, requesting only that no insult might be offered to the empress or his children. When conducted to Cortes, he appeared neither with the sullen fierceness of a barbarian, nor with the dejection of a supplicant. "I have done," said he, addressing himself to the Spanish general, "what became a monarch. I have defended my people to the last extremity. Nothing now remains but to die. Take this dagger," laying his hand on one which Cortes wore, "plant it in my breast, and put an end to a life which can no longer be of use."[n]

July 27.

He is taken prisoner.

Aug. 13. The city surrenders.

As soon as the fate of their sovereign was known, the resistance of the Mexicans ceased; and Cortes took possession of that small part of the capital which yet remained undestroyed. Thus terminated the siege of Mexico, the most memorable event in the conquest of America. It continued seventy-five days, hardly one of which passed without some extraordinary effort of one party in the attack, or of the other in the defence, of a city, on the fate of which both knew that the fortune of the empire depended. As the struggle here was more obstinate, it was likewise more equal, than any between the inhabitants of the Old and New Worlds. The great abilities of Guatimozin, the number of his troops, the peculiar situation of his capital, so far counterbalanced the superiority of the Spaniards in arms and discipline, that they must have relinquished the enterprise if they had trusted for success to themselves alone. But Mexico was overturned by the jealousy of neighbours who dreaded its power, and by the revolt of subjects impatient to shake off its yoke. By their effectual aid, Cortes was enabled to accomplish what, without such support, he would hardly have ventured to attempt. How much soever this account of the reduction of Mexico may detract, on the one hand, from the marvellous relations of some Spanish writers, by ascribing that to simple and obvious causes which they attribute to the romantic valour of their countrymen, it adds, on the other, to the merit and abilities of Cortes, who, under every disadvantage, acquired such an ascendant over unknown nations, as to render them instruments towards carrying his schemes into execution.[o]

Smallness of the booty, and disappointment of the Spaniards.

The exultation of the Spaniards on accomplishing this arduous enterprise was at first excessive. But this was quickly damped by the cruel disappointment of those sanguine hopes, which had animated them amidst so many hardships and dangers. Instead of the inexhaustible wealth which they expected from becoming masters of Montezuma's treasures, and the ornaments of so many temples, their rapaciousness could only collect an inconsiderable booty amidst ruins and desolation.[p] Guatimozin, aware of his impending fate, had ordered what remained of the riches amassed by his ancestors to be thrown into the lake. The Indian auxiliaries, while the Spaniards were engaged in conflict with the enemy, had carried off the most valuable part of the spoil. The sum to be divided among the conquerors was so small, that many of them disdained to accept of the pittance which fell to their share, and all murmured and exclaimed; some against Cortes and his confidants, whom they suspected of having secretly appropriated to their own use a large portion of the riches which should have been brought into the common stock; others against Guatimozin, whom they accused of obstinacy, in refusing to discover the place where he had hidden his treasure.

Guatimozin tortured.

Arguments, entreaties, and promises were employed in order to soothe them,

o See Note CXXI.

p The gold and silver, according to Cortes, amounted only to 120,000 pesos, Relat. 280. A. a sum much inferior to that which the Spaniards had formerly divided in Mexico.

but with so little effect, that Cortes, from solicitude to check this growing spirit of discontent, gave way to a deed which stains the glory of all his great actions. Without regarding the former dignity of Guatimozin, or feeling any reverence for those virtues which he had displayed, he subjected the unhappy monarch, together with his chief favourite, to torture, in order to force from them a discovery of the royal treasures, which it was supposed they had concealed. Guatimozin bore whatever the refined cruelty of his tormentors could inflict, with the invincible fortitude of an American warrior. His fellow-sufferer, overcome by the violence of the anguish, turned a dejected eye towards his master, which seemed to implore his permission to reveal all that he knew. But the high-spirited prince, darting on him a look of authority mingled with scorn, checked his weakness by asking, "Am I now reposing on a bed of flowers?" Overawed by the reproach, the favourite persevered in his dutiful silence, and expired. Cortes, ashamed of a scene so horrid, rescued the royal victim from the hands of his torturers, and prolonged a life reserved for new indignities and sufferings.[q]

All the provinces of the empire submit.

The fate of the capital, as both parties had foreseen, decided that of the empire. The provinces submitted one after another to the conquerors. Small detachments of Spaniards marching through them without interruption, penetrated in different quarters to the great Southern ocean, which, according to the ideas of Columbus, they imagined would open a short as well as easy passage to the East Indies, and secure to the crown of Castile all the envied wealth of those fertile regions;[r] and the active mind of Cortes began already to form schemes for attempting this important discovery.[s]

Cortes forms schemes of new discoveries.

which are completed by Magellan.

He did not know, that during the progress of his victorious arms in Mexico, the very scheme of which he began to form some idea had been undertaken and accomplished. As this is one of the most splendid events in the history of the Spanish discoveries, and has been productive of effects peculiarly interesting to those extensive provinces which Cortes had now subjected to the crown of Castile, the account of its rise and progress merits a particular detail.

Ferdinand Magalhaens, or Magellan, a Portuguese gentleman of honourable birth, having served several years in the East Indies, with distinguished valour, under the famous Albuquerque, demanded the recompence which he thought due to his services, with the boldness natural to a high-spirited soldier. But as his general would not grant his suit, and he expected greater justice from his sovereign, whom he knew to be a good judge and a generous rewarder of merit, he quitted India abruptly, and returned to Lisbon. In order to induce Emanuel to listen more favourably to his claim, he not only stated his past services, but offered to add to them by conducting his countrymen to the Molucca or Spice Islands, by holding a westerly course; which he contended would be both shorter and less hazardous than that which the Portuguese now followed by the Cape of Good Hope, through the immense extent of the Eastern Ocean. This was the original and favourite project of Columbus, and Magellan founded his hopes of success on the ideas of that great navigator, confirmed by many observations, the result of his own naval experience, as well as that of his countrymen, in their intercourse with the East. But though the Portuguese monarchs had the merit of having first awakened and encouraged the spirit of discovery in that age, it was their destiny, in the course of a few years, to reject two grand schemes for this purpose, the execution of which would have been attended with a great accession of glory to themselves, and of power to their kingdom. In consequence of some ill-founded prejudice against Magellan, or of some dark intrigue which contemporary historians have not explained, Emanuel would neither bestow the recompence which he claimed, nor approve of the scheme which he proposed; and dismissed him with a disdainful coldness, intolerable to a man conscious of what he deserved, and animated with the sanguine hopes of success peculiar to those who are capable of forming or of conducting new and great undertakings. In a transport of resentment, Magellan formally renounced his allegiance to an ungrateful master, and fled to the court of Castile, where he expected that his talents would be most justly estimated. He endeavoured to recommend himself by offering to execute, under the patronage of Spain, that scheme which he had laid before the court of Portugal, the accomplishment of which, he knew, would wound the monarch against whom he was exasperated in the most tender part. In order to establish the justness of his theory, he produced the same arguments which he had employed at Lisbon; acknowledging, at the same time, that the undertaking was both arduous and expensive, as it could not be attempted but with a squadron of considerable force, and victualled for at least two years. Fortunately, he applied to a minister who was not apt to be deterred, either by the boldness of a design, or the expense of carrying it into execution. Cardinal Ximenes, who at that time directed the affairs of Spain, discerning at once what an increase of wealth and glory would accrue to his country by the success of Magellan's proposal, listened to it with a most favourable ear. Charles V. on his arrival in his Spanish dominions, entered into the measure with no less ardour, and orders were issued for equipping a proper squadron at the public charge, of which the command was given to Magellan,

whom the king honoured with the habit of St. Jago and the title of captain-general.[t]

His voyage. On the tenth of August one thousand five hundred and nineteen, Magellan sailed from Seville with five ships, which, according to the ideas of the age, were deemed to be of considerable force, though the burden of the largest did not exceed one hundred and twenty tons. The crews of the whole amounted to two hundred and thirty-four men, among whom were some of the most skilful pilots in Spain, and several Portuguese sailors, in whose experience, as more extensive, Magellan placed still greater confidence. After touching at the Canaries, he stood directly south towards the equinoctial line along the coast of America, but was so long retarded by tedious calms, and spent so much time in searching every bay and inlet for that communication with the Southern Ocean which he wished to discover, that he did not reach the river De la Plata till the twelfth of January. That spacious opening through which its vast body of water pours into the Atlantic allured him to enter; but after sailing up it for some days, he concluded, from the shallowness of the stream and the freshness of the water, that the wished-for strait was not situated there, and continued his course towards the south. On the thirty-first of March he arrived in the port of St. Julian, about forty-eight degrees south of the line, where he resolved to winter. In this uncomfortable station he lost one of his squadron, and the Spaniards suffered so much from the excessive rigour of the climate, that the crews of three of his ships, headed by their officers, rose in open mutiny, and insisted on relinquishing the visionary project of a desperate adventurer, and returning directly to Spain. This dangerous insurrection Magellan suppressed by an effort of courage no less prompt than intrepid, and inflicted exemplary punishment on the ringleaders. With the remainder of his followers, overawed but not reconciled to his scheme, he continued his voyage towards the south, and at length discovered, near the fifty-third degree of latitude, the mouth of a strait, into which he entered, notwithstanding the murmurs and remonstrances of the people under his command. After sailing twenty days in that winding dangerous channel, to which he gave his own name, and where one of his ships deserted him, the great Southern ocean opened to his view, and with tears of joy he returned thanks to Heaven for having thus far crowned his endeavours with success.[u]

1520.

But he was still at a greater distance than he imagined from the object of his wishes. He sailed during three months and twenty days in an uniform direction towards the north-west, without discovering land. In this voyage, the longest that had ever been made in the unbounded ocean, he suffered incredible distress. His stock of provisions was almost exhausted, the water became putrid, the men were reduced to the shortest allowance with which it was possible to sustain life, and the scurvy, the most dreadful of all the maladies with which seafaring people are afflicted, began to spread among the crew. One circumstance alone afforded them some consolation; they enjoyed an uninterrupted course of fair weather, with such favourable winds, that Magellan bestowed on that ocean the name of *Pacific*, which it still retains. When reduced to such extremity that they must have sunk under their sufferings, they fell in with a cluster of small but fertile islands, which afforded them refreshments in such abundance, that their health was soon re-established. From these isles, which he called *De los Ladrones*, he proceeded on his voyage, and soon made a more important discovery of the islands now known by the name of the *Philippines*. In one of these he got into an unfortunate quarrel with the natives, who attacked him with a numerous body of troops well armed; and while he fought at the head of his men with his usual valour, he fell by the hands of those barbarians, together with several of his principal officers.

March 6.

April 26.

The expedition was prosecuted under other commanders. After visiting many of the smaller isles scattered in the eastern part of the Indian Ocean, they touched at the great island of Borneo, and at length landed in Tidore, one of the Moluccas, to the astonishment of the Portuguese, who could not comprehend how the Spaniards, by holding a westerly course, had arrived at that sequestered seat of their most valuable commerce, which they themselves had discovered by sailing in an opposite direction. There, and in the adjacent isles, the Spaniards found a people acquainted with the benefits of extensive trade, and willing to open an intercourse with a new nation. They took in a cargo of the precious spices, which are the distinguished production of these islands; and with that, as well as with specimens of the rich commodities yielded by the other countries which they had visited, the *Victory*, which, of the two ships that remained of the squadron, was most fit for a long voyage, set sail for Europe, under the command of Juan Sebastian del Cano. He followed the course of the Portuguese, by the Cape of Good Hope, and after many disasters and sufferings he arrived at St. Lucar on the seventh of September one thousand five hundred and twenty-two, having sailed round the globe in the space of three years and twenty-eight days.[x]

Nov. 8.

1522. January.

Though an untimely fate deprived Magellan of the satisfaction of accomplishing this great undertaking, his contemporaries, just to his memory and talents, ascribed to him not only the honour of hav-

ing formed the plan, but of having surmounted almost every obstacle to the completion of it; and in the present age his name is still ranked among the highest in the roll of eminent and successful navigators. The naval glory of Spain now eclipsed that of every other nation; and by a singular felicity she had the merit, in the course of a few years, of discovering a new continent almost as large as that part of the earth which was formerly known, and of ascertaining by experience the form and extent of the whole of the terraqueous globe.

The Spaniards were not satisfied with the glory of having first encompassed the earth; they expected to derive great commercial advantages from this new and boldest effort of their maritime skill. The men of science among them contended, that the Spice Islands, and several of the richest countries in the east, were so situated as to belong of right to the crown of Castile, in consequence of the partitions made by Alexander VI. The merchants, without attending to this discussion, engaged eagerly in that lucrative and alluring commerce which was now opened to them. The Portuguese, alarmed at the intrusion of such formidable rivals, remonstrated and negociated in Europe, while in Asia they obstructed the trade of the Spaniards by force of arms. Charles V. not sufficiently instructed with respect to the importance of this valuable branch of commerce, or distracted by the multiplicity of his schemes and operations, did not afford his subjects proper protection. At last, the low state of his finances, exhausted by the efforts of his arms in every part of Europe, together with the dread of adding a new war with Portugal to those in which he was already engaged, induced him to make over his claim of the Moluccas to the Portuguese for three hundred and fifty thousand ducats. He reserved, however, to the crown of Castile the right of reviving its pretensions on repayment of that sum; but other objects engrossed his attention and that of his successors; and Spain was finally excluded from a branch of commerce in which it was engaging with sanguine expectations of profit.[y]

Though the trade with the Moluccas was relinquished, the voyage of Magellan was followed by commercial effects of great moment to Spain. Philip II., in the year one thousand five hundred and sixty-four, reduced those islands which he discovered in the Eastern ocean to subjection, and established settlements there; between which and the kingdom of New Spain a regular intercourse, the nature of which shall be explained in its proper place, is still carried on. I return now to the transactions in new Spain.

An order to supersede Cortes,

At the time that Cortes was acquiring such extensive territories for his native country, and preparing the way for future conquests, it was his singular fate not only to be destitute of any commission or authority from the sovereign whom he was serving with such successful zeal, but to be regarded as an undutiful and seditious subject. By the influence of Fonseca, bishop of Burgos, his conduct in assuming the government of New Spain was declared to be an irregular usurpation, in contempt of the royal authority; and Christoval de Tapia received a commission, empowering him to supersede Cortes, to seize his person, to confiscate his effects, to make a strict scrutiny into his proceedings, and to transmit the result of all the inquiries carried on in New Spain to the council of the Indies, of which the bishop of Burgos was president. A few weeks after the reduction of Mexico, Tapia landed at Vera Cruz, with the royal mandate to strip its conqueror of his power, and treat him as a criminal. But Fonseca had chosen a very improper instrument to wreak his vengeance on Cortes. Tapia had neither the reputation nor the talents that suited the high command to which he was appointed. Cortes, while he publicly expressed the most respectful veneration for the emperor's authority, secretly took measures to defeat the effect of his commission; and having involved Tapia and his followers in a multiplicity of negociations and conferences, in which he sometimes had recourse to threats, but more frequently employed bribes and promises, he at length prevailed upon that weak man to abandon a province which he was unworthy of governing.[z]

which he eludes.

Applies again to the court. May 15.

But notwithstanding the fortunate dexterity with which he had eluded this danger, Cortes was so sensible of the precarious tenure by which he held his power, that he despatched deputies to Spain, with a pompous account of the success of his arms, with further specimens of the productions of the country, and with rich presents to the emperor, as the earnest of future contributions from his new conquests; requesting, in recompence for all his services, the approbation of his proceedings, and that he might be intrusted with the government of those dominions, which his conduct and the valour of his followers had added to the crown of Castile. The juncture in which his deputies reached the court was favourable. The internal commotions in Spain, which had disquieted the beginning of Charles's reign, were just appeased.[a] The ministers had leisure to turn their attention towards foreign affairs. The account of Cortes's victories filled his countrymen with admiration. The extent and value of his conquests became the object of vast and interesting hopes. Whatever stain he might have contracted, by the irregularity of the steps which he took in order to attain power, was so fully effaced by the splendour and merit of the great actions which this had enabled him to perform, that every heart revolted at the thought of inflicting any censure on a man whose services entitled him to the highest marks of

a Hist. of Charles V. b. iii.

distinction. The public voice declared warmly in favour of his pretensions; and Charles, arriving in Spain about this time, adopted the sentiments of his subjects with a youthful ardour. Notwithstanding the claims of Velasquez, and the partial representations of the bishop of Burgos, the emperor appointed Cortes captain-general and governor of New Spain, judging that no person was so capable of maintaining the royal authority, or of establishing good order both among his Spanish and Indian subjects, as the victorious leader whom the former had long been accustomed to obey, and the latter had been taught to fear and to respect.[b]

and is appointed captain-general and governor of New Spain.

His schemes and arrangements.

Even before his jurisdiction received this legal sanction, Cortes ventured to exercise all the powers of a governor, and, by various arrangements, endeavoured to render his conquest a secure and beneficial acquisition to his country. He determined to establish the seat of government in its ancient station, and to raise Mexico again from its ruins; and having conceived high ideas concerning the future grandeur of the state of which he was laying the foundation, he began to re-build its capital on a plan which hath gradually formed the most magnificent city in the New World. At the same time, he employed skilful persons to search for mines in different parts of the country, and opened some which were found to be richer than any which the Spaniards had hitherto discovered in America. He detached his principal officers into the remote provinces, and encouraged them to settle there, not only by bestowing upon them large tracts of land, but by granting them the same dominion over the Indians, and the same right to their service, which the Spaniards had assumed in the islands.

Insurrections of the Mexicans and cruelty of the Spaniards.

It was not, however, without difficulty, that the Mexican empire could be entirely reduced into the form of a Spanish colony. Enraged and rendered desperate by oppression, the natives often forgot the superiority of their enemies, and ran to arms in defence of their liberties. In every contest, however, the European valour and discipline prevailed. But fatally for the honour of their country, the Spaniards sullied the glory redounding from these repeated victories by their mode of treating the vanquished people. After taking Guatimozin, and becoming masters of his capital, they supposed that the king of Castile entered on possession of all the rights of the captive monarch, and affected to consider every effort of the Mexicans to assert their own independence, as the rebellion of vassals against their sovereign, or the mutiny of slaves against their master. Under the sanction of those ill-founded maxims, they violated every right that should be held sacred between hostile nations. After each insurrection, they reduced the common people, in the provinces which they subdued, to the most humiliating of all conditions, that of personal servitude. Their chiefs, supposed to be more criminal, were punished with greater severity, and put to death in the most ignominious or the most excruciating mode that the insolence or the cruelty of their conquerors could devise. In almost every district of the Mexican empire, the progress of the Spanish arms is marked with blood, and with deeds so atrocious, as disgrace the enterprising valour that conducted them to success. In the country of Panuco sixty caziques or leaders, and four hundred nobles, were burnt at one time. Nor was this shocking barbarity perpetrated in any sudden sally of rage, or by a commander of inferior note. It was the act of Sandoval, an officer whose name is entitled to the second rank in the annals of New Spain, and executed after a solemn consultation with Cortes; and to complete the horror of the scene, the children and relations of the wretched victims were assembled, and compelled to be spectators of their dying agonies.[c] It seems hardly possible to exceed in horror this dreadful example of severity; but it was followed by another, which affected the Mexicans still more sensibly, as it gave them a most feeling proof of their own degradation, and of the small regard which their haughty masters retained for the ancient dignity and splendour of their state. On a slight suspicion, confirmed by very imperfect evidence, that Guatimozin had formed a scheme to shake off the yoke, and to excite his former subjects to take arms, Cortes, without the formality of a trial, ordered the unhappy monarch, together with the caziques of Tezeuco and Tacuba, the two persons of greatest eminence in the empire, to be hanged; and the Mexicans, with astonishment and horror, beheld this disgraceful punishment inflicted upon persons, to whom they were accustomed to look up with reverence hardly inferior to that which they paid to the gods themselves.[d] The example of Cortes and his principal officers encouraged and justified persons of subordinate rank to venture upon committing greater excesses. Nuno de Guzman, in particular, stained an illustrious name by deeds of peculiar enormity and rigour, in various expeditions which he conducted.[e]

First object of industry among the conquerors.

One circumstance, however, saved the Mexicans from further consumption, perhaps from one as complete as that which had depopulated the islands. The first conquerors did not attempt to search for the precious metals in the bowels of the earth. They were neither sufficiently wealthy to carry on the expensive works, which are requisite for opening those deep recesses where nature has concealed the veins of gold and silver, nor sufficiently skilful to perform the ingenious operations by which those precious metals are separated from their respective ores. They were satisfied with the more simple method, practised by the Indians, of washing the earth carried

down rivers and torrents from the mountains, and collecting the grains of native metal deposited there. The rich mines of New Spain, which have poured forth their treasures with such profusion on every quarter of the globe, were not discovered for several years after the conquest.[f] By that time a more orderly government and police were introduced into the colony; experience, derived from former errors, had suggested many useful and humane regulations for the protection and preservation of the Indians; and though it then became necessary to increase the number of those employed in the mines, and they were engaged in a species of labour more pernicious to the human constitution, they suffered less hardship or diminution than from the ill-judged but less extensive schemes of the first conquerors.

1552, &c.

Their poverty.

While it was the lot of the Indians to suffer, their new masters seemed not to have derived any considerable wealth from their ill-conducted researches. According to the usual fate of first settlers in new colonies, it was their lot to encounter danger, and to struggle with difficulties; the fruits of their victories and toils were reserved for times of tranquillity, and reaped by successors of greater industry, but of inferior merit. The early historians of America abound with accounts of the sufferings and of the poverty of its conquerors.[g] In New Spain, their condition was rendered more grievous by a peculiar arrangement. When Charles V. advanced Cortes to the government of that country, he at the same time appointed certain commissioners to receive and administer the royal revenue there with independent jurisdiction.[h] These men, chosen from inferior stations in various departments of public business at Madrid, were so much elevated with their promotion, that they thought they were called to act a part of the first consequence. But being accustomed to the minute formalities of office, and having contracted the narrow ideas suited to the sphere in which they had hitherto moved, they were astonished, on arriving in Mexico, at the high authority which Cortes exercised, and could not conceive that the mode of administration, in a country recently subdued and settled, must be different from what took place in one where tranquillity and regular government had been long established. In their letters they represented Cortes as an ambitious tyrant, who, having usurped a jurisdiction superior to law, aspired at independence, and by his exorbitant wealth and extensive influence might accomplish those disloyal schemes which he apparently meditated.[i] These insinuations made such deep impression upon the Spanish ministers, most of whom had been formed to business under the jealous and rigid administration of Ferdinand, that, unmindful of all Cortes's past services, and regardless of what he was then suffering in conducting that extraordinary expedition, in which he advanced from the lake of Mexico to the western extremities of Honduras,[k] they infused the same suspicions into the mind of their master, and prevailed on him to order a solemn inquest to be made into his conduct, with powers to the licentiate Ponce de Leon, intrusted with that commission, to seize his person, if he should find that expedient, and send him prisoner to Spain.[l]

1524.

1525.

The sudden death of Ponce de Leon, a few days after his arrival in New Spain, prevented the execution of this commission. But as the object of his appointment was known, the mind of Cortes was deeply wounded with this unexpected return for services which far exceeded whatever any subject of Spain had rendered to his sovereign. He endeavoured, however, to maintain his station, and to recover the confidence of the court. But every person in office who had arrived from Spain since the conquest was a spy upon his conduct, and with malicious ingenuity gave an unfavourable representation of all his actions. The apprehensions of Charles and his ministers increased. A new commission of inquiry was issued, with more extensive powers, and various precautions were taken in order to prevent or to punish him, if he should be so presumptuous as to attempt what was inconsistent with the fidelity of a subject.[m] Cortes beheld the approaching crisis of his fortune with all the violent emotions natural to a haughty mind, conscious of high desert, and receiving unworthy treatment. But though some of his desperate followers urged him to assert his own rights against his ungrateful country, and with a bold hand to seize that power which the courtiers meanly accused him of coveting,[n] he retained such self-command, or was actuated with such sentiments of loyalty, as to reject their dangerous counsels, and to choose the only course in which he could secure his own dignity, without departing from his duty. He resolved not to expose himself to the ignominy of a trial, in that country which had been the scene of his triumphs; but, without waiting for the arrival of his judges, to repair directly to Castile, and commit himself and his cause to the justice and generosity of his sovereign.[o]

Cortes returns to Spain.

1528.

Cortes appeared in his native country with the splendour that suited the conqueror of a mighty kingdom. He brought with him a great part of his wealth, many jewels and ornaments of great value, several curious productions of the country,[p] and was attended by some Mexicans of the first rank, as well as by the most considerable of his own officers. His arrival in Spain removed at once every suspicion and fear that had been entertained with respect to his intentions.

His reception there.

The emperor, having now nothing to apprehend from the designs of Cortes, received him like a person whom consciousness of his own innocence had brought into the presence of his master, and who was entitled, by the eminence of his services, to the highest marks of distinction and respect. The order of St. Jago, the title of Marquis del Valle de Guaxaca, the grant of an ample territory in New Spain, were successively bestowed upon him; and as his manners were correct and elegant, although he had passed the greater part of his life among rough adventurers, the emperor admitted him to the same familiar intercourse with himself, that was enjoyed by noblemen of the first rank.[q]

Settlement of the government in New Spain.

But, amidst those external proofs of regard, symptoms of remaining distrust appeared. Though Cortes earnestly solicited to be reinstated in the government of New Spain, Charles, too sagacious to commit such an important charge to a man whom he had once suspected, peremptorily refused to invest him again with powers which he might find it impossible to control. Cortes, though dignified with new titles, returned to Mexico with diminished authority. The military department, with powers to attempt new discoveries, was left in his hands; but the supreme direction of civil affairs was placed in a board called *The Audience of New Spain*. At a subsequent period, when, upon the increase of the colony, the exertion of authority more united and extensive became necessary, Antonio de Mendoza, a nobleman of high rank, was sent thither as *Viceroy*, to take the government into his hands.

1530.

New schemes of Cortes.

This division of power in New Spain proved, as was unavoidable, the source of perpetual dissension, which imbittered the life of Cortes, and thwarted all his schemes. As he had now no opportunity to display his active talents but in attempting new discoveries, he formed various schemes for that purpose, all of which bear impressions of a genius that delighted in what was bold and splendid. He early entertained an idea, that, either by steering through the gulf of Florida along the east coast of North America, some strait would be found that communicated with the Western ocean; or that by examining the isthmus of Darien, some passage would be discovered between the North and South seas.[r] But having been disappointed in his expectations with respect to both, he now confined his views to such voyages of discovery as he could make from the ports of New Spain in the South Sea. There he fitted out successively several small squadrons, which either perished in the attempt, or returned without making any discovery of moment. Cortes, weary of intrusting the conduct of his operations to others, took the command of a new armament in person, and after enduring incredible hardships, and encountering dangers of every species, he discovered the large peninsula of California, and surveyed the greater part of the gulf which separates it from New Spain. The discovery of a country of such extent would have reflected credit on a common adventurer; but it could add little new honour to the name of Cortes, and was far from satisfying the sanguine expectations which he had formed.[s] Disgusted with ill success, to which he had not been accustomed, and weary of contesting with adversaries to whom he considered it as a disgrace to be opposed, he once more sought for redress in his native country.

1536.

1540.

But his reception there was very different from that which gratitude, and even decency, ought to have secured for him. The merit of his ancient exploits was already, in a great measure, forgotten, or eclipsed by the fame of recent and more valuable conquests in another quarter of America. No service of moment was now expected from a man of declining years, and who began to be unfortunate. The emperor behaved to him with cold civility; his ministers treated him sometimes with neglect, sometimes with insolence. His grievances received no redress; his claims were urged without effect; and after several years spent in fruitless application to ministers and judges, an occupation the most irksome and mortifying to a man of high spirit, who had moved in a sphere where he was more accustomed to command than to solicit, Cortes ended his days on the second of December one thousand five hundred and forty-seven, in the sixty-second year of his age. His fate was the same with that of all the persons who distinguished themselves in the discovery or conquest of the New World. Envied by his contemporarics, and ill requited by the court which he served, he has been admired and celebrated by succeeding ages. Which has formed the most just estimate of his character, an impartial consideration of his actions must determine.

His death.

BOOK VI.

1523. Schemes for discovering Peru.

From the time that Nugnez de Balboa discovered the great Southern ocean, and received the first obscure hints concerning the opulent countries with which it might open a communication, the wishes and schemes of every enterprising person in the colonies of Darien and Panama were turned towards the wealth of those unknown regions. In an age when the spirit of adventure was so ardent and vigorous, that large fortunes were wasted, and the most alarming dangers braved, in pursuit of discoveries merely possible, the faintest ray of hope was followed with

an eager expectation, and the slightest information was sufficient to inspire such perfect confidence, as conducted men to the most arduous undertakings.[a]

unsuccessful for some time.

Accordingly, several armaments were fitted out in order to explore and take possession of the countries to the east of Panama, but under the conduct of leaders whose talents and resources were unequal to the attempt.[b] As the excursions of those adventurers did not extend beyond the limits of the province to which the Spaniards had given the name of Tierra Firme, a mountainous region covered with woods, thinly inhabited, and extremely unhealthy, they returned with dismal accounts concerning the distresses to which they had been exposed, and the unpromising aspect of the places which they had visited. Damped by these tidings, the rage for discovery in that direction abated; and it became the general opinion, that Balboa had founded visionary hopes, on the tale of an ignorant Indian, ill understood, or calculated to deceive.

1524. Undertaken by Pizarro, Almagro, and Luque.

But there were three persons settled in Panama, on whom the circumstances which deterred others made so little impression, that at the very moment when all considered Balboa's expectations of discovering a rich country, by steering towards the east, as chimerical, they resolved to attempt the execution of his scheme. The names of those extraordinary men were Francisco Pizarro, Diego de Almagro, and Hernando Luque. Pizarro was the natural son of a gentleman of an honourable family by a very low woman, and, according to the cruel fate which often attends the offspring of unlawful love, had been so totally neglected in his youth by the author of his birth, that he seems to have destined him never to rise beyond the condition of his mother. In consequence of this ungenerous idea, he set him, when bordering on manhood, to keep hogs. But the aspiring mind of young Pizarro disdaining that ignoble occupation, he abruptly abandoned his charge, enlisted as a soldier, and, after serving some years in Italy, embarked for America, which, by opening such a boundless range to active talents, allured every adventurer whose fortune was not equal to his ambitious thoughts. There Pizarro early distinguished himself. With a temper of mind no less daring than the constitution of his body was robust, he was foremost in every danger, patient under the greatest hardships, and unsubdued by any fatigue. Though so illiterate that he could not even read, he was soon considered as a man formed to command. Every operation committed to his conduct proved successful, as, by a happy but rare conjunction, he united perseverance with ardour, and was as cautious in executing, as he was bold in forming, his plans. By engaging early in active life, without any resource but his own talents and industry, and by depending on himself alone in his struggles to emerge from obscurity, he acquired such a thorough knowledge of affairs, and of men, that he was fitted to assume a superior part in conducting the former, and in governing the latter.[c]

Almagro had as little to boast of his descent as Pizarro. The one was a bastard, the other a foundling. Bred, like his companion, in the camp, he yielded not to him in any of the soldierly qualities of intrepid valour, indefatigable activity, or insurmountable constancy, in enduring the hardships inseparable from military service in the New World. But in Almagro these virtues were accompanied with the openness, generosity, and candour, natural to men whose profession is arms; in Pizarro, they were united with the address, the craft, and the dissimulation of a politician, with the art of concealing his own purposes, and with sagacity to penetrate into those of other men.

Fernando de Luque was an ecclesiastic, who acted both as priest and schoolmaster at Panama, and, by means which the contemporary writers have not described, had amassed riches that inspired him with thoughts of rising to greater eminence.

Terms of their association.

Such were the men destined to overturn one of the most extensive empires on the face of the earth. Their confederacy for this purpose was authorized by Pedrarias, the governor of Panama. Each engaged to employ his whole fortune in the adventure. Pizarro, the least wealthy of the three, as he could not throw so large a sum as his associates into the common stock, engaged to take the department of greatest fatigue and danger, and to command in person the armament which was to go first upon discovery. Almagro offered to conduct the supplies of provisions and reinforcements of troops, of which Pizarro might stand in need. Luque was to remain at Panama to negociate with the governor, and superintend whatever was carrying on for the general interest. As the spirit of enthusiasm uniformly accompanied that of adventure in the New World, and by that strange union both acquired an increase of force, this confederacy, formed by ambition and avarice, was confirmed by the most solemn act of religion. Luque celebrated mass, divided a consecrated host into three, and reserving one part to himself, gave the other two to his associates, of which they partook; and thus, in the name of the Prince of peace, ratified a contract of which plunder and bloodshed were the objects.[d]

Their first attempt,

The attempt was begun with a force more suited to the humble condition of the three associates, than to the greatness of the enterprise in which they were engaged.

Nov. 14.

Pizarro set sail from Panama with a single vessel, of small burthen, and a hundred and twelve men. But in that age, so little were the

Spaniards acquainted with the peculiarities of climate in America, that the time which Pizarro chose for his departure was the most improper in the whole year; the periodical winds which were then set in, being directly adverse to the course which he proposed to steer.[e] After beating about for seventy days, with much danger and incessant fatiguc, Pizarro's progress towards the south-cast was not greater than what a skilful navigator will now make in as many hours. He touched at several places on the coast of Tierra Firme, but found every where the same uninviting country which former adventurers had described; the low grounds converted into swamps by an overflowing of rivers; the higher covered with impervious woods; few inhabitants, and those fierce and hostile. Famine, fatigue, or frequent encounters with the natives, and, above all, the distempers of a moist, sultry climate, combined in wasting his slender band of followers. The undaunted resolution of their leader continued, however, for some time, to sustain their spirits, although no sign had yet appeared of discovering those golden regions to which he had promised to conduct them. At length he was obliged to abandon that inhospitable coast, and retire to Chuchama, opposite to the pearl islands, where he hoped to receive a supply of provisions and troops from Panama.

1525.

attended with little success.

But Almagro having sailed from that port with seventy men, stood directly towards that part of the continent where he hoped to meet with his associate. Not finding him there, he landed his soldiers, who, in searching for their companions, underwent the same distresses, and were exposed to the same dangers, which had driven them out of the country. Repulsed at length by the Indians in a sharp conflict, in which their leader lost one of his eyes by the wound of an arrow, they likewise were compelled to reimbark. Chance led them to the place of Pizarro's retreat, where they found some consolation in recounting to each other their adventures, and comparing their sufferings. As Almagro had advanced as far as the river St. Juan, in the province of Popayan, where both the country and inhabitants appeared with a more promising aspect, that dawn of better fortune was sufficient to determine such sanguine projectors not to abandon their scheme, notwithstanding all that they had suffered in prosecuting it.[f]

June 24.

1526.

They resume the undertaking.

Almagro repaired to Panama, in hopes of recruiting their shattered troops. But what he and Pizarro had suffered gave his countrymen such an unfavourable idea of the service, that it was with difficulty he could levy fourscore men.[g] Feeble as this reinforcement was, Almagro took the command of it, and having joined Pizarro, they did not hesitate about resuming their operations. After a long series of disasters and disappointments, not inferior to those which they had alrcady experienced, part of the armament reached the Bay of St. Matthew, on the coast of Quito, and landing at Tacamez, to the south of the river of Emeralds, they beheld a country more champaign and fertile than any they had yet discovered in the Southern ocean, the natives clad in garments of woollen or cotton stuff, and adorned with several trinkets of gold and silver.

But, notwithstanding those favourable appearances, magnified beyond the truth, both by the vanity of the persons who brought the report from Tacamez, and by the fond imagination of those who listened to them, Pizarro and Almagro durst not venture to invade a country so populous with a handful of men enfeebled by fatigue and diseases. They retired to the small island of Gallo, where Pizarro remained with part of the troops, and his associate returned to Panama, in hopes of bringing such a reinforcement as might enable them to take possession of the opulent territories, whose existence seemed to be no longer doubtful.[h]

Pizarro recalled by the governor of Panama.

But some of the adventurers, less enterprising or less hardy than their leaders, having secretly conveyed lamentable accounts of their sufferings and losses to their friends at Panama, Almagro met with an unfavourable reception from Pedro de los Rios, who had succeeded Pedrarias in the government of that settlement. After weighing the matter with that cold economical prudence, which appears the first of all virtues to persons whose limited faculties are incapable of conceiving or executing great designs, he concluded an expedition, attended with such certain waste of men, to be so detrimental to an infant and feeble colony, that he not only prohibited the raising of new levies, but despatched a vessel to bring home Pizarro and his companions from the island of Gallo. Almagro and Luque, though deeply affected with those measures, which they could not prevent, and durst not oppose, found means of communicating their sentiments privately to Pizarro, and exhorted him not to relinquish an enterprise that was the foundation of all their hopes, and the only means of re-establishing their reputation and fortune, which were both on the decline. Pizarro's mind, bent with inflexible obstinacy on all its purposes, needed no incentive to persist in the scheme. He peremptorily refused to obey the governor of Panama's orders, and employed all his address and eloquence in persuading his men not to abandon him. But the incredible calamities to which they had been exposed were still so recent in their memories, and the thoughts of revisiting their families and friends after a long absence, rushed with such joy into their minds, that when Pizarro drew a line upon the sand with his sword, permitting such as wished to return home to pass over it, only thirteen of all

Persists in his designs.

the daring veterans in his service had resolution to remain with their commander.[i]

This small but determined band, whose names the Spanish historians record with deserved praise, as the persons to whose persevering fortitude their country is indebted for the most valuable of all its American possessions, fixed their residence in the island of Gorgona. This, as it was further removed from the coast than Gallo, and uninhabited, they considered as a more secure retreat, where, unmolested, they might wait for supplies from Panama, which they trusted that the activity of their associates would be able to procure. Almagro and Luque were not inattentive or cold solicitors, and their incessant importunity was seconded by the general voice of the colony, which exclaimed loudly against the infamy of exposing brave men, engaged in the public service, and chargeable with no errror but what flowed from an excess of zeal and courage, to perish like the most odious criminals in a desert island. Overcome by those entreaties and expostulations, the governor at last consented to send a small vessel to their relief. But that he might not seem to encourage Pizarro to any new enterprise, he would not permit one landman to embark on board of it.

Hardships he endured.

By this time Pizarro and his companions had remained five months in an island, infamous for the most unhealthy climate in that region of America.[k] During all this period their eyes were turned towards Panama, in hopes of succour from their countrymen; but worn out at length with fruitless expectations, and dispirited with suffering hardships of which they saw no end, they, in despair, came to a resolution of committing themselves to the ocean on a float, rather than continue in that detestable abode. But, on the arrival of the vessel from Panama, they were transported with such joy, that all their sufferings were forgotten. Their hopes revived, and, with a rapid transition, not unnatural among men accustomed by their mode of life to sudden vicissitudes of fortune, high confidence succeeding to extreme dejection, Pizarro easily induced not only his own followers, but the crew of the vessel from Panama, to resume his former scheme with fresh ardour. Instead of returning to Panama, they stood towards the south-east, and more fortunate in this than in any of their past efforts, they, on the twentieth day after their departure from Gorgona, discovered the coast of Peru. After touching at several villages near the shore, which they found to be no wise inviting, they landed at Tumbez, a place of some note, about three degrees south of the line, distinguished for its stately temple, and a palace of the *Incas* or sovereigns of the country.[l] There the Spaniards feasted their eyes with the first view of the opulence and civilization of the Peruvian empire. They beheld a country fully peopled, and cultivated with an appearance of regular industry; the natives decently clothed, and possessed of ingenuity so far surpassing the other inhabitants of the New World, as to have the use of tame domestic animals. But what chiefly attracted their notice, was such a show of gold and silver, not only in the ornaments of their persons and temples, but in several vessels and utensils for common use, formed of those precious metals, as left no room to doubt that they abounded with profusion in the country. Pizarro and his companions seemed now to have attained to the completion of their most sanguine hopes, and fancied that all their wishes and dreams of rich domains, and inexhaustible treasures, would soon be realized.

Discovers Peru.

But with the slender force then under his command, Pizarro could only view the rich country of which he hoped hereafter to obtain possession. He ranged, however, for some time along the coast, maintaining every where a peaceable intercourse with the natives, no less astonished at their new visitants, than the Spaniards were with the uniform appearance of opulence and cultivation which they beheld. Having explored the country as far as was requisite to ascertain the importance of the discovery, Pizarro procured from the inhabitants some of their *Llamas* or tame cattle, to which the Spaniards gave the name of sheep, some vessels of gold and silver, as well as some specimens of their other works of ingenuity, and two young men, whom he proposed to instruct in the Castilian language, that they might serve as interpreters in the expedition which he meditated. With these he arrived at Panama, towards the close of the third year from the time of his departure thence.[m] No adventurer of the age suffered hardships or encountered dangers which equal those to which he was exposed during this long period. The patience with which he endured the one, and the fortitude with which he surmounted the other, exceed whatever is recorded in the history of the New World, where so many romantic displays of those virtues occur.

Returns to Panama.

1527.

Neither the splendid relation that Pizarro gave of the incredible opulence of the country which he had discovered, nor his bitter complaints on account of that unseasonable recall of his forces, which had put it out of his power to attempt making any settlement there, could move the governor of Panama to swerve from his former plan of conduct. He still contended, that the colony was not in a condition to invade such a mighty empire, and refused to authorize an expedition which he foresaw would be so alluring that it might ruin the province in which he presided, by an effort beyond its strength. His coldness, however, did not in any degree abate the ardour of the three associates; but they perceived that they could not carry their scheme into execu-

tion without the countenance of superior authority, and must solicit their sovereign to grant that permission which they could not extort from his delegate. With this view, after adjusting among themselves, that Pizarro should claim the station of governor, Almagro that of lieutenant-governor, and Luque the dignity of bishop, in the country which they purposed to conquer, they sent Pizarro as their agent to Spain, though their fortunes were now so much exhausted by the repeated efforts which they had made, that they found some difficulty in borrowing the small sum requisite towards equipping him for the voyage.[n]

Pizarro sent to Spain to negociate.

Pizarro lost no time in repairing to court, and new as the scene might be to him, he appeared before the emperor with the unembarrassed dignity of a man conscious of what his services merited; and he conducted his negociations with an insinuating dexterity of address, which could not have been expected either from his education or former habits of life. His feeling description of his own sufferings, and his pompous account of the country which he had discovered, confirmed by the specimens of its productions which he exhibited, made such an impression both on Charles and his ministers, that they not only approved of the intended expedition, but seemed to be interested in the success of its leader.

Neglects his associates,

Presuming on those dispositions in his favour, Pizarro paid little attention to the interest of his associates. As the pretensions of Luque did not interfere with his own, he obtained for him the ecclesiastical dignity to which he aspired. For Almagro he claimed only the command of the fortress which should be erected at Tumbez. To himself he secured whatever his boundless ambition could desire. He was appointed governor, captain-general, and adelantado of all the country which he had discovered, and hoped to conquer, with supreme authority, civil as well as military; and with full right to all the privileges and emoluments usually granted to adventurers in the New World. His jurisdiction was declared to extend two hundred leagues along the coast to the south of the river St. Jago; to be independent of the governor of Panama; and he had power to nominate all the officers who were to serve under him. In return for those concessions, which cost the court of Spain nothing, as the enjoyment of them depended upon the success of Pizarro's own efforts, he engaged to raise two hundred and fifty men, and to provide the ships, arms, and warlike stores requisite towards subjecting to the crown of Castile the country of which the government was allotted him.

July 26. and procures the supreme command to himself.

Slender force he was able to raise. 1529.

Inconsiderable as the body of men was which Pizarro had undertaken to raise, his funds and credit were so low that he could hardly complete half the number; and after obtaining his patents from the crown, he was obliged to steal privately out of the port of Seville, in order to elude the scrutiny of the officers who had it in charge to examine whether he had fulfilled the stipulations in his contract.[o] Before his departure, however, he received some supply of money from Cortes, who having returned to Spain about this time, was willing to contribute his aid towards enabling an ancient companion, with whose talents and courage he was well acquainted, to begin a career of glory similar to that which he himself had finished.[p]

He landed at Nombre de Dios, and marched across the isthmus to Panama, accompanied by his three brothers, Ferdinand, Juan, and Gonzalo, of whom the first was born in lawful wedlock, the two latter, like himself, were of illegitimate birth, and by Francisco de Alcantara, his mother's brother. They were all in the prime of life, and of such abilities and courage as fitted them to take a distinguished part in his subsequent transactions.

1530. His reconciliation with Almagro.

On his arrival at Panama, Pizarro found Almagro so much exasperated at the manner in which he had conducted his negociation, that he not only refused to act any longer in concert with a man by whose perfidy he had been excluded from the power and honours to which he had a just claim, but laboured to form a new association, in order to thwart or to rival his former confederate in his discoveries. Pizarro, however, had more wisdom and address than to suffer a rupture so fatal to all his schemes to become irreparable. By offering voluntarily to relinquish the office of adelantado, and promising to concur in soliciting that title, with an independent government, for Almagro, he gradually mitigated the rage of an open-hearted soldier, which had been violent, but was not implacable. Luque, highly satisfied with having been successful in all his own pretensions, cordially seconded Pizarro's endeavours. A reconciliation was effected, and the confederacy renewed on its original terms, that the enterprise should be carried on at the common expense of the associates, and the profits accruing from it should be equally divided among them.[q]

Their armament.

Even after their reunion, and the utmost efforts of their interest, three small vessels, with a hundred and eighty soldiers, thirty-six of whom were horsemen, composed the armament which they were able to fit out. But the astonishing progress of the Spaniards in America had inspired them with such ideas of their own superiority, that Pizarro did not hesitate to sail with this contemptible force to invade a great empire. Almagro was left at Panama, as formerly, to follow him with what reinforcement of men he should be able to muster. As the season for embarking was properly chosen, and the course of navigation between Panama and

Peru was now better known, Pizarro completed the voyage in thirteen days; though, by the force of the winds and currents, he was carried above a hundred leagues to the north of Tumbez, the place of his destination, and obliged to land his troops in the bay of St. Matthew. Without losing a moment he began to advance towards the south, taking care, however, not to depart far from the sea-shore, both that he might easily effect a junction with the supplies which he expected from Panama, and secure a retreat in case of any disaster, by keeping as near as possible to his ships. But as the country in several parts on the coast of Peru is barren, unhealthful, and thinly peopled; as the Spaniards had to pass all the rivers near their mouth, where the body of water is greatest; and as the imprudence of Pizarro, in attacking the natives when he should have studied to gain their confidence, had forced them to abandon their habitations; famine, fatigue, and diseases of various kinds, brought upon him and his followers calamities hardly inferior to those which they had endured in their former expedition. What they now experienced corresponded so ill with the alluring description of the country given by Pizarro, that many began to reproach him, and every soldier must have become cold to the service, if, even in this unfertile region of Peru, they had not met with some appearances of wealth and cultivation, which seemed to justify the report of their leader. At length they reached the province of Coaque; and, having surprised the principal settlement of the natives, they seized their vessels and ornaments of gold and silver, to the amount of thirty thousand pesos, with other booty of such value, as dispelled all their doubts, and inspired the most desponding with sanguine hopes.[r]

Lands in Peru.

April 14.

His measures for obtaining a reinforcement.

Pizarro himself was so much delighted with this rich spoil, which he considered as the first fruits of a land abounding with treasure, that he instantly despatched one of his ships to Panama with a large remittance to Almagro; and another to Nicaragua with a considerable sum to several persons of influence in that province, in hopes of alluring adventurers by this early display of the wealth which he had acquired. Meanwhile he continued his march along the coast, and disdaining to employ any means of reducing the natives but force, he attacked them with such violence in their scattered habitations, as compelled them either to retire into the interior country, or to submit to his yoke. This sudden appearance of invaders, whose aspect and manners were so strange, and whose power seemed to be so irresistible, made the same dreadful impression as in other parts of America. Pizarro hardly met with resistance until he attacked the island of Puna in the bay of Guayaquil. As that was better peopled than the country through which he had passed, and its inhabitants fiercer and less civilized than those of the continent, they defended themselves with such obstinate valour that Pizarro spent six months in reducing them to subjection. From Puna he proceeded to Tumbez, where the distempers which raged among his men compelled him to remain for three months.[s]

Receives some, and continues to advance.

While he was thus employed, he began to reap advantage from his attention to spread the fame of his first success to Coaque. Two different detachments arrived from Nicaragua, which, though neither exceeded thirty men, he considered as a reinforcement of great consequence to his feeble band, especially as the one was under the command of Sebastian Benalcazar, and the other of Hernando Soto, officers not inferior in merit and reputation to any who had served in America. From Tumbez he proceeded to the river Piura, and in an advantageous station near the mouth of it, he established the first Spanish colony in Peru, to which he gave the name of St. Michael.

1532.

May 16.

As Pizarro continued to advance towards the centre of the Peruvian empire, he gradually received more full information concerning its extent and policy, as well as the situation of its affairs at that juncture. Without some knowledge of these, he could not have conducted his operations with propriety; and without a suitable attention to them, it is impossible to account for the progress which the Spaniards had already made, or to unfold the causes of their subsequent success.

State of the Peruvian empire.

At the time when the Spaniards invaded Peru, the dominions of its sovereigns extended in length, from north to south, above fifteen hundred miles along the Pacific ocean. Its breadth, from east to west, was much less considerable, being uniformly bounded by the vast ridge of the Andes, stretching from its one extremity to the other. Peru, like the rest of the New World, was originally possessed by small independent tribes, differing from each other in manners, and in their forms of rude policy. All, however, were so little civilized, that if the traditions concerning their mode of life, preserved among their descendants, deserve credit, they must be classed among the most unimproved savages of America. Strangers to every species of cultivation or regular industry, without any fixed residence, and unacquainted with those sentiments and obligations which form the first bonds of social union, they are said to have roamed about naked in the forests, with which the country was then covered, more like wild beasts than like men. After they had struggled for several ages with the hardships and calamities which are inevitable in such a state, and when no circumstance seemed to indicate the approach of any uncommon effort towards improvement, we are

told that there appeared, on the banks of the lake Titiaca, a man and woman of majestic form, clothed in decent garments. They declared themselves to be children of the sun, sent by their beneficent parent, who beheld with pity the miseries of the human race, to instruct and to reclaim them. At their persuasion, enforced by reverence for the divinity in whose name they were supposed to speak, several of the dispersed savages united together, and receiving their commands as heavenly injunctions, followed them to Cuzco, where they settled and began to lay the foundations of a city.

Manco Capac and Mama Ocollo, for such were the names of those extraordinary personages, having thus collected some wandering tribes, formed that social union, which, by multiplying the desires and uniting the efforts of the human species, excites industry, and leads to improvement. Manco Capac instructed the men in agriculture and other useful arts: Mama Ocollo taught the women to spin and to weave. By the labour of the one sex, subsistence became less precarious; by that of the other, life was rendered more comfortable. After securing the objects of first necessity in an infant state, by providing food, raiment, and habitations for the rude people of whom he took charge, Manco Capac turned his attention towards introducing such laws and policy as might perpetuate their happiness. By his institutions, which shall be more particularly explained hereafter, the various relations in private life were established, and the duties resulting from them prescribed with such propriety, as gradually formed a barbarous people to decency of manners. In public administration, the functions of persons in authority were so precisely defined, and the subordination of those under their jurisdiction maintained with such a steady hand, that the society in which he presided soon assumed the aspect of a regular and well-governed state.

Thus, according to the Indian tradition, was founded the empire of the *Incas* or *Lords* of Peru. At first its extent was small. The territory of Manco Capac did not reach above eight leagues from Cuzco. But within its narrow precincts he exercised absolute and uncontrolled authority. His successors, as their dominions extended, arrogated a similar jurisdiction over the new subjects which they acquired; the despotism of Asia was not more complete. The incas were not only obeyed as monarchs, but revered as divinities. Their blood was held to be sacred, and by prohibiting intermarriages with the people, was never contaminated by mixing with that of any other race. The family, thus separated from the rest of the nation, was distinguished by peculiarities in dress and ornaments, which it was unlawful for others to assume. The monarch himself appeared with ensigns of royalty reserved for him alone; and received from his subjects marks of obsequious homage and respect, which approached almost to adoration.

But, among the Peruvians, this unbounded power of their monarchs seems to have been uniformly accompanied with attention to the good of their subjects. It was not the rage of conquest, if we may believe the accounts of their countrymen, that prompted the incas to extend their dominions, but the desire of diffusing the blessings of civilization, and the knowledge of the arts which they possessed, among the barbarous people whom they reduced. During a succession of twelve monarchs, it is said that not one deviated from this beneficent character.[t]

When the Spaniards first visited the coast of Peru, in the year one thousand five hundred and twenty-six, Huana Capac, the twelfth monarch from the founder of the state, was seated on the throne. He is represented as a prince distinguished not only for the pacific virtues peculiar to the race, but eminent for his martial talents. By his victorious arms the kingdom of Quito was subjected, a conquest of such extent and importance as almost doubled the power of the Peruvian empire. He was fond of residing in the capital of that valuable province which he had added to his dominions; and, notwithstanding the ancient and fundamental law of the monarchy against polluting the royal blood by any foreign alliance, he married the daughter of the vanquished monarch of Quito. She bore him a son named Atahualpa, whom, on his death at Quito, which seems to have happened about the year one thousand five hundred and twenty-nine, he appointed his successor in that kingdom, leaving the rest of his dominions to Huascar, his eldest son, by a mother of the royal race. Greatly as the Peruvians revered the memory of a monarch who had reigned with greater reputation and splendour than any of his predecessors, the destination of Huana Capac concerning the succession appeared so repugnant to a maxim coeval with the empire, and founded on authority deemed sacred, that it was no sooner known at Cuzco than it excited general disgust. Encouraged by those sentiments of his subjects, Huascar required his brother to renounce the government of Quito, and to acknowledge him as his lawful superior. But it had been the first care of Atahualpa to gain a large body of troops which had accompanied his father to Quito. These were the flower of the Peruvian warriors, to whose valour Huana Capac had been indebted for all his victories. Relying on their support, Atahualpa first eluded his brother's demand, and then marched against him in hostile array.

Thus the ambition of two young men, the title of the one founded on ancient usage, and that of the other asserted by the veteran troops, involved Peru in civil war, a calamity to which, under a succession of virtuous princes, it had hitherto been a stranger. In such a contest the issue was obvious. The force of arms triumphed over the authority of laws. Atahualpa remained victorious, and made a

t Cieca de Leon, Chron. c. 44. Herrera dec. 3. lib. x. c. 4. dec. 5. lib. iii. c. 17.

cruel use of his victory. Conscious of the defect in his own title to the crown, he attempted to exterminate the royal race, by putting to death all the children of the sun descended from Manco Capac, whom he could seize either by force or stratagem. From a political motive, the life of his unfortunate rival Huascar, who had been taken prisoner in a battle which decided the fate of the empire, was prolonged for some time, that by issuing orders in his name the usurper might more easily establish his own authority.[u]

Favourable to the progress of Pizarro.

When Pizarro landed in the bay of St. Matthew, this civil war raged between the two brothers in its greatest fury. Had he made any hostile attempt in his former visit to Peru in the year one thousand five hundred and twenty-seven, he must then have encountered the force of a powerful state, united under a monarch possessed of capacity as well as courage, and unembarrassed with any care that could divert him from opposing his progress. But at this time the two competitors, though they received early accounts of the arrival and violent proceedings of the Spaniards, were so intent upon the operations of a war which they deemed more interesting, that they paid no attention to the motions of an enemy, too inconsiderable in number to excite any great alarm, and to whom it would be easy, as they imagined, to give a check when more at leisure.

He avails himself of it, and advances.

By this fortunate coincidence of events, whereof Pizarro could have no foresight, and of which, from his defective mode of intercourse with the people of the country, he remained long ignorant, he was permitted to carry on his operations unmolested, and advance to the centre of a great empire before one effort of its power was exerted to stop his career. During their progress, the Spaniards had acquired some imperfect knowledge of this struggle between the two contending factions. The first complete information with respect to it they received from messengers whom Huascar sent to Pizarro, in order to solicit his aid against Atahualpa, whom he represented as a rebel and an usurper.[x] Pizarro perceived at once the importance of this intelligence, and foresaw so clearly all the advantages which might be derived from this divided state of the kingdom which he had invaded, that without waiting for the reinforcement which he expected from Panama, he determined to push forward, while intestine discord put it out of the power of the Peruvians to attack him with their whole force, and while, by taking part, as circumstances should incline him, with one of the competitors, he might be enabled with greater ease to crush both. Enterprising as the Spaniards of that age were in all their operations against Americans, and distinguished as Pizarro was among his countrymen for daring courage, we can hardly suppose, that, after having proceeded hitherto slowly and with much caution, he would have changed at once his system of operation, and have ventured upon a measure so hazardous, without some new motive or prospect to justify it.

State of his forces.

As he was obliged to divide his troops, in order to leave a garrison in St. Michael, sufficient to defend a station of equal importance as a place of retreat in case of any disaster, and as a port for receiving any supplies which should come from Panama, he began his march with a very slender and ill-accoutred train of followers. They consisted of sixty-two horsemen,[y] and a hundred and two foot-soldiers, of whom twenty were armed with cross-bows, and three with muskets. He directed his course towards Caxamalca, a small town at the distance of twelve days' march from St. Michael, where Atahualpa was encamped with a considerable body of troops. Before he had proceeded far, an officer despatched by the inca met him with a valuable present from that prince, accompanied with a proffer of his alliance, and assurances of a friendly reception at Caxamalca. Pizarro, according to the usual artifice of his countrymen in America, pretended to come as the ambassador of a very powerful monarch, and declared that he was now advancing with an intention to offer Atahualpa his aid against those enemies who disputed his title to the throne.[z]

Ideas of the Peruvians concerning their designs.

As the object of the Spaniards in entering their country was altogether incomprehensible to the Peruvians, they had formed various conjectures concerning it, without being able to decide whether they should consider their new guests as beings of a superior nature, who had visited them from some beneficent motive, or as formidable avengers of their crimes, and enemies to their repose and liberty. The continual professions of the Spaniards, that they came to enlighten them with the knowledge of truth, and lead them in the way of happiness, favoured the former opinion; the outrages which they committed, their rapaciousness and cruelty, were awful confirmations of the latter. While in this state of uncertainty, Pizarro's declaration of his pacific intentions so far removed all the inca's fears, that he determined to give him a friendly reception. In consequence of this resolution, the Spaniards were allowed to march in tranquillity across the sandy desert between St. Michael and Motupè, where the most feeble effort of an enemy, added to the unavoidable distresses which they suffered in passing through that comfortless region, must have proved fatal to them.[a] From Motupè they advanced towards the mountains which encompassed the low country of Peru, and passed through a defile so narrow and inaccessible, that a few men might have defended it against a numerous army. But here likewise, from the same inconsiderate credulity of the inca, the Spaniards met with no opposition,

u Zarate, lib. i. c. 15. Vega, 1. lib. ix. c. 12. and 32- 40. Herrera, dec. 5. lib. i. c. 2. lib. iii. 17.

a See Note CXXIX

and took quiet possession of a fort erected for the security of that important station. As they now approached near to Caxamalca, Atahualpa renewed his professions of friendship; and as an evidence of their sincerity, sent them presents of greater value than the former.

Arrive at Caxamalca.

On entering Caxamalca, Pizarro took possession of a large court, on one side of which was a house which the Spanish historians call a palace of the inca, and on the other a temple of the sun, the whole surrounded with a strong rampart or wall of earth. When he had posted his troops in this advantageous station, he despatched his brother Ferdinand and Hernando Soto to the camp of Atahualpa, which was at about a league distant from the town. He instructed them to confirm the declaration which he had formerly made of his pacific disposition, and to desire an interview with the inca, that he might explain more fully the intention of the Spaniards in visiting his country. They were treated with all the respectful hospitality usual among the Peruvians in the reception of their most cordial friends, and Atahualpa promised to visit the Spanish commander next day in his quarters. The decent deportment of the Peruvian monarch, the order of his court, and the reverence with which his subjects approached his person and obeyed his commands, astonished those Spaniards who had never met in America with any thing more dignified than the petty cazique of a barbarous tribe. But their eyes were still more powerfully attracted by the vast profusion of wealth which they observed in the inca's camp. The rich ornaments worn by him and his attendants, the vessels of gold and silver in which the repast offered to them was served up, the multitude of utensils of every kind formed of those precious metals, opened prospects far exceeding any idea of opulence that an European of the sixteenth century could form.

Perfidious scheme of Pizarro.

On their return to Caxamalca, while their minds were yet warm with admiration and desire of the wealth which they had beheld, they gave such a description of it to their countrymen as confirmed Pizarro in a resolution which he had already taken. From his own observation of American manners during his long service in the New World, as well as from the advantages which Cortes had derived from seizing Montezuma, he knew of what consequence it was to have the inca in his power. For this purpose, he formed a plan as daring as it was perfidious. Notwithstanding the character that he had assumed, of an ambassador from a powerful monarch who courted an alliance with the inca, and in violation of the repeated offers which he had made to him of his own friendship and assistance, he determined to avail himself of the unsuspicious simplicity with which Atahualpa relied on his professions, and to seize the person of the inca during the interview to which he had invited him. He prepared for the execution of his scheme with the same deliberate arrangement, and with as little compunction, as if it had reflected no disgrace on himself or his country. He divided his cavalry into three small squadrons, under the command of his brother Ferdinand, Soto, and Benalcazar; his infantry were formed in one body, except twenty of most tried courage, whom he kept near his own person to support him in the dangerous service which he reserved for himself; the artillery, consisting of two field-pieces,[b] and the cross-bowmen, were placed opposite to the avenue by which Atahualpa was to approach. All were commanded to keep within the square, and not to move until the signal for action was given.

Nov. 16. Visited by the inca.

Early in the morning the Peruvian camp was all in motion, But as Atahualpa was solicitous to appear with the greatest splendour and magnificence in his first interview with the strangers, the preparations for this were so tedious, that the day was far advanced before he began his march. Even then, lest the order of the procession should be deranged, he moved so slowly, that the Spaniards became impatient, and apprehensive that some suspicion of their intention might be the cause of this delay. In order to remove this, Pizarro despatched one of his officers with fresh assurances of his friendly disposition. At length the inca approached. First of all appeared four hundred men, in an uniform dress, as harbingers to clear the way before him. He himself, sitting on a throne or couch adorned with plumes of various colours, and almost covered with plates of gold and silver enriched with precious stones, was carried on the shoulders of his principal attendants. Behind him came some chief officers of his court, carried in the same manner. Several bands of singers and dancers accompanied this cavalcade; and the whole plain was covered with troops, amounting to more than thirty thousand men.

Strange harangue of father Valverde.

As the inca drew near the Spanish quarters, father Vincent Valverde, chaplain to the expedition, advanced with a crucifix in one hand, and a breviary in the other, and in a long discourse explained to him the doctrine of the creation, the fall of Adam, the incarnation, the sufferings and resurrection of Jesus Christ, the appointment of St. Peter as God's vicegerent on earth, the transmission of his apostolic power by succession to the popes, the donation made to the king of Castile, by pope Alexander, of all the regions of the New World. In consequence of all this, he required Atahualpa to embrace the christian faith, to acknowledge the supreme jurisdiction of the pope, and to submit to the king of Castile as his lawful sovereign; promising if he complied instantly with this requisition, that the Castilian monarch would protect his dominions, and permit him to continue in the exercise of his royal authority; but if he should impiously refuse to obey this summons, he denounced war against

b Xerez, p. 194.

him in his master's name, and threatened him with the most dreadful effects of his vengeance.

Reply of the inca.

This strange harangue, unfolding deep mysteries, and alluding to unknown facts, of which no power of eloquence could have conveyed at once a distinct idea to an American, was so lamely translated by an unskilful interpreter, little acquainted with the idiom of the Spanish tongue, and incapable of expressing himself with propriety in the language of the inca, that its general tenor was altogether incomprehensible to Atahualpa. Some parts in it, of more obvious meaning, filled him with astonishment and indignation. His reply, however, was temperate. He began with observing, that he was lord of the dominions over which he reigned by hereditary succession; and added, that he could not conceive how a foreign priest should pretend to dispose of territories which did not belong to him; that if such a preposterous grant had been made, he, who was the rightful possessor, refused to confirm it; that he had no inclination to renounce the religious institutions established by his ancestors; nor would he forsake the service of the sun, the immortal divinity whom he and his people revered, in order to worship the god of the Spaniards, who was subject to death; that with respect to other matters contained in his discourse, as he had never heard of them before, and did not now understand their meaning, he desired to know where the priest had learned things so extraordinary. "In this book," answered Valverde, reaching out to him his breviary. The inca opened it eagerly, and turning over the leaves, lifted it to his ear: "This," says he, "is silent; it tells me nothing;" and threw it with disdain to the ground. The enraged monk, running towards his countrymen, cried out, "To arms, christians, to arms; the word of God is insulted; avenge this profanation on those impious dogs."[c]

Pizarro attacks the Peruvians;

Pizarro, who, during this long conference, had with difficulty restrained his soldiers, eager to seize the rich spoils of which they had now so near a view, immediately gave the signal of assault. At once the martial music struck up, the cannon and muskets began to fire, the horse sallied out fiercely to the charge, the infantry rushed on sword in hand. The Peruvians, astonished at the suddenness of an attack which they did not expect, and dismayed with the destructive effect of the fire-arms, and the irresistible impression of the cavalry, fled with universal consternation on every side, without attempting either to annoy the enemy, or to defend themselves. Pizarro, at the head of his chosen band, advanced directly towards the inca; and though his nobles crowded around him with officious zeal, and fell in numbers at his feet, while they vied one with another in sacrificing their own lives, that they might cover the sacred person of their sovereign, the Spaniards soon penetrated to the royal seat; and Pizarro, seizing the inca by the arm, dragged him to the ground, and carried him as a prisoner to his quarters. The fate of the monarch increased the precipitate flight of his followers. The Spaniards pursued them towards every quarter, and with deliberate and unrelenting barbarity continued to slaughter wretched fugitives, who never once offered to resist. The carnage did not cease until the close of the day. Above four thousand Peruvians were killed. Not a single Spaniard fell, nor was one wounded but Pizarro himself, whose hand was slightly hurt by one of his own soldiers, while struggling eagerly to lay hold on the Inca.[d]

and seizes the inca.

The plunder of the field was rich beyond any idea which the Spaniards had yet formed concerning the wealth of Peru, and they were so transported with the value of the acquisition, as well as the greatnesss of their success, that they passed the night in the extravagant exultation natural to indigent adventurers on such an extraordinary change of fortune.

Dejection of the inca.

As first the captive monarch could hardly believe a calamity, which he so little expected, to be real. But he soon felt all the misery of his fate, and the dejection into which he sunk was in proportion to the height of grandeur from which he had fallen. Pizarro, afraid of losing all the advantages which he hoped to derive from the possession of such a prisoner, laboured to console him with professions of kindness and respect, that corresponded ill with his actions. By residing among the Spaniards, the inca quickly discovered their ruling passion, which indeed they were nowise solicitous to conceal, and, by applying to that, made an attempt to recover his liberty. He offered as a ransom what astonished the Spaniards, even after all they now knew concerning the opulence of his kingdom. The apartment in which he was confined was twenty-two feet in length and sixteen in breadth; he undertook to fill it with vessels of gold as high as he could reach. Pizarro closed eagerly with this tempting proposal, and a line was drawn upon the walls of the chamber, to mark the stipulated height to which the treasure was to rise.

His offer of a ransom.

Atahualpa, transported with having obtained some prospect of liberty, took measures instantly for fulfilling his part of the agreement, by sending messengers to Cuzco, Quito, and other places, where gold had been amassed in largest quantities, either for adorning the temples of the gods, or the houses of the inca, to bring what was neeessary for completing his ransom directly to Caxamalca. Though Atahualpa was now in the custody of his enemies, yet so much were the Peruvians accustomed to respect every mandate issued by their sovereign, that his orders were executed with the greatest alacrity. Soothed with hopes of recovering his liberty by this means, the subjects of the inca were afraid of endangering his life by forming any other

c See Note CXXX.

d See Note CXXXI.

scheme for his relief; and though the force of the empire was still entire, no preparations were made and no army assembled to avenge their own wrongs or those of their monarch.[e] The Spaniards remained in Caxamalca tranquil and unmolested.

The Spaniards visit different provinces.

Small detachments of their number marched into remote provinces of the empire, and, instead of meeting with any opposition, were every where received with marks of the most submissive respect.[f]

Almagro arrives with a reinforcement.

Inconsiderable as those parties were, and desirous as Pizarro might be to obtain some knowledge of the interior state of the country, he could not have ventured upon any diminution of his main body, if he had not about this time received an account of Almagro's having landed at St. Michael with such a reinforcement as would almost double the number of his followers.[g] The arrival of this long-expected succour was not more agreeable to the Spaniards than alarming to the inca. He saw the power of his enemies increase; and as he knew neither the source whence they derived their supplies, nor the means by which they were conveyed to Peru, he could not foresee to what a height the inundation that poured in upon his dominions might rise. While disquieted with such apprehensions, he learned that some Spaniards, in their way to Cuzco, had visited his brother Huascar in the place where he kept him confined, and that the captive prince had represented to them the justice of his own cause, and as an inducement to espouse it, had promised them a quantity of treasure greatly beyond that which Atahualpa had engaged to pay for his ransom. If the Spaniards should listen to this proposal, Atahualpa perceived his own destruction to be inevitable; and suspecting that their insatiable thirst for gold would tempt them to lend a favourable ear to it, he determined to sacrifice his brother's life, that he might save his own; and his orders for this purpose were executed, like all his other commands, with scrupulous punctuality.[h]

December.

1533. Huascar put to death.

The Spaniards make a division of the spoil.

Meanwhile Indians daily arrived at Caxamalca from different parts of the kingdom, loaded with treasure. A great part of the stipulated quantity was now amassed, and Atahualpa assured the Spaniards, that the only thing which prevented the whole from being brought in, was the remoteness of the provinces where it was deposited. But such vast piles of gold presented continually to the view of needy soldiers, had so inflamed their avarice, that it was impossible any longer to restrain their impatience to obtain possession of this rich booty. Orders were given for melting down the whole, except some pieces of curious fabric, reserved as a present for the emperor. After setting apart the fifth due to the crown, and a hundred thousand pesos as a donative to the soldiers which arrived with Almagro, there remained one million five hundred and twenty-eight thousand five hundred pesos to Pizarro and his followers. The festival of St. James, the patron saint of Spain, was the day chosen for the partition of this enormous sum, and the manner of conducting it strongly marks the strange alliance of fanaticism with avarice, which I have more than once had occasion to point out as a striking feature in the character of the conquerors of the New World. Though assembled to divide the spoils of an innocent people, procured by deceit, extortion, and cruelty, the transaction began with a solemn invocation of the name of God,[i] as if they could have expected the guidance of Heaven in distributing those wages of iniquity. In this division above eight thousand pesos, at that time not inferior in effective value to as many pounds sterling in the present century, fell to the share of each horseman, and half that sum to each foot soldier. Pizarro himself, and his officers, received dividends in proportion to the dignity of their rank.

July 25.

The effect of it.

There is no example in history of such a sudden acquisition of wealth by military service, nor was ever a sum so great divided among so small a number of soldiers. Many of them having received a recompence for their services far beyond their most sanguine hopes, were so impatient to retire from fatigue and danger, in order to spend the remainder of their days in their native country in ease and opulence, that they demanded their discharge with clamorous importunity. Pizarro, sensible that from such men he could expect neither enterprise in action nor fortitude in suffering, and persuaded that wherever they went the display of their riches would allure adventurers, less opulent but more hardy, to his standard, granted their suit without reluctance, and permitted above sixty of them to accompany his brother Ferdinand, whom he sent to Spain with an account of his success, and the present destined for the emperor.[k]

The inca demands his liberty in vain.

The Spaniards having divided among them the treasure amassed for the inca's ransom, he insisted with them to fulfil their promise of setting him at liberty. But nothing was further from Pizarro's thoughts. During his long service in the New World, he had imbibed those ideas and maxims of his fellow-soldiers, which led them to consider its inhabitants as an inferior race, neither worthy of the name, nor entitled to the rights, of men. In his compact with Atahualpa, he had no other object than to amuse his captive with such a prospect of recovering his liberty, as might induce him to lend all the aid of his authority towards collecting the wealth of his kingdom. Having now accomplished this, he no longer regarded his plighted faith; and at the very time when the credulous prince hoped to be replaced on his throne, he had secretly resolved to bereave

him of life. Many circumstances seem to have concurred in prompting him to this action, the most criminal and atrocious that stains the Spanish name, amidst all the deeds of violence committed in carrying on the conquests of the New World.

He and the Spaniards mutually jealous.

Though Pizarro had seized the inca, in imitation of Cortes's conduct towards the Mexican monarch, he did not possess talents for carrying on the same artful plan of policy. Destitute of the temper and address requisite for gaining the confidence of his prisoner, he never reaped all the advantages which might have been derived from being master of his person and authority. Atahualpa was, indeed, a prince of greater abilities and discernment than Montezuma, and seems to have penetrated more thoroughly into the character and intentions of the Spaniards. Mutual suspicion and distrust accordingly took place between them. The strict attention with which it was necessary to guard a captive of such importance, greatly increased the fatigue of military duty. The utility of keeping him appeared inconsiderable; and Pizarro felt him as an encumbrance, from which he wished to be delivered.[l]

Almagro and his followers demand his life.

Almagro and his followers had made a demand of an equal share in the inca's ransom; and though Pizarro had bestowed upon the private men the large gratuity which I have mentioned, and endeavoured to soothe their leader by presents of great value, they still continued dissatisfied. They were apprehensive, that as long as Atahualpa remained a prisoner, Pizarro's soldiers would apply whatever treasure should be acquired, to make up what was wanting of the quantity stipulated for his ransom, and under that pretext exclude them from any part of it. They insisted eagerly on putting the inca to death, that all the adventurers in Peru might thereafter be on an equal footing.[m]

Motives which induced Pizarro to consent.

Pizarro himself began to be alarmed with accounts of forces assembling in the remote provinces of the empire, and suspected Atahualpa of having issued orders for that purpose. These fears and suspicions were artfully increased by Philippillo, one of the Indians whom Pizarro had carried off from Tumbez in the year one thousand five hundred and twenty-seven, and whom he employed as an interpreter. The function which he performed admitting this man to familiar intercourse with the captive monarch, he presumed, notwithstanding the meanness of his birth, to raise his affections to a *Coya*, or descendant of the sun, one of Atahualpa's wives; and seeing no prospect of gratifying that passion during the life of the monarch, he endeavoured to fill the ears of the Spaniards with such accounts of the inca's secret designs and preparations, as might awaken their jealousy, and incite them to cut him off.

While Almagro and his followers openly demanded the life of the inca, and Philippillo laboured to ruin him by private machinations, that unhappy prince inadvertently contributed to hasten his own fate. During his confinement he had attached himself with peculiar affection to Ferdinand Pizarro and Hernando Soto; who, as they were persons of birth and education superior to the rough adventurers with whom they served, were accustomed to behave with more decency and attention to the captive monarch. Soothed with this respect from persons of such high rank, he delighted in their society. But in the presence of the governor he was always uneasy and overawed. This dread soon came to be mingled with contempt. Among all the European arts, what he admired most was that of reading and writing; and he long deliberated with himself, whether he should regard it as a natural or acquired talent. In order to determine this, he desired one of the soldiers, who guarded him, to write the name of God on the nail of his thumb. This he showed successively to several Spaniards, asking its meaning; and to his amazement, they all, without hesitation, returned the same answer. At length Pizarro entered; and, on presenting it to him, he blushed, and with some confusion was obliged to acknowledge his ignorance. From that moment Atahualpa considered him as a mean person, less instructed than his own soldiers; and he had not address enough to conceal the sentiments with which this discovery inspired him. To be the object of a barbarian's scorn, not only mortified the pride of Pizarro, but excited such resentment in his breast, as added force to all the other considerations which prompted him to put the inca to death.[n]

His trial.

But in order to give some colour of justice to this violent action, and that he himself might be exempted from standing singly responsible for the commission of it, Pizarro resolved to try the inca with all the formalities observed in the criminal courts of Spain. Pizarro himself, and Almagro, with two assistants, were appointed judges, with full power to acquit or to condemn; an attorney-general was named to carry on the prosecution in the king's name; counsellors were chosen to assist the prisoner in his defence; and clerks were ordained to record the proceedings of court. Before this strange tribunal, a charge was exhibited still more amazing. It consisted of various articles; that Atahualpa, though a bastard, had dispossessed the rightful owner of the throne, and usurped the regal power; that he had put his brother and lawful sovereign to death; that he was an idolater, and had not only permitted, but commanded, the offering of human sacrifices; that he had a great number of concubines; that since his imprisonment he had wasted and embezzled the royal treasures, which now belonged of right to the conquerors; that he had incited his subjects to take arms against the Spaniards. On these heads of ac-

cusation, some of which are so ludierous, others so absurd, that the effrontery of Pizarro, in making them the foundation of a serious procedure, is not less surprising than his injustiee, did this strange court go on to try the sovereign of a great empire, over whom it had no jurisdiction. With respect to each of the articles, witnesses were examined; but as they delivered their evidence in their native tongue, Philippillo had it in his power to give their words whatever turn best suited his malevolent intentions. To judges predetermined in their opinion, this evidenee appeared sufficient.

He is condemned, They pronounced Atahualpa guilty, and condemned him to be burnt alive. Friar Valverde prostituted the authority of his sacred funetion to confirm this sentence, and by his signature warranted it to be just. Astonished at his fate, Atahualpa endeavoured to avert it by tcars, by promises, and by entreaties that he might be sent to Spain, where a monarch would be the arbiter of his lot. But pity never touched the unfeeling heart of Pizarro. He ordered him to be led instantly to execution; and, what added to the bitterness of his last moments, the same monk who had just ratificd his doom, offered to console, and attempted to convert him. The most powerful argument Valverde employed to prevail with him to embrace the ehristian faith, was a promise of mitigation in his punishment. The dread of a cruel death extorted from the trembling victim a desire of receiving baptism. The eeremony was performed; and Atahualpa, instead of being burnt, was strangled at the stake.[o]

and executed.

Several Spaniards protest against it. Happily for the credit of the Spanish nation, even among the profligate adventurers which it sent forth to conquer and desolate the New World, there were persons who retained some tincture of the Castilian generosity and honour. Though, before the trial of Atahualpa, Ferdinand Pizarro had set out for Spain, and Soto was sent on a separate command at a distance from Caxamalca, this odious transaction was not carried on without censure and opposition. Several officers, and among those some of the greatest reputation and most respectable families in the service, not only remonstrated, but protested against this measure of their general, as disgraecful to their country, as repugnant to every maxim of equity, as a violation of public faith, and an usurpation of jurisdiction over an independent monarch, to which they had no title. But their laudable endeavours were vain. Numbers, and the opinion of such as held every thing to be lawful which they deemed advantageous, prevailed. History, however, records even the unsuccessful exertions of virtue with applause; and the Spanish writers, in rclating events where the valour of their nation is more conspicuous than its humanity, have not failed to preserve the names of those who made this laudable effort to save their country from the infamy of having perpetrated such a crime.[p]

Dissolution of government and order in Peru. On the death of Atahualpa, Pizarro invested one of his sons with the ensigns of royalty, hoping that a young man without experience might prove a more passive instrument in his hands, than an ambitious monarch, who had been accustomed to independent eommand. The people of Cuzeo, and the adjaeent country, acknowledged Manco Capae, a brother of Huascar, as inea.[q] But neither possessed the authority which belonged to a sovereign of Peru. The violent convulsions into which the empire had been thrown, first by the civil war between the two brothers, and then by the invasion of the Spaniards, had not only deranged the order of the Peruvian government, but almost dissolved its frame. When they beheld their monarch a captive in the power of strangers, and at last suffering an ignominious death, the people in several provinces, as if they had been set free from every restraint of law and deceney, broke out into the most licentious excesses.[r] So many descendants of the sun, after being treated with the utmost indignity, had been cut off by Atahualpa, that not only their influence in the state diminished with their number, but the aecustomed reverence for that sacred race sensibly decreased. In consequence of this state of things, ambitious men in different parts of the empire aspired to independent authority, and usurped jurisdiction to which they had no title. The general who commanded for Atahualpa in Quito, seized the brother and children of his master, put them to a cruel death, and disclaiming any connexion with either inca, endeavoured to establish a separate kingdom for himself.[s]

Pizarro advances to Cuzco. The Spaniards, with pleasure, beheld the spirit of diseord diffusing itself, and the vigour of government relaxing among the Peruvians. They considered those disorders as symptoms of a state hastening towards its dissolution. Pizarro no longer hesitated to advance towards Cuzeo, and he had reeeived sueh eonsiderable reinforcements, that he eould venture with little danger to penetrate so far into the interior part of the country. The account of the wealth acquired at Caxamalca operated as he had foreseen. No sooner did his brother Ferdinand, with the officers and soldiers to whom he had given their diseharge after the partition of the inea's ransom, arrive at Panama, and display their riches in the view of their astonished countrymen, than fame spread the aceount with such exaggeration through all the Spanish settlements on the South Sea, that the governors of Guatimala, Panama, and Niearagua, eould hardly restrain the people under their jurisdiction from abandoning their possessions, and crowding to that inexhaustible souree of wealth which seemed to be opened in Peru.[t] In spite of

every check and regulation, such numbers resorted thither, that Pizarro began his march at the head of five hundred men, after leaving a considerable garrison in St. Michael, under the command of Benalcazar. The Peruvians had assembled some large bodies of troops to oppose his progress. Several fierce encounters happened. But they terminated like all the actions in America: a few Spaniards were killed or wounded; the natives were put to flight with incredible slaughter. At length Pizarro forced his way to Cuzco, and took quiet possession of that capital. The riches found there, even after all that the natives had carried off and concealed, either from a superstitious veneration for the ornaments of their temples, or out of hatred to their rapacious conquerors, exceeded in value what had been received as Atahualpa's ransom. But as the Spaniards were now accustomed to the wealth of the country, and it came to be parcelled out among a great number of adventurers, this dividend did not excite the same surprise, either from novelty, or the largeness of the sum that fell to the share of each individual.[u]

During the march to Cuzco, that son of Atahualpa, whom Pizarro treated as inca, died; and as the Spaniards substituted no person in his place, the title of Manco Capac seems to have been universally recognised.[x]

Quito conquered by Benalcazar.

While his fellow-soldiers were thus employed, Benalcazar, governor of St. Michael, an able and enterprising officer, was ashamed of remaining inactive, and impatient to have his name distinguished among the discoverers and conquerors of the New World. The seasonable arrival of a fresh body of recruits from Panama and Nicaragua, put it in his power to gratify this passion. Leaving a sufficient force to protect the infant settlement intrusted to his care, he placed himself at the head of the rest, and set out to attempt the reduction of Quito, where, according to the report of the natives, Atahualpa had left the greatest part of his treasure. Notwithstanding the distance of that city from St. Michael, the difficulty of marching through a mountainous country covered with woods, and the frequent and fierce attacks of the best troops in Peru, commanded by a skilful leader, the valour, good conduct, and perseverance of Benalcazar surmounted every obstacle, and he entered Quito with his victorious troops. But they met with a cruel mortification there. The natives, now acquainted to their sorrow with the predominant passion of their invaders, and knowing how to disappoint it, had carried off all those treasures, the prospect of which had prompted them to undertake this arduous expedition, and had supported them under all the dangers and hardships wherewith they had to struggle in carrying it on.[y]

Alvarado's expedition.

Benalcazar was not the only Spanish leader who attacked the kingdom of Quito. The fame of its riches attracted a more powerful enemy. Pedro de Alvarado, who had distinguished himself so eminently in the conquest of Mexico, having obtained the government of Guatimala as a recompence for his valour, soon became disgusted with a life of uniform tranquillity, and longed to be again engaged in the bustle of military service. The glory and wealth acquired by the conquerors of Peru heightened this passion, and gave it a determined direction. Believing, or pretending to believe, that the kingdom of Quito did not lie within the limits of the province allotted to Pizarro, he resolved to invade it. The high reputation of the commander allured volunteers from every quarter. He embarked with five hundred men, of whom above two hundred were of such distinction as to serve on horseback. He landed at Puerto Viejo, and without sufficient knowledge of the country, or proper guides to conduct him, attempted to march directly to Quito, by following the course of the river Guayaquil, and crossing the ridge of the Andes towards its head. But in this route, one of the most impracticable in all America, his troops endured such fatigue in forcing their way through forests and marshes on the low grounds, and suffered so much from excessive cold when they began to ascend the mountains, that before they reached the plain of Quito, a fifth part of the men and half their horses died, and the rest were so much dispirited and worn out, as to be almost unfit for service.[z] There they met with a body, not of Indians but of Spaniards, drawn up in hostile array against them. Pizarro having received an account of Alvarado's armament, had detached Almagro with some troops to oppose this formidable invader of his jurisdiction; and these were joined by Benalcazar and his victorious party. Alvarado, though surprised at the sight of enemies whom he did not expect, advanced boldly to the charge. But, by the interposition of some moderate men in each party, an amicable accommodation took place; and the fatal period, when Spaniards suspended their conquests to imbrue their hands in the blood of their countrymen, was postponed a few years. Alvarado engaged to return to his government, upon Almagro's paying him a hundred thousand pesos to defray the expense of his armament. Most of his followers remained in the country; and an expedition, which threatened Pizarro and his colony with ruin, contributed to augment its strength.[a]

1534. Honours conferred on Pizarro and Almagro.

By this time Ferdinand Pizarro had landed in Spain. The immense quantities of gold and silver which he imported,[b] filled the kingdom with no less astonishment than they had excited in Panama and the adjacent provinces. Pizarro was received by the emperor with the attention due to the bearer of a present so rich as to exceed any idea which the Spaniards had formed concerning the value of their

acquisitions in America, even after they had been ten years masters of Mexico. In recompence of his brother's services, his authority was confirmed with new powers and privileges, and the addition of seventy leagues, extending along the coast, to the southward of the territory granted in his former patent. Almagro received the honours which he had so long desired. The title of adelantado, or governor, was conferred upon him, with jurisdiction over two hundred leagues of country, stretching beyond the southern limits of the province allotted to Pizarro. Ferdinand himself did not go unrewarded. He was admitted into the military order of St. Jago, a distinction always acceptable to a Spanish gentleman, and soon set out on his return to Peru, accompanied by many persons of higher rank than had yet served in that country.[c]

Beginning of dissensions between Pizarro and Almagro.

Some account of his negociations reached Peru before he arrived there himself. Almagro no sooner learned that he had obtained the royal grant of an independent government, than pretending that Cuzco, the imperial residence of the incas, lay within its boundaries, he attempted to render himself master of that important station. Juan and Gonzalez Pizarro prepared to oppose him. Each of the contending parties was supported by powerful adherents, and the dispute was on the point of being terminated by the sword, when Francis Pizarro arrived in the capital. The reconciliation between him and Almagro had never been cordial. The treachery of Pizarro in engrossing to himself all the honours and emoluments, which ought to have been divided with his associate, was always present in both their thoughts. The former, conscious of his own perfidy, did not expect forgiveness; the latter, feeling that he had been deceived, was impatient to be avenged; and though avarice and ambition had induced them not only to dissemble their sentiments, but even to act in concert while in pursuit of wealth and power, no sooner did they obtain possession of these, than the same passions which had formed this temporary union gave rise to jealousy and discord. To each of them was attached a small band of interested dependants, who, with the malicious art peculiar to such men, heightened their suspicions, and magnified every appearance of offence. But with all those seeds of enmity in their minds, and thus assiduously cherished, each was so thoroughly acquainted with the abilities and courage of his rival, that they equally dreaded the consequences of an open rupture. The fortunate arrival of Pizarro at Cuzco, and the address mingled with firmness which he manifested in his expostulations with Almagro and his partisans, averted that evil for the present. A new reconciliation took place; the chief article of which was, that Almagro should attempt the conquest of Chili; and if he did not find in that province an establishment adequate to his merit and expectations, Pizarro, by way of indemnification, should yield up to him a part of Peru. This new agreement, June 12. though confirmed with the same sacred solemnities as their first contract, was observed with as little fidelity.[d]

Regulations of Pizarro.

Soon after he concluded this important transaction, Pizarro marched back to the countries on the sea-coast, and as he now enjoyed an interval of tranquillity undisturbed by any enemy, either Spanish or Indian, he applied himself with that persevering ardour which distinguishes his character, to introduce a form of regular government into the extensive provinces subject to his authority. Though ill qualified by his education to enter into any disquisition concerning the principles of civil policy, and little accustomed by his former habits of life to attend to its arrangements, his natural sagacity supplied the want both of science and experience. He distributed the country into various districts; he appointed proper magistrates to preside in each; and established regulations concerning the administration of justice, the collection of the royal revenue, the working of the mines, and the treatment of the Indians, extremely simple, but well calculated to promote the public prosperity. But though, for the present, he adapted his plan to the infant state of his colony, his aspiring mind looked forward to its future grandeur. He considered himself as laying the foundation of a great empire, and deliberated long, and with much solicitude, in what place he should fix the seat of government. Cuzco, the imperial city of the incas, was situated in a corner of the empire, above four hundred miles from the sea, and much further from Quito, a province of whose value he had formed a high idea. No other settlement of the Peruvians was so considerable as to merit the name of a town, or to allure the Spaniards to fix their residence in it. But in marching through the country, Pizarro had been struck with the beauty and fertility of the valley of Rimac, one of the most extensive and best cultivated in Peru. There, on the banks of a small river, of the same name with the vale which it waters and enriches, at the distance of six miles from Callao, the most commodious harbour in the Pacific ocean, he founded a city which he destined to be the capital of his government. 1535. January 18. He gave it the name of Ciudad de los Reyes, either from the circumstance of having laid the first stone at that season when the church celebrates the festival of the three kings, or, as is more probable, in honour of Juana and Charles, the joint sovereigns of Castile. This name it still retains among the Spaniards in all legal and formal deeds; but it is better known to foreigners by that of *Lima*, a corruption of the ancient appellation of the valley in which it is situated. Under his inspection, the buildings advanced with such rapidity, that it soon

Foundation of Lima.

c Zarate, lib. iii. c. 3. Vega, p. 11. lib. ii. c. 19. Herrera, dec. 5. lib. vi. c. 13.

assumed the form of a city, which, by a magnificent palace that he erected for himself, and by the stately houses built by several of his officers, gave, even in its infancy, some indication of its subsequent grandeur.[e]

Almagro invades Chili.

In consequence of what had been agreed with Pizarro, Almagro began his march towards Chili; and as he possessed in an eminent degree the virtues most admired by soldiers, boundless liberality and fearless courage, his standard was followed by five hundred and seventy men, the greatest body of Europeans that had hitherto been assembled in Peru. From impatience to finish the expedition, or from that contempt of hardship and danger acquired by all the Spaniards who had served long in America, Almagro, instead of advancing along the level country on the coast, chose to march across the mountains by a route that was shorter indeed, but almost impracticable. In this attempt his troops were exposed to every calamity which men can suffer, from fatigue, from famine, and from the rigour of the climate in those elevated regions of the torrid zone, where the degree of cold is hardly inferior to what is felt within the polar circle. Many of them perished; and the survivors, when they descended into the fertile plains of Chili, had new difficulties to encounter. They found there a race of men very different from the people of Peru, intrepid, hardy, independent, and in their bodily constitution, as well as vigour of spirit, nearly resembling the warlike tribes in North America. Though filled with wonder at the first appearance of the Spaniards, and still more astonished at the operations of their cavalry and the effects of their fire-arms, the Chilese soon recovered so far from their surprise, as not only to defend themselves with obstinacy, but to attack their new enemies with more determined fierceness than any American nation had hitherto discovered. The Spaniards, however, continued to penetrate into the country, and collected some considerable quantities of gold; but were so far from thinking of making any settlement amidst such formidable neighbours, that, in spite of all the experience and valour of their leader, the final issue of the expedition still remained extremely dubious, when they were recalled from it by an unexpected revolution in Peru.[f] The causes of this important event I shall endeavour to trace to their source.

An insurrection of the Peruvians.

So many adventurers had flocked to Peru from every Spanish colony in America, and all with such high expectations of accumulating independent fortunes at once, that, to men possessed with notions so extravagant, any mention of acquiring wealth gradually, and by schemes of patient industry, would have been not only a disappointment, but an insult. In order to find occupation for men who could not with safety be allowed to remain inactive, Pizarro encouraged some of the most distinguished officers who had lately joined him, to invade different provinces of the empire, which the Spaniards had not hitherto visited. Several large bodies were formed for this purpose; and about the time that Almagro set out for Chili, they marched into remote districts of the country. No sooner did Manco Capac, the inca, observe the inconsiderate security of the Spaniards in thus dispersing their troops, and that only a handful of soldiers remained in Cuzco, under Juan and Gonzalez Pizarro, than he thought that the happy period was at length come for vindicating his own rights, for avenging the wrongs of his country, and extirpating its oppressors. Though strictly watched by the Spaniards, who allowed him to reside in the palace of his ancestors at Cuzco, he found means of communicating his scheme to the persons who were to be intrusted with the execution of it. Among people accustomed to revere their sovereign as a divinity, every hint of his will carries the authority of a command; and they themselves were now convinced, by the daily increase in the number of their invaders, that the fond hopes which they had long entertained of their voluntary departure were altogether vain. All perceived that a vigorous effort of the whole nation was requisite to expel them, and the preparations for it were carried on with the secrecy and silence peculiar to Americans.

Its rise, and progress.

After some unsuccessful attempts of the inca to make his escape, Ferdinand Pizarro happening to arrive at 1536. that time in Cuzco, he obtained permission from him to attend a great festival which was to be celebrated a few leagues from the capital. Under pretext of that solemnity, the great men of the empire were assembled. As soon as the inca joined them, the standard of war was erected; and in a short time all the fighting men, from the confines of Quito to the frontier of Chili, were in arms. Many Spaniards, living securely on the settlements allotted them, were massacred. Several detachments, as they marched carelessly through a country which seemed to be tamely submissive to their dominion, were cut off to a man. An army amounting (if we may believe the Spanish writers) to two hundred thousand men, attacked Cuzco, which the three brothers endeavoured to defend with only one hundred and seventy Spaniards. Another formidable body invested Lima, and kept the governor closely shut up. There was no longer any communication between the two cities; the numerous forces of the Peruvians spreading over the country, intercepted every messenger; and as the parties in Cuzco and Lima were equally unacquainted with the fate of their countrymen, each boded the worst concerning the other, and imagined that they themselves were the only persons who had survived the general extinction of the Spanish name in Peru.[g]

Siege of Cuzco.

It was at Cuzco, where the inca commanded in person, that the Peruvians made their chief effort. During nine months they carried on the siege with incessant ardour, and in various forms; and though they displayed not the same undaunted ferocity as the Mexican warriors, they conducted some of their operations in a manner which discovered greater sagacity, and a genius more susceptible of improvement in the military art. They not only observed the advantages which the Spaniards derived from their discipline and their weapons, but they endeavoured to imitate the former, and turned the latter against them. They armed a considerable body of their bravest warriors with the swords, the spears, and bucklers, which they had taken from the Spanish soldiers whom they had cut off in different parts of the country. These they endeavoured to marshal in that regular compact order, to which experience had taught them that the Spaniards were indebted for their irresistible force in action. Some appeared in the field with Spanish muskets, and had acquired skill and resolution enough to use them. A few of the boldest, among whom was the inca himself, were mounted on the horses which they had taken, and advanced briskly to the charge like Spanish cavaliers, with their lances in the rest. It was more by their numbers, however, than by those imperfect essays to imitate European arts and to employ European arms, that the Peruvians annoyed the Spaniards.[h] In spite of the valour, heightened by despair, with which the three brothers defended Cuzco, Manco Capac recovered possession of one half of his capital; and in their various efforts to drive him out of it, the Spaniards lost Juan Pizarro, the best beloved of all the brothers, together with some other persons of note. Worn out with the fatigue of incessant duty, distressed with want of provisions, and despairing of being able any longer to resist an enemy whose numbers daily increased, the soldiers became impatient to abandon Cuzco, in hopes either of joining their countrymen, if any of them yet survived, or of forcing their way to the sea, and finding some means of escaping from a country which had been so fatal to the Spanish name.[i] While they were brooding over those desponding thoughts, which their officers laboured in vain to dispel, Almagro appeared suddenly in the neighbourhood of Cuzco.

Arrival of Almagro, and motives of his conduct.

The accounts transmitted to Almagro concerning the general insurrection of the Peruvians, were such as would have induced him, without hesitation, to relinquish the conquest of Chili, and hasten to the aid of his countrymen. But in this resolution he was confirmed by a motive less generous, but more interesting. By the same messenger who brought him intelligence of the inca's revolt, he received the royal patent creating him governor of Chili, and defining the limits of his jurisdiction. Upon considering the tenor of it, he deemed it manifest beyond contradiction, that Cuzco lay within the boundaries of his government, and he was equally solicitous to prevent the Peruvians from recovering possession of their capital, and to wrest it out of the hands of the Pizarros. From impatience to accomplish both, he ventured to return by a new route; and in marching through the sandy plains on the coast, he suffered from heat and drought, calamities of a new species, hardly inferior to those in which he had been involved by cold and famine on the summits of the Andes.

1537. His operations.

His arrival at Cuzco was in a critical moment. The Spaniards and Peruvians fixed their eyes upon him with equal solicitude. The former, as he did not study to conceal his pretensions, were at a loss whether to welcome him as a deliverer, or to take precautions against him as an enemy. The latter, knowing the points in contest between him and his countrymen, flattered themselves that they had more to hope than to dread from his operations. Almagro himself, unacquainted with the detail of the events which had happened in his absence, and solicitous to learn the precise posture of affairs, advanced towards the capital slowly, and with great circumspection. Various negociations with both parties were set on foot. The inca conducted them on his part with much address. At first he endeavoured to gain the friendship of Almagro; and after many fruitless overtures, despairing of any cordial union with a Spaniard, he attacked him by surprise with a numerous body of chosen troops. But the Spanish discipline and valour maintained their wonted superiority. The Peruvians were repulsed with such slaughter, that a great part of their army dispersed, and Almagro proceeded to the gates of Cuzco without interruption.

Takes possession of Cuzco.

The Pizarros, as they had no longer to make head against the Peruvians, directed all their attention towards their new enemy, and took measures to obstruct his entry into the capital. Prudence, however, restrained both parties for some time from turning their arms against one another, while surrounded by common enemies, who would rejoice in the mutual slaughter. Different schemes of accommodation were proposed. Each endeavoured to deceive the other, or to corrupt his followers. The generous, open, affable temper of Almagro gained many adherents of the Pizarros, who were disgusted with their harsh domineering manners. Encouraged by this defection, he advanced towards the city by night, surprised the sentinels, or was admitted by them, and investing the house where the two brothers resided, compelled them, after an obstinate defence, to surrender at discretion. Almagro's claim of jurisdiction over Cuzco was universally acknowledged, and a form of administration established in his name.[k]

k Zarate, lib. iii. c. 4. Vega, p. 11. lib. ii. c. 29, 31. Gomara Hist. c. 134. Herrera, dec. 6. lib. ii. c. 1—5.

Civil war, and first success of Almagro:

Two or three persons only were killed in this first act of civil hostility; but it was soon followed by scenes more bloody. Francis Pizarro having dispersed the Peruvians who had invested Lima, and received some considerable reinforcements from Hispaniola and Nicaragua, ordered five hundred men, under the command of Alonso de Alvarado, to march to Cuzco, in hopes of relieving his brothers, if they and their garrison were not already cut off by the Peruvians. This body, which at that period of the Spanish power in America, must be deemed a considerable force, advanced near to the capital before they knew that they had any enemy more formidable than Indians to encounter. It was with astonishment that they beheld their countrymen posted on the banks of the river Abancay to oppose their progress. Almagro, however, wished rather to gain than to conquer them, and by bribes and promises endeavoured to seduce their leader. The fidelity of Alvarado remained unshaken; but his talents for war were not equal to his virtue. Almagro amused him with various movements, of which he did not comprehend the meaning, while a large detachment of chosen soldiers passed the river by night, fell upon his camp by surprise, broke his troops before they had time to form, and took him prisoner, together with his principal officers.[l]

July 12.

but he does not improve his advantages.

By the sudden rout of this body, the contest between the two rivals must have been decided, if Almagro had known as well how to improve as how to gain a victory. Rodrigo Orgognez, an officer of great abilities, who having served under the constable Bourbon, when he led the imperial army to Rome, had been accustomed to bold and decisive measures, advised him instantly to issue orders for putting to death Ferdinand and Gonzalo Pizarro, Alvarado, and a few other persons whom he could not hope to gain, and to march directly with his victorious troops to Lima, before the governor had time to prepare for his defence. But Almagro, though he discerned at once the utility of the counsel, and though he had courage to have carried it into execution, suffered himself to be influenced by sentiments unlike those of a soldier of fortune grown old in service, and by scruples which suited not the chief of a party who had drawn his sword in civil war. Feelings of humanity restrained him from shedding the blood of his opponents; and the dread of being deemed a rebel, deterred him from entering a province which the king had allotted to another. Though he knew that arms must terminate the dispute between him and Pizarro, and resolved not to shun that mode of decision, yet, with a timid delicacy preposterous at such a juncture, he was so solicitous that his rival should be considered as the aggressor, that he marched quietly back to Cuzco to wait his approach.[m]

Distress of Pizarro.

Pizarro was still unacquainted with all the interesting events which had happened near Cuzco. Accounts of Almagro's return, of the loss of the capital, of the death of one brother, of the imprisonment of the other two, and of the defeat of Alvarado, were brought to him at once. Such a tide of misfortunes almost overwhelmed a spirit which had continued firm and erect under the rudest shocks of adversity. But the necessity of attending to his own safety, as well as the desire of revenge, preserved him from sinking under it. He took measures for both with his wonted sagacity. As he had the command of the sea-coast, and expected considerable supplies both of men and military stores, it was no less his interest to gain time, and to avoid action, than it was that of Almagro to precipitate operations, and bring the contest to a speedy issue. He had recourse to arts which he had formerly practised with success; and Almagro was again weak enough to suffer himself to be amused with a prospect of terminating their differences by some amicable accommodation. By varying his overtures, and shifting his ground as often as it suited his purpose, sometimes seeming to yield to every thing which his rival could desire, and then retracting all that he had granted, Pizarro dexterously protracted the negociation to such a length, that, though every day was precious to Almagro, several months elapsed without coming to any final agreement. While the attention of Almagro, and of the officers with whom he consulted, was occupied in detecting and eluding the fraudulent intentions of the governor, Gonzalo Pizarro and Alvarado found means to corrupt the soldiers to whose custody they were committed, and not only made their escape themselves, but persuaded sixty of the men who formerly guarded them to accompany their flight.[n] Fortune having thus delivered one of his brothers, the governor scrupled not at one act of perfidy more to procure the release of the other. He proposed, that every point in controversy between Almagro and himself should be submitted to the decision of their sovereign; that until his award was known, each should retain undisturbed possession of whatever part of the country he now occupied; that Ferdinand Pizarro should be set at liberty, and return instantly to Spain, together with the officers whom Almagro purposed to send thither to represent the justice of his claims. Obvious as the design of Pizarro was in those propositions, and familiar as his artifices might now have been to his opponent, Almagro, with a credulity approaching to infatuation, relied on his sincerity, and concluded an agreement on these terms.[o]

His artful conduct.

His preparations for war.

The moment that Ferdinand Pizarro recovered his liberty, the governor, no longer fettered in his operations by anxiety about his brother's life, threw off every disguise which his

concern for it had obliged him to assume. The treaty was forgotten; pacific and conciliating measures were no more mentioned; it was in the field, he openly declared, and not in the cabinet, by arms, and not by negociation, that it must now be determined who should be master of Peru. The rapidity of his preparations suited such a decisive resolution. Seven hundred men were soon ready to march towards Cuzco. The command of these was given to his two brothers, in whom he could perfectly confide for the execution of his most violent schemes, as they were urged on, not only by the enmity flowing from the rivalship between their family and Almagro, but animated with the desire of vengeance, excited by recollection of their own recent disgrace and sufferings. After an unsuccessful attempt to cross the mountains in the direct road between Lima and Cuzco, they marched towards the south along the coast as far as Nasca, and then turning to the left, penetrated through the defiles in that branch of the Andes which lay between them and the capital. Almagro, instead of hearkening to some of his officers, who advised him to attempt the defence of those difficult passes, waited the approach of the enemy in the plain of Cuzco. Two reasons seem to have induced him to take this resolution. His followers amounted hardly to five hundred, and he was afraid of weakening such a feeble body by sending any detachment towards the mountains. His cavalry far exceeded that of the adverse party, both in number and discipline, and it was only in an open country that he could avail himself of that advantage.

1538.

His army marches to Cuzco.

The Pizarros advanced without any obstruction, but what arose from the nature of the desert and horrid regions through which they marched. As soon as they reached the plain, both factions were equally impatient to bring this long protracted contest to an issue. Though countrymen and friends, the subjects of the same sovereign, and each with the royal standard displayed; and though they beheld the mountains that surrounded the plain in which they were drawn up, covered with a vast multitude of Indians, assembled to enjoy the spectacle of their mutual carnage, and prepared to attack whatever party remained master of the field; so fell and implacable was the rancour which had taken possession of every breast, that not one pacific counsel, not a single overture towards accommodation, proceeded from either side. Unfortunately for Almagro, he was so worn out with the fatigues of service, to which his advanced age was unequal, that at this crisis of his fate he could not exert his wonted activity; and he was obliged to commit the leading of his troops to Orgognez, who, though an officer of great merit, did not possess the same ascendant either over the spirit or affections of the soldiers, as the chief whom they had long been accustomed to follow and revere.

The conflict was fierce, and maintained by each party with equal courage. On the side of Almagro were more veteran soldiers, and a large proportion of cavalry; but these were counterbalanced by Pizarro's superiority in numbers, and by two companies of well disciplined musketeers, which, on receiving an account of the insurrection of the Indians, the emperor had sent from Spain.[p] As the use of fire-arms was not frequent among the adventurers in America,[q] hastily equipped for service at their own expense, this small band of soldiers regularly trained and armed was a novelty in Peru, and decided the fate of the day. Wherever it advanced, the weight of a heavy and well-sustained fire bore down horse and foot before it; and Orgognez, while he endeavoured to rally and animate his troops, having received a dangerous wound, the rout became general. The barbarity of the conquerors stained the glory which they acquired by this complete victory. The violence of civil rage hurried on some to slaughter their countrymen with indiscriminate cruelty; the meanness of private revenge instigated others to single out individuals as the objects of their vengeance. Orgognez, and several officers of distinction, were massacred in cold blood; above a hundred and forty soldiers fell in the field; a large proportion, where the number of combatants was few, and the heat of the contest soon over. Almagro, though so feeble that he could not bear the motion of a horse, had insisted on being carried in a litter to an eminence which overlooked the field of battle. From thence, in the utmost agitation of mind, he viewed the various movements of both parties, and at last beheld the total defeat of his own troops, with all the passionate indignation of a veteran leader long accustomed to victory. He endeavoured to save himself by flight but was taken prisoner, and guarded with the strictest vigilance.[r]

April 26. Almagro defeated, and taken.

The Indians, instead of executing the resolution which they had formed, retired quietly after the battle was over; and in the history of the New World, there is not a more striking instance of the wonderful ascendant which the Spaniards had acquired over its inhabitants, than that, after seeing one of the contending parties ruined and dispersed, and the other weakened and fatigued, they had not courage to fall upon their enemies, when fortune presented an opportunity of attacking them with such advantage.[s]

Cuzco was pillaged by the victorious troops, who found there a considerable booty, consisting partly of the gleanings of the Indian treasures, and partly of the wealth amassed by their antagonists from the spoils of Peru and Chili. But so far did this, and whatever the

bounty of their leader could add to it, fall below the high ideas of the recompence which they conceived to be due to their merit, that Ferdinand Pizarro, unable to gratify such extravagant expectations, had recourse to the same expedient which his brother had employed on a similar occasion, and endeavoured to find occupation for this turbulent assuming spirit, in order to prevent it from breaking out into open mutiny. With this view, he encouraged his most active officers to attempt the discovery and reduction of various provinces which had not hitherto submitted to the Spaniards. To every standard erected by the leaders who undertook any of those new expeditions, volunteers resorted with the ardour and hope peculiar to the age. Several of Almagro's soldiers joined them, and thus Pizarro had the satisfaction of being delivered both from the importunity of his discontented friends, and the dread of his ancient enemies.[t]

Almagro tried,

Almagro himself remained for several months in custody, under all the anguish of suspense. For although his doom was determined by the Pizarros from the moment that he fell into their hands, prudence constrained them to defer gratifying their vengeance, until the soldiers who had served under him, as well as several of their own followers in whom they could not perfectly confide, had left Cuzco. As soon as they set out upon their different expeditions, Almagro was

condemned,

impeached of treason, formally tried, and condemned to die. The sentence astonished him; and though he had often braved death with undaunted spirit in the field, its approach under this ignominious form appalled him so much, that he had recourse to abject supplications, unworthy of his former fame. He besought the Pizarros to remember the ancient friendship between their brother and him, and how much he had contributed to the prosperity of their family; he reminded them of the humanity with which, in opposition to the repeated remonstrances of his own most attached friends, he had spared their lives when he had them in his power; he conjured them to pity his age and infirmities, and to suffer him to pass the wretched remainder of his days in bewailing his crimes, and in making his peace with Heaven. The entreaties, says a Spanish historian, of a man so much beloved, touched many an unfeeling heart, and drew tears from many a stern eye. But the brothers remained inflexible. As soon as Almagro knew his fate to be inevitable, he met it with the dignity and fortitude

and put to death.

of a veteran. He was strangled in prison, and afterwards publicly beheaded. He suffered in the seventy-fifth year of his age, and left one son by an Indian woman of Panama, whom, though at that time a prisoner in Lima, he named as successor to his government, pursuant to a power which the emperor had granted him.[u]

1539. Deliberations of the court of Spain concerning the state of Peru.

As, during the civil dissensions in Peru, all intercourse with Spain was suspended, the detail of the extraordinary transactions there did not soon reach the court. Unfortunately for the victorious faction, the first intelligence was brought thither by some of Almagro's officers, who left the country upon the ruin of their cause; and they related what had happened with every circumstance unfavourable to Pizarro and his brothers. Their ambition, their breach of the most solemn engagements, their violence and cruelty, were painted with all the malignity and exaggeration of party hatred. Ferdinand Pizarro, who arrived soon after, and appeared in court with extraordinary splendour, endeavoured to efface the impression which their accusations had made, and to justify his brother and himself by representing Almagro as the aggressor. The emperor and his ministers, though they could not pronounce which of the contending factions was most criminal, clearly discerned the fatal tendency of their dissensions. It was obvious, that while the leaders, intrusted with the conduct of two infant colonies, employed the arms which should have been turned against the common enemy in destroying one another, all attention to the public good must cease, and there was reason to dread that the Indians might improve the advantage which the disunion of the Spaniards presented to them, and extirpate both the victors and vanquished. But the evil was more apparent than the remedy. Where the information which had been received was so defective and suspicious, and the scene of action so remote, it was almost impossible to chalk out the line of conduct that ought to be followed, and before any plan that should be approved of in Spain could be carried into execution, the situation of the parties, and the circumstances of affairs, might alter so entirely as to render its effects extremely pernicious.

Vaca de Castro sent thither with ample powers.

Nothing therefore remained but to send a person to Peru, vested with extensive and discretionary power, who, after viewing deliberately the posture of affairs with his own eyes, and inquiring upon the spot into the conduct of the different leaders, should be authorized to establish the government in that form which he deemed most conducive to the interest of the parent state, and the welfare of the colony. The man selected for this important charge was Christoval Vaca de Castro, a judge in the court of royal audience at Valladolid; and his abilities, integrity, and firmness, justified the choice. His instructions, though ample, were not such as to fetter him in his operations. According to the different aspect of affairs, he had power to take upon him different characters. If he found the governor still alive, he was to assume only the title of judge, to maintain the appearance of acting in concert with him, and to guard against giving any just

t Zarate, lib. iii. c. 12. Gomara Hist. c. 141. Herrera, dec. 6. lib. iv. c. 7.

u Zarate, lib. iii. c. 12. Gomara Hist. c. 141. Vega, p. 11. lib. ii. c. 39. Herrera, dec. 6. lib. iv. c. 9. lib. v. c. 1.

cause of offence to a man who had merited so highly of his country. But if Pizarro were dead, he was intrusted with a commission that he might then produce, by which he was appointed his successor in the government of Peru. This attention to Pizarro, however, seems to have flowed rather from dread of his power, than from any approbation of his measures; for at the very time that the court seemed so solicitous not to irritate him, his brother Ferdinand was arrested at Madrid, and confined to a prison, where he remained above twenty years.[x]

1540. Pizarro divides Peru among his followers.

While Vaca de Castro was preparing for his voyage, events of great moment happened in Peru. The governor considering himself, upon the death of Almagro, as the unrivalled possessor of that vast empire, proceeded to parcel out its territories among the conquerors; and had this division been made with any degree of impartiality, the extent of country which he had to bestow was sufficient to have gratified his friends, and to have gained his enemies. But Pizarro conducted this transaction, not with the equity and candour of a judge attentive to discover and to reward merit, but with the illiberal spirit of a party leader. Large districts, in parts of the country most cultivated and populous, were set apart as his own property, or granted to his brothers, his adherents, and favourites. To others lots less valuable and inviting were assigned. The followers of Almagro, amongst whom were many of the original adventurers to whose valour and perseverance Pizarro was indebted for his success, were totally excluded from any portion in those lands, towards the acquisition of which they had contributed so largely. As the vanity of every individual set an immoderate value upon his own services, and the idea of each concerning the recompence due to them rose gradually to a more exorbitant height in proportion as their conquests extended, all who were disappointed in their expectations exclaimed loudly against the rapaciousness and partiality of the governor. The partisans of Almagro murmured in secret, and meditated revenge.[y]

Progress of the Spanish arms.

Rapid as the progress of the Spaniards in South America had been since Pizarro landed in Peru, their avidity of dominion was not yet satisfied. The officers to whom Ferdinand Pizarro gave the command of different detachments, penetrated into several new provinces, and though some of them were exposed to great hardships in the cold and barren regions of the Andes, and others suffered distress not inferior amidst the woods and marshes of the plains, they made discoveries and conquests which not only extended their knowledge of the country, but added considerably to the territories of Spain in the New World. Pedro de Valdivia reassumed Almagro's scheme of invading Chili, and notwithstanding the fortitude of the natives in defending their possessions, made such progress in the conquest of the country, that he founded the city of St. Jago, and gave a beginning to the establishment of the Spanish dominion in that province.[z] But of all the enterprises undertaken about this period, that of Gonzalo Pizarro was the most remarkable. The governor, who seems to have resolved that no person in Peru should possess any station of distinguished eminence or authority but those of his own family, had deprived Benalcazar, the conqueror of Quito, of his command in that kingdom, and appointed his brother Gonzalo to take the government of it. He instructed him to attempt the discovery and conquest of the country to the east of the Andes, which, according to the information of the Indians, abounded with cinnamon and other valuable spices. Gonzalo, not inferior to any of his brothers in courage, and no less ambitious of acquiring distinction, eagerly engaged in this difficult service. He set out from Quito at the head of three hundred and forty soldiers, near one half of whom were horsemen; with four thousand Indians to carry their provisions. In forcing their way through the defiles, or over the ridges, of the Andes, excess of cold and fatigue, to neither of which they were accustomed, proved fatal to the greater part of their wretched attendants. The Spaniards, though more robust, and inured to a variety of climates, suffered considerably, and lost some men; but when they descended into the low country their distress increased. During two months it rained incessantly, without any interval of fair weather long enough to dry their clothes.[a] The immense plains upon which they were now entering, either altogether without inhabitants, or occupied by the rudest and least industrious tribes in the New World, yielded little subsistence. They could not advance a step but as they cut a road through woods, or made it through marshes. Such incessant toil, and continual scarcity of food, seem more than sufficient to have exhausted and dispirited any troops. But the fortitude and perseverance of the Spaniards in the sixteenth century were insuperable. Allured by frequent but false accounts of rich countries before them, they persisted in struggling on, until they reached the banks of the Coca or Napo, one of the large rivers whose waters pour into the Maragnon, and contribute to its grandeur. There, with infinite labour, they built a bark, which they expected would prove of great utility, in conveying them over rivers, in procuring provisions, and in exploring the country. This was manned with fifty soldiers, under the command of Francis Orellana, the officer next in rank to Pizarro. The stream carried them down with such rapidity, that they were soon far a-head of their countrymen, who followed slowly and with difficulty by land.

Remarkable expedition of Gonzalo Pizarro.

Hardships they endure.

Deserted by Orellana.

At this distance from his commander, Orellana, a young man of an aspiring mind, began to fancy himself independent, and transported with the predominant passion of the age, he formed the scheme of distinguishing himself as a discoverer, by following the course of the Maragnon, until it joined the ocean, and by surveying the vast regions through which it flows. This scheme of Orellana's was as bold as it was treacherous. For, if he be chargeable with the guilt of having violated his duty to his commander, and with having abandoned his fellow-soldiers in a pathless desert, where they had hardly any hopes of success, or even of safety, but what were founded on the service which they expected from the bark; his crime is, in some measure, balanced by the glory of having ventured upon a navigation of near two thousand leagues, through unknown nations, in a vessel hastily constructed, with green timber, and by very unskilful hands, without provisions, without a compass, or a pilot. But his courage and alacrity supplied every defect. Committing himself fearlessly to the guidance of the stream, the Napo bore him along to the south, until he reached the great channel of the Maragnon. Turning with it towards the coast, he held on his course in that direction. He made frequent descents on both sides of the river, sometimes seizing by force of arms the provisions of the fierce savages seated on its banks, and sometimes procuring a supply of food by a friendly intercourse with more gentle tribes. After a long series of dangers, which he encountered with amazing fortitude, and of distresses which he supported with no less magnanimity, he reached the ocean,[b] where new perils awaited him. These he likewise surmounted, and got safe to the Spanish settlement in the island Cubagua; from thence he sailed to Spain. The vanity natural to travellers who visit regions unknown to the rest of mankind, and the art of an adventurer solicitous to magnify his own merit, concurred in prompting him to mingle an extraordinary proportion of the marvellous in the narrative of his voyage. He pretended to have discovered nations so rich, that the roofs of their temples were covered with plates of gold; and described a republic of women so warlike and powerful, as to have extended their dominion over a considerable tract of the fertile plains which he had visited. Extravagant as those tales were, they gave rise to an opinion, that a region abounding with gold, distinguished by the name of *El Dorado*, and a community of Amazons, were to be found in this part of the New World; and such is the propensity of mankind to believe what is wonderful, that it has been slowly and with difficulty that reason and observation have exploded those fables. The voyage, however, even when stripped of every romantic embellishment, deserves to be recorded, not only as one of the most memorable occurrences in that adventurous age, but as the first event which led to any certain knowledge of the extensive countries that stretch eastward from the Andes to the ocean.[c]

Sails down the Maragnon.

No words can describe the consternation of Pizarro, when he did not find the bark at the confluence of the Napo and Maragnon, where he had ordered Orellana to wait for him. He would not allow himself to suspect that a man whom he had intrusted with such an important command, could be so base and so unfeeling as to desert him at such a juncture. But imputing his absence from the place of rendezvous to some unknown accident, he advanced above fifty leagues along the banks of the Maragnon, expecting every moment to see the bark appear with a supply of provisions. At length he came up with an officer whom Orellana had left to perish in the desert, because he had the courage to remonstrate against his perfidy. From him he learned the extent of Orellana's crime, and his followers perceived at once their own desperate situation, when deprived of their only resource. The spirit of the stoutest-hearted veteran sunk within him, and all demanded to be led back instantly. Pizarro, though he assumed an appearance of tranquillity, did not oppose their inclination. But he was now twelve hundred miles from Quito; and in that long march the Spaniards encountered hardships greater than those which they had endured in their progress outward, without the alluring hopes which then soothed and animated them under their sufferings. Hunger compelled them to feed on roots and berries, to eat all their dogs and horses, to devour the most loathsome reptiles, and even to gnaw the leather of their saddles and sword-belts. Four thousand Indians, and two hundred and ten Spaniards, perished in this wild disastrous expedition, which continued near two years; and as fifty men were aboard the bark with Orellana, only fourscore got back to Quito. These were naked like savages, and so emaciated with famine, or worn out with fatigue, that they had more the appearance of spectres than of men.[d]

Distress of Pizarro.

1541.

But, instead of returning to enjoy the repose which his condition required, Pizarro, on entering Quito, received accounts of a fatal event that threatened calamities more dreadful to him than those through which he had passed. From the time that his brother made that partial division of his conquests which has been mentioned, the adherents of Almagro, considering themselves as prescribed by the party in power, no longer entertained any hope of bettering their condition. Great numbers in despair resorted to Lima, where the house of young Almagro was always open to them, and the slender portion

Number of malcontents in Peru.

of his father's fortune which the governor allowed him to enjoy, was spent in affording them subsistence. The warm attachment with which every person who had served under the elder Almagro devoted himself to his interests, was quickly transferred to his son, who was now grown up to the age of manhood, and possessed all the qualities which captivate the affections of soldiers. Of a graceful appearance, dexterous at all martial exercises, bold, open, generous, he seemed to be formed for command; and as his father, conscious of his own inferiority, from the total want of education, had been extremely attentive to have him instructed in every science becoming a gentleman, the accomplishments which he had acquired heightened the respect of his followers, as they gave him distinction and eminence among illiterate adventurers. In this young man the Almagrians found a point of union which they wanted, and looking up to him as their head, were ready to undertake any thing for his advancement. Nor was affection for Almagro their only incitement; they were urged on by their own distresses. Many of them, destitute of common necessaries,[e] and weary of loitering away life, a burden to their chief, or to such of their associates as had saved some remnant of their fortune from pillage and confiscation, longed impatiently for an occasion to exert their activity and courage, and began to deliberate how they might be avenged on the author of all their misery. Their frequent cabals did not pass unobserved; and the governor was warned to be on his guard against men who meditated some desperate deed, and had resolution to execute it. But either from the native intrepidity of his mind, or from contempt of persons whose poverty seemed to render their machinations of little consequence, he disregarded the admonitions of his friends. "Be in no pain," said he carelessly, "about my life; it is perfectly safe, as long as every man in Peru knows that I can in a moment cut off any head which dares to harbour a thought against it." This security gave the Almagrians full leisure to digest and ripen every part of their scheme; and Juan de Herrada, an officer of great abilities, who had the charge of Almagro's education, took the direction of their consultations, with all the zeal which this connexion inspired, and with all the authority which the ascendant that he was known to have over the mind of his pupil gave him.

Consider young Almagro as their leader.

Conspire against the life of Pizarro.

On Sunday the twenty-sixth of June, at mid-day, the season of tranquillity and repose in all sultry climates, Herrada, at the head of eighteen of the most determined conspirators, sallied out of Almagro's house in complete armour; and, drawing their swords, as they advanced hastily towards the governor's palace, cried out, "Long live the king, but let the tyrant die!" Their associates, warned of their motions by a signal, were in arms at different stations ready to support them. Though Pizarro was usually surrounded by such a numerous train of attendants as suited the magnificence of the most opulent subject of the age in which he lived, yet as he was just risen from table, and most of his domestics had retired to their own apartments, the conspirators passed through the two outer courts of the palace unobserved. They were at the bottom of a staircase before a page in waiting could give the alarm to his master, who was conversing with a few friends in a large hall. The governor, whose steady mind no form of danger could appal, starting up, called for arms, and commanded Francisco de Chaves to make fast the door. But that officer, who did not retain so much presence of mind as to obey this prudent order, running to the top of the stair-case, wildly asked the conspirators what they meant, and whither they were going? Instead of answering, they stabbed him to the heart, and burst into the hall. Some of the persons who were there threw themselves from the windows; others attempted to fly; and a few drawing their swords followed their leader into an inner apartment. The conspirators, animated with having the object of their vengeance now in view, rushed forward after them. Pizarro, with no other arms than his sword and buckler, defended the entry; and supported by his half-brother Alcantara, and his little knot of friends, he maintained the unequal contest with intrepidity worthy of his past exploits, and with the vigour of a youthful combatant. "Courage," cried he, "companions! we are yet enow to make those traitors repent of their audacity." But the armour of the conspirators protected them, while every thrust they made took effect. Alcantara fell dead at his brother's feet; his other defenders were mortally wounded. The governor, so weary that he could hardly wield his sword, and no longer able to parry the many weapons furiously aimed at him, received a deadly thrust full in his throat, sunk to the ground, and expired.

As soon as he was slain, the assassins ran out into the streets, and waving their bloody swords, proclaimed the death of the tyrant. Above two hundred of their associates having joined them, they conducted young Almagro in solemn procession through the city, and assembling the magistrates and principal citizens, compelled them to acknowledge him as lawful successor to his father in his government. The palace of Pizarro, together with the houses of several of his adherents, were pillaged by the soldiers, who had the satisfaction at once of being avenged on their enemies, and of enriching themselves by the spoils of those through whose hands all the wealth of Peru had passed.[f]

Almagro acknowledged as his successor.

The boldness and success of the conspiracy, as well as the name and

New appearances of discord.

f Zarate, lib. 4. c. 6—8. Gomara Hist. c. 144, 145. Vega, p. 11. lib. iii. c. 5—7. Herrera, dec. 6. lib. x. c. 4—7. Pizarro Var Illust. p. 183.

popular qualities of Almagro, drew many soldiers to his standard. Every adventurer of desperate fortune, all who were dissatisfied with Pizarro, and from the rapaciousness of his government in the latter years of his life the number of malcontents was considerable, declared without hesitation in favour of Almagro, and he was soon at the head of eight hundred of the most gallant veterans in Peru. As his youth and inexperience disqualified him from taking the command of them himself, he appointed Herrada to act as general. But though Almagro speedily collected such a respectable force, the acquiescence in his government was far from being general. Pizarro had left many friends to whom his memory was dear; the barbarous assassination of a man to whom his country was so highly indebted, filled every impartial person with horror. The ignominious birth of Almagro, as well as the doubtful title on which he founded his pretensions, led others to consider him as an usurper. The officers who commanded in some provinces refused to recognise his authority, until it was confirmed by the emperor. In others, particularly at Cuzco, the royal standard was erected, and preparations were begun in order to revenge the murder of their ancient leader.

Arrival of Vaca de Castro,

Those seeds of discord, which could not have lain long dormant, acquired great vigour and activity when the arrival of Vaca de Castro was known. After a long and disastrous voyage, he was driven by stress of weather into a small harbour in the province of Popayan; and proceeding from thence by land, after a journey no less tedious than difficult, he reached Quito. In his way he received accounts of Pizarro's death, and of the events which followed upon it.

who assumes the title of governor.

He immediately produced the royal commission, appointing him governor of Peru, with the same privileges and authority; and his jurisdiction was acknowledged without hesitation by Benalcazar, adelantado or lieutenant-general for the emperor in Popayan, and by Pedro de Puelles, who, in the absence of Gonzalo Pizarro, had the command of the troops left in Quito. Vaca de Castro not only assumed the supreme authority, but showed that he possessed the talents which the exercise of it at that juncture required. By his influence and address he soon assembled such a body of troops, as not only to set him above all fear of being exposed to any insult from the adverse party, but enabled him to advance from Quito with the dignity that became his character. By despatching persons of confidence to the different settlements in Peru, with a formal notification of his arrival and of his commission, he communicated to his countrymen the royal pleasure with respect to the government of the country. By private emissaries, he excited such officers as had discovered their disapprobation of Almagro's proceedings, to manifest their duty to their sovereign by supporting the person honoured with his commission. Those measures were productive of great effects. Encouraged by the approach of the new governor, or prepared by his machinations, the loyal were confirmed in their principles, and avowed them with greater boldness; the timid ventured to declare their sentiments; the neutral and wavering, finding it necessary to choose a side, began to lean to that which now appeared to be the safest, as well as the most just.g

Conduct of Almagro.

Almagro observed the rapid progress of this spirit of disaffection to his cause, and in order to give an effectual check to it before the arrival of Vaca de Castro, he set out at the head of his troops for Cuzco, where the most considerable body of opponents had erected the royal standard, under the command of Pedro Alvarez Holguin. During his march thither, Herrada, the skilful guide of his youth and of his counsels, died; and from that time his measures were conspicuous for their violence, but concerted with little sagacity, and executed with no address. Holguin, who, with forces far inferior to those of the opposite party, was descending towards the coast at the very time that Almagro was on his way to Cuzco, deceived his inexperienced adversary by a very simple stratagem, avoided an engagement, and effected a junction with Alvarado, an officer of note, who had been the first to declare against Almagro as an usurper.

1542.

Progress of Vaca de Castro.

Soon after, Vaca de Castro entered their camp with the troops which he brought from Quito, and erecting the royal standard before his own tent, he declared that, as governor, he would discharge in person all the functions of general of their combined forces. Though formed by the tenor of his past life to the habits of a sedentary and pacific profession, he at once assumed the activity, and discovered the decision, of an officer long accustomed to command. Knowing his strength to be now far superior to that of the enemy, he was impatient to terminate the contest by a battle. Nor did the followers of Almagro, who had no hopes of obtaining a pardon for a crime so atrocious as the murder of the governor, decline that mode of decision. They met at Chupaz, about two hundred miles from Cuzco, and fought with all the fierce animosity inspired by the violence of civil rage, the rancour of private enmity, the eagerness of revenge, and the last efforts of despair. Victory, after remaining long doubtful, declared at last for Vaca de Castro. The superior number of his troops, his own intrepidity, and the martial talents of Francisco de Carvajal, a veteran officer formed under the great captain in the wars of Italy, and who on that day laid the foundation of his future fame in Peru, triumphed over the bravery of his opponents, though led on by young Almagro with a gallant spirit, worthy of a better cause, and

Defeats Almagro.

g Benzon, lib. iii. c. 9. Zarate, lib. iv. c. 11. Gomara, c. 146. 147. Herrera, dec. 6. lib. x. c. 1, 2, 3, 7, &c.

deserving another fate. The carnage was great in proportion to the number of the combatants. Many of the vanquished, especially such as were conscious that they might be charged with being accessary to the assassination of Pizarro, rushing on the swords of the enemy, chose to fall like soldiers, rather than wait an ignominious doom. Of fourteen hundred men, the total amount of combatants on both sides, five hundred lay dead on the field, and the number of the wounded was still greater.[h]

Severity of his proceedings.

If the military talents displayed by Vaca de Castro, both in the council and in the field, surprised the adventurers in Peru, they were still more astonished at his conduct after the victory. As he was by nature a rigid dispenser of justice, and persuaded that it required examples of extraordinary severity to restrain the licentious spirit of soldiers so far removed from the seat of government, he proceeded directly to try his prisoners as rebels. Forty were condemned to suffer the death of traitors, others were banished from Peru. Their leader, who made his escape from the battle, being betrayed by some of his officers, was publicly beheaded in Cuzco; and in him the name of Almagro, and the spirit of the party, was extinct.[i]

Consultations of the emperor concerning his dominions in America.

During those violent convulsions in Peru, the emperor and his ministers were intently employed in preparing regulations, by which they hoped, not only to re-establish tranquillity there, but to introduce a more perfect system of internal policy into all their settlements in the New World. It is manifest from all the events recorded in the history of America, that, rapid and extensive as the Spanish conquests there had been, they were not carried on by any regular exertion of the national force, but by the occasional efforts of private adventurers. After fitting out a few of the first armaments for discovering new regions, the court of Spain, during the busy reigns of Ferdinand and of Charles V., the former the most intriguing prince of the age, and the latter the most ambitious, was encumbered with such a multiplicity of schemes, and involved in war with so many nations of Europe, that he had not leisure to attend to distant and less interesting objects. The care of prosecuting discovery, or of attempting conquest, was abandoned to individuals; and with such ardour did men push forward in this new career, on which novelty, the spirit of adventure, avarice, ambition, and the hope of meriting heaven, prompted them with combined influence to enter, that in less than half a century almost the whole of that extensive empire which Spain now possesses in the New World, was subjected to its dominion. As the Spanish court contributed nothing towards the various expeditions undertaken in America, it was not entitled to claim much from their success. The sovereignty of the conquered provinces, with the fifth of the gold and silver, was reserved for the crown; every thing else was seized by the associates in each expedition as their own right. The plunder of the countries which they invaded served to indemnify them for what they had expended in equipping themselves for the service, and the conquered territory was divided among them, according to rules which custom had introduced, as permanent establishments which their successful valour merited. In the infancy of those settlements, when their extent as well as their value were unknown, many irregularities escaped observation, and it was found necessary to connive at many excesses. The conquered people were frequently pillaged with destructive rapacity, and their country parcelled out among its new masters in exorbitant shares, far exceeding the highest recompence due to their services. The rude conquerors of America, incapable of forming their establishments upon any general or extensive plan of policy, attentive only to private interest, unwilling to forego present gain from the prospect of remote or public benefit, seem to have had no object but to amass sudden wealth, without regarding what might be the consequences of the means by which they acquired it. But when time at length discovered to the Spanish court the importance of its American possessions, the necessity of new-modelling their whole frame became obvious, and in place of the maxims and practices prevalent among military adventurers, it was found requisite to substitute the institutions of regular government.

One evil in particular called for an immediate remedy. The conquerors of Mexico and Peru imitated the fatal example of their countrymen settled in the islands, and employed themselves in searching for gold and silver with the same inconsiderate eagerness. Similar effects followed. The natives employed in this labour by masters, who in imposing tasks had no regard either to what they felt or to what they were able to perform, pined away and perished so fast, that there was reason to apprehend that Spain, instead of possessing countries peopled to such a degree as to be susceptible of progressive improvement, would soon remain proprietor only of a vast uninhabited desert.

The emperor and his ministers were so sensible of this, and so solicitous to prevent the extinction of the Indian race, which threatened to render their acquisitions of no value, that from time to time various laws, which I have mentioned, had been made for securing to that unhappy people more gentle and equitable treatment. But the distance of America from the seat of empire, the feebleness of government in the new colonies, the avarice and audacity of soldiers unaccustomed to restraint, prevented these salutary regulations from operating with any considerable influence. The evil continued to grow, and at this time the emperor found an interval of leisure from the affairs of Europe to take it into attentive consideration. He consulted not

h Zarate, lib. iv. c. 12—19. Gomara, c. 148. Vega, p. 11. lib. iii. c. 11—18. Herrera, dec. 7. lib. i. c. 1, 2, 3. lib. iii. c. 1—11.

only with his ministers and the members of the council of the Indies, but called upon several persons who had resided long in the New World, to aid them with the result of their experience and observation. Fortunately for the people of America, among these was Bartholomew de las Casas, who happened to be then at Madrid on a mission from a chapter of his order at Chiapa.[k] Though since the miscarriage of his former schemes for the relief of the Indians, he had continued shut up in his cloister, or occupied in religious functions, his zeal in behalf of the former objects of his pity was so far from abating, that, from an increased knowledge of their sufferings, its ardour had augmented. He seized eagerly this opportunity of reviving his favourite maxims concerning the treatment of the Indians. With the moving eloquence natural to a man on whose mind the scenes which he had beheld had made a deep impression, he described the irreparable waste of the human species in the New World, the Indian race almost totally swept away in the islands in less than fifty years, and hastening to extinction on the continent with the same rapid decay. With the decisive tone of one strongly prepossessed with the truth of his own system, he imputed all this to a single cause, to the exactions and cruelty of his countrymen, and contended that nothing could prevent the depopulation of America, but the declaring of its natives to be freemen, and treating them as subjects, not as slaves. Nor did he confide for the success of this proposal in the powers of his oratory alone. In order to enforce them, he composed his famous treatise concerning the destruction of America,[l] in which he relates, with many horrid circumstances, but with apparent marks of exaggerated description, the devastation of every province which had been visited by the Spaniards.

The persons with whom he advises.

His solicitude to introduce a general reformation of government.

The emperor was deeply afflicted with the recital of so many actions shocking to humanity. But as his views extended far beyond those of Las Casas, he perceived that relieving the Indians from oppression was but one step towards rendering his possessions in the New World a valuable acquisition, and would be of little avail, unless he could circumscribe the power and usurpations of his own subjects there. The conquerors of America, however great their merit had been towards their country, were mostly persons of such mean birth, and of such an abject rank in society, as gave no distinction in the eye of a monarch. The exorbitant wealth with which some of them returned, gave umbrage to an age not accustomed to see men in inferior condition elevated above their level, and rising to emulate or to surpass the ancient nobility in splendour. The territories which their leaders had appropriated to themselves were of such enormous extent,[m] that if the country should ever be improved in proportion to the fertility of the soil, they must grow too wealthy and too powerful for subjects. It appeared to Charles that this abuse required a remedy no less than the other, and that the regulations concerning both must be enforced by a mode of government more vigorous than had yet been introduced into America.

New regulations for this purpose.

With this view he framed a body of laws, containing many salutary appointments with respect to the constitution and powers of the supreme council of the Indies; concerning the station and jurisdiction of the royal audiences in different parts of America; the administration of justice; the order of government, both ecclesiastical and civil. These were approved of by all ranks of men. But together with them were issued the following regulations, which excited universal alarm, and occasioned the most violent convulsions: "That as the *repartimientos* or shares of land seized by several persons appeared to be excessive, the royal audiences are empowered to reduce them to a moderate extent: That upon the death of any conqueror or planter, the lands and Indians granted to him shall not descend to his widow or children, but return to the crown: That the Indians shall henceforth be exempt from personal service, and shall not be compelled to carry the baggage of travellers, to labour in the mines, or to dive in the pearl fisheries: That the stated tribute due by them to their superior shall be ascertained, and they shall be paid as servants for any work they voluntarily perform: That all persons who are or have been in public offices, all ecclesiastics of every denomination, all hospitals and monasteries, shall be deprived of the lands and Indians allotted to them, and these be annexed to the crown: That every person in Peru, who had any criminal concern in the contests between Pizarro and Almagro, should forfeit his lands and Indians."

His ministers remonstrate against them.

All the Spanish ministers who had hitherto been intrusted with the direction of American affairs, and who were best acquainted with the state of the country, remonstrated against those regulations as ruinous to their infant colonies. They represented that the number of Spaniards who had hitherto emigrated to the New World was so extremely small, that nothing could be expected from any effort of theirs towards improving the vast regions over which they were scattered; that the success of every scheme for this purpose must depend upon the ministry and service of the Indians, whose native indolence and aversion to labour, no prospect of benefit or promise of reward could surmount; that the moment the right of imposing a task, and exacting the performance of it, was taken from their masters, every work of industry must cease, and all the sources from which wealth began to pour in upon Spain must be stopped for ever. But Charles, tenacious at all times of

n Herrera, dec. 7. lib. vi. c. 5. Fernandez, Hist. lib. i. c. 1, 2.

his own opinions, and so much impressed at present with the view of the disorders which reigned in America, that he was willing to hazard the application even of a dangerous remedy, persisted in his resolution of publishing the laws. That they might be carried into execution with greater vigour and authority, he authorized Francisco Tello de Sandoval to repair to Mexico as *visitador* or superintendant of that country, and to co-operate with Antonio de Mendoza, the viceroy, in enforcing them. He appointed Blasco Nugnez Vela to be governor of Peru with the title of viceroy; and in order to strengthen his administration, he established a court of royal audience in Lima, in which four lawyers of eminence were to preside as judges.[o]

A viceroy appointed for Peru.

The viceroy and superintendant sailed at the same time; and an account of the laws which they were to enforce reached America before them. The entry of Sandoval into Mexico was viewed as the prelude of general ruin. The unlimited grant of liberty to the Indians affected every Spaniard in America without distinction; and there was hardly one who might not on some pretext be included under the other regulations, and suffer by them. But the colony in New Spain had now been so long accustomed to the restraints of law and authority under the steady and prudent administration of Mendoza, that how much soever the spirit of the new statutes was detested and dreaded, no attempt was made to obstruct the publication of them by any act of violence unbecoming subjects. The magistrates and principal inhabitants, however, presented dutiful addresses to the viceroy and superintendant, representing the fatal consequences of enforcing them. Happily for them, Mendoza, by long residence in the country, was so thoroughly acquainted with its state, that he knew what was for its interest as well as what it could bear; and Sandoval, though new in office, displayed a degree of moderation seldom possessed by persons just entering upon the exercise of power. They engaged to suspend, for some time, the execution of what was offensive in the new laws, and not only consented that a deputation of citizens should be sent to Europe to lay before the emperor the apprehensions of his subjects in New Spain with respect to their tendency and effects, but they concurred with them in supporting their sentiments. Charles, moved by the opinion of men whose abilities and integrity entitled them to decide concerning what fell immediately under their own view, granted such a relaxation of the rigour of the laws as re-established the colony in its former tranquillity.[p]

Effects of the regulations in New Spain,

1543. In Peru the storm gathered with an aspect still more fierce and threatening, and was not so soon dispelled. The conquerors of Peru, of a rank much inferior to those who had subjected Mexico to the Spanish crown, further removed from the inspection of the parent state, and intoxicated with the sudden acquisition of wealth, carried on all their operations with greater license and irregularity than any body of adventurers in the New World. Amidst the general subversion of law and order, occasioned by two successive civil wars, when each individual was at liberty to decide for himself, without any guide but his own interest or passions, this turbulent spirit rose above all sense of subordination. To men thus corrupted by anarchy, the introduction of regular government, the power of a viceroy, and the authority of a respectable court of judicature, would of themselves have appeared formidable restraints, to which they would have submitted with reluctance. But they revolted with indignation against the idea of complying with laws, by which they were to be stripped at once of all they had earned so hardly during many years of service and suffering. As the account of the new laws spread successively through the different settlements, the inhabitants ran together, the women in tears, and the men exclaiming against the injustice and ingratitude of their sovereign in depriving them, unheard and unconvicted, of their possessions. "Is this," cried they, "the recompence due to persons, who, without public aid, at their own expense, and by their own valour, have subjected to the crown of Castile territories of such immense extent and opulence? Are these the rewards bestowed for having endured unparalleled distress, for having encountered every species of danger in the service of their country? Whose merit is so great, whose conduct has been so irreproachable, that he may not be condemned by some penal clause in regulations, conceived in terms as loose and comprehensive as if it had been intended that all should be entangled in their snare? Every Spaniard of note in Peru has held some public office, and all, without distinction, have been constrained to take an active part in the contest between the two rival chiefs. Were the former to be robbed of their property because they had done their duty? Were the latter to be punished on account of what they could not avoid? Shall the conquerors of this great empire, instead of receiving marks of distinction, be deprived of the natural consolation of providing for their widows and children, and leave them to depend for subsistence on the scanty supply they can extort from unfeeling courtiers?[q] We are not able now, continued they, to explore unknown regions in quest of more secure settlements; our constitutions debilitated with age, and our bodies covered with wounds, are no longer fit for active service; but still we possess vigour sufficient to assert our just rights, and we will not tamely suffer them to be wrested from us."[r]

in Peru.

By discourses of this sort, uttered with vehe-

An insurrection prevented by the moderation of Castro.

mence, and listened to with universal approbation, their passions were inflamed to such a pitch, that they were prepared for the most violent measures, and began to hold consultations in different places, how they might oppose the entrance of the viceroy and judges, and prevent not only the execution but the promulgation of the new laws. From this, however, they were diverted by the address of Vaca de Castro, who flattered them with hopes, that as soon as the viceroy and judges should arrive, and had leisure to examine their petitions and remonstrances, they would concur with them in endeavouring to procure some mitigation in the rigour of laws, which had been framed without due attention either to the state of the country or to the sentiments of the people. A greater degree of accommodation to these, and even some concessions on the part of government, were now become requisite to compose the present ferment, and to soothe the colonists into submission, by inspiring them with confidence in their superiors. But without profound discernment, conciliating manners, and flexibility of temper, such a plan could not be carried on. The viceroy possessed none of these. Of all the qualities that fit men for high command, he was endowed only with integrity and courage; the former harsh and uncomplying, the latter bordering so frequently on rashness or obstinacy, that in his situation they were defects rather than virtues. From the moment that he landed at Tumbez, Nugnez Vela seems to have considered himself merely as an executive officer, without any discretionary power; and, regardless of whatever he observed or heard concerning the state of the country, he adhered to the letter of the regulations with unrelenting rigour. In all the towns through which he passed, the natives were declared to be free, every person in public office was deprived of his lands and servants; and as an example of obedience to others, he would not suffer a single Indian to be employed in carrying his own baggage in his march towards Lima. Amazement and consternation went before him as he approached; and so little solicitous was he to prevent these from augmenting, that on entering the capital he openly avowed, that he came to obey the orders of his sovereign, not to dispense with his laws. This harsh declaration was accompanied with what rendered it still more intolerable, haughtiness in deportment, a tone of arrogance and decision in discourse, and an insolence of office grievous to men little accustomed to hold civil authority in high respect. Every attempt to procure a suspension or mitigation of the new laws, the viceroy considered as flowing from a spirit of disaffection that tended to rebellion. Several persons of rank were confined, and some put to death, without any form of trial. Vaca de Castro was arrested, and notwithstanding the dignity of his former rank, and his merit in having prevented a general insurrection in the colony, he was loaded with chains, and shut up in the common gaol.[s]

The spirit of disaffection increased by the viceroy.

March 4.

But however general the indignation was against such proceedings, it is probable the hand of authority would have been strong enough to suppress it, or to prevent it bursting out with open violence, if the malcontents had not been provided with a leader of credit and eminence to unite and to direct their efforts. From the time that the purport of the new regulations was known in Peru, every Spaniard there turned his eyes towards Gonzalo Pizarro, as the only person able to avert the ruin with which they threatened the colony. From all quarters, letters and addresses were sent to him, conjuring him to stand forth as their common protector, and offering to support him in the attempt with their lives and fortunes. Gonzalo, though inferior in talents to his other brothers, was equally ambitious, and of courage no less daring. The behaviour of an ungrateful court towards his brothers and himself dwelt continually on his mind. Ferdinand a state prisoner in Europe, the children of the governor in custody of the viceroy, and sent aboard his fleet, himself reduced to the condition of a private citizen in a country, for the discovery and conquest of which Spain was indebted to his family;—these thoughts prompted him to seek for vengeance, and to assert the rights of his family, of which he now considered himself as the guardian and the heir. But as no Spaniard can easily surmount that veneration for his sovereign which seems to be interwoven in his frame, the idea of marching in arms against the royal standard filled him with horror. He hesitated long, and was still unresolved, when the violence of the viceroy, the universal call of his countrymen, and the certainty of becoming soon a victim himself to the severity of the new laws, moved him to quit his residence at Chuquisaca de la Plata, and repair to Cuzco. All the inhabitants went out to meet him, and received him with transports of joy as the deliverer of the colony. In the fervour of their zeal, they elected him procurator-general of the Spanish nation in Peru, to solicit the repeal of the late regulations. They empowered him to lay their remonstrances before the royal audience in Lima, and upon pretext of danger from the Indians, authorized him to march thither in arms. Under sanction of this nomination, Pizarro took possession of the royal treasure, appointed officers, levied soldiers, seized a large train of artillery which Vaca de Castro had deposited in Gumanga, and set out for Lima, as if he had been advancing against a public enemy. Disaffection having now assumed a regular form, and being united under a chief of such distinguished name, many persons of note resorted to his standard; and a considerable part of the

The malcontents choose Gonzalo Pizarro to be their leader.

s Zarate, lib. iv. c. 23, 24, 25. Gomara, c. 153—155. Vega, p. 11. lib. iv. c. 4, 5. Fernandez, lib. i. c. 6—10.

troops, raised by the viceroy to oppose his progress, deserted to him in a body.[t]

Dissensions of the viceroy and court of audience.

Before Pizarro reached Lima, a revolution had happened there, which encouraged him to proceed with almost certainty of success. The violence of the viceroy's administration was not more formidable to the Spaniards of Peru, than his overbearing haughtiness was odious to his associates, the judges of the royal audience. During their voyage from Spain some symptoms of coldness between the viceroy and them began to appear.[u] But as soon as they entered upon the exercise of their respective offices, both parties were so much exasperated by frequent contests, arising from interference of jurisdiction and contrariety of opinion, that their mutual disgust soon grew into open enmity. The judges thwarted the viceroy in every measure, set at liberty prisoners whom he had confined, justified the malcontents, and applauded their remonstrances. At a time when both departments of government should have united against the approaching enemy, they were contending with each other for superiority. The judges at length prevailed. The viceroy, universally odious, and abandoned even by his own guards, was seized in his palace, and carried to a desert island on the coast, to be kept there until he could be sent home to Spain.

The viceroy imprisoned. Sept. 18.

Views of Pizarro.

The judges, in consequence of this, having assumed the supreme direction of affairs into their own hands, issued a proclamation suspending the execution of the obnoxious laws, and sent a message to Pizarro, requiring him, as they had already granted whatever he could request, to dismiss his troops, and to repair to Lima with fifteen or twenty attendants. They could hardly expect that a man so daring and ambitious would tamely comply with this requisition. It was made probably with no such intention, but only to throw a decent veil over their own conduct; for Cepeda, the president of the court of audience, a pragmatical and aspiring lawyer, seems to have held a secret correspondence with Pizarro, and had already formed the plan which he afterwards executed, of devoting himself to his service. The imprisonment of the viceroy, the usurpation of the judges, together with the universal confusion and anarchy consequent upon events so singular and unexpected, opened new and vast prospects to Pizarro. He now beheld the supreme power within his reach. Nor did he want courage to push on towards the object which fortune presented to his view. Carvajal, the prompter of his resolutions and guide of all his actions, had long fixed his eye upon it as the only end at which Pizarro ought to aim. Instead of the inferior function of procurator for the Spanish settlements in Peru, he openly demanded to be governor and captain-general of the whole province, and required the court of audience to grant him a commission to that effect. At the head of twelve hundred men, within a mile of Lima, where there was neither leader nor army to oppose him, such a request carried with it the authority of a command. But the judges, either from unwillingness to relinquish power, or from a desire of preserving some attention to appearances, hesitated, or seemed to hesitate, about complying with what he demanded. Carvajal, impatient of delay, and impetuous in all his operations, marched into the city by night, seized several officers of distinction obnoxious to Pizarro, and hanged them without the formality of a trial. Next morning the court of audience issued a commission in the emperor's name, appointing Pizarro governor of Peru, with full powers, civil as well as military, and he entered the town that day with extraordinary pomp, to take possession of his new dignity.[x]

He assumes the government.

But amidst the disorder and turbulence which accompanied this total dissolution of the frame of government, the minds of men, set loose from the ordinary restraints of law and authority, acted with such capricious irregularity, that events no less extraordinary than unexpected followed in a rapid succession. Pizarro had scarcely begun to exercise the new powers with which he was invested, when he beheld formidable enemies rise up to oppose him. The viceroy having been put on board a vessel by the judges of the audience, in order that he might be carried to Spain under custody of Juan Alvarez, one of their own number; as soon as they were out at sea, Alvarez, either touched with remorse, or moved by fear, kneeled down to his prisoner, declaring him from that moment to be free, and that he himself, and every person in the ship, would obey him as the legal representative of their sovereign. Nugnez Vela ordered the pilot of the vessel to shape his course towards Tumbez, and as soon as he landed there, erected the royal standard, and resumed his functions of viceroy. Several persons of note, to whom the contagion of the seditious spirit which reigned at Cuzco and Lima had not reached, instantly avowed their resolution to support his authority.[y] The violence of Pizarro's government, who observed every individual with the jealousy natural to usurpers, and who punished every appearance of disaffection with unforgiving severity, soon augmented the number of the viceroy's adherents, as it forced some leading men in the colony to fly to him for refuge While he was gathering such strength at Tumbez, that his forces began to assume the appearance of what was considered as an army in America, Diego Centeno, a bold and active officer, exasperated by the cruelty and oppression of Pizarro's lieutenant-governor in the province of Charcas, formed a conspiracy

against his life, cut him off, and declared for the viceroy.[z]

1545. Pizarro marches against him.

Pizarro, though alarmed with those appearances of hostility in the opposite extremes of the empire, was not disconcerted. He prepared to assert the authority to which he had attained, with the spirit and conduct of an officer accustomed to command, and marched directly against the viceroy as the enemy who was nearest as well as most formidable. As he was master of the public revenues in Peru, and most of the military men were attached to his family, his troops were so numerous, that the viceroy, unable to face them, retreated towards Quito. Pizarro followed him; and in that long march, through a wild mountainous country, suffered hardships and encountered difficulties, which no troops but those accustomed to serve in America could have endured or surmounted.[a] The viceroy had scarcely reached Quito, when the vanguard of Pizarro's forces appeared, led by Carvajal, who, though near fourscore, was as hardy and active as any young soldier under his command. Nugnez Vela instantly abandoned a town incapable of defence, and with a rapidity more resembling a flight than a retreat, marched into the province of Popayan. Pizarro continued to pursue; but finding it impossible to overtake him, returned to Quito. From thence he despatched Carvajal to oppose Centeno, who was growing formidable in the southern provinces of the empire, and he himself remained there to make head against the viceroy.[b]

The viceroy defeated,

By his own activity, and the assistance of Benalcazar, Nugnez Vela soon assembled four hundred men in Popayan. As he retained, amidst all his disasters, the same elevation of mind, and the same high sense of his own dignity, he rejected with disdain the advice of some of his followers, who urged him to make overtures of accommodation to Pizarro, declaring that it was only by the sword that a contest with rebels could be decided. With this intention he

1546.

marched back to Quito. Pizarro, relying on the superior number, and still more on the discipline and valour, of his troops, advanced resolutely to meet him. The battle

Jan. 18.

was fierce and bloody, both parties fighting like men who knew that the possession of a great empire, the fate of their leaders, and their own future fortune, depended upon the issue of that day. But Pizarro's veterans pushed forward with such regular and well-directed force, that they soon began to make an impression on their enemies. The viceroy, by extraordinary exertions, in which the abilities of a commander and the courage of a soldier were equally displayed, held victory for some time in suspense. At length he fell, pierced with many wounds; and the rout of his followers became general. They were hotly pursued. His head was cut off, and placed on the public gibbet in Quito, which Pizarro entered in triumph. The troops assembled by Centeno were dispersed soon after by Carvajal, and he himself compelled to fly to the mountains, where he remained for several months concealed in a cave. Every person in Peru, from the frontiers of Popayan to those of Chili, submitted to Pizarro; and by his fleet, under Pedro de Hinojosa, he had not only the unrivalled command of the South sea, but had taken possession of Panama, and placed a garrison in Nombre de Dios, on the opposite side of the isthmus, which rendered him master of the only avenue of communication between Spain and Peru that was used at that period.[c]

and slain.

Pizarro advised to resume the sovereignty of Peru;

After this decisive victory, Pizarro and his followers remained for some time at Quito, and during the first transports of their exultation, they ran into every excess of licentious indulgence, with the riotous spirit usual among low adventurers upon extraordinary success. But amidst this dissipation, their chief and his confidants were obliged to turn their thoughts sometimes to what was serious, and deliberated with much solicitude concerning the part that he ought now to take. Carvajal, no less bold and decisive in council than in the field, had from the beginning warned Pizarro, that in the career on which he was entering it was vain to think of holding a middle course; that he must either boldly aim at all, or attempt nothing. From the time that Pizarro obtained possession of the government of Peru, he inculcated the same maxim with greater earnestness. Upon receiving an account of the victory at Quito, he remonstrated with him in a tone still more peremptory. "You have usurped," said he, in a letter written to Pizarro on that occasion, "the supreme power in this country, in contempt of the emperor's commission to the viceroy. You have marched in hostile array against the royal standard; you have attacked the representative of your sovereign in the field, have defeated him, and cut off his head. Think not that ever a monarch will forgive such insults on his dignity, or that any reconciliation with him can be cordial or sincere. Depend no longer on the precarious favour of another. Assume yourself the sovereignty over a country, to the dominion of which your family has a title founded on the rights both of discovery and conquest. It is in your power to attach every Spaniard in Peru of any consequence inviolably to your interest, by liberal grants of lands and of Indians, or by instituting ranks of nobility, and creating titles of honour similar to those which are courted with so much eagerness in Europe. By establishing orders of knighthood, with privileges and distinctions resembling those in Spain, you may bestow a gratification upon the officers in your service, suited to the ideas

of military men. Nor is it to your countrymen only that you ought to attend; endeavour to gain the natives. By marrying the Coya, or daughter of the Sun next in succession to the crown, you will induce the Indians, out of veneration for the blood of their ancient princes, to unite with the Spaniards in support of your authority. Thus, at the head of the ancient inhabitants of Peru, as well as of the new settlers there, you may set at defiance the power of Spain, and repel with ease any feeble force which it can send at such a distance." Cepeda, the lawyer, who was now Pizarro's confidential counsellor, warmly seconded Carvajal's exhortations, and employed whatever learning he possessed in demonstrating, that all the founders of great monarchies had been raised to pre-eminence, not by the antiquity of their lineage, or the validity of their rights, but by their own aspiring valour and personal merit.[d]

but chooses to negociate with the court of Spain.

Pizarro listened attentively to both, and could not conceal the satisfaction with which he contemplated the object that they presented to his view. But happily for the tranquillity of the world, few men possess that superior strength of mind, and extent of abilities, which are capable of forming and executing such daring schemes, as cannot be accomplished without overturning the established order of society, and violating those maxims of duty which men are accustomed to hold sacred. The mediocrity of Pizarro's talents circumscribed his ambition within more narrow limits. Instead of aspiring at independent power, he confined his views to the obtaining from the court of Spain a confirmation of the authority which he now possessed; and for that purpose he sent an officer of distinction thither, to give such a representation of his conduct, and of the state of the country, as might induce the emperor and his ministers, either from inclination or from necessity, to continue him in his present station.

Consultations of the Spanish ministers.

While Pizarro was deliberating with respect to the part which he should take, consultations were held in Spain, with no less solicitude, concerning the measures which ought to be pursued in order to re-establish the emperor's authority in Peru. Though unacquainted with the last excesses of outrage to which the malcontents had proceeded in that country, the court had received an account of the insurrection against the viceroy, of his imprisonment, and the usurpation of the government by Pizarro. A revolution so alarming called for an immediate interposition of the emperor's abilities and authority. But as he was fully occupied at that time in Germany, in conducting the war against the famous league of Smalkalde, one of the most interesting and arduous enterprises in his reign, the care of providing a remedy for the disorders in Peru devolved upon his son Philip, and the counsellors whom Charles had appointed to assist him in the government of Spain during his absence. At first

[d] Vega, p. 11. lib. iv. c. 40. Fernandez, lib. i. c. 34. lib. ii. c. 1, 49.

view, the actions of Pizarro and his adherents appeared so repugnant to the duty of subjects towards their sovereign, that the greater part of the ministers insisted on declaring them instantly to be guilty of rebellion, and on proceeding to punish them with exemplary rigour. But when the fervour of their zeal and indignation began to abate, innumerable obstacles to the execution of this measure presented themselves. The veteran bands of infantry, the strength and glory of the Spanish armies, were then employed in Germany. Spain, exhausted of men and money by a long series of wars, in which she had been involved by the restless ambition of two successive monarchs, could not easily equip an armament of sufficient force to reduce Pizarro. To transport any respectable body of troops to a country so remote as Peru, appeared almost impossible. While Pizarro continued master of the South sea, the direct route by Nombre de Dios and Panama was impracticable. An attempt to march to Quito by land through the new kingdom of Granada, and the province of Popayan, across regions of prodigious extent, desolate, unhealthy, or inhabited by fierce and hostile tribes, would be attended with insurmountable danger and hardships. The passage to the South sea by the straits of Magellan was so tedious, so uncertain, and so little known in that age, that no confidence could be placed in any effort carried on in a course of navigation so remote and precarious. Nothing then remained but to relinquish the system which the ardour of their loyalty had first suggested, and to attempt by lenient measures what could not be effected by force. It was manifest from Pizarro's solicitude to represent his conduct in a favourable light to the emperor, that notwithstanding the excesses of which he had been guilty, he still retained sentiments of veneration for his sovereign. By a proper application to these, together with some such concessions as should discover a spirit of moderation and forbearance in government, there was still room to hope that he might be yet reclaimed, or the ideas of loyalty natural to Spaniards might so far revive among his followers, that they would no longer lend their aid to uphold his usurped authority.

Gasca appointed to repair to Peru as president.

The success, however, of this negociation, no less delicate than it was important, depended entirely on the abilities and address of the person to whom it should be committed. After weighing with much attention the comparative merit of various persons, the Spanish ministers fixed with unanimity of choice upon Pedro de la Gasca, a priest in no higher station than that of counsellor to the inquisition. Though in no public office, he had been occasionally employed by government in affairs of trust and consequence, and had conducted them with no less skill than success; displaying a gentle and insinuating temper, accompanied with much firmness; probity, superior to any feeling of private interest;

Herrera, dec. 8. lib. ii. c. 10.

and a cautious circumspection in concerting measures, followed by such vigour in executing them, as is rarely found in alliance with the other. These qualities marked him out for the function to which he was destined. The emperor, to whom Gasca was not unknown, warmly approved of the choice, and communicated it to him in a letter containing expressions of good-will and confidence, no less honourable to the prince who wrote than to the subject who received it. Gasca, notwithstanding his advanced age and feeble constitution, and though, from the apprehensions natural to a man, who, during the course of his life, had never been out of his own country, he dreaded the effects of a long voyage, and of an unhealthy climate,[e] did not hesitate a moment about complying with the will of his sovereign. But as a proof that it was from this principle alone he acted, he refused a bishopric which was offered to him, in order that he might appear in Peru with a more dignified character; he would accept of no higher title than that of president of the court of audience in Lima; and declared that he would receive no salary on account of his discharging the duties of that office. All he required was, that the expense of supporting his family should be defrayed by the public, and as he was to go like a minister of peace with his gown and breviary, and without any retinue but a few domestics, this would not load the revenue with any enormous burthen.[f]

His moderation.

The powers committed to him.

But while he discovered such disinterested moderation with respect to whatever related personally to himself, he demanded his official powers in a very different tone. He insisted, as he was to be employed in a country so remote from the seat of government, where he could not have recourse to his sovereign for new instructions on every emergence, and as the whole success of his negociations must depend upon the confidence which the people with whom he had to treat could place in the extent of his powers, that he ought to be invested with unlimited authority; that his jurisdiction must reach to all persons and to all causes; that he must be empowered to pardon, to punish, or to reward, as circumstances and the behaviour of different men might require; that in case of resistance from the malcontents, he might be authorized to reduce them to obedience by force of arms, to levy troops for that purpose, and to call for assistance from the governors of all the Spanish settlements in America. These powers, though manifestly conducive to the great objects of his mission, appeared to the Spanish ministers to be inalienable prerogatives of royalty, which ought not to be delegated to a subject, and they refused to grant them. But the emperor's views were more enlarged. As, from the nature of his employment, Gasca must be intrusted with discretionary power in several points, and all his efforts might prove ineffectual if he was circumscribed in any one particular, Charles scrupled not to invest him with authority to the full extent that he demanded. Highly satisfied with this fresh proof of his master's confidence, Gasca hastened his departure, and, without either money or troops, set out to quell a formidable rebellion.[g]

July 27. His arrival at Panama.

On his arrival at Nombre de Dios he found Herman Mexia, an officer of note, posted there, by order of Pizarro, with a considerable body of men, to oppose the landing of any hostile forces. But Gasca appeared in such pacific guise, with a train so little formidable, and with a title of no such dignity as to excite terror, that he was received with much respect. From Nombre de Dios he advanced to Panama, and met with a similar reception from Hinojosa, whom Pizarro had intrusted with the government of that town, and the command of his fleet stationed there. In both places he held the same language, declaring that he was sent by their sovereign as a messenger of peace, not as a minister of vengeance; that he came to redress all their grievances, to revoke the laws which had excited alarm, to pardon past offences, and to re-establish order and justice in the government of Peru. His mild deportment, the simplicity of his manners, the sanctity of his profession, and a winning appearance of candour, gained credit to his declarations. The veneration due to a person clothed with legal authority, and acting in virtue of a royal commission, began to revive among men accustomed for some time to nothing more respectable than an usurped jurisdiction. Hinojosa, Mexia, and several other officers of distinction, to each of whom Gasca applied separately, were gained over to his interest, and waited only for some decent occasion of declaring openly in his favour.[h]

Violent proceedings of Pizarro.

This the violence of Pizarro soon afforded them. As soon as he heard of Gasca's arrival at Panama, though he received, at the same time, an account of the nature of his commission, and was informed of his offers, not only to render every Spaniard in Peru easy concerning what was past, by an act of general oblivion, but secure with respect to the future by repealing the obnoxious laws; instead of accepting with gratitude his sovereign's gracious concessions, he was so much exasperated on finding that he was not to be continued in his station as governor of the country, that he instantly resolved to oppose the president's entry into Peru, and to prevent his exercising any jurisdiction there. To this desperate resolution he added another highly preposterous. He sent a new deputation to Spain to justify this conduct, and to insist, in name of all the communities in Peru, for a confirmation of the government to himself during life, as the only means of preserving tranquillity there. The persons intrusted

with this strange commission intimated the intention of Pizarro to the president, and required him, in his name, to depart from Panama and return to Spain. They carried likewise secret instructions to Hinojosa, directing him to offer Gasca a present of fifty thousand pesos, if he would comply voluntarily with what was demanded of him; and if he should continue obstinate, to cut him off, either by assassination or poison.[i]

Gasca gains his fleet.

Many circumstances concurred in pushing on Pizarro to those wild measures. Having been once accustomed to supreme command, he could not bear the thoughts of descending to a private station. Conscious of his own demerit, he suspected that the emperor studied only to deceive him, and would never pardon the outrages which he had committed. His chief confidants, no less guilty, entertained the same apprehensions. The approach of Gasca without any military force excited no terror. There were now above six thousand Spaniards settled in Peru;[k] and at the head of these he doubted not to maintain his own independence, if the court of Spain should refuse to grant what he required. But he knew not that a spirit of defection had already begun to spread among those whom he trusted most. Hinojosa, amazed at Pizarro's precipitate resolution of setting himself in opposition to the emperor's commission, and disdaining to be his instrument in perpetrating the odious crimes pointed out in his secret instructions, publicly recognised the title of the president to the supreme authority in Peru. The officers under his command did the same. Such was the contagious influence of the example, that it reached even the deputies who had been sent from Peru; and at the time when Pizarro expected to hear either of Gasca's return to Spain, or of his death, he received an account of his being master of the fleet, of Panama, and of the troops stationed there.

1547. Pizarro resolves on war.

Irritated almost to madness by events so unexpected, he openly prepared for war; and in order to give some colour of justice to his arms, he appointed the court of audience in Lima to proceed to the trial of Gasca, for the crimes of having seized his ships, seduced his officers, and prevented his deputies from proceeding in their voyage to Spain. Cepeda, though acting as a judge in virtue of the royal commission, did not scruple to prostitute the dignity of his function by finding Gasca guilty of treason, and condemning him to death on that account.[l] Wild, and even ridiculous, as this proceeding was, it imposed on the low illiterate adventurers with whom Peru was filled, by the semblance of legal sanction warranting Pizarro to carry on hostilities against a convicted traitor. Soldiers accordingly resorted from every quarter to his standard, and he was soon at the head of a thousand men, the best equipped that had ever taken the field in Peru.

Preparations of Gasca.

Gasca, on his part, perceiving that force must be employed in order to accomplish the purpose of his mission, was no less assiduous in collecting troops from Nicaragua, Carthagena, and other settlements on the continent; and with such success, that he was soon in a condition to detach a squadron of his fleet, with a considerable body of soldiers, to the coast of Peru. Their appearance excited a dreadful alarm; and though they did not attempt for some time to make any descent, they did more effectual service, by setting ashore in different places persons who dispersed copies of the act of general indemnity, and the revocation of the late edicts; and who made known everywhere the pacific intentions, as well as mild temper, of the president. The effect of spreading this information was wonderful. All who were dissatisfied with Pizarro's violent administration, all who retained any sentiments of fidelity to their sovereign, began to meditate revolt. Some openly deserted a cause which they now deemed to be unjust. Centeno, leaving the cave in which he lay concealed, assembled about fifty of his former adherents, and with this feeble half-armed band advanced boldly to Cuzco. By a sudden attack in the night-time, in which he displayed no less military skill than valour, he rendered himself master of that capital, though defended by a garrison of five hundred men. Most of these having ranged themselves under his banners, he had soon the command of a respectable body of troops.[m]

April.

Insurrection of Centeno,

against whom Pizarro marches,

Pizarro, though astonished at beholding one enemy approaching by sea, and another by land, at a time when he trusted to the union of all Peru in his favour, was of a spirit more undaunted, and more accustomed to the vicissitudes of fortune, than to be disconcerted or appalled. As the danger from Centeno's operations was the most urgent, he instantly set out to oppose him. Having provided horses for all his soldiers, he marched with amazing rapidity. But every morning he found his force diminished, by numbers who had left him during the night; and though he became suspicious to excess, and punished without mercy all whom he suspected, the rage of desertion was too violent to be checked. Before he got within sight of the enemy at Huarina, near the lake Titiaca, he could not muster more than four hundred soldiers. But these he justly considered as men of tried attachment, on whom he might depend. They were indeed the boldest and most desperate of his followers, conscious, like himself, of crimes for which they could hardly expect forgiveness, and without any hope but in the success of their arms.

October 20. With these he did not hesitate to attack Centeno's troops, though double to his own in number. The royalists did not decline the combat. It was the most obstinate and bloody that had hitherto been fought in Peru. At length the intrepid valour of Pizarro, and the superiority of Carvajal's military talents, triumphed over numbers, and obtained a complete victory. The booty was immense,[n] and the treatment of the vanquished cruel. By this signal success the reputation of Pizarro was re-established, and being now deemed invincible in the field, his army increased daily in number.[o]

and defeats him.

But events happened in other parts of Peru, which more than counterbalanced the splendid victory at Huarina. Pizarro had scarcely left Lima, when the citizens, weary of his oppressive dominion, erected the royal standard, and Aldana, with a detachment of soldiers from the fleet, took possession of the town. About the same time,[p] Gasca landed at Tumbez with five hundred men. Encouraged by his presence, every settlement in the low country declared for the king. The situation of the two parties was now perfectly reversed: Cuzco and the adjacent provinces were possessed by Pizarro; all the rest of the empire, from Quito southward, acknowledged the jurisdiction of the president. As his numbers augmented fast, Gasca advanced into the interior part of the country. His behaviour still continued to be gentle and unassuming; he expressed, on every occasion, his ardent wish of terminating the contest without bloodshed. More solicitous to reclaim than to punish, he upbraided no man for past offences, but received them as a father receives penitent children returning to a sense of their duty. Though desirous of peace, he did not slacken his preparations for war. He appointed the general rendezvous of his troops in the fertile valley of Xauxa, on the road to Cuzco.[q] There he remained for some months, not only that he might have time to make another attempt towards an accommodation with Pizarro, but that he might train his new soldiers to the use of arms, and accustom them to the discipline of a camp, before he led them against a body of victorious veterans. Pizarro, intoxicated with the success which had hitherto accompanied his arms, and elated with having again near a thousand men under his command, refused to listen to any terms, although Cepeda, together with several of his officers, and even Carvajal himself,[r] gave it as their advice to close with the president's offer of a general indemnity, and the revocation of the obnoxious laws.[s]

Gasca lands at Peru.

Advances towards Cuzco.

Dec. 29. Gasca having tried in vain every expedient to avoid imbruing his hands in the blood of his countrymen, began to move towards Cuzco, at the head of sixteen hundred men.

Pizarro, confident of victory, suffered the royalists to pass all the rivers which lie between Guamanga and Cuzco without opposition, and to advance within four leagues of that capital, flattering himself that a defeat in such a situation as rendered escape impracticable would at once terminate the war. He then marched out to meet the enemy, and Carvajal chose his ground, and made the disposition of the troops with the discerning eye, and profound knowledge in the art of war, conspicuous in all his operations. As the two armies moved forwards slowly to the charge, the appearance of each was singular. In that of Pizarro, composed of men enriched with the spoils of the most opulent country in America, every officer, and almost all the private men, were clothed in stuffs of silk, or brocade, embroidered with gold and silver; and their horses, their arms, their standards, were adorned with all the pride of military pomp.[t] That of Gasca, though not so splendid, exhibited what was no less striking. He himself, accompanied by the archbishop of Lima, the bishops of Quito and Cuzco, and a great number of ecclesiastics, marching along the lines, blessing the men, and encouraging them to a resolute discharge of their duty.

Both parties prepare for battle. 1548.

April 9.

When both armies were just ready to engage, Cepeda set spurs to his horse, galloped off, and surrendered himself to the president. Garcilasso de la Vega, and other officers of note, followed his example. The revolt of persons in such high rank struck all with amazement. The mutual confidence on which the union and strength of armies depend, ceased at once. Distrust and consternation spread from rank to rank. Some silently slipped away, others threw down their arms, the greatest number went over to the royalists. Pizarro, Carvajal, and some leaders, employed authority, threats, and entreaties, to stop them, but in vain. In less than half an hour, a body of men, which might have decided the fate of the Peruvian empire, was totally dispersed. Pizarro, seeing all irretrievably lost, cried out in amazement to a few officers who still faithfully adhered to him, "What remains for us to do?"—"Let us rush," replied one of them, "upon the enemy's firmest battalion, and die like Romans." Dejected with such a reverse of fortune, he had not spirit to follow this soldierly counsel, and with a tameness disgraceful to his former fame, he surrendered to one of Gasca's officers. Carvajal, endeavouring to escape, was overtaken and seized.

Pizarro deserted by his troops,

taken,

Gasca, happy in this bloodless victory, did not stain it with cruelty. Pizarro, Carvajal, and a small number of the most distinguished or notorious offenders, were punished capitally. Pizarro was beheaded on the day after he surrendered. He submitted to his fate with a

and put to death.

composed dignity, and seemed desirous to atone by repentance for the crimes which he had committed. The end of Carvajal was suitable to his life. On his trial he offered no defence. When the sentence adjudging him to be hanged was pronounced, he carelessly replied, "One can die but once." During the interval between the sentence and execution, he discovered no sign either of remorse for the past, or of solicitude about the future; scoffing at all who visited him, in his usual sarcastic vein of mirth, with the same quickness of repartee and gross pleasantry as at any other period of his life. Cepeda, more criminal than either, ought to have shared the same fate; but the merit of having deserted his associates at such a critical moment, and with such decisive effect, saved him from immediate punishment. He was sent, however, as a prisoner to Spain, and died in confinement.[u]

In the minute detail which the contemporary historians have given of the civil dissensions that raged in Peru, with little interruption, during ten years, many circumstances occur so striking, and which indicate such an uncommon state of manners, as to merit particular attention.

No mercenary soldiers in the civil wars of Peru.

Though the Spaniards who first invaded Peru were of the lowest order in society, and the greater part of those who afterwards joined them were persons of desperate fortune, yet in all the bodies of troops brought into the field by the different leaders who contended for superiority, not one man acted as a hired soldier, that follows his standard for pay. Every adventurer in Peru considered himself as a conqueror, entitled, by his services, to an establishment in that country which had been acquired by his valour. In the contests between the rival chiefs, each chose his side as he was directed by his own judgment or affections. He joined his commander as a companion of his fortune, and disdained to degrade himself by receiving the wages of a mercenary. It was to their sword, not to pre-eminence in office, or nobility of birth, that most of the leaders whom they followed were indebted for their elevation; and each of their adherents hoped, by the same means, to open a way for himself to the possession of power and wealth.[x]

Armies immensely expensive;

But though the troops in Peru served without any regular pay, they were raised at immense expense. Among men accustomed to divide the spoils of an opulent country, the desire of obtaining wealth acquired incredible force. The ardour of pursuit augmented in proportion to the hope of success. Where all were intent on the same object, and under the dominion of the same passion, there was but one mode of gaining men, or of securing their attachment. Officers of name and influence, besides the promise of future establishments, received in hand large gratuities from the chief with whom they engaged. Gonzalo Pizarro, in order to raise a thousand men, advanced five hundred thousand pesos.[y] Gasca expended, in levying the troops which he led against Pizarro, nine hundred thousand pesos.[z] The distribution of property, bestowed as the reward of services, was still more exorbitant. Cepeda, as the recompence of his perfidy and address, in persuading the court of royal audience to give the sanction of its authority to the usurped jurisdiction of Pizarro, received a grant of lands which yielded an annual income of a hundred and fifty thousand pesos.[a] Hinojosa, who, by his early defection from Pizarro, and surrender of the fleet to Gasca, decided the fate of Peru, obtained a district of country affording two hundred thousand pesos of yearly value.[b] While such rewards were dealt out to the principal officers, with more than royal munificence, proportional shares were conferred upon those of inferior rank.

and immense rewards to individuals.

Their profusion and luxury.

Such a rapid change of fortune produced its natural effects. It gave birth to new wants, and new desires. Veterans, long accustomed to hardship and toil, acquired of a sudden a taste for profuse and inconsiderate dissipation, and indulged in all the excesses of military licentiousness. The riot of low debauchery occupied some; a relish for expensive luxuries spread among others.[c] The meanest soldier in Peru would have thought himself degraded by marching on foot; and at a time when the prices of horses in that country were exorbitant, each insisted on being furnished with one before he would take the field. But though less patient under the fatigue and hardships of service, they were ready to face danger and death with as much intrepidity as ever; and animated by the hope of new rewards, they never failed, on the day of battle, to display all their ancient valour.

Ferocity with which their contests were carried on.

Together with their courage, they retained all the ferocity by which they were originally distinguished. Civil discord never raged with a more fell spirit than among the Spaniards in Peru. To all the passions which usually envenom contests among countrymen avarice was added, and rendered their enmity more rancorous. Eagerness to seize the valuable forfeitures expected upon the death of every opponent, shut the door against mercy. To be wealthy, was of itself sufficient to expose a man to accusation, or to subject him to punishment. On the slightest suspicions, Pizarro condemned many of the most opulent inhabitants in Peru to death. Carvajal, without searching for any pretext to justify his cruelty, cut off many more. The number of those who suffered by the hands of the executioner, was not much inferior to what fell in the field;[d] and the greater part was condemned without the formality of any legal trial.

and want of faith.

The violence with which the contending parties treated their opponents was not accompanied with its usual attendants, attachment and fidelity to those with whom they acted. The ties of honour, which ought to be held sacred among soldiers, and the principle of integrity, interwoven as thoroughly in the Spanish character as in that of any nation, seem to have been equally forgotten. Even regard for decency, and the sense of shame, were totally lost. During their dissensions, there was hardly a Spaniard in Peru who did not abandon the party which he had originally espoused, betray the associates with whom he had united, and violate the engagements under which he had come. The viceroy Nugnez Vela was ruined by the treachery of Cepeda and the other judges of the royal audience, who were bound by the duties of their function to have supported his authority. The chief advisers and companions of Gonzalo Pizarro's revolt were the first to forsake him, and submit to his enemies. His fleet was given up to Gasca, by the man whom he had singled out among his officers to intrust with that important command. On the day that was to decide his fate, an army of veterans, in sight of the enemy, threw down their arms without striking a blow, and deserted a leader who had often conducted them to victory. Instances of such general and avowed contempt of the principles and obligations which attach man to man, and bind them together in social union, rarely occur in history. It is only where men are far removed from the seat of government, where the restraints of law and order are little felt, where the prospect of gain is unbounded, and where immense wealth may cover the crimes by which it is acquired, that we can find any parallel to the levity, the rapaciousness, the perfidy and corruption prevalent among the Spaniards in Peru.

Gasca devises employment for his soldiers.

On the death of Pizarro, the malcontents in every corner of Peru laid down their arms, and tranquillity seemed to be perfectly re-established. But two very interesting objects still remained to occupy the president's attention. The one was to find immediately such employment for a multitude of turbulent and daring adventurers with which the country was filled, as might prevent them from exciting new commotions. The other, to bestow proper gratifications upon those to whose loyalty and valour he had been indebted for his success. The former of these was in some measure accomplished, by appointing Pedro de Valdivia to prosecute the conquest of Chili; and by empowering Diego Centeno to undertake the discovery of the vast regions bordering on the river De la Plata. The reputation of those leaders, together with the hopes of acquiring wealth, and of rising to consequence in some unexplored country, alluring many of the most indigent and desperate soldiers to follow their standards, drained off no inconsiderable portion of that mutinous spirit which Gasca dreaded.

His division of the country among his followers.

The latter was an affair of greater difficulty, and to be adjusted with a more attentive and delicate hand. The *repartimientos*, or allotments of lands and Indians, which fell to be distributed in consequence of the death or forfeiture of the former possessors, exceeded two millions of pesos of yearly rent.[e] Gasca, when now absolute master of this immense property, retained the same disinterested sentiments which he had originally professed, and refused to reserve the smallest portion of it for himself. But the number of claimants was great; and whilst the vanity or avarice of every individual fixed the value of his own services, and estimated the recompence which he thought due to him, the pretensions of each were so extravagant, that it was impossible to satisfy all. Gasca listened to them one by one, with the most patient attention; and that he might have leisure to weigh the comparative merit of their several claims with accuracy, he retired with the archbishop of Lima and a single secretary, to a village twelve leagues from Cuzco. There he spent several days in allotting to each a district of lands and number of Indians, in proportion to his idea of their past services and future importance. But that he might get beyond the reach of the fierce storm of clamour and rage which he foresaw would burst out on the publication of his decree, notwithstanding the impartial equity with which he had framed it, he set out for Lima, leaving the instrument of partition sealed up, with orders not to open it for some days after his departure.

Aug. 24. The discontent it occasions.

The indignation excited by publishing the decree of partition was not less than Gasca had expected. Vanity, avarice, emulation, envy, shame, rage, and all the other passions which most vehemently agitate the minds of men when both their honour and their interest are deeply affected, conspired in adding to its violence. It broke out with all the fury of military insolence. Calumny, threats, and curses, were poured out openly upon the president. He was accused of ingratitude, of partiality, and of injustice. Among soldiers prompt to action, such seditious discourse would have been soon followed by deeds no less violent, and they already began to turn their eyes towards some discontented leaders, expecting them to stand forth in redress of their wrongs. By some vigorous interpositions of government, a timely check was given to this mutinous spirit, and the danger of another civil war averted for the present.[f]

1549. Re-establishes order and government;

Gasca, however, perceiving that the flame was suppressed rather than extinguished, laboured with the utmost assiduity to soothe the malcontents, by bestowing large gratuities on some, by promising *repartimien-*

tos, when they fell vacant, to others, and by caressing and flattering all. But that the public security might rest on a foundation more stable than their good affection, he endeavoured to strengthen the hands of his successors in office, by re-establishing the regular administration of justice in every part of the empire. He introduced order and simplicity into the mode of collecting the royal revenue. He issued regulations concerning the treatment of the Indians, well calculated to protect them from oppression, and to provide for their instruction in the principles of religion, without depriving the Spaniards of the benefit accruing from their labour.

1550. Having now accomplished every object of his mission, Gasca, longing to return again to a private station, committed the government of Peru to the court of audience, and set out for Spain. As, during the anarchy and turbulence of the four last years, there had been no remittance made of the royal revenue, he carried with him thirteen hundred thousand pesos of public money, which the economy and order of his administration enabled him to save, after paying all the expenses of the war.

Feb. 1. and sets out for Spain.

His reception there. He was received in his native country with universal admiration of his abilities and of his virtue. Both were, indeed, highly conspicuous. Without army, or fleet, or public funds; with a train so simple, that only three thousand ducats were expended in equipping him,[g] he set out to oppose a formidable rebellion. By his address and talents he supplied all those defects, and seemed to create instruments for executing his designs. He acquired such a naval force, as gave him the command of the sea. He raised a body of men able to cope with the veteran bands which gave law to Peru. He vanquished their leader, on whose arms victory had hitherto attended; and in place of anarchy and usurpation, he established the government of laws, and the authority of the rightful sovereign. But the praise bestowed on his abilities was exceeded by that which his virtue merited. After residing in a country where wealth presented allurements which had seduced every person who had hitherto possessed power there, he returned from that trying station with integrity not only untainted but unsuspected. After distributing among his countrymen possessions of greater extent and value than had ever been in the disposal of a subject in any age or nation, he himself remained in his original state of poverty; and at the very time when he brought such a large recruit to the royal treasury, he was obliged to apply by petition for a small sum to discharge some petty debts which he had contracted during the course of his service.[h] Charles was not insensible to such disinterested merit. Gasca was received by him with the most distinguishing marks of esteem, and being promoted to the bishopric of Palencia, he passed the remainder of his days in the tranquillity of retirement, respected by his country, honoured by his sovereign, and beloved by all.

Notwithstanding all Gasca's wise regulations, the tranquillity of Peru was not of long continuance. In a country where the authority of government had been almost forgotten during the long prevalence of anarchy and misrule, where there were disappointed leaders ripe for revolt, and seditious soldiers ready to follow them, it was not difficult to raise combustion. Several successive insurrections desolated the country for some years. But as those, though fierce, were only transient storms, excited rather by the ambition and turbulence of particular men, than by general or public motives, the detail of them is not the object of this history. These commotions in Peru, like every thing of extreme violence either in the natural or political body, were not of long duration, and by carrying off the corrupted humours which had given rise to the disorders, they contributed in the end to strengthen the society which at first they threatened to destroy. During their fierce contests, several of the first invaders of Peru, and many of those licentious adventurers whom the fame of their success had allured thither, fell by each other's hands. Each of the parties, as they alternately prevailed in the struggle, gradually cleared the country of a number of turbulent spirits, by executing, proscribing, or banishing their opponents. Men less enterprising, less desperate, and more accustomed to move in the path of sober and peaceable industry, settled in Peru; and the royal authority was gradually established as firmly there as in other Spanish colonies.

BOOK VII.

As the conquest of the two great empires of Mexico and Peru forms the most splendid and interesting period in the history of America, a view of their political institutions, and a description of their national manners, will exhibit the human species to the contemplation of intelligent observers in a very singular stage of its progress.[a]

Mexico and Peru more polished than other parts of America. When compared with other parts of the New World, Mexico and Peru may be considered as polished states. Instead of small, independent, hostile tribes, struggling for subsistence amidst woods and marshes, strangers to industry and arts, unacquainted with subordination, and almost without the appearance of regular government, we find countries of great extent subjected to the dominion of one sovereign; the inhabitants collected together in cities; the wisdom and foresight of rulers employed in providing for the maintenance and security of the people; the empire of laws in some measure established;

g Fernandez, lib. ii. c. 18. h MS. penes me.

a See Note CXLIV.

the authority of religion recognised; many of the arts essential to life brought to some degree of maturity, and the dawn of such as are ornamental beginning to appear.

The inferiority to the nations of the ancient continent.

But if the comparison be made with the people of the ancient continent, the inferiority of America in improvement will be conspicuous, and neither the Mexicans nor Peruvians will be entitled to rank with those nations which merit the name of civilized. The people of both the great empires in America, like the rude tribes around them, were totally unacquainted with the useful metals, and the progress which they had made in extending their dominion over the animal creation was inconsiderable. The Mexicans had gone no further than to tame and rear turkeys, ducks, a species of small dogs, and rabbits.[b] By this feeble essay of ingenuity, the means of subsistence were rendered somewhat more plentiful and secure, than when men depend solely on hunting; but they had no idea of attempting to subdue the more robust animals, or of deriving any aid from their ministry in carrying on works of labour. The Peruvians seem to have neglected the inferior animals, and not rendered any of them domestic except the duck; but they were more fortunate in taming the Llama, an animal peculiar to their country, of a form which bears some resemblance to a deer, and some to a camel, and is of a size somewhat larger than a sheep. Under the protection of man, this species multiplied greatly. Its wool furnished the Peruvians with clothing, its flesh with food. It was even employed as a beast of burden, and carried a moderate load with much patience and docility.[c] It was never used for draught; and the breed being confined to the mountainous country, its service, if we may judge by incidents which occur in the early Spanish writers, was not very extensive among the Peruvians in their original state.

In tracing the line by which nations proceed towards civilization, the discovery of the useful metals, and the acquisition of dominion over the animal creation, have been marked as steps of capital importance in their progress. In our continent, long after men had attained both, society continued in that state which is denominated barbarous. Even with all that command over nature which these confer, many ages elapse, before industry becomes so regular as to render subsistence secure, before the arts which supply the wants and furnish the accommodations of life are brought to any considerable degree of perfection, and before any idea is conceived of various institutions requisite in a well-ordered society. The Mexicans and Peruvians, without knowledge of the useful metals, or the aid of domestic animals, laboured under disadvantages which must have greatly retarded their progress, and in their highest state of improvement their power was so limited, and their operations so feeble, that they can hardly be considered as having advanced beyond the infancy of civil life.

View of the institutions and manners of each.

After this general observation concerning the most singular and distinguishing circumstance in the state of both the great empires in America, I shall endeavour to give such a view of the constitution and interior police of each, as may enable us to ascertain their place in the political scale, to allot them their proper station between the rude tribes in the New World, and the polished states of the ancient, and to determine how far they had risen above the former, as well as how much they fell below the latter.

Imperfect information concerning those of Mexico.

Mexico was first subjected to the Spanish crown. But our acquaintance with its laws and manners is not, from that circumstance, more complete. What I have remarked concerning the defective and inaccurate information on which we must rely with respect to the condition and customs of the savage tribes in America, may be applied likewise to our knowledge of the Mexican empire. Cortes, and the rapacious adventurers who accompanied him, had not leisure or capacity to enrich either civil or natural history with new observations. They undertook their expedition in quest of one object, and seemed hardly to have turned their eyes towards any other. Or if, during some short interval of tranquillity, when the occupations of war ceased, and the ardour of plunder was suspended, the institutions and manners of the people whom they had invaded drew their attention, the inquiries of illiterate soldiers were conducted with so little sagacity and precision, that the accounts given by them of the policy and order established in the Mexican monarchy are superficial, confused, and inexplicable. It is rather from incidents which they relate occasionally, than from their own deductions and remarks, that we are enabled to form some idea of the genius and manners of that people. The obscurity in which the ignorance of its conquerors involved the annals of Mexico, was augmented by the superstition of those who succeeded them. As the memory of past events was preserved among the Mexicans by figures painted on skins, on cotton cloth, on a kind of pasteboard, or on the bark of trees, the early missionaries, unable to comprehend their meaning, and struck with their uncouth forms, conceived them to be monuments of idolatry which ought to be destroyed, in order to facilitate the conversion of the Indians. In obedience to an edict issued by Juan de Zummaraga, a Franciscan monk, the first bishop of Mexico, as many records of the ancient Mexican story as could be collected were committed to the flames. In consequence of this fanatical zeal of the monks who first visited New Spain, (which their successors soon began to lament,) whatever knowledge of remote events such rude monuments contained was

b Herrera, dec. 11. lib. vii. c. 12.

c Vega, p. 1. lib. viii. c. 16. Zarate, lib. i. c. 14.

almost entirely lost; and no information remained concerning the ancient revolutions and policy of the empire, but what was derived from tradition, or from some fragments of their historical paintings that escaped the barbarous researches of Zummaraga.[d] From the experience of all nations it is manifest, that the memory of past transactions can neither be long preserved, nor be transmitted with any fidelity, by tradition. The Mexican paintings, which are supposed to have served as annals of their empire, are few in number, and of ambiguous meaning. Thus, amidst the uncertainty of the former, and the obscurity of the latter, we must glean what intelligence can be collected from the scanty materials scattered in the Spanish writers.[e]

Origin of the Mexican monarchy;

According to the account of the Mexicans themselves, their empire was not of long duration. Their country, as they relate, was originally possessed, rather than peopled, by small independent tribes, whose mode of life and manners resembled those of the rudest savages which we have described. But about a period corresponding to the beginning of the tenth century in the christian æra, several tribes moved in successive migrations from unknown regions towards the north and north west, and settled in different provinces of *Anahuac*, the ancient name of New Spain. These, more civilized than the original inhabitants, began to form them to the arts of social life. At length, towards the commencement of the thirteenth century, the Mexicans, a people more polished than any of the former, advanced from the border of the Californian gulf, and took possession of the plains adjacent to the great lake near the centre of the country. After residing there about fifty years they founded a town, since distinguished by the name of *Mexico*, which, from humble beginnings, soon grew to be the most considerable city in the New World. The Mexicans, long after they were established in their new possessions, continued, like other martial tribes in America, unacquainted with regal dominion, and were governed in peace, and conducted in war, by such as were entitled to pre-eminence by their wisdom or their valour. But among them, as in other states whose power and territories become extensive, the supreme authority centred at last in a single person; and when the Spaniards under Cortes invaded the country, Montezuma was the ninth monarch in order who had swayed the Mexican sceptre, not by hereditary right, but by election.

very recent.

Such is the traditional tale of the Mexicans concerning the progress of their own empire. According to this, its duration was very short. From the first migration of their parent tribe, they can reckon little more than three hundred years. From the establishment of monarchical government, not above a hundred and thirty years according to one account,[f] or a hundred and ninety seven, according to another computation,[g] had elapsed. If, on one hand, we suppose the Mexican state to have been of higher antiquity, and to have subsisted during such a length of time as the Spanish accounts of its civilization would naturally lead us to conclude, it is difficult to conceive how, among a people who possessed the art of recording events by pictures, and who considered it as an essential part of their national education to teach their children to repeat the historical songs which celebrated the exploits of their ancestors,[h] the knowledge of past transactions should be so slender and limited. If, on the other hand, we adopt their own system with respect to the antiquities of their nation, it is no less difficult to account either for that improved state of society, or for the extensive dominion to which their empire had attained, when first visited by the Spaniards. The infancy of nations is so long, and, even when every circumstance is favourable to their progress, they advance so slowly towards any maturity of strength or policy, that the recent origin of the Mexicans seems to be a strong presumption of some exaggeration in the splendid descriptions which have been given of their government and manners.

Facts which prove their progress in civilization.

But it is not by theory or conjectures that history decides with regard to the state or character of nations. It produces facts as the foundation of every judgment which it ventures to pronounce. In collecting those which must regulate our opinion in the present inquiry, some occur that suggest an idea of considerable progress in civilization in the Mexican empire, and others which seem to indicate that it had advanced but little beyond the savage tribes around it. Both shall be exhibited to the view of the reader,

d Acosta, lib. vi. c. 7. Torquem. Proem. lib. ii. lib. iii. c. 6. lib. xiv. c. 6.

e In the first edition I observed, that in consequence of the destruction of the ancient Mexican paintings, occasioned by the zeal of Zummaraga, whatever knowledge they might have conveyed was *entirely* lost. Every candid reader must have perceived that the expression was inaccurate; as in a few lines afterwards I mention some ancient paintings to be still extant. M. Clavigero, not satisfied with laying hold of this inaccuracy, which I corrected in the subsequent editions, labours to render it more glaring, by the manner in which he quotes the remaining part of the sentence. He reprehends with great asperity the account which I gave of the scanty materials for writing the ancient history of Mexico. Vol. I. Account of Writers, p. xxvi. Vol. II. 380. My words, however, are almost the same with those of Torquemada, who seems to have been better acquainted with the ancient monuments of the Mexicans than any Spanish author whose works I have seen. Lib. xiv. c. 6. M. Clavigero himself gives a description of the destruction of ancient paintings in almost the same terms I have used; and mentions, as an additional reason of there being so small a number of ancient paintings known to the Spaniards, that the natives have become so solicitous to preserve and conceal them, that it is "difficult, if not impossible, to make them part with one of them." Vol. I. 407. II. 194. No point can be more ascertained than that few of the Mexican historical paintings have been preserved. Though several Spaniards have carried on inquiries into the antiquities of the Mexican empire, no engravings from Mexican paintings have been communicated to the public, except those by Purchas, Gemelli Carreri, and Lorenzana. It affords me some satisfaction, that in the course of my researches I have discovered two collections of Mexican paintings which were unknown to former inquirers. The cut which I published is an exact copy of the original, and gives no high idea of the progress which the Mexicans had made in the art of painting. I cannot conjecture what could induce M. Clavigero to express some dissatisfaction with me for having published it without the same colours it has in the original painting, p. xxix. He might have recollected, that neither Purchas, nor Gemelli Carreri, nor Lorenzana, thought it necessary to colour the prints which they have published, and they have never been censured on that account. He may rest assured, that though the colours in the paintings in the imperial library are remarkably bright, they are laid on without art, and without "any of that regard to light and shade, or the rules of perspective," which M. Clavigero requires. Vol. II. 378. If the public express any desire to have the seven paintings still in my possession engraved, I am ready to communicate them. The print published by Gemelli Carreri, of the route of the ancient Mexicans when they travelled towards the lake on which they built the capital of their empire, (Churchill, Vol. IV. p. 481.) is the most finished monument of art brought from the New World, and yet a very slight inspection of it will satisfy every one, that the annals of a nation conveyed in this manner must be very meagre and imperfect.

f Acost. Hist. lib. vii. c. 8, &c. g Purchas, Pilgr. iii. p. 1068, &c.

h Herrera, dec. 3. lib. ii. c. 18.

that, from comparing them, he may determine on which side the evidence preponderates.

The right of property fully established.

In the Mexican empire, the right of private property was perfectly understood, and established in its full extent. Among several savage tribes, we have seen, that the idea of a title to the separate and exclusive possession of any object was hardly known; and that among all it was extremely limited and ill defined. But in Mexico, where agriculture and industry had made some progress, the distinction between property in land and property in goods had taken place. Both might be transferred from one person to another by sale or barter; both might descend by inheritance. Every person who could be denominated a freeman had property in land. This, however, they held by various tenures. Some possessed it in full right, and it descended to their heirs. The title of others to their lands was derived from the office or dignity which they enjoyed; and when deprived of the latter, they lost possession of the former. Both these modes of occupying land were deemed noble, and peculiar to citizens of the highest class. The tenure by which the great body of the people held their property, was very different. In every district a certain quantity of land was measured out in proportion to the number of families. This was cultivated by the joint labour of the whole; its produce was deposited in a common storehouse, and divided among them according to their respective exigencies. The members of the *Calpullee*, or associations, could not alienate their share of the common estate; it was an indivisible permanent property, destined for the support of their families.[i] In consequence of this distribution of the territory of the state, every man had an interest in its welfare, and the happiness of the individual was connected with the public security.

The number and greatness of their cities.

Another striking circumstance, which distinguishes the Mexican empire from those nations in America we have already described, is the number and greatness of its cities. While society continues in a rude state, the wants of men are so few, and they stand so little in need of mutual assistance, that their inducements to crowd together are extremely feeble. Their industry at the same time is so imperfect, that it cannot secure subsistence for any considerable number of families settled in one spot. They live dispersed, at this period, from choice as well as from necessity, or, at the utmost, assemble in small hamlets on the banks of the river which supplies them with food, or on the border of some plain left open by nature, or cleared by their own labour. The Spaniards, accustomed to this mode of habitation among all the savage tribes with which they were hitherto acquainted, were astonished, on entering New Spain, to find the natives residing in towns of such extent as resembled those of Europe. In the first fervour of their admiration, they compared Zempoalla, though a town only of the second or third size, to the cities of greatest note in their own country. When, afterwards, they visited in succession Tlascala, Cholula, Tacuba, Tezeuco, and Mexico itself, their amazement increased so much, that it led them to convey ideas of their magnitude and populousness bordering on what is incredible. Even when there is leisure for observation, and no interest that leads to deceive, conjectural estimates of the number of people in cities are extremely loose, and usually much exaggerated. It is not surprising, then, that Cortes and his companions, little accustomed to such computations, and powerfully tempted to magnify, in order to exalt the merit of their own discoveries and conquests, should have been betrayed into this common error, and have raised their descriptions considerably above truth. For this reason, some considerable abatement ought to be made from their calculations of the number of inhabitants in the Mexican cities, and we may fix the standard of their population much lower than they have done; but still they will appear to be cities of such consequence, as are not to be found but among people who have made some considerable progress in the arts of social life.[k] From their accounts, we can hardly suppose Mexico, the capital of the empire, to have contained fewer than sixty thousand inhabitants.

The separation of professions.

The separation of professions among the Mexicans is a symptom of improvement no less remarkable. Arts, in the early ages of society, are so few and so simple, that each man is sufficiently master of them all, to gratify every demand of his own limited desires. The savage can form his bow, point his arrows, rear his hut, and hollow his canoe, without calling in the aid of any hand more skilful than his own. Time must have augmented the wants of men, and ripened their ingenuity, before the productions of art became so complicated in their structure, or so curious in their fabric, that a particular course of education was requisite towards forming the artificer to expertness in contrivance and workmanship. In proportion as refinement spreads, the distinction of professions increases, and they branch out into more numerous and minute subdivisions. Among the Mexicans this separation of the arts necessary in life had taken place to a considerable extent. The functions of the mason, the weaver, the goldsmith, the painter, and of several other crafts, were carried on by different persons. Each was regularly instructed in his calling. To it alone his industry was confined; and, by assiduous application to one object, together with the persevering patience peculiar to Americans, their artisans attained to a degree of neatness and perfection in work, far beyond what could have been expected from the rude tools which they employed. Their various productions were brought into commerce;

i Herrera, dec. 3. lib. iv. c. 15. Torquem. Mon. Ind. lib. xiv. c. 7. Corita, MS.

k See Note CXLV.

and by the exchange of them in the stated markets held in the cities, not only were their mutual wants supplied,[l] in such orderly intercourse as characterizes an improved state of society, but their industry was daily rendered persevering and inventive.

The distinction of ranks.

The distinction of ranks established in the Mexican empire is the next circumstance that merits attention. In surveying the savage tribes of America, we observed, that consciousness of equality, and impatience of subordination, are sentiments natural to man in the infancy of civil life. During peace, the authority of a superior is hardly felt among them, and even in war it is but little acknowledged. Strangers to the idea of property, the difference in condition resulting from the inequality of it is unknown. Birth or titles confer no pre-eminence; it is only by personal merit and accomplishments that distinction can be acquired. The form of society was very different among the Mexicans. The great body of the people was in a most humiliating state. A considerable number, known by the name of *Mayeques*, nearly resembled in condition those peasants who, under various denominations, were considered, during the prevalence of the feudal system, as instruments of labour attached to the soil. The *Mayeques* could not change their place of residence without permission of the superior on whom they depended. They were conveyed, together with the lands on which they were settled, from one proprietor to another; and were bound to cultivate the ground, and to perform several kinds of servile work.[m] Others were reduced to the lowest form of subjection, that of domestic servitude, and felt the utmost rigour of that wretched state. Their condition was held to be so vile, and their lives deemed to be of so little value, that a person who killed one of these slaves was not subjected to any punishment.[n] Even those considered as freemen were treated by their haughty lords as beings of an inferior species. The nobles, possessed of ample territories, were divided into various classes, to each of which peculiar titles of honour belonged. Some of these titles, like their lands, descended from father to son in perpetual succession. Others were annexed to particular offices, or conferred during life as marks of personal distinction.[o] The monarch, exalted above all, enjoyed extensive power, and supreme dignity. Thus, the distinction of ranks was completely established, in a line of regular subordination, reaching from the highest to the lowest member of the community. Each of these knew what he could claim, and what he owed. The people, who were not allowed to wear a dress of the same fashion, or to dwell in houses of a form similar to those of the nobles, accosted them with the most submissive reverence. In the presence of their sovereign, they durst not lift their eyes from the ground, or look him in the face.[p] The nobles themselves, when admitted to an audience of their sovereign, entered barefooted, in mean garments, and, as his slaves, paid him homage approaching to adoration. This respect, due from inferiors to those above them in rank, was prescribed with such ceremonious accuracy, that it incorporated with the language, and influenced its genius and idiom. The Mexican tongue abounded in expressions of reverence and courtesy. The style and appellations used in the intercourse between equals, would have been so unbecoming in the mouth of one in a lower sphere, when he accosted a person in higher rank, as to be deemed an insult.[q] It is only in societies, which time and the institution of regular government have moulded into form, that we find such an orderly arrangement of men into different ranks, and such nice attention paid to their various rights.

Their political constitution.

The spirit of the Mexicans, thus familiarized and bended to subordination, was prepared for submitting to monarchical government. But the descriptions of their policy and laws by the Spaniards who overturned them, are so inaccurate and contradictory, that it is difficult to delineate the form of their constitution with any precision. Sometimes they represent the monarchs of Mexico as absolute, deciding according to their pleasure with respect to every operation of the state. On other occasions, we discover the traces of established customs and laws, framed in order to circumscribe the power of the crown, and we meet with rights and privileges of the nobles which seemed to be opposed as barriers against its encroachments. This appearance of inconsistency has arisen from inattention to the innovations of Montezuma upon the Mexican policy. His aspiring ambition subverted the original system of government, and introduced a pure despotism. He disregarded the ancient laws, violated the privileges held most sacred, and reduced his subjects of every order to the level of slaves.[r] The chiefs, or nobles of the first rank, submitted to the yoke with such reluctance, that, from impatience to shake it off, and hope of recovering their rights, many of them courted the protection of Cortes, and joined a foreign power against their domestic oppressor.[s] It is not then under the dominion of Montezuma, but under the government of his predecessors, that we can discover what was the original form and genius of Mexican policy. From the foundation of the monarchy to the election of Montezuma, it seems to have subsisted with little variation. That body of citizens which may be distinguished by the name of nobility, formed the chief and most respectable order in the state. They were of various ranks, as has been already observed, and their honours were acquired and transmitted in different manners. Their number seems to have been great. According

to an author accustomed to examine with attention what he relates, there were in the Mexican empire thirty of this order, each of whom had in his territories about an hundred thousand people, and subordinate to these, there were about three thousand nobles of a lower class.[t] The territories belonging to the chiefs of Tezeuco and Tacuba were hardly inferior in extent to those of the Mexican monarch.[u] Each of these possessed complete territorial jurisdiction, and levied taxes from their own vassals. But all followed the standard of Mexico in war, serving with a number of men in proportion to their domain, and most of them paid tribute to its monarch as their superior lord.

In tracing those great lines of the Mexican constitution, an image of feudal policy, in its most rigid form, rises to view, and we discern its three distinguishing characteristics, a nobility possessing almost independent authority, a people depressed into the lowest state of subjection, and a king intrusted with the executive power of the state. Its spirit and principles seem to have operated in the New World in the same manner as in the ancient. The jurisdiction of the crown was extremely limited. All real and effective authority was retained by the Mexican nobles in their own hands, and the shadow of it only left to the king. Jealous to excess of their own rights, they guarded with the most vigilant anxiety against the encroachments of their sovereigns. By a fundamental law of the empire it was provided, that the king should not determine concerning any point of general importance, without the approbation of a council composed of the prime nobility.[x] Unless he obtained their consent, he could not engage the nation in war, nor could he dispose of the most considerable branch of the public revenue at pleasure; it was appropriated to certain purposes, from which it could not be diverted by the regal authority alone.[y] In order to secure full effect to those constitutional restraints, the Mexican nobles did not permit their crown to descend by inheritance, but disposed of it by election. The right of election seems to have been originally vested in the whole body of nobility, but was afterwards committed to six electors, of whom the chiefs of Tezeuco and Tacuba were always two. From respect for the family of their monarchs, the choice fell generally upon some person sprung from it. But as the activity and valour of their prince were of greater moment to a people perpetually engaged in war, than a strict adherence to the order of birth, collaterals of mature age, or of distinguished merit, were often preferred to those who were nearer the throne in direct descent.[z] To this maxim in their policy, the Mexicans appear to be indebted for such a succession of able and warlike princes, as raised their empire in a short period to that extraordinary height of power which it had attained when Cortes landed in New Spain.

Power and splendour of their monarchs.

While the jurisdiction of the Mexican monarchs continued to be limited, it is probable that it was exercised with little ostentation. But as their authority became more extensive, the splendour of their government augmented. It was in this last state that the Spaniards beheld it; and struck with the appearance of Montezuma's court, they describe its pomp at great length, and with much admiration. The number of his attendants, the order, the silence, and the reverence with which they served him; the extent of his royal mansion, the variety of its apartments allotted to different officers, and the ostentation with which his grandeur was displayed, whenever he permitted his subjects to behold him, seem to resemble the magnificence of the ancient monarchies in Asia, rather than the simplicity of the infant states in the New World.

Order of their government.

But it was not in the mere parade of royalty that the Mexican potentates exhibited their power; they manifested it more beneficially in the order and regularity with which they conducted the internal administration and police of their dominions. Complete jurisdiction, civil as well as criminal, over its own immediate vassals, was vested in the crown. Judges were appointed for each department, and if we may rely on the account which the Spanish writers give of the maxims and laws upon which they founded their decisions with respect to the distribution of property and the punishment of crimes, justice was administered in the Mexican empire with a degree of order and equity resembling what takes place in societies highly civilized.

Provision for the support of it.

Their intention in providing for the support of government was not less sagacious. Taxes were laid upon land, upon the acquisitions of industry, and upon commodities of every kind exposed to sale in the public markets. These duties were considerable, but not arbitrary or unequal. They were imposed according to established rules, and each knew what share of the common burden he had to bear. As the use of money was unknown, all the taxes were paid in kind, and thus not only the natural productions of all the different provinces in the empire, but every species of manufacture, and every work of ingenuity and art, were collected in the public storehouses. From those the emperor supplied his numerous train of attendants in peace, and his armies during war, with food, with clothes, and ornaments. People of inferior condition, neither possessing land nor engaged in commerce, were bound to the performance of various services. By their stated labour the crown lands were cultivated, public works were carried on, and the various houses belonging to the emperor were built and kept in repair.[a]

Their police.

The improved state of government among the Mexicans is conspicuous,

y Herrera, dec. 3. lib. iv. c. 17.
z Acosta, lib. vi. c. 24. Herrera, dec. 3. lib. ii. c. 13. Corita MS.
a Herr. dec. ii. lib. vii. c. 13. dec. 3. lib. iv. c. 16, 17. See Note CXLVII.

not only in points essential to the being of a well ordered society, but in several regulations of inferior consequence with respect to police. The institution which I have already mentioned, of public couriers, stationed at proper intervals, to convey intelligence from one part of the empire to the other, was a refinement in police not introduced into any kingdom of Europe at that period. The structure of the capital city in a lake, with artificial dykes, and causeways of great length, which served as avenues to it from different quarters, erected in the water with no less ingenuity than labour, seems to be an idea that could not have occurred to any but a civilized people. The same observation may be applied to the structure of the aqueducts, or conduits, by which they conveyed a stream of fresh water, from a considerable distance, into the city, along one of the causeways.[b] The appointment of a number of persons to clean the streets, to light them by fires kindled in different places, and to patrole as watchmen during the night,[c] discovers a degree of attention which even polished nations are late in acquiring.

Their arts.

The progress of the Mexicans in various arts, is considered as the most decisive proof of their superior refinement. Cortes, and the early Spanish authors, describe this with rapture, and maintain, that the most celebrated European artists could not surpass or even equal them in ingenuity and neatness of workmanship. They represented men, animals, and other objects, by such a disposition of various coloured feathers, as is said to have produced all the effects of light and shade, and to have imitated nature with truth and delicacy. Their ornaments of gold and silver have been described to be of a fabric no less curious. But in forming any idea, from general descriptions, concerning the state of arts among nations imperfectly polished, we are extremely ready to err. In examining the works of people whose advances in improvement are nearly the same with our own, we view them with a critical and often with a jealous eye. Whereas, when conscious of our own superiority, we survey the arts of nations comparatively rude, we are astonished at works executed by them under such manifest disadvantages, and, in the warmth of our admiration, are apt to represent them as productions more finished than they really are. To the influence of this illusion, without supposing any intention to deceive, we may impute the exaggeration of some Spanish authors, in their accounts of the Mexican arts.

It is not from those descriptions, but from considering such specimens of their arts as are still preserved, that we must decide concerning their degree of merit. As the ship in which Cortes sent to Charles V. the most curious productions of the Mexican artisans, which were collected by the Spaniards when they first pillaged the empire, was taken by a French corsair,[d] the remains of their ingenuity are less numerous than those of the Peruvians. Whether any of their works with feathers, in imitation of painting, be still extant in Spain, I have not learned; but many of their ornaments in gold and silver, as well as various utensils employed in common life, are deposited in the magnificent cabinet of natural and artificial productions, lately opened by the king of Spain; and I am informed by persons on whose judgment and taste I can rely, that these boasted efforts of their art are uncouth representations of common objects, or very coarse images of the human and some other forms, destitute of grace and propriety.[e] The justness of these observations is confirmed by inspecting the wooden prints and copper-plates of their paintings, which have been published by various authors. In them, every figure of men, of quadrupeds, or birds, as well as every representation of inanimated nature, is extremely rude and awkward.[f] The hardest Egyptian style, stiff and imperfect as it was, is more elegant. The scrawls of children delineate objects almost as accurately.

But however low the Mexican paintings may be ranked, when viewed merely as works of art, a very different station belongs to them, when considered as the records of their country, as historical monuments of its policy and transactions; and they become curious as well as interesting objects of attention. The noblest and most beneficial invention of which human ingenuity can boast, is that of writing. But the first essays of this art, which hath contributed more than all others to the improvement of the species, were very rude, and it advanced towards perfection slowly, and by a gradual progression. When the warrior, eager for fame, wished to transmit some knowledge of his exploits to succeeding ages; when the gratitude of a people to their sovereign prompted them to hand down an account of his beneficent deeds to posterity; the

b See Note CXLVIII. c Herrera, dec. 2. lib. viii. c. 4. Torribio, MS.
d Relac. de Cort. Ramus. iii. 294. F. e See Note CXLIX.
f As a specimen of the spirit and style in which M. Clavigero makes his strictures upon my History of America, I shall publish his remarks upon this passage. "Thus far Robertson: to whom we answer, first, That there is no reason to believe that those rude works were really Mexican; secondly, That neither do we know whether those persons in whose judgments he confides, may be persons fit to merit our faith, because we have observed that Robertson trusts frequently to the testimony of Gage, Correal, Ibagnez, and other such authors, who are entirely undeserving of credit; thirdly, It is more probable that the arms of copper, believed by those intelligent judges to be certainly Oriental, are really Mexican." Vol. II. 391.—When an author not entirely destitute of integrity or discernment, and who has some solicitude about his own character, asserts that he received his information concerning any particular point from persons "on whose judgment and taste he can rely;" a very slender degree of candour, one should think, might induce the reader to believe that he does not endeavour to impose upon the public by an appeal to testimony altogether unworthy of credit. My information concerning the Mexican works of art deposited in the king of Spain's cabinet, was received from the late lord Grantham, ambassador extraordinary from the court of London to that of Madrid, and from Mr. Archdeacon Waddilove, chaplain to the embassy; and it was upon their authority that I pronounced the coat of armour, mentioned in the note, to be of Oriental fabric. As they were both at Madrid in their public character when the first edition of the History of America was published, I thought it improper at that time to mention their names. Did their decision concerning a matter of taste, or their testimony concerning a point of fact, stand in need of confirmation, I might produce the evidence of an intelligent traveller, who, in describing the royal cabinet of Madrid, takes notice that it contains "specimens of Mexican and Peruvian utensils, vases, &c. in earthen-ware, wretched both in taste and execution." Dillon's Travels through Spain, p. 77. As Gage composed his survey of New Spain with all the zeal and acrimony of a new convert, I have paid little regard to his testimony with respect to points relating to religion. But as he resided in several provinces in New Spain which travellers seldom visit, and as he seems to have observed their manners and laws with an intelligent eye, I have availed myself of his information with respect to matters where religious opinion could have little influence. Correal I have seldom quoted, and never rested upon his evidence alone. The station in which Ibagnez was employed in America, as well as the credit given to his veracity by printing his Regno Jesuitico among the large collection of documents published (as I believe by authority) at Madrid, A. D. 1767, justifies me for appealing to his authority.

first method of accomplishing this which seems to have occurred to them, was to delineate, in the best manner they could, figures representing the action of which they were solicitous to preserve the memory. Of this, which has very properly been called *picture-writing*,[g] we find traces among some of the most savage tribes of America. When a leader returns from the field, he strips a tree of its bark, and with red paint scratches upon it some uncouth figures, which represent the order of his march. the number of his followers, the enemy whom he attacked, the scalps and captives which he brought home. To those simple annals he trusts for renown, and soothes himself with hope that by their means he shall receive praise from the warriors of future times.[h]

Compared with those awkward essays of their savage countrymen, the paintings of the Mexicans may be considered as works of composition and design. They were not acquainted, it is true, with any other method of recording transactions, than that of delineating the objects which they wished to represent. But they could exhibit a more complex series of events in progressive order, and describe, by a proper disposition of figures, the occurrences of a king's reign from his accession to his death; the progress of an infant's education from its birth until it attain to the years of maturity; the different recompences and marks of distinction conferred upon warriors, in proportion to the exploits which they had performed. Some singular specimens of this picture-writing have been preserved, which are justly considered as the most curious monuments of art brought from the New World. The most valuable of these was published by Purchas in sixty-six plates. It is divided into three parts. The first contains the history of the Mexican empire under its ten monarchs. The second is a tribute-roll, representing what each conquered town paid into the royal treasury. The third is a code of their institutions, domestic, political, and military. Another specimen of Mexican painting has been published in thirty-two plates, by the present archbishop of Toledo. To both is annexed a full explanation of what the figures were intended to represent, which was obtained by the Spaniards from Indians well acquainted with their own arts. The style of painting in all these is the same. They represent *things* not *words*. They exhibit images to the eye, not ideas to the understanding. They may, therefore, be considered as the earliest and most imperfect essay of men in their progress towards discovering the art of writing. The defects in this mode of recording transactions must have been early felt. To paint every occurrence was, from its nature, a very tedious operation; and as affairs became more complicated, and events multiplied in society, its annals must have swelled to an enormous bulk. Besides this, no objects could be delineated but those of sense; the conceptions of the mind had no corporeal form, and as long as picture-writing could not convey an idea of these, it must have been a very imperfect art. The necessity of improving it must have roused and sharpened invention, and the human mind holding the same course in the New World as in the Old, might have advanced by the same successive steps, first from an actual picture to the plain hieroglyphic; next to the allegorical symbol; then to the arbitrary character; until, at length, an alphabet of letters was discovered, capable of expressing all the various combinations of sound employed in speech. In the paintings of the Mexicans we accordingly perceive, that this progress was begun among them. Upon an attentive inspection of the plates which I have mentioned, we may observe some approach to the plain or simple hieroglyphic, where some principal part or circumstance in the subject is made to stand for the whole. In the annals of their kings, published by Purchas, the towns conquered by each are uniformly represented in the same manner by a rude delineation of a house; but in order to point out the particular towns which submitted to their victorious arms, peculiar emblems, sometimes natural objects, and sometimes artificial figures, are employed. In the tribute-roll published by the archbishop of Toledo, the house, which was properly the picture of the town, is omitted, and the emblem alone is employed to represent it. The Mexicans seem even to have made some advances beyond this, towards the use of the more figurative and fanciful hieroglyphic. In order to describe a monarch who had enlarged his dominions by force of arms, they painted a target ornamented with darts, and placed it between him and those towns which he subdued. But it is only in one instance, the notation of numbers, that we discern any attempt to exhibit ideas which had no corporeal form. The Mexican painters had invented artificial marks, or *signs of convention*, for this purpose. By means of these, they computed the years of their kings' reigns, as well as the amount of tribute to be paid into the royal treasury. The figure of a circle represented unit, and in small numbers the computation was made by repeating it. Larger numbers were expressed by a peculiar mark, and they had such as denoted all integral numbers, from twenty to eight thousand. The short duration of their empire prevented the Mexicans from advancing further in that long course which conducts men from the labour of delineating real objects, to the simplicity and ease of alphabetic writing. Their records, notwithstanding some dawn of such ideas as might have led to a more perfect style, can be considered as little more than a species of picture-writing, so far improved as to mark their superiority over the savage tribes of America; but still so defective, as to prove that they had not proceeded far beyond the first stage in that progress which must be

g Divine Legat. of Moses, iii. 73.

h Sir W. Johnson, Philos. Transact. vol. lxiii. p. 143. Mem. de la Hontan, ii. 191. Lafitau, Mœurs de Sauv. ii. 43.

completed before any people can be ranked among polished nations.[i]

Their mode of computing time.

Their mode of computing time may be considered as a more decisive evidence of their progress in improvement. They divided their year into eighteen months, each consisting of twenty days, amounting in all to three hundred and sixty. But as they observed that the course of the sun was not completed in that time, they added five days to the year. These, which were properly intercalary days, they termed *supernumerary* or *waste*; and as they did not belong to any month, no work was done, and no sacred rite performed on them; they were devoted wholly to festivity and pastime.[k] This near approach to philosophical accuracy is a remarkable proof that the Mexicans had bestowed some attention upon inquiries and speculations, to which men in a very rude state never turn their thoughts.[l]

Facts indicating a small progress in civilization.

Such are the most striking particulars in the manners and policy of the Mexicans, which exhibit them to view as a people considerably refined. But from other circumstances, one is apt to suspect that their character, and many of their institutions, did not differ greatly from those of the other inhabitants of America.

Their wars continual and ferocious.
